Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402.

This rule is now strenuously insisted upon by the courts in all jurisdictions, as will be seen from selections from very recent decisions from various courts. As was said in a leading Oregon case:[7] "Again, the use of the water by each, for reasons given in the case last cited, must also be limited in its application to the acreage of land upon which previously applied, except at such times as the water or some part thereof may not be needed by others; and the owner not requiring its use should not be permitted to complain of its application to a beneficial use by others interested. In other words, at all times that the water is not required by one or more, it must be at the disposal of others in the order of their relative rights thereto." And, again, as was said in a more recent Arizona case:[8] "The mere fact that by his notice of appropriation he sought to appropriate all of the flood waters of the stream, does not entitle the appellant to relief against the appellee. To make his appropriation effectual he must make use of the water within a reasonable time. He may then be protected only to the extent that he makes a beneficial use of the water. Whenever there is water in excess of his needs, others may appropriate it." And, again, as was said by Mr. Chief Justice Frick, for the Supreme Court of Utah, in a still more recent case:[9] "The ultimate ques-

*Utah.*

An individual may appropriate as much water as the purpose requires at any time; but, if the use of the amount is not actually needed all the time, subsequent appropriators are entitled to take it in the order of their rights to the extent of their necessities and appropriations. tion for determination, however, is not how much water appellants required, but what amount had they applied to a useful and beneficial purpose for a term of years prior to the time when respondents made their appropriation?" [10]

This rule has been embodied in many of the irrigation or water codes recently enacted in a number of the States, and in which the common expression is found: "Beneficial use shall be the basis, the measure, and the limit of all rights to the use of water in this State." [11]

**§ 878. Quantity of water limited by claim.**—The quantity of water which may be diverted under any single appropriation is limited by the amount originally claimed under that appropriation. The more modern method of laying claim to a certain amount of water, and one which the statutes of the most of the States provide for, is by means of the notice of appropriation, or by an application to appropriate.[1]

These statutes usually provide that the notice of intention to appropriate water shall state specifically the quantity of water which the appropriator intends to take and the beneficial purpose for which the appropriation is made. In most cases the notice is sufficient to fix the maximum rights of the appropriator. He can not take any more water than is called for in the notice,[2] but he may be compelled to take less, if he does not put all of the water claimed in the notice to a beneficial use. For, as we have seen in a previous

10 That all the water appropriated must be applied to a beneficial use or purpose, see Secs. 725-728, and 738.

See, also, as to the rights of the prior appropriator as against the rights of subsequent appropriators, Secs. 776-782.

11 Compiled statutes of Utah, 1907, Sec. 1288x20.

For the statutes of the various States, see Part XIV.

1 For notice of appropriation, see Secs. 710-716.

For effect of notice, see Sec. 714.

For application to appropriate under the irrigation codes, see Secs. 1349-1353.

2 Where the complaint states that the water was appropriated "in pursuance of notice duly given and made," a finding that the appropriator was entitled to water in twelve times the amount claimed in the notice can not be sustained. Last Chance etc. Co. v. Heilbron, 86 Cal. 1, 26 Pac. Rep. 523.

See, also, Becker v. Marble Creek etc. Co., 15 Utah 225, 49 Pac. Rep. 892, 1119; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454.

section, the true test of the quantity of water which can be lawfully claimed under a single appropriation is limited to the quantity actually needed and economically used for some beneficial purpose.[3]

An appropriator can not reserve to himself a certain amount of water claimed for a public use, and not actually applied to a useful purpose. As was said in a late California case:[4] "As the agent of such a public use, he had no power whatsoever to reserve to himself for his private purposes any part of this water. If he could reserve a part he could reserve all, and thus, by his *ipse dixit*, convert a public use into private ownership; or if he could reserve a part for himself he could with equal authority give away parts of the supply to others, and by this method destroy what the constitution itself has declared shall forever remain a public use. Therefore, the only tenable ground upon which respondent can stand is that, with his appropriation for public use, he became a private appropriator of water for use upon his Buggytown ranch. If this be so, then his rights to water would be measured, as are the rights of every other private appropriator—not by the amount which he took, not by the amount which he claimed, not, as the Court decrees, by an amount sufficient thoroughly and properly to irrigate a thousand acres of land, but it would be measured by the amount which he had been actually taking and applying to a beneficial use upon that land. His right to priority in the use of water would also be measured by and limited to this quantity."[5]

But, in cases where notice was not given, as was often the case during the early history of the law of appropriation,[6] or where the appropriation is made by actual diversion and the code provisions are not followed, the quantity of water which can be claimed must be determined by the use to which the water is put, together with the capacity of the ditch as indicating the maximum amount of the claim.[7] The amount of water which can be lawfully appropriated under any claim depends largely upon the priority of right,[8]

[3] See Secs. 727, 877.

[6] As to the early laws requiring notice, see Secs. 711, 712.

[7] For modern rule as to the capacity of the ditch, see Sec. 882.

[8] For rights of prior appropriators, see Secs. 777-782.

and the intention to make the appropriation for a certain purpose. And such intention, where not established by notice, application, or in some other public manner, can in no way be known by or control others wishing to make secondary appropriations from the same stream. This intention may then be established from the capacity of the ditch, and the amount of water reasonably required, when economically used, for the purpose for which the appropriation is made,[9] and the time which the appropriator has already consumed in the final consummation of the appropriation [10] and the application of the water to a beneficial use or purpose.[11] And it is held that, where one has appropriated water for irrigation and has actually used the water for such purpose, he can not be deprived of his rights by the fact that he did not in the first instance describe a definite measurement of what he uses, and does not furnish clear and satisfactory evidence of the amount he requires. The exact amount of water required for his purposes under his claim may be ascertained by further proceedings.[12] In some of these methods the maximum claim of the prior appropriator must be determined, for the reason

[9] This is the rule in Colorado, where no notice is required.

See Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 153.

For early cases, see Ortman v. Dixon, 13 Cal. 33, 1 Morr. Min. Rep. 626; McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626; McKinney v. Smith, 21 Cal. 347, 1 Morr. Min. Rep. 650; White v. Todd's Val. etc. Co., 8 Cal. 443, 68 Am. Dec. 338, 4 Morr. Min. Rep. 536.

Every appropriation of water must be for a beneficial or useful purpose, either existing or contemplated, and the claimant's intent at the time of the appropriation must be determined by his acts, and by surrounding circumstances, its actual and contemplated use, and the purpose thereof. Toohey v. Campbell, 24 Mont. 13, 60 Pac. Rep. 396.

[10] For reasonable time, see Secs. 733-741.

[11] For actual application of the water, see Secs. 727, 877.

For the appropriations for future use, see Sec. 740.

McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Rodgers v. Pitt, 89 Fed. Rep. 420, 129 Fed. Rep. 932; Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Kleinschmidt v. Greiser, 14 Mont. 484, 37 Pac. Rep. 5, 43 Am. St. Rep. 652.

[12] In a case involving this point arising in Washington on appeal the Court reversed the judgment with instructions to the trial Court to hear and consider only such further evidence as might be produced before it upon the quantity of water required to irrigate the land owned by the plaintiff and for which the appropriation was made. Longmire v. Smith,

that all of the water of the streams are subject to appropriation and use, and subsequent appropriators must be given the opportunity to take the surplus.[13] However, where there are no subsequent appropriators on the stream, an appropriator may enlarge his claim. But this must be done in the same method as is necessary in the making of a new appropriation.[14] And, again, where a party appropriated water, and by failure to apply it to a beneficial use within a reasonable time forfeited his rights, he may afterwards reappropriate the same amount of water if intervening rights have not attached.[15]

**§ 879. Quantity of water limited by special purpose for which appropriation is made.**—The special purpose or object for which the appropriation is originally made often determines the extent of the appropriator's right to the use of the water, and in such a case the appropriator is entitled to only so much as is reasonably necessary for that purpose, and that, too, whether he continues to use the water for that identical purpose or subsequently applies it to some other. In other words, the measure of the right of the prior appropriator as to the quantity of water depends upon the reasonable amount necessary for the beneficial use or purpose for which it was originally appropriated.[1] The uses or purposes for which

26 Wash. 439, 67 Pac. Rep. 246, 58 L. R. A. 308.

13 For rights of subsequent appropriators, see Secs. 783-786.

Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Ortman v. Dixon, 13 Cal. 33; Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537.

The appropriation of water for a specific purpose qualifies such appropriation by limiting the volume to the quantity necessary for that purpose. Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185, citing Kinney on Irr., 1st Ed., Sec. 231.

"The need of the purpose for which the appropriation is made is the limit to the amount of water which may be taken." Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7.

See, also, Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Seaweard v. Pacific L. Co., 49 Ore. 157, 88 Pac. Rep. 963; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Union M. & M. Co. v. Dangberg, 81 Fed. 73; Anderson v. Bass-

water may be appropriated[2] may be divided into classes: First, those which practically consume the water; and, second, those which do not. It is true, as we have seen in the preceding chapter of this work, that an appropriator may, under certain conditions, change his use of the water from one purpose to another,[3] but in making this change he is bound by the original limitation as to the quantity of water as that for his original use. And if he attempts to divert more water than his original use called for, he may be prevented by any subsequent claimants who may have secured rights in the waters of the stream, and whose rights are thereby injured.[4]

§ 880. **Capacity of ditch or canal.**—The general rule for the capacity of a ditch or canal, after making due allowance for evaporation and seepage, is the continuous amount of water which it will carry from the point of diversion to the point of use, and the point on the ditch of the least carrying capacity fixes its general capacity.[1]

man, 140 Fed. Rep. 14; Kirk v. Bartholomew, 2 Idaho 1087, 3 Idaho (Hasb.) 367, 29 Pac. Rep. 40; Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275.

"No person can by virtue of a prior appropriation claim or hold any more water than is necessary for the purpose of his appropriation. Reason is the life of law, and it would be unreasonable and unjust for any person to appropriate all the waters of a creek when it is not necessary to use the same for the purpose of his appropriation." Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673.

2 For what purposes water may be appropriated, see Secs. 690-705.

3 For change of the use of water appropriated, see Secs. 869-872.

4 For right to make change of use, see Secs. 869-872; Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111, citing Kinney on Irr., 1st Ed., Sec., 231; Handy D. Co. v. Louden Irr. Co., 27 Colo. 515, 62 Pac. Rep. 847, citing Kinney on Irr., 1st Ed., Secs. 175, 231, 248; New Loveland & Greeley etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266, citing Kinney on Irr., 1st Ed., Secs. 230, 232; Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Simpson v. 1 Posachane W. Co. v. Standart, 97 Cal. 476, 32 Pac. Rep. 532; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 116; Ophir etc. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673.

It is measured by the smallest space in the upper part of the ditch. Browning v. Lewis, 39 Ore. 11, 64 Pac. Rep. 304.

The carrying capacity of a ditch is not established by a mere showing of

The carrying capacity of a ditch may be determined by its width, depth, and grade or the velocity of the flow of the water therein.[2] The carrying capacity of a ditch or canal means its continuing carrying capacity. Upon the other hand, the capacity of a reservoir means the amount of water that the reservoir is capable of holding at one filling.[3]

**§ 881. Early rule as to the capacity of ditch as related to the quantity of water appropriated.**—During the history of the formative period of the Arid Region Doctrine of appropriation, on account of the inexperience of the practical irrigators, as well as of the legislators and of the courts, and the entire lack of scientific knowledge upon the subject, a number of rules were adopted which are now considered erroneous and have long since been repudiated. One of these rules was, that without taking into consideration the beneficial use to which the water was applied, the capacity of the ditch itself was considered at least *prima facie* evidence of the quantity of water which might be claimed under a certain appropriation, upon the theory that the diversion of a ditchful was the taking into possession of an amount of water to that extent, and therefore an appropriation of that amount.[1] So, in the early days, when settlers in

the width and depth of the ditch, but the velocity of the flow must be shown. Caruthers v. Pemberton, 1 Mont. 111, 4 Morr. Min. Rep. 622.

See, also, Last Chance etc. Co. v. Heilbron, 86 Cal. 1, 26 Pac. Rep. 523.

For the measurement of this capacity, see Sec. 881.

2 Bates v. Hall, 44 Colo. 260, 98 Pac. Rep. 3; Broadmoor etc. Co. v. Brookside etc. Co., 24 Colo. 541, 52 Pac. Rep. 792; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

3 See Windsor etc. Co. v. Lake Supply etc. Co., 44 Colo. 214, 98 Pac. Rep. 729.

1 The appropriator is entitled to the water so undiminished in quantity as to leave sufficient to fill his canal or ditch, as it existed at the time of the subsequent appropriations of the stream. "This right is essential to the protection of the ditch owner." Bear River etc. Co. v. New York M. Co., 8 Cal. 327, 68 Am. Dec. 325, 4 Morr. Min. Rep. 526; approved in Hill v. King, 8 Cal. 336, Mokelumne Hill Co. v. Woodbury, 10 Cal. 185, but modified in Pilot Rock etc. Co. v. Chapman, 11 Cal. 162; Phoenix W. Co. v. Fletcher, 23 Cal. 482, 15 Morr. Min. Rep. 185.

See, also, Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Moore v. Clear Lake Water Works, 68 Cal. 147, 8 Pac. Rep. 816.

"Here the point is made that the count fails to show that the plaintiff is in a position to use the water himself, or that he is in any position

the arid and semi-arid regions were few and scattering and there was plenty of water for all, if a person constructed a ditch of a certain capacity and diverted water enough to fill it, before the rights of subsequent claimants to the water from the same stream had vested, the first appropriator's rights to a certain quantity of water were considered fixed by the amount that filled his ditch to its full capacity. And although the ditch might have a capacity of ten times the amount of water which he needed for the purposes for which he used it, but little regard was paid to that fact, and the only restriction placed upon his right was that he was not permitted to still further enlarge the capacity of his ditch and thus increase the amount of his appropriation of the water as against the rights of others, who had subsequently appropriated the surplus flowing in the stream.

Under the later decisions relative to the capacity of the ditch being the limit of the extent of the appropriator's rights in and to the waters of a stream, it is held to be against the general policy of the entire modern system of the doctrine of appropriation that the greatest good shall accrue to the greatest number. For if this was the law upon the subject a person might lay claim to the water of whole rivers for the ostensible purpose of irrigating immense tracts of lands, which with the utmost diligence it would take years to accomplish; and although others might intervene an attempt to appropriate the water of a stream they could only lay claim to it for a temporary period of time, and until the works of the first appropriator were eventually completed, and they would then be deprived of their appropriation. Thus would the way for speculation, and monopoly be opened, and the main object of the law defeated.[2]

which gives him a right to furnish the water to others. The allegation of these matters is not essential to plaintiff's right of action." Moore v. Clear Lake Water Works, 68 Cal. 147, 8 Pac. Rep. 816.

The quantity of water appropriated in any given case is to be measured by the capacity of the ditch or flume at the smallest point; that is, at the point where the least water can be conveyed through it. Ophir M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640.

See, also, Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Caruthers v. Pemberton, 1 Mont. 111, 4 Morr. Min. Rep. 622; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; overruled in Donnelly v. Cuhna, —— Ore. ——, 119 Pac. Rep. 331.

2 Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111, quoting Kinney on Irr., 1st Ed., Sec. 161.

The true test, as we have seen, of the quantity of water which may be lawfully claimed, under a prior appropriation, is the quantity or amount of water which is needed and is actually and economically applied to some beneficial or useful purpose within a reasonable time; and any surplus over and above this amount is subject to the appropriation and use by others.[3]

§ 882. **Modern rule as to the capacity of ditch as related to quantity of water appropriated.**—The right of the prior appropriator to the use of a certain quantity of water, as already stated in the previous sections,[1] being limited by his necessity and that, too, when the water is economically used, it therefore follows that the carrying capacity of the appropriator's ditch has no bearing upon the question as to the amount of water which he can lawfully claim, where the ditch carries more water than the needs of the appropriator require.[2] As was said in a Nevada case, "If the capacity

That water can not be appropriated for speculation and monopoly, see Sec. 705.

3 For later rule as to the capacity of ditch, see Sec. 882.

For reasonable time in which to consummate an appropriation, see Secs. 733-741.

1 See Sec. 877.

2 That all the water appropriated must be so applied, see Secs. 727, 877.

For seepage and evaporation as affecting quantity, see Sec. 908.

"The law has become well settled that beneficial use and needs of the appropriator, and not the capacity of the ditches or quantity first applied, is the measure and limit of the right of such appropriator." Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728, citing Kinney on Irr., 1st Ed., Sec. 30.

Capacity of ditch does not alone constitute a valid appropriation of water, unaccompanied by application of water to some beneficial use. Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111, citing Kinney on Irr., 1st Ed., Sec. 161.

See, also, Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185; New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266, both citing Kinney on Irr., 1st Ed., Secs. 230, 232.

See, also, Seaweard v. Pacific L. Co., 49 Ore. 157, 88 Pac. Rep. 963; Gardiner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 116; Anderson v. Bassman, 140 Fed. Rep. 14.

The paramount right to the use of water is measured by the owner's necessities, and not by the capacity of the ditch. Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546.

See, also, Riverside W. Co. v. Sargent, 112 Cal. 230, 44 Pac. Rep. 560.

An appropriation of water by the means of a ditch is not measured by the capacity of the ditch, but is limited to such quantity as the appropriator may put to a useful purpose.

of his ditches is greater than is necessary to irrigate his farming land, he must be restricted to the quantity needed for the purposes of irrigation, for watering his stock, and for domestic purposes."[3] Those who are at all familiar with the conditions in the West will recognize that it is quite a customary occurrence for appropriators to construct ditches much larger than the actual extent of their appropriation demands. Where this is the case and the water of the stream is diverted to the full capacity of the ditch, even if the appropriator is prior to all others in point of time, where such an amount is not beneficially used it is the law that the claim must be cut down to the amount of water actually used for such purposes and, furthermore, economically applied;[4] and the surplus water is either treated as abandoned,[5] or forfeited under some statute for failure to use within the time specified,[6] or it is held that no legal appropriation was made as to such surplus.

In a Colorado case, where it was found that a ditch had a carrying capacity of 33 cubic feet of water per second of time, and where it was constructed to irrigate only 120 acres of land, it was decided that the appropriator was entitled only to so much water as he could beneficially apply upon the land.[7]

Where the appropriation is made without notice, as allowed in Colorado,[8] or is by actual diversion without complying with existing statute, the capacity of the ditch may be evidence of the intent to appropriate a certain quantity of water, when taken in connection with the facts of use.[9] But a decree based alone on the capacity of a ditch is erroneous as it should further be limited to

Smith v. Hawkins, 120 Cal. 86, 52 Pac. Rep. 139, 19 Morr. Min. Rep. 243; affirming *Id.*, 110 Cal. 122, 42 Pac. Rep. 453.

See, also, Woods v. Sargent, 43 Colo. 268, 95 Pac. Rep. 932; Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

[8] For notice, see Secs. 710-716.

[9] "Such intention, unless established by notice or in some other public manner, could in no way be known, or to control others wishing to take the

a beneficial use of all of the water up to that capacity.[10] This principle was illustrated in a recent Colorado case,[11] where a decree was rendered by the trial Court giving as excessive amount of water, and where the Supreme Court in reviewing the same said: "The Court apparently based the first appropriation upon the amount of water carried through the canal, and not the amount necessary for the irrigation of the land, applied to a beneficial use. The complaint, on the same line, ingeniously alleges that the ditch was originally constructed 12 feet wide on the bottom, with a capacity of 100 cubic feet per second, and capable of irrigating 5,000 acres of land. Admitting all this, the ditch might not be entitled to any decree. We have endeavored to show these settlers could not make a beneficial use of more water on the tracts than was necessary for their irrigation. It is immaterial whether the Buffalo ditch was 10, 12, or 15 feet wide on the bottom, or whether it was capable of irrigating 5,000 acres of land, and was filled to its capacity. Any one familiar with irrigation knows that 47 cubic feet of water per second is not necessary for the irrigation of 640 acres of land. That amount, therefore, was not beneficially applied thereto." Again, in a recent Oregon case,[12] involving the same question, the Court said: "The defendant's attorney, invoking the rule adopted in Coventon v. Seufert[13] that the capacity of the ditch at the smallest place affords the measure of the right, insists that the quantity of water awarded by the decree was a just distribution. The principle announced in the case referred to is not now controlling, when more careful methods of irrigation have been discovered, so that water is not wasted, and a larger area of land is adequately moistened, thereby promoting a greater and better development of the country. The adaptability of arid lands to the

water from the same stream, and such intention could only be inferred or deduced (1) from the capacity of the ditch at its head and perhaps (2) the amount of irrigable land of the ditch proprietors upon which it could be reasonably supposed that they intended to apply it." Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 153.

For intent to appropriate, see Secs. 708, 709.

10 Gotelli v. Cardelli, 26 Nev. 382, 69 Pac. Rep. 8; Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 280, 89 Pac. Rep. 289; Lakeside etc. Co. v. Crane, 80 Cal. 181, 22 Pac. Rep. 76; Medano v. Adams, 29 Cal. 317, 68 Pac. Rep. 431.

12 Donnelly v. Cuhna, —— Ore. —, 119 Pac. Rep. 331.

13 23 Ore. 548, 32 Pac. Rep. 508.

growth of particular crops by careful irrigation furnishes the test of the quantity of water reasonably necessary for that purpose. The number of acres of such land that is susceptible to cultivation, the degree of sterility of the premises, the most profitable crops that can be raised by artificial application of moisture, and the quantity of water reasonably necessary to produce the harvest on an acre by careful husbandry, are elements to be considered in determining the measure of an appropriation."

In a very recent Montana case [14] the modern rule relative to the capacity of the appropriator's ditch as relating to the quantity of the water appropriated by him was well stated in the following language: "The appropriator's needs and facilities, if equal, measure the extent of his appropriation. If his needs exceed the capacity of his means of diversion, then the capacity of ditch, etc., measures the extent of his right. If the capacity of his ditch exceeds his needs, then his needs measure the limit of his appropriation." [15]

§ 883. **Quantity of water limited by size of ditch.**—Upon the other hand, where the ditch carries no more water than is reasonably required by the necessities of the appropriator, with the appropriation fully consummated,[1] the capacity of the ditch has the effect of definitely fixing and limiting the maximum quantity of the water that the appropriator is under any circumstances entitled to.[2] And,

1 For the consummation of an appropriation, see Secs. 725-729.

For the appropriation for future needs, see Secs. 740, 886.

2 "If, however, the capacity of his ditches is not more than sufficient for those purposes, . . . he must be restricted to the capacity of his ditches at their smallest point; that is, at the point where the least water can be carried through them." Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673.

See, also, Browning v. Lewis, 39 Ore. 11, 64 Pac. Rep. 304, citing Kinney on Irr., 1st Ed., Sec. 230; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; Dougherty v. Haggin, 61 Cal. 305, 56 Cal. 522; Posachane etc. Co. v. Standart, 97 Cal. 476, 32 Pac. Rep. 532; McKinney v. Smith, 21 Cal. 374, 1 Morr. Min. Rep. 650; Higgins v. Baker, 42 Cal. 233; San Luis etc. Co. v. Estrada, 117 Cal. 168, 48 Pac. Rep. 1075; McDonald v. Lannen, 19 Mont. 78, 47 Pac. Rep. 648; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; Bean v. Stoneman, 104 Cal. 49, 37 Pac. Rep. 777, 38 Pac. Rep.

again, where at times the flow of the stream is not up to the full capacity of his ditch, he is entitled to all the water up to that capacity, provided that the extent of his prior appropriation covers that amount.[3]

The capacity of the appropriator's ditch being the maximum amount of water which he can divert by virtue of his appropriation, the quantity of water to which he is entitled is limited to that amount, and he must apply this quantity with reasonable economy to the purpose for which he makes the appropriation, or to some other purpose.[4] His prior right thus limited becomes fixed and certain, and others may appropriate the remainder of the water running in the stream and acquire a title thereto as perfect as that of the right of the prior appropriator.[5] And after the rights of others have vested to the remainder of the water by the appropriation of the same, the first appropriator can not in any way increase his appropriation by enlarging the capacity of his ditch, or by any other method increase the amount of the water diverted by him, if the later comers are in any way materially injured or their rights infringed upon.[6]

**§ 884. Capacity of ditch or canal—Rule in adjudicating priorities.**—It seems to be the tendency of appropriators to construct ditches and canals of a larger capacity than the utmost extent

39; Lillis v. Emigrant D. Co., 95 Cal. 553, 30 Pac. Rep. 1108; White v. Todd's Valley etc. Co., 8 Cal. 443, 68 Am. Dec. 338, 4 Morr. Min. Rep. 536; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396; Driskill v. Rebbe, 22 S. D. 242, 117 N. W. Rep. 135.

3 Where one appropriates a specified amount of water, and his ditch will carry this amount, he is entitled to such an appropriation if that amount of water is ever in the stream. Sayre v. Johnson, 33 Mont. 15, 81 Pac. Rep. 389.

4 For the right to change the use, see Secs. 869-872.

5 For rights of subsequent appropriators, see Secs. 783-787.

6 Colorado etc. Co. v. Larimer etc. Co., 26 Colo. 47, 56 Pac. Rep. 185, citing Kinney on Irr., 1st Ed., Secs. 230, 232; Cache La Poudre Res. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131; Proctor v. Jennings, 6 Nev. 83, 3 Am. St. Rep. 240, 4 Morr. Min. Rep. 265; Nevada W. Co. v. Powell, 34 Cal. 109, 91 Am. Dec. 685, 4 Morr. Min. Rep. 253; Ortman v. Dixon, 13 Cal. 33; Higgins v. Baker, 42 Cal. 233; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; South Side Imp. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107.

of their lawful claim to the waters of the stream demands, or of a capacity larger than the aggregate volume of their priorities where there are more than one taking their water through the same ditch. But the physical size of a ditch and the aggregate volume of its priorities do not alone determine its capacity when it comes to the question of its ability to supply or deliver water. Upon this phase of the question, a ditch or canal can convey no more water than it can obtain from its source of supply.* Hence, in the construction of a contract contained in water deeds issued by vendor companies, wherein their authority to sell water rights was limited to the "estimated capacity" of the canal system, it is held that this term means the ability of the canal to supply or deliver water. And, further, in determining this question, there must be taken into consideration not only the physical capacity of the canal, but also the volume of its decreed priorities, in connection with the probability of obtaining water from the stream supplying them under normal conditions during the season of irrigation.[1] Therefore, in adjudicating the capacity of ditches and canals, it is within the particular province of the Court to determine their ability to supply and deliver water to consumers under all of the facts in each particular case.[2] And when this has once been determined, and a decree entered to that effect, it becomes *res judicata* when attacked in a subsequent action.[3] The courts have often been called upon to determine the carrying capacity of ditches; and, it is held

1 The words "estimated capacity," limited and modified as they are by the words "to furnish," must be construed as meaning the ability of the canal to supply or deliver water. Wyatt v. Larimer etc. Co., 18 Colo. 298, 33 Pac. Rep. 144, 36 Am. St. Rep. 280.

See, also, Blakely v. Ft. Lyon C. Co., 31 Colo. 224, 73 Pac. Rep. 249; Larimer & Weld Irr. Co. v. Wyatt, 23 Colo. 480, 48 Pac. Rep. 528; La Junta etc. Co. v. Hess, 31 Colo. 1, 71 Pac. Rep. 415.

2 Blakely v. Ft. Lyon C. Co., *supra*.

3 Water Supply Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322.

See, also, Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 116.

"It has been so frequently determined by this Court that, except as specially provided by the statutes, or in case of fraud, decrees rendered in statutory proceedings under the Irrigation Act are conclusive upon the parties thereto, that an extended discussion of the question would not seem necessary." Farmers' Union etc. Co. v. Rio Grande etc. Co., 37 Colo. 512, 86 Pac. Rep. 1042, citing New Mercer D. Co. v. Armstrong, 21 Colo. 357, 40 Pac. Rep. 989; Louden C. Co. v. Handy D. Co., 22 Colo. 102, 43 Pac. Rep. 535; Boulder etc. Co. v. Lower Boulder D. Co., 22 Colo. 115, 43 Pac.

that, where the court has once determined the carrying capacity of a ditch, it is as much *res judicata* when attacked in a subsequent action for review of the decree as the determination of the physical dimensions of the ditch. The discovery of a new or more accurate formula for the measuring of the carrying capacity of a ditch, which was not known at the time of the decree, is no ground for setting aside the decree and the entering of a new one, for the reason that there would be no end of litigation, provided still new and more accurate tests for measurement are afterward discovered.[4]

**§ 885. Quantity of water limited to that economically used.**—As we have seen in previous sections, the later authorities do not look so much to the size of the appropriator's ditch or canal as determining the extent of his right to the use of the waters of a certain stream [1] as did the early authorities, but upon the amount of water which is actually needed by the prior appropriator for the use or purpose for which he applies it.[2] This change of the rule has been gradual and is undoubtedly due to the fact that the irrigable portion of the arid and semi-arid West is rapidly becoming settled up. As the population increased and additional lands were settled upon, which also required water in order that they might be successfully cultivated, the demand for water, of course, became each year greater and greater. Then, again, as the knowledge of practical irrigators has become greater from both the result of experience and from technical education, to which the General Govern-

Rep. 540; Montrose C. Co. v. Loutzenhizer D. Co., 23 Colo. 233, 48 Pac. Rep. 532.

4 "If we should now correct the decree of 1882 for the reason urged, then at the end of the next decade there may be evolved a new method of determining the carrying capacity of ditches, giving even more accurate results than under the Kutter formula, and, in an action then brought to correct the mistake made by us now in applying the Kutter test, the Court must set aside our decree and enter a new one, and so there would be no end to the litigation, provided new and more accurate tests are discovered." Water Supply etc. Co. v. Larimer etc. Irr. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322.

1 See Sec. 882.

2 See Sec. 877.

ment and the agricultural colleges in every Western State and Territory throughout the West have largely contributed, it has been demonstrated in thousands of instances that the soil will yield larger and better crops by not using so large a quantity of water in the irrigation of the same as was at first thought necessary. And as the demand became greater, the legislatures and the courts have often stepped in and prevented the wasteful diversion of water by laying down the rule that the mere diversion of the water was not a legal appropriation of it, but there must be an application of all of the water diverted, within a reasonable time, to some beneficial use or purpose, and that the diversion of any portion of the water which is not so applied is unlawful and subject to appropriation by later comers who will so apply it.[3] Still later the authorities have gone one step further in holding that not only is the quantity of water under an appropriation limited to the amount which is necessary to the use of the appropriator, but that as against other appropriators his right is limited to such an amount which is reasonably necessary for his purposes, when diverted, conducted to the place of use, and applied to that use in a reasonably economical manner. As was held in a Washington case, it becomes the duty of the irrigator to use proper means to bring the water to points where it is needed; to use it only at such times and in such quantities as are necessary for his purposes; and then, if others situated like himself require the water, to stop its flow until it shall again become necessary.[4] As well stated by the Oregon Court in a case decided in 1911:[5] "Before the country was so thickly settled as it is now, the practice for the appropriator of water 'to keep all you get and get all you can' was in many cases tolerated; but, yielding to reason and justice to all, the later authorities have established a different rule. We conceive it to be the law, except as modified by statute, that the right of a prior appropriator is paramount, but the right is limited to such an amount of water as is reasonably necessary for such useful purpose and project as may be fairly within contemplation at the time the appropriation is made."[6]

[3] See cases cited under Sec. 877.

[4] Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254.

[5] Andrews v. Donnelly, —— Ore. ——, 116 Pac. Rep. 569.

[6] "Owing to the little demand and large proportionate supply in use by those along Silver Creek and its branches in the early '80s, together with the lack of general knowledge

Again, as was said in a recent California case:[7] "It is the well-settled law of this State that one making an appropriation of the waters of a stream acquires no title to the waters but only a right to their beneficial use and only to the extent that they are employed for that purpose. His right is not measured by the extent of his appropriation, as stated in his notice or by his actual diversion from the stream, but by the extent to which he applies such waters for useful or beneficial purposes. Beyond that his appropriation or diversion of more than can be applied by him gives him no right to the excess, and this is subject to appropriation by any other person who may use it for similar beneficial purposes."[8] Again,

and experience on the subject throughout the State, wasteful methods at that time were, no doubt, common; but of recent years improved means throughout the West have come into use, and a scarcity of the supply has made a more economic use necessary. The result is that the law has become well settled that beneficial use and needs of the appropriator, and not the capacity of the ditches or quantity first applied, are the measure and limit of the right of such appropriators." Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

in a very recent Idaho case it is said: "Economy must be required and demanded in the use and application of water. Water users should not be allowed an excessive quantity of water to compensate for and counterbalance their neglect or indolence in the preparation of their lands for the successful and economical application of the water. One farmer, although he has a superior water right, should not be allowed to waste enough water in the irrigation of his land to supply both him and his neighbor simply because his land is not adequately prepared for the economical application of the water."[9] As to what constitutes a reasonably economical use of the water will be more thoroughly discussed in the sections of this chapter upon the subjects of duty of water [10] and the suppression of waste.[11] In general, we will say here, however, that what constitutes a reasonable, economical use of the water depends upon the circumstances surrounding each particular case, and is therefore a question of fact. In determining this question there must be taken into consideration the amount of water claimed, the area of land to which it is applied, the character of the soil, the nature of the crops planted, the distance of the land from the source of supply of the water, the condition of the ditches and canals, and other like subjects.[12]

**§ 886. Quantity of water—Appropriations for future use for irrigation.**—Under the subject of reasonable diligence as regarding appropriations for future use, we discussed the time which might be allowed a settler appropriator for the purpose of the irrigation of new lands, to finally consummate his appropriation and apply the water to the full amount claimed by him.[1] We have seen in the previous sections that a person could not appropriate more water than was necessary for the purpose or use to which it was intended to be applied and that for this purpose it must be economically

used.[2] But the authorities agree upon the proposition that, where the purpose of the appropriation is for the irrigation of new land by a settler, although the quantity first used is not the full amount claimed, the settler may year by year increase the quantity used, as he gets his land ready for cultivation, up to the full amount of his claim, and that, too, as against the claims of subsequent appropriators, provided that he does not delay the final use of all the water claimed for an unreasonable time.[3] Under this state of facts, it is the well-settled rule that where he has used reasonable diligence the additional application of the water annually to meet the augmented demand causes the appropriation to relate back to the inception of the claim, thereby cutting off all adverse claimants to the use of the water, where their claims interfere with the rights of the settler who was prior in time.[4] Or, in other words, the rule is that, at the time of the inception of his claim, he may lay the foundation for the appropriation of such a quantity of water as will be necessary, when economically used, for the reclamation of his entire tract of land, and he will not lose his priority of right, provided he makes use of all of the water claimed within a reasonable time.[5] But this rule must not be construed to mean that a

See, also, for decrees as to inchoate rights, Chaps. 78, 79.

5 "That all the water which was appropriated can not be used at that time by the appropriator will not put his right down to what he actually

person may attempt to appropriate and hold in reserve a quantity of water which he can have no use for on his own land.[6] And, again, in order for an appropriator to successfully lay claim to a quantity of water sufficient for his future needs, and for the doctrine of relation to apply thereto, these needs must have entered into the intent of the appropriator, and have been claimed at the inception of his appropriation.[7]

In this connection the Utah Court, in a recent case,[8] said: "May an application be made to appropriate water for a beneficial purpose so contemplated in the future? We confess that the question is open to debate, and is not free of doubt. We have, however, with some hesitancy, reached the conclusion that such an application may properly be made when it is made in good faith and with an actual *bona fide* intention and a present design to appropriate the water

uses, in favor of a subsequent appropriator, if the amount appropriated was not greater than could be profitably used on his own land, and he intends, as rapidly as possible, to make use of the whole of it." Kleinschmidt v. Greiser, 14 Mont. 484, 37 Pac. Rep. 5, 43 Am. St. Rep. 652.

"If the water is used for the purpose of irrigating lands owned by the appropriator, the right is not confined to the amount of water used at the time the appropriation is made; the appropriator is entitled not only to his needs and necessities at that time, but to such other and further amount of water, within the capacity of his ditch, as would be required for the future improvement and extended cultivation of his land, if the right is otherwise kept up." Judge Hawley in Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 116.

6 Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583; Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Elliot v. Whitmore, 23 Utah 342, 65 Pac. Rep. 70, 90 Am. St. Rep. 700.

7 For the doctrine of relation, see Secs. 742-756.

"Hence the wisdom of statutory provision requiring a claimant of water to file a plat and statement as public notice of intention and extent of the right claimed." Taughenbaugh v. Clark, 6 Colo. App. 235, 40 Pac. Rep. 151.

Rio Grande etc. Co., 37 Colo. 512, 86 Pac. Rep. 1042; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Toohey v. Campbell, 24 Mont. 13, 60 Pac. Rep. 396; Brown v. Baker, 39 Ore. 66, 65 Pac. Rep. 799; *Id.*, 66 Pac. Rep. 193; Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 379, 110 Pac. Rep. 535; Porter v. Pettingill, 57 Ore. 247, 110 Pac. Rep. 393; McDonald v. Lannen, 19 Mont. 78, 47 Pac. Rep. 468; Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

8 Sowards v. Meagher, 37 Utah 212, 108 Pac. Rep. 1112.

for a beneficial use, though contemplated in the future, and when it is not made for the purposes of mere speculation or monopoly." A very recent Colorado case [9] also held that a settler upon 160 acres of Government land who constructs a ditch or buys a water right with a view to irrigate the entire tract may use such an amount of water as is sufficient to irrigate all his land when needed, provided the water is beneficially used and with reasonable diligence for the improvement of his land; and it was said by the Supreme Court: "The test is not necessarily the number of acres irrigated each year. If these tracts were farmed, and all the water necessary to irrigate them was beneficially used with reasonable diligence in the improvement of the land, it is sufficient. What was a sufficient amount of water, and was it applied to a beneficial use, is the test."

As we have seen in a previous section, the quantity of water which may be diverted under a single appropriation is limited by the amount originally claimed under that appropriation,[10] and the quantity of water for future needs must be claimed at the time of the inception of the original appropriation and not be the result of a mere afterthought, and not contemplated at the time of the original appropriation. We have also seen in a previous section that an appropriator can hold the unused quantity of the water in an appropriation for future needs only for what is deemed a reasonable time.[11] And as to what constitutes a reasonable time for the final consummation of an appropriation and the application of all the water to some beneficial use or purpose depends upon all of the pertinent facts surrounding each particular case.[12]

That in California a reasonable time for the application of water is held to be five years, see Smith v.

Where the amount of the full quantity of water was also claimed in the notice of appropriation or the application to appropriate, there is no reason in law why the same principle should not apply to appropriations other than for the use of the water for irrigation. In fact, the same doctrine has been applied to an appropriation for future uses for the development for power purposes. Of course, the same rules as to reasonable time for the full consummation of the appropriation, and the final application to the use intended of all the water covered by the claim, must be observed.[13]

In a number of States the time within which the water must be actually applied to the beneficial use or purpose is fixed by statute.[14]

Owing to the recent decisions sustaining the rule as above set forth, we have no reason to change our statement made in the first edition of this work, which is as follows: "We find that the rule is that he may make an appropriation of all the water that he will need upon his land, and that the fact that he does not make immediate use of the whole land will not destroy his priority of right if he continues the development of his land and makes a full use of his water right within a reasonable time."

§ 887. **Appropriator not always limited to first amount used.**—In addition to the question of the appropriation of water for future use, discussed in our previous section,[1] there are other circumstances by which the appropriator will not be required to divert and use the full quantity of the water covered by his claim. If, by reason of any obstructions or irregularities in the grade of the ditch it is not capable of diverting as much water as its general size would indicate and as the area of the land to be irrigated for which the appropriation is made would reasonably require, and also claimed for in the notice of application of appropriation, the appropriator will be allowed a reasonable time to remove such obstructions or to adjust the grade.[2]

**§ 888. Measurement of water.**—It is not the purpose of this work to treat the subject of water rights, or the appropriation of water for any beneficial purpose, from the standpoint of the engineer. But a general discussion upon the subject of measuring water and some of the most approved methods for the same will not be out of place, leaving the details of the subject to engineering works, or, better still, to the engineers themselves. The subject of measuring running water has always been a most difficult one; and, although science in this respect has kept pace with the subject of the duty of water, or the exact quantity of water essential to irrigate a given tract of land under all conditions,[1] the results in many respects are far from satisfactory. If the water was always quiet and at rest, it would be an easy matter to determine the exact quantity in any body in gallons or any other unit of measurement by simply measuring the dimensions of the body, and then making the proper computation. This would be like measuring wheat in a bin or corn in a crib. But, as "water is a movable, wandering thing,"[2] when we come to the measurement of running water, we have a different proposition, and one which has taxed the best efforts of some of the greatest scientists of the ages, and even now it can not be claimed there is any certain rule by which this can be done and always obtain the exact result. Under certain conditions by the present methods in practice, the measurement of the running water may be exact, or as near exact as is necessary to determine for the use or uses to which the water is applied. But the conditions where the measurements are taken are never the same at the different places of measurement. And, then again, the method and formula, which are applicable to give the correct result under certain conditions are found to be wholly inapplicable and inadequate to give the correct result under different conditions. Then, again, under the same conditions, and the running water measured at the same place, and the computation made by a different formula, claimed to be a standard for measuring water, and an improvement upon some old standard, by which the water previously had been measured, different results may be obtained. And, as said by Mr. Justice Campbell, in rendering the decision of the Supreme Court of Colorado: "It further appears that no computations are ever the

1 For duty of water, see Secs. 902-908.

2 2 Black Comm. 18. See, also, Sec. 455.

same, even with the same formula. Hydraulics is said to be one of the most complex sciences."[3] And the courts hold that in order for a witness to be competent to testify as to the measurement and duty of water, he must have had experience and training along these lines.[4]

In a recent case in Oregon,[5] it was held that the testimony of a witness that a flow of 17 inches of water per acre was necessary for the irrigation of certain lands, was so obviously unreliable that it could not be accepted by the Supreme Court upon review of the case although the testimony was undisputed. And the Supreme Court, relative to this point said: "The absurdity of such quantity, being essential to the proper irrigation of lands is manifest."

**§ 890. Measurement of water—The miner's inch as prescribed**—In order to determine the definite quantity of water to which an appropriator is entitled, some method of measurement must be adopted by which the quantity of running water may be determined with some degree of accuracy. And, in order to do this, first and foremost, there must be adopted a standard of measurement. By the custom of the early miners of California, during the formative period of the Arid Region Doctrine of appropriation, the first standard of measurement was called the "miner's inch." The placer miners first employed this standard; and, in those sections where irrigation succeeded this form of mining, appropriators for this purpose generally adopted this standard or unit of measurement. At an early day, when water was plentiful for the uses for which it was claimed, in many respects it was satisfactory, especially for the smaller measurements of water. It is simpler than the computation by other standards, and easily understood by the farmers for the reason that they could tell at a glance the quantity of water that was being delivered. It is not suited, however, to the measurement of rivers or streams, or the regulation of the larger quantities of water as between the large canals, as the prescribed conditions necessary can not be produced on a large stream of water. Where

[3] Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322. For further discussion of this case, see Sec. 900.

For computations by formula, see Sec. 899.

[5] Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

the water has become scarce, as compared to the demand, it is also subject to many other objections, which we will proceed to discuss.

This standard, with certain specifications as to pressure, is still retained in some of the Western States, although in the most it has been superseded by other standards of measurement such as the "second foot" or the "acre foot."[1] The terms "inch," "miner's inch," and "miner's measurement," as found in some of the early decisions, mean absolutely nothing in and of themselves without further specifications or evidence as to what the inch or miner's measurement consists of. As was said in a recent California case:[2] "To show the quantity in miner's inches there should have been either evidence as to a measurement according to some prescribed method, or evidence of facts upon which a definite calculation could be made."[3] Before any statutory enactments were made attempting to specify what a miner's inch should consist of it varied greatly even in different localities of the same State, and depended entirely upon the custom of that particular locality where the measurement was made.[4] In California, where this standard of measurement

[1] For second-foot, see Secs. 892, 893.

For acre-foot, see Sec. 894.

For history of doctrine of appropriation, see Secs. 595-626.

For a description of the miner's inch, see Exp. Stations Bulletin No. 86, U. S. Dept. of Agriculture, p. 19.

[2] Logan v. Guichard, 159 Cal. 562, 114 Pac. Rep. 989.

[3] "An examination discloses that a number of witnesses, when testifying and while expressing opinions as to the number of inches of water required to irrigate the land, had not very definite ideas as to the measurement of water; the Court was justified in attaching but little weight to such testimony." Longmire v. Smith, 26 Wash. 439, 67 Pac. Rep. 246, 58 L. R. A. 308.

As the words "inch of water" have not acquired any fixed technical meaning, which must control when used in a grant, evidence of the circumstances surrounding the making of the grant must be considered. Jackson M. Co. v. Chandos, 82 Wis. 437, 52 N. W. Rep. 759.

A decree that a party is entitled to "150 inches, statutory measurement," where it nowhere appears what statutory measurement is referred to, is void. *In re* Huntley, 85 Fed. Rep. 889, 29 C. C. A. 469.

See, also, Janesville Cotton Mills v. Ford, 82 Wis. 416, 52 N. W. Rep. 764; Collins v. Gray, 3 Cal. App. 723, 86 Pac. Rep. 983; Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

[4] "It was admitted at the argument, that these latter terms have no fixed meaning, and that an inch of water according to 'miner's measurement' in one locality is sometimes a very different quantity from an inch according to 'miner's measurement'

originated, the term miner's inch is more or less indefinite in different localities of the State, for the reason that all do not use the same head above the center of the aperture.[5] It also varies in the different States according to the different heads either where it is used according to the custom of some locality or is prescribed by the statutes of the respective States.

From the above, as near as we can come to a general definition of the "miner's inch" as the unit of rate of discharge of water as used in the Western States, it is such an amount of water as will flow through an orifice one inch square in a vertical position and under a standard head fixed either by custom or law, and in the computation of which each square inch of the opening represents a miner's inch.[6] It will be noticed that this will not give the quantity of water in any recognized standard and only in miner's inches. The quantity of water in gallons or cubic feet will have to be determined by other measurements discussed in the following sections.[7] Then, again, the quantity will vary according to the standard head prescribed, which varies greatly in different localities, and also in accordance with the statutes of the different States still adhering to this unit of measurement.[8]

**§ 890. Measurement of water—The miner's inch as prescribed by the statutes.**—As we said in the previous section, the quantity of water measured by the miner's inch varies with the head of water prescribed. The "head of water," as used in this connection, is the

in another locality." Dougherty v. Haggin, 56 Cal. 522, 15 Morr. Min. Rep. 211; see, also, *Id.*, 61 Cal. 305.

5 See Kent's Mechanical Engineer's Pocketbook, p. 18.

Where it was found that the customary flow for the purpose of irrigation was 40 inches of water, the finding was not fatally defective for failure to specify the particular standard of measurement, since the finding would be construed according to the customary measurement of the locality. Collins v. Gray, 3 Cal. App. 723, 86 Pac. Rep. 983.

8 See Sec. 890.

For the unit of measurement of the different States, see Part XIV.

pressure of water as it flows through the orifice or opening above the top of such opening. This head varies from three inches to nine inches.[1] In the different States, a different standard of head is prescribed for the miner's inch; and, as a different quantity of water will flow through the same orifice with a greater head than with a smaller one, it must necessarily follow that, as to the quantity of water, there is a variation in accordance with the head prescribed by the respective statutes.

In California the statute originally prescribed that the miner's inch should be measured under a four-inch pressure.[2] However, by the Act of 1901,[3] a different standard of head was adopted. That Act provides that the standard miner's inch shall be equivalent or equal to one and one-half cubic feet of water per minute measured through any aperture or orifice, and repealed all Acts or parts of Acts inconsistent therewith. By computation the head of water must be under a six-inch pressure.[4]

In Colorado the inch is defined by statute as follows: "Every inch shall be considered equal to an inch square orifice under a five-inch pressure, and a five-inch pressure shall be from the top of the orifice of the box put into the banks of the ditch, to the surface of the water."[5]

In Idaho the statute provides for the standard of a four-inch head,[6] although the duty of water is fixed at not more than one cubic foot per second for each fifty acres of land irrigated.[7]

In Oregon, the Court holds that, where the record is silent as

to the quantity of water understood by the word "inch," it will be presumed that it is to be measured under a six-inch pressure.[8] And the term "inch," whenever referred to, is estimated on the basis of 40 inches to one "second foot."[9]

In many States, as we shall see in the following section, a new and better standard of measurement has been adopted, that of the "second foot" or "acre foot."[10] In these States, however, many rights had been acquired under the old standard of the miner's inch, before the statutes had been adopted. An equivalent was adopted in many of these States for the miner's inch in fractions of the second foot, or the reverse, a number of miner's inches were specified which should equal one second foot. As examples of the first, the North Dakota,[11] South Dakota,[12] and New Mexico[13] statutes declare that the miner's inch shall equal one-fiftieth of a second foot. As an example of the second foot, the statutes of Nebraska declare fifty miner's inches one second foot.[14] By the statutes of Arizona and Montana 100 miner's inches are declared to equal two and one-half cubic feet per second.[15] This is equal to forty inches to the cubic foot. The same equivalent is adopted by the California statute of 1901,[16] and also by the decisions of the Court in Oregon.[17] And in Colorado thirty-eight and four-tenths inches are declared to equal one second foot.

**§ 891. Measurement of water—Miner's inch not a safe or accurate standard.**—It will be noticed from the last section that the

ratio between the miner's inch and the second foot is not always the same. This is due largely to the different standards of head adopted in the various jurisdictions, the difference in the calculations, and the difference as to the understanding as to just what a miner's inch consists of. In the calculations even under the statutory definitions of a miner's inch, the amount of water can be varied greatly and still keep within the statute. In these definitions the question of velocity is not mentioned. Again, it is seldom specified as to the thickness of the plank in which the orifice is cut. An orifice of thin edges will discharge a greater quantity of water than one with thick edges. Then, the roughness or smoothness of approach is not considered. Then, again, the difference in the size of the orifice is not considered. A square orifice with sides two inches each, and therefore having an area of four square inches, will discharge more than four times the amount of water of an orifice one inch square or one-fourth its size, and that, too, with the same pressure of head. None of these subjects are mentioned in the statutes of the various States in defining the miner's inch. Yet all of these and more subjects, which we need not mention here, must be taken into consideration if we are to determine the exact quantity of water flowing in what is called the miner's inch.[1]

As shown in the last two sections, the miner's inch or the inch is such a variable quantity and has so many meanings that, in many States, it has been abolished as the standard for the measurement of running water, and the second foot or the acre foot adopted instead.[2] As was said in a recent Oregon case, when speaking of the term "inch": "This designation, however, is not sufficiently definite to be a safe guide at all times in ascertaining when the rights of a person awarded a given number of inches under six-inch pressure, etc., are being invaded."[3] And, in adopting an equivalent for the miner's inch, the Court said: "It is evident that the only reliable method by which any certain number of inches of water, when awarded under this method of measurement, can always be determined, is on the basis of what is termed by engineers as 'second feet,' or quantity of water flowing past a

certain point in a given space of time." And the Court adopted the ratio recognized by the authorities that one inch of water under six-inch pressure equals one-fortieth of a second foot. But the question arises, instead of adopting an equivalent to the miner's inch expressed in the fraction of the second foot, why not adopt the second foot itself as the standard of measurement? The adoption of an equivalent of the miner's inch in the fraction of the second foot is but accomplishing the same end in a very roundabout manner, and one that still further complicates the subject.

The confusion in which a trial court may find itself in endeavoring to use these two standards of measurement is well illustrated in a late Oregon case:[4] "To show the quantity in miner's inches there should have been either evidence as to a measurement according to some prescribed method, or evidence of facts upon which a definite calculation could be made. Without evidence from which the quantity of water diverted could be ascertained the trial court was without evidence upon which it could base any conclusion as to the number of miner's inches which the Guichards were entitled to take on Logan's land, or could make any adjudication whatever of the extent of their rights. In the absence of a finding of the actual diversion of some definite quantity of water, sufficiently supported by evidence, the plea of prescriptive right to take water above their boundary must necessarily fail." In construing a contract where the miner's inch was provided for, but the pressure was not indicated, the Washington Court, in a recent case, said:[5] "The contract in this case does not define the pressure. The term 'miner's inch,' as used therein, is, no doubt, ambiguous. In such cases the rule is that oral evidence may be received to explain what the parties meant by the use of such terms. Such evidence was introduced in this case, and is clearly to the effect that at the time the contract was made and in that locality, it was commonly understood that the term 'miner's inch,' as applied to the measurement of water, meant a quantity of water which will flow through an orifice one inch square under a four-inch pressure; that a four-inch pressure means that the head of water stands four inches above the top of the orifice. There was no dispute whatever upon this defini-

tion. Some of the witnesses stated: 'A miner's inch of water . . . is a body of water . . . taken . . . through an opening an inch square under a four-inch pressure, or six in that particular locality. Some understand six and some four.' But no witness put the pressure less than four inches." It was also held by the Court that the contract would be enforced in an action for specific performance for the miner's inch of water under a four-inch pressure.

§ 892. **Measurement of water—The second foot—Of what it consists.**—Contrary to the indefinite quantity of water as measured by the miner's inch, and discussed in our previous sections,[1] the unit or the "second foot" is a definite and exact method of measuring the volume of running water. The basis of this unit is the cubic foot of water, which consists of the quantity of water contained in a solid cube one foot in dimensions, containing 7.4805 gallons and weighing at 50 degrees Fahrenheit 62.408 pounds. The cubic foot per second, or the second foot as it is more commonly called, is the exact quantity of water contained in the cubic foot passing a certain given point in one second of time. Knowing the number of cubic feet passing a given point in a given period of time, it is a simple matter of computation to determine the exact volume or quantity of water which passed during that period either in second feet, in gallons, in acre feet, or in any other unit of measurement.[2] The volume of the flow is, of course, the number of cubic feet passing the given point during one second of time.

The more modern irrigation or water codes recently adopted in many of the States also provide to the effect that "The standard unit of measurement of the flow of water shall be the discharge of one cubic foot per second of time, which shall be known as a second foot; and the standard unit of measurement of the volume of water shall be the acre foot, being the amount of water upon an acre covered one foot deep, equivalent to 43,560 cubic feet."[3]

§ 893. **Measurement of water—The second foot—Its use as a unit of flow.**—What is needed under the law of appropriation for the measurement of the flow of running water is some standard or

1 See Secs. 889-891.

2 For acre-feet, see Sec. 894.

3 Compiled Laws of Utah, 1907, Sec. 1288x19.

unit of measurement which will be uniform in all of the States, and from which there may be calculated the volume or quantity of the running water and approximately the correct results obtained under all conditions. The best standard or unit of measurement now known to science, in terms of which the flow of water running by a given point in a definite period of time may be given, is what is called the "second-foot" or the flow of one cubic foot of water by a given point in every second of time.

The second-foot is a definite and convenient unit of flow and has the double advantage of showing precisely what is meant and is further well adapted to the measurement of large as well as small volumes of flowing water. "It is the most satisfactory unit which can be employed in dividing rivers or in measurements where the flow is continuous."[1] Where the weir method is used for the measurement, with the standard tables which are always available,[2] it is as easily understood by the average farmer as is the miner's inch, and has the further advantage of being much more accurate and is the same under all conditions. For this reason it has been adopted by legislative enactment by the majority of the States of the arid and semi-arid West as the legal unit in the gauging and division of rivers, in measuring the discharge of ditches and canals, in defining the amounts of appropriations from the natural streams, and in fixing the volume in water right contracts between canal companies and the consumers obtaining their water from them. It is also the most common unit used in fixing the duty of water by the various statutes,[3] and also by the Government Reclamation Service, although in some cases the acre-foot is used for this purpose.[4] Even in those States which have not adopted the second-foot as the legal unit, equivalents to the miner's inch expressed in the fraction of the second-foot, or the reverse of the proposition, have been adopted either by statute or by Court decisions.[5]

5 See Sec. 891.

"It is evident that the only reliable method by which any certain number of inches of water, when awarded under this method of measurement, can always be determined, is on the basis of what is termed by

**§ 894. Measurement of water—The acre foot—Of what it consists and its adoption as a unit of quantity.**—There is another unit employed in the measurement of running water, which is also based upon the cubic foot of water,[1] which is as definite and accurate as the second-foot, and which, as we have seen, has been generally adopted as the unit of flow based on time. This is the acre-foot, which we may call the unit of quantity. This is a definite quantity of water, equal to one foot in depth and 43,560 feet square, or the amount of water which will cover one acre one foot in depth, and containing 325,851 gallons of water. The computation for this amount of water is generally made by the second-foot.[2] One second-foot of water flowing continually for twenty-four hours will amount to 86,400 cubic feet, or nearly two-acre-feet. It is a convenient and accurate unit for measuring the capacity of reservoirs, and for selling stored water. Also it is adopted by the statutes of some of the States as the unit for fixing the duty of water.[3] This unit has also been adopted by the Reclamation Service in certain cases.[4] Wherever the acre-foot has been adopted it has proven satisfactory to irrigators, and also to the canal companies, and has generally resulted in the economical use of the water.

3 In Oklahoma, the second-foot and the acre foot are declared to be the units of time and flow respectively. Oklahoma Laws, 1905, p. 274, Chap. 21, Sec. 27.

In New Mexico, the second-foot and the acre-foot are declared to be the units for time and volume respectively. Laws New Mexico, 1905, p. 270, Chap. 102, Sec. 3.

In North Dakota the second-foot and the acre-foot are declared to be the standards of measurement for time and volume respectively. Stat. North Dakota. See Part XIV.

In Utah the standard unit of flow is the second-foot; of volume, the acre-foot. Comp. Laws of Utah, 1907, Sec. 1288x19.

4 See annual reports of Reclamation Service, Nos. 1-7.

flows by a given point in one second of time, or how it may be determined that a certain number of acre feet have been delivered to the irrigator during a season, are questions more within the province of the engineers than within that of the law book writer. We will, however, in most general terms, describe some of the methods and devices used in the measurement of running water, without going into any great details as to how results are obtained, and taking it for granted that the standard formulas and the tables, especially as related to the weir measurements, are approximately correct.

There are many devices used to assist in the measurement of running water, and foremost among these is the weir. The word weir may be used to describe any structure used to determine the volume of flow of water from measurements on a crest or sill of known length and form, and where the water has a considerable fall. The weir as applied to stream measurements is a special adaptation of the mill dam, to which the term weir, meaning a hindrance or obstruction, has been applied from early times. The French term "nappe," suggested by the curved surface of a cloth hanging over the edge of a table, is used to designate the overfalling sheet of water.

The theory of weir measurements is based upon the knowledge of a definite relation between the length and depth of the overflow and the quantity of the water, which has been scientifically determined by numerous experiments from the time of those made by Torricelli in 1643, down to the present time. In fact it is the theorem of Torricelli which forms the basis of this method of the measurement of running water and renders the weir, when properly constructed and with the tables of computation at hand, a comparatively simple, practical, and accurate method. This theorem of Torricelli is as follows: *"The velocity of a fluid passing through an orifice in the side of a reservoir is the same as that which would be acquired by a heavy body falling freely through the vertical height measured from the surface of the fluid in the reservoir to the center of the orifice."* The truth of this proposition was confirmed by the experiments of Mariotte, published in 1685. It can also be demonstrated from the law of dynamics and the principles of energy.[1]

1 See Wood, Elementary Mechanics, pp. 167, 291.

See, also, Weir Experiments, coefficients and formulas, by Horton, 1907, Water-Supply and Irr. Paper No. 200, pp. 10, 11.

Up to the present time the use of weirs for the measurement of running water has been confined to the smaller streams, owing to the fact that in the larger rivers and streams it is difficult to secure the proper conditions. But upon the smaller streams in the arid and semi-arid West the weir method of measurement is in common practice and gives universal satisfaction not only to engineers, but also to canal companies and the consumers. It is also a very common method of dividing the volume of flow of many streams in the West among the various ditches and canals entitled to the water.

There is one condition, however, even in the smaller streams, where the use of the weir has not always proven satisfactory, and that is when the streams are laden with heavy silt, and in these streams other devices for the measurement of the water are usually used.[2]

**§ 896. Devices for measuring water—Different kinds of weirs used—The Cippoletti weir.**—There are now two classes of weirs in general use throughout the West. First, "suppressed weirs," or weirs without end contractions, and whose channels of approach have a width identical with the length of the crest of the weir. Under this class is the rectangular weir, which is often the most convenient type for measuring the volume of large canals. Where the velocity of approach is not excessive and the grade of the canal will warrant it, this kind of weir is often installed in a flume or other structure. Often the section of the canal can not be reduced in width, and when this is the case, this kind of weir is the only one which can be readily installed. It is not considered as accurate as some of the weirs which we shall describe, but where it is properly set and the computations carefully made, approximately accurate results can be obtained.[1]

The weirs from which the most accurate results may be obtained are the second class, under our description, and are called the "con-

[2] For measurement by the flume method, see Sec. 897.

For measurement by the current meter, see Sec. 898.

[1] For description of these weirs, see Weir Experiments, co-efficients and formulas, by Horton, 1907, Water-Supply and Irr. Papers, No. 200, U. S. Geological Survey.

For tables for discharges in cubic feet per second of rectangular weirs from one to ten feet long, without end contractions, see Experiment Stations Bulletin No. 86, U. S. Dept. of Agriculture, pp. 55-66.

tracted weirs," or weirs whose crest have a length of less than the width of the channel of approach. In other words, the ends of these weirs are contracted. These weirs are thin edged and sharp crested, over which the "nappe" or overfalling sheet of water[2] touches only the smooth, sharp, up-stream corner or edge of the crest. The contractions may be of different shapes, but the most common type of this class of weirs is the famous trapezoidal weir of Cippoletti, an Italian engineer.[3] In the Cippoletti weir the actual length of the crest is the effective length, and no corrections are applied for end contractions as is the case of the rectangular weir, and the only corrections to be made when this weir is properly installed are for the velocity of approach. In this type of weir the sides have a slope of one-fourth horizontal to one vertical, and the slope automatically allows for the end contractions by increasing the discharge area with each corresponding increase in depth of the water.[4]

The Cippoletti weir is considered the most accurate and simple device known to science for the measuring of running water, where the conditions are such that it may be properly installed, and the streams are not too large and not too heavily laden with sediment. The fact that the only correction in the computation to be made when the weir is properly installed is for the velocity of approach greatly adds to its simplicity. Having once learned the depth flowing over the crest of the weir to which he is entitled, the irrigator can tell at a glance whether or not he is receiving the proper amount of water, and that, too, without any computation upon his part. But if he desires to make further computations, the weir tables for this purpose are readily had. Then by knowing the length of the crest of the weir and the depth of water flowing over the same he can readily ascertain the cubic feet of water flowing in his ditch down to the fraction of ten-thousandths of a cubic foot. As for the accuracy of the weir tables, it is not for the average irrigator or for us

2 See for "nappe," Sec. 895.

3 See Sec. 146.

4 For the description and formula for the Cippoletti weirs, see Weir Experiments, co-efficients and formulas, by Horton, *supra*, pp. 47-49.

Tables for the discharge in cubic feet per second may be secured in State engineer's reports, and from engineering works. Also see, for tables, Experiment Stations Bulletin No. 86, U. S. Dept. of Agriculture, pp. 49-54; also, for regulations of the Department of Agriculture for installing Cippoletti weirs, see pp. 29, 30.

to question or to compute, and this feature must be left to the engineers. It is sufficient for our purpose that they are generally considered accurate and have been adopted as the standard tables by the best engineers.

The Cippoletti weir is adopted by the United States as the standard device for measuring the flow of the smaller streams. It is also adopted by many of the State engineers for the same purpose.

§ 897. **Devices for measuring water—The flume.**—Some of the streams, especially in the southwestern portion of the country, carry a large percentage of silt or sediment. Where this is the case the weir can not be used to advantage for the reason that the sediment falling to the bottom fills the channel of approach oftentimes as high as the crest of the weir. Some of the canal companies which employ weirs operate in connection therewith a sluicing device which removes the accumulated sediment when occasion requires, which is at times as often as once a day. The objection to this is that the conditions are never stable, and it is impossible to tell for what length of time the weir tables agree with the actual discharge.

In cases where there is considerable sediment running in the stream, or the stream is of considerable size, the flume is most commonly used as the device for the measurement of the running water. The measuring flume, according to the regulations of the Agricultural Department, should be constructed with a bottom horizontal in both directions, with vertical sides. The length must be in no case less than twelve feet nor less than twice the width of the ditch or canal, and the width must be equal to the width of the ditch on the bottom. The upstream should have a submerged apron, extending two feet below the bottom, to prevent leakage. There are other conditions prescribed which are unnecessary to mention here. The principal difference between this kind of a flume and the weir is that there is no crest for the water to run over, and behind which sediment may lodge.[1]

The most serious objection to the use of the flume is that it requires an engineer to set it properly and to prepare the rating tables, on account of the constantly varying conditions as to the size, depth of water, and the velocity of approach. In determining

[1] For accurate description of flume and directions for setting, see Experiment Stations Bulletin No. 86, U. S. Dept. of Agriculture, pp. 30, 31.

the velocity of approach, a current meter is required, and this requires more skill to operate than is possessed by the average irrigator. There are no general rating tables which will give the volume in flow in cubic feet for all flume measurements, and a table has to be prepared for each case. However, with the flume properly constructed and set, and the table prepared by some competent engineer, the irrigator will have no difficulty in determining the amount of water flowing through by measuring its depth and making his computation in accordance with the table.[2]

§ 898. **Other devices for measuring water.**—There are other devices used in determining the volume of the flow of running water which we will not mention at all, and for which the standard works upon the subject of hydraulics and engineering are referred to.[1] There is one, however, which we will hastily mention, and that is the current meter. This is a mechanical device for measuring the velocity of a stream at all depths and at all parts of the stream, thereby acquiring a knowledge of the mean velocity from which and the size and depth of the stream the quantity of water which it discharges can be computed. It requires an engineer skilled in the use of a current meter to obtain satisfactory results. It is especially useful in the preparation of rating tables where the flume method of measurement is used.[2] The recent improvement in these instruments, by which their convenience and accuracy have both been increased, has made it a comparatively simple matter to prepare these rating tables of discharge in flumes or streams in which the flow is reasonably uniform. Under proper conditions and with the best instruments handled by a competent engineer results can be obtained of an accuracy within one per cent of the correct amount of water. The water meter is used in preliminary investigation, and where flumes or weirs have not been constructed, and in the measurement of large rivers and canals.

§ 899. **The velocity of approach—Formulas for computing.**—The methods of measuring and computing the volume and quantity

2 "Tables of this character have no value except with reference to the flume to which they relate." Experiment Stations Bulletin No. 86, U. S. Dept. of Agriculture, p. 70.

1 See books referred to under Secs. 896, 897, 899.

2 For flume method, see Sec. 897.

of a flow of running water would be comparatively an easy matter, if the velocity of all streams, or throughout all portions of the same stream, was the same. But as the velocity of different streams is always different, and is also continually changing in the same stream, the measurement and computation of the mean velocity of flow of the different natural streams and also of that in ditches and canals at different times, forms one of the most complex subjects connected with the science of the measurement of running water. This difference in velocity is due to the various differing conditions in the streams where the water is measured. Even in the same stream, where works have been constructed so as to bring about the most perfect conditions for the measurement of the velocity, where there are uniform grade, depth, and cross-section, the velocity is greater in the center than at the sides; it is also greater on the surface than at any depth below the surface, and is the least at the bottom.[1] This is due to the friction of the water on the sides and the bottom, and the more and greater the obstructions in the stream the greater will be the friction or retarding effect upon the velocity of the water. In small artificial channels of uniform cross-section and slope, these obstructions may be said to consist entirely of the comparatively minute roughness of the material of which the bed and sides of the channel may consist. But in rivers and earth canals, even where the general direction, slope, and cross-section are tolerably uniform, there are many considerable irregularities in the sides and bottom; and these exert a greater retarding effect upon the mean velocity than the mere roughness of material of the bed and sides. Much greater, then, are the variations in velocity where the current is obstructed by rocks, brush, sticks of wood, or other obstructions, as the water is retarded and cross eddies are formed. These obstructions in the channel of approach to the point where the measurement is taken is called the "coefficient of roughness," and corrections must always be made on account thereof in making the computations, in order to obtain anything like accurate results. With these corrections made, after

[1] For distribution of velocity in channel of approach, see Weir Experiments, coefficients, and formulas, by Horton, 1907, Water-Supply and Irr. Paper No. 200, U. S. Geological Survey, pp. 16-20.

See Ency. Britannica, Vol. 12, Sub. Hydromechanics; Trautwine's Engineers' Pocketbook, pp. 271-273; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322.

the fall in the channel of approach leading to the measuring device has been determined, the mean velocity of the stream may then be ascertained. But in these measurements and the computations for the same, it must always be considered that the fall in the channel of approach leading to the point of measurement is always greater than that required to produce the existing velocity, because some fall must be utilized in overcoming friction. There are a number of formulas based upon experiments used to determine the velocity of approach,[2] and for making the corrections for the "coefficient of roughness" in connection therewith. We will mention but one and that is what is known as "Kutter's Formula." This formula was based upon a vast number of experiments in which the coefficient of roughness is represented by the values of N which were obtained by averaging a large number of experiments made under very different circumstances. They therefore embrace all the disturbing effects to the velocity of the water arising from obstructions existing upon the bottom and sides of the channel of approach experimented upon. This formula is considered by engineers and scientists generally to be the "latest approved and most trustworthy test for ascertaining the carrying capacity of streams and canals."[3]

§ 900. **Evidence of the measurement of water before the courts.**—As will be seen from a study of the subject, the question of the measurement of water is a most complex one, and one which, as far as the practical side is concerned, is strictly within the special domain of the engineer and the scientist. The average lawyer, and, indeed, the average judge upon the bench, have to depend almost entirely upon the expert testimony of the engineer and scientist in order to acquire anywhere near a correct knowledge of the facts in any case where the question of the measurement of running water is involved. Streams, ditches, and canals have to be measured, computations have to be made upon these measurements, and in making

[2] For some of these formulas, see Weir Experiments, coefficients, and formulas, Horton, 1907, pp. 14-20, Water-Supply and Irr. Paper No. 200, U. S. Geological Survey.

[3] Prof. Carpenter's testimony in Water Supply etc. Co. v. Larimer etc. Co., *supra.*

For Kutter's formula, see Trautwine, *supra*, pp. 271, 272.

See, also, Flow of Water, translated from Ganguillet and Kutter, by Rudolph Hering and John C. Trautwine, 1889.

these computations the recognized standard formulas have to be used.[1] Experiments upon this subject are still being made, and what, in one decade was considered a practically accurate formula, has been made to give way to one considered still more accurate. Hence, it follows that the question has not become what is known as an exact science, although it is exact enough for all practical purposes for the measurement of the streams and the division of their waters among the users entitled thereto. But to appreciate what the courts have to meet in this respect is well illustrated in a case which arose in Colorado, where this exact point was in question.[2] In that case on the 11th day of April, 1882, a decree was duly entered in the District Court of Larimer County, Colorado, adjudicating the priorities and the quantity of water to which each was entitled, of certain ditches and reservoirs in controversy, and all taking their water from a common source of supply, the Cache la Poudre River. Later, another action was brought for the express object of readjudicating the rights awarded by the Court and especially as to those awarded to a certain ditch of the appellees, upon the ground that under the latest approved formula for ascertaining the carrying capacity of water in ditches and canals, the computation, as originally made and awarded by the Court in the first decree in 1882 was erroneous, and that the specified quantity should be much less. From the testimony of that eminent scholar upon this subject, Professor L. G. Carpenter, it appeared that the latest approved and most trustworthy test for ascertaining the carrying capacity of streams and canals is by the formula of Ganguillet and Kutter, and by their formula a ditch of the theoretical dimensions of the one in question would not carry more than about 560 cubic feet of water per second of time, while under the early decree the ditch was awarded 720 cubic feet of water per second of time. Judgment was rendered for the defendant, and the plaintiff appealed to the Supreme Court. The Supreme Court affirmed the judgment, holding that the decree of 1882 was *res judicata,* and Mr. Justice Campbell, in delivering the opinion of the Court, said: "It is in evidence, however, that, in accordance with the formula that was in general use in this State at the time the decrees were rendered, the computation, as determined by the decree, was substantially correct;

1 For formulas, see Sec. 899.

2 See Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322.

and it further appears that no two computations are ever the same, even with the same formula. Hydraulics is said to be one of the most complex sciences. . . . If we should now correct the decree of 1882 for the reason urged, then, at the end of the next decade there may be evolved a new method of determining the carrying capacity of ditches giving even more accurate results than under the Kutter formula, and, in an action then brought to correct the mistake made by us now applying the Kutter test, the Court must set aside our decree and enter a new one, and so there would be no end to the litigation, provided new and more accurate tests are discovered."

In general it may be said that only expert testimony can be relied upon in the measurement of water, or at least the testimony of those who are familiar with the measuring of water under certain definite and specific conditions.[3]

§ 901. **Scientific investigations tending toward economical use.**—Since the first edition of this work was published in 1893, great progress has been made in the way of scientific investigations relative to stream measurements to ascertain the exact water supply of many sections of the arid and semi-arid West, and especially in those sections of the country which depend largely for their future development upon irrigation. These investigations have not been limited to the water supply but have also covered the subject as to how the available supply may be most economically used and still obtain the best results. These investigations have been carried on by two departments of the Government, the Department of the Interior and the Department of Agriculture. The results of the Interior Department have been published from time to time for distribution in what are known as the "Water Supply and Irrigation Papers." The results of the investigations of the Department of Agriculture have been published in bulletins and are also for distribution. In these papers or bulletins much valuable information is being spread throughout the country for the use of practical irrigators, engineers, and the courts. And, in addition to the investigations by the General Government, every State and Territory in the arid and semi-arid West has carried on investigations upon its own

3 Farmers' etc. Co. v. Riverside Irr. 481; Whited v. Cavin, 55 Ore. 98, 105 Dis., 16 Idaho 525, 102 Pac. Rep. Pac. Rep. 396.

behalf. Usually these investigations and experiments have been carried on by the agricultural colleges or by the State engineer's department of the respective States or Territories. And besides the subjects mentioned, these investigations have covered every question which has arisen relative to the scientific features of the subject of irrigation and all other uses of water. And, owing to the great scarcity of water in this Western country, no feature of the subject has been investigated more carefully, or with better results, than that phase of the question as to how to make a given quantity of water do the greatest service, and, at the same time to give the best results. The technical term given to this is the "duty of water," the investigations concerning which cover practically the whole field, especially as to the subject of irrigation.

Among the special subjects investigated by the Department of Agriculture of the Government and tending to solve the problem as to the proper duty of water under all conditions, are the following:

The quantity of water required by different crops;

The length of the irrigation period in different sections of the arid and semi-arid regions of the West;

The agreement or divergence between the quantity of water used in irrigation in the different months of the growing season and the rise and fall of streams during those months;

The benefits of reservoirs and the percentage of the total discharge of streams which must be stored in order to utilize the whole supply;

Losses in canals from seepage and evaporation;

Influence of different forms of water-right contracts in promoting economy or waste;

The returns from the use in irrigation of an acre foot of water.[1]

In the following sections we will discuss what effect these investigations have had upon the legal side of the question as to the economical use of water.

**§ 902. Duty of Water—Definition.**—In many portions of the arid and semi-arid West, either the General Government or the respective States, by means of the investigations referred

1 See Experiment Stations Bulletin No. 86, U. S. Dept. of Agriculture, p. 23.

to in our last section,[1] have determined, by careful scientific measurements covering a number of years, the quantity of water flowing at all seasons of the year in the different rivers, creeks, and other sources, which can be drawn upon to supply water for irrigation. Having determined the quantity of water available for irrigation, we would naturally be at a loss as to the number of acres such a quantity would irrigate when economically applied to the land unless we first had some idea of the quantity required to irrigate one acre. This ratio between the acreage to be irrigated and the quantity of water required to irrigate it is called the "duty of water."

Therefore, taking into consideration the economical use of water, the term "duty of water" may be defined, as far as the legal side of the question is concerned, as a definite quantity of water essential to successfully irrigate a definite tract of land, of a certain number of acres. The higher the duty, the larger the tract of land a definite amount of water will irrigate; the lower the duty the less land the same amount of water will irrigate. Or, to state the proposition in other language, the higher the duty, the less quantity of water necessary to successfully irrigate a definite tract of land of a certain number of acres; the lower the duty, the more water required for the same tract of land.[2] So, as it may be seen, the variable quantity may be either land or water. And, furthermore, the authorities, speaking of the subject sometimes from one basis and then from the other, at times, make it somewhat confusing.

**§ 903. Duty of water—Too high, should not be required at expense of success.**—In our definition of the duty of water,[1] it

1 See Sec. 901.

2 The "duty of water" is the quantity essential to the irrigation of any given tract of land. Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

"What evidence was given from actual tests shows a less quantity of water necessary per acre, and consequently a higher duty for the water." Farmers' etc. Co. v. Riverside Irr. Co., 16 Idaho 525, 102 Pac. Rep. 481.

As defined by Mr. Herbert M. Wilson, in his work on Irrigation in India, Water-Supply and Irrigation Paper No. 87, 2d Ed., 1903, p. 67, "The 'duty of water' is an expression which is used in India, as in the United States, to indicate the area of land which a fixed unit of water will irrigate, and, as in America, the unit adopted is one cubic foot per second of flow, or, as we express it, one 'second-foot.'"

1 See Sec. 902.

will be noticed that we used the expression "the quantity essential to successfully irrigate a definite tract of land." We mean by this that it is such a quantity of water necessary, when economically conducted and applied to the land without unnecessary loss, as will result in the successful growing of the crops on the land. The economical use of the water might be carried to the extent that no crops could be raised, or at least very poor crops. This is illustrated in the many instances where there is not sufficient water for the proper irrigation of the land. But where an appropriator has a prior right to ample water to irrigate properly a certain tract of land, the successful raising of the crops thereon should not be made to give way by an award of a certain quantity of water which would require too great economy in its use. The object of these rules is to suppress, as far as possible, the waste of water,[2] and an award of this nature would be going to the other extreme and would require an economy in the use of the water at the expense of successful results. The water supply of the country should be conserved to the greatest possible extent consistent with its successful use for all beneficial purposes for which it may be appropriated. Further than this we should not go.

**§ 904. Duty of water—How essential duty is determined.**—In determining the duty of water, or the quantity essential to successfully irrigate a definite tract of land, many questions must be taken into consideration. Among these questions are the character of the soil, the climatic conditions, the location and altitude of the lands to be irrigated, the kind of crops to be raised, the time included in what is known as the "irrigation season," and the necessary manner of diverting the water from the source of supply, carrying it to the place of use and the final application to the land, as well as many other questions which constantly arise in connection with this subject. The "head" of water, or the quantity entering the intake of any canal or ditch, and the distance which the water has to be carried to the place of use, and the necessary loss in the carrying of the water, may also be considered, and also the question as to whether it is new land or land which has been irrigated for a number of years to which the water is to be applied.[1] Again, in determining

2 For the suppression of waste, see Secs. 911-916.

1 Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102

the duty of water, the fact as to whether or not the lands have been prepared and reduced to a reasonably good condition for their irrigation should be considered.[2] Water users should not be awarded an excessive quantity of water to compensate for and counterbalance their neglect or indolence in the preparation of their lands for the successful and economical application of the water.

From the above it can be readily seen that no hard and fast rule can be made as to the duty of water which will apply to all cases. Therefore, the proper duty of water can only be determined from all the facts surrounding each particular case. What may be the proper quantity of water for one tract, might not be the proper quantity to be awarded to another tract adjoining. In some of the States by statute the minimum duty of water is fixed for the lands of the whole State.[3]

The required duty necessary to the successful raising of crops differs greatly with the varying conditions. As was well said by Mr. A. S. Dawson, Chief Engineer in charge of the Canadian Pacific Railway Company's irrigation projects in the Province of Alberta:[4] "World-wide experience in the use of water on cultivated lands under any kind of crops during long periods of years, shows that the duty varies with, (1) the nature of the soil; (2) the age of the soil; (3) the kind of crop; (4) the weather conditions; (5) the slope and condition of the conveying channels of supply; (6) the distance the water is carried in the ditches and channels to the fields, and (7) the experience and skill employed in irrigation."

**§ 905. Duty of water—Power of Court to fix.**—Especially during the later years, the courts have been and are now being called upon to fix by decrees the duty of water for certain tracts of land. In cases brought for the adjudication of water rights on certain

4 In an address before the Western Canada Irrigation Association, held at Calgary, Alberta, August 8-10, 1911.

streams as between the appropriators of the water thereof, it is always within the power of, and indeed it is the duty of the Court, where it is not limited by some statute arbitrarily fixing the duty of water, to award by decree the duty of water or the quantity to each piece, as under the evidence in the case it shall be found to be entitled. In fixing the duty of water for a certain tract of land, such an amount per acre should be awarded, within the lawful claim of the prior appropriator, as is essential or necessary for the proper irrigation of the land on which the water is used, and upon which the duty is being fixed; which water, when economically applied without waste, will result in the successful growing of crops on the land. Further than this, as far as the rights of the prior appropriator are concerned, the courts should not and can not lawfully go, where the result would be in cutting down the quantity of water to which the prior appropriator is entitled and reasonably needs for his purpose and the awarding of a certain amount of his water to subsequent appropriators.[1]

But, upon the other hand, where the Court finds that the claim of the prior appropriator is for an excessive amount of water for the land upon which it is being used, or is about to be used, there is no question as to the power of the Court to cut down the claim in its award to the proper duty for the land, as the evidence shall disclose, and award the surplus to the subsequent appropriators in the order of their respective priorities. It is always possible as the result of recent scientific investigations and the modern methods of measuring the water, to determine the proper duty of water for any given tract of land, and excessive quantities of water should never be awarded by the Court, even if, prior to the adjudication, there had been an attempt to use all of the water claimed.[2] This rule was well illustrated by a recent decision by the Supreme Court

1 For the rights of the prior appropriators, see Secs. 776-782.

For the rights of subsequent appropriators, see Secs. 783-786.

For decrees, see Chaps. 78, 79, Secs. 1557-1564, 1577, 1578.

2 "This feature, however, is similar in principle to that of the farmer who at first may have needed but 100 inches of water and yet constructed ditches carrying three times that quantity, using it in a wasteful manner, and which right he still insists upon by reason of the ditch, when first constructed, being of sufficient capacity to carry the excessive supply. It is well settled that such a claim can not be successfully maintained."

of Oregon,[3] where the trial court awarded seventeen inches of water under a six-inch pressure per acre as necessary for the irrigation of certain lands upon the testimony of certain witnesses, and the Supreme Court, in reviewing the judgment, said: "A flow of seventeen inches therefore would cover an area equal to one acre to a depth of twenty-five and one-half feet each month, or 102 feet in depth (102 acre feet) during an irrigation season of four months. The absurdity of such a quantity, being essential to the proper irrigation of lands, is manifest."[4]

The reason of this rule is apparent when we come to consider the fact that an appropriator, even if prior in time to all others, does not acquire any title to the waters while flowing in the natural stream.[5] He only acquires the right to the use of a certain quantity, reasonably sufficient for his purpose within the extent of his appropriation.[6] When he has this amount his right is satisfied, even though he attempted to claim more than he needed. When he has made an excessive appropriation the Court should cut his claim down to the proper duty of water for the land irrigated. The wasteful methods of diversion, in conducting the water, and its application to the land, so common with the early settlers, can, under the light most favorable to their use, be deemed only a privilege permitted merely because at that time it could be exercised without substantial injury to the rights of others, for the reason that the others were not then there. No vested right to continue these wasteful methods was acquired by the prior appropriator. Neither was there any vested right acquired to the surplus water over and above the proper duty of the water for the land irrigated. The surplus or excessive amount claimed the courts have the power to award to the subsequent appropriators in the order of their

Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

See, also, Seaweard v. Pacific L. Co., 49 Ore. 157, 88 Pac. Rep. 963.

3 Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

4 See, also, Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535; Porter v. Pettingill, 57 Ore. 247, 110 Pac. Rep. 393; Gerber v. Nampa Irr. Dis., 16 Idaho 1, 100 Pac. Rep. 80; *Id.*, 19 Idaho 765, 116 Pac. Rep. 104; United States v. Conrad Investment Co., 156 Fed. Rep. 123; Nevada Ditch Co. v. Canyon etc. Co., 58 Ore. 517, 114 Pac. Rep. 86; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

5 See Secs. 772.

6 For quantity of water limited to the amount needed, see Sec. 877.

respective priorities.[7] This is also the case in those States which by statute fix the maximum duty of water for all lands within their respective jurisdictions. In these States the Court in the face of the statute can not award a lower duty than that fixed by statute. But, if the evidence warrants it, it may award a higher duty. By this means it is practically left to the Court to determine from all the evidence in the case the proper duty of water for any given tract of land involved in the suit, and to make its award by decree therefor.[8]

**§ 906. Duty of water—Minimum duty as fixed by statute.**—In a number of the States of the West the minimum duty of water, or the maximum quantity allowed per acre, is fixed by statute, and ranges from the low duty of one cubic foot of water per second, or one second-foot, as it is commonly called, for every fifty acres of land irrigated in the State of Idaho,[1] to the higher minimum duty of one second-foot for each eighty acres of land irrigated in the

7 "The wasteful methods so common with the early settlers, can, under the light most favorable to their system of use, be deemed only a privilege permitted merely because it could be exercised without substantial injury to any one; and no right to such method was acquired thereby." Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

"Whatever amount of water the defendant shows himself entitled to for the irrigation of the meadows or other lands as a prior right over the plaintiff, the judgment should be so decreed, but beyond this he can not go under any other pretext or claims for the natural condition of the stream. In this arid country, where the largest duty and the greatest use must be had from every inch of water in the interest of agriculture and home building, it will not do to say that a stream may be dammed so as to cause subirrigation of a few acres at a loss of enough water to surface irrigate ten times as much by proper application." Van Camp v. Emery, 13 Idaho 202, 89 Pac. Rep. 752.

See, also, Anderson v. Bassman, 140 Fed. Rep. 14; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; United States v. Conrad Invest. Co., 156 Fed. Rep. 123; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Abbott v. Reedy, 9 Idaho 577, 75 Pac. Rep. 764.

"It is the policy of the laws of this State, and it has been so declared from time to time by this Court, to require the highest and greatest possible duty from the waters of the State in the interest of agriculture and other useful and beneficial purposes." Farmers' Co-op. D. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481.

8 For the maximum duty as fixed by statute, see Sec. 906.

1 For Idaho Stat., see Part XIV, under Idaho.

For the measurement of water, see Secs. 888-900.

State of North Dakota.[2] In the State of Nevada a different basis of measurement is established by statute—that of the volume of the acre-foot instead of the measurement by flow of the cubic foot.[3] And in this State it is provided that the minimum duty may be three acre-feet per acre per year.[4] This is equivalent to about one second-foot for one hundred and sixty acres of land. Outside of the last-mentioned State it will be noticed that the minimum duty as prescribed by statute is very low, as compared with the actual duty of water in some localities. For example, the duty of water for the Greeley or Union Colony of Colorado, mentioned in a previous section, is one hundred and eighty acres of land irrigated for each second-foot of water. In Southern California, where water is very scarce, there is also a very much higher duty. In the Northwest Territories of Canada the minimum duty of water is fixed at one cubic foot of water per second, flowing continuously during the irrigating season, for each one hundred and fifty acres of land.[5] The Reclamation Service, under the Act of Congress of 1902, has established different duties of water, varying according to the soil, climate, and other physical features of the particular locality where the project is constructed or being constructed. Under the Minidoka project, in Idaho, the duty of water on an estimated average is four acre-feet per annum, measured at the point of diversion. For the Williston project, in North Dakota, it is fixed at two acre-feet per annum. For the North Platte project, in Nebraska and Wyoming, it is one and one-half second-feet per annum for each one hundred acres. For the Carlsbad project in New Mexico, it is three acre-feet per acre per annum. For the Cimarron project, in Oklahoma, it is two acre-feet per acre per annum. For the Belle Fourche project, in South Dakota, it is two acre-feet per acre per annum. For the Truckee-

2 For North Dakota Stat., see Part XIV, under North Dakota.

In Nebraska, New Mexico, Oklahoma, South Dakota, and Wyoming the minimum duty of water is fixed at one second-foot for each seventy acres of land irrigated. For the statutes of these States, see Part XIV.

3 For the measurement of water, see Secs. 888-900.

4 For the Nevada statutes, see Part XIV, under Nevada.

5 See, also, Irrigation in the Northwest Territories of Canada, 1902, published by authority of Hon. Clifford Sifton, Minister of the Interior, p. 30.

For Modern Irrigation in Canada, see Secs. 177-237.

Carson project, in Nevada, it is two and one-half acre-feet per annum. For the Strawberry Valley project, in Utah, it is one cubic foot per second at the head of the gate for every eighty acres. For the Yuma project, in California and Arizona, it is five and five-tenths acre-feet per annum for each acre. For the Uncompahgre Valley project, in Colorado, it is one cubic foot per second at the headgates for every eighty acres.[6]

It will be noticed that the duty established by the statutes of the various States is the minimum duty, or the largest amount of water which may be awarded for any given acreage. There is nothing in the statutes of any of these States which prevents the courts from awarding a higher duty, or making the same amount of water serve a larger acreage. In fact, where the conditions in any case warrant it, it is the tendency of the courts to do this, as, for instance in Idaho, where the minimum duty is but one second-foot for each fifty acres of land irrigated. In a very recent case the Court reaffirmed some of its previous decisions upon this point, and said: "It is the policy of the laws of this State, and it has been so declared from time to time by this Court, to require the highest and greatest possible duty from the waters of the State in the interest of agriculture and beneficial purposes."[7] As we view the matter, it is not only the right of the courts, but it is their duty, in all cases brought before them to adjudicate the water rights upon the streams to fix as high a duty as it is possible consistent with the successful use of the water. In many localities an increase of the water supply seems to be improbable, for apparently all the local sources have been developed. "A more economical use of the available supply is, then, the only way in which new orchards and new fields may be provided for without injury."[8]

[6] For the above and other duties established by the Reclamation Service, see 6th Annual Report, 1906-1907.

[7] Farmers' Co-op. D. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481.

Rep. 728; Seaweard v. Pacific L. Co., 49 Ore. 157, 88 Pac. Rep. 963; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; United States v. Conrad Invest. Co., 156 Fed. Rep. 123, 130; Anderson v. Bassman, 140 Fed. Rep. 14.

[8] R. H. Loughridge, in Distribution of Water in the Soil in Furrow Irrigation, U. S. Dept. of Agriculture, Experiment Stations Bulletin No. 203, 1908.

The legal duty in the Provinces of Alberta and Saskatchewan is fixed by the Irrigation Act as a continuous flow of one cubic foot per second of time for every one hundred and fifty acres of land, and for the period of fifty-three days between May 1 and September 30.[9] This, as will be noticed, is a much higher duty than is allowed by the statutes of any State in this country.

**§ 907. Duty of water—Relation to—Of natural losses in transit.**—In spite of the greatest precautions and the greatest care in the construction of the works to conduct the water, there is bound to be some loss of the water in transit between the point of diversion and the place of use. Water will evaporate; it will seep; and, at times, it will leak. These we will call the natural losses of the water in transit, and do not, except in the cases of leakages, constitute what is termed the wasting of water. As we have seen in a previous section, one of the subjects of investigation by the United States Department of Agriculture was the losses of canals from seepage and evaporation.[1] And from the beginning of the irrigation investigations of that department, many measurements of the losses from ditches and canals have been made in all sections of the arid and semi-arid West. The highest loss found was 64 per cent of the water entering the ditch in a single mile of ditch, while other canals having canals or irrigated land above them, show gains instead of loss. It is found that the average for the large canals is approximately one per cent per mile. And a commonly accepted estimate of the loss from large unlined canals is 30 per cent of the water taken in at the headgate, and from measurements given this seems to be a conservative estimate. It is probable that as much more is lost from the laterals and field ditches, so that it is well within the truth to say that not more than one-half of the water diverted by the average unlined earthen canals and ditches reaches the fields for which it is diverted.[2]

There are, however, some necessary losses in the carrying of water from the point of diversion to the place of use which can not be counted as the waste of water. As was said in a recent Colorado case:[3] "We might be justified in indulging in the presumption this seepage occurs for a long distance along the line of the canal, and that it is no exception to the general rule of large ditches, where seepage usually exists from their headgate along down their line until the ditch gradually winds its way from the river upon the level lands. All irrigation canals must of necessity seep more or less along this portion of their lines, and will so continue until prevented by other means than ordinary diligence in their construction, and we do not think the time has yet been reached in this State when the owners of such enterprises can be held to such a high degree of diligence in their construction as to be compelled to prevent them from seeping at all, or be subject to successive suits for any injury which it is not practicable to remedy, and which logic would mean to prevent the construction of a large number of ditches and reservoirs, and thus retard the development of our State, as the result of such a rule would mean in most cases that the costs or means to prevent the seepage would be far in excess of the value of the property so damaged."[4] As will be readily seen, some of these losses are enormous, and merge into the waste of water.[5]

Upon the other hand, this water is not all lost to use, upon the old adage of "What is one man's loss is another man's gain." Much of the water which escapes from the canals finds its way to the surface below in the form of springs in spots which were ordinarily dry. Irrigators have used these waters, and in many cases have secured an ample supply of water for their use without having to pay the canal company which furnishes it anything for operating expenses. In those cases the question of the permanency of these rights arises, should the canal company line its canal and thereby prevent the loss.[6] This question we have treated and will treat in other portions of this work. But in a number of the States there are statutes providing for the acquisition of permanent rights in what

is known as seepage and spring water.[7] Again, where the water does not come to the surface in springs, the water lost from canals usually finds its way back into the streams, where it may be reappropriated by the irrigators lower down. The investigations of the Government have been of the greatest value to the owners of the ditches and canals which have been measured, since they locate the losses and make it possible to improve the sections of the canal which lose the most. And the object of the investigations was that existing conditions as to the natural losses might be improved so that as large a percentage of the water as was possible might be utilized, and thus greater areas might be brought under cultivation from the same amount of water diverted from the streams.

§ 908. **Duty of water—Point where water must be measured.**—As we have seen, in many jurisdictions the minimum duty of water is fixed by law,[1] and where this is the case the question has arisen as to whether the quantity of water claimed under an appropriation is to be measured at the head of the canal or at the margin of the irrigated field where it is to be used. It can be readily seen that where, for example, the duty allowed by statute or awarded by decision of the Court is the continuous flow of water of one cubic foot per second for each eighty acres of land to be irrigated, or is three acre-feet for the irrigation season, that a person having eighty acres of land lying at some distance from the headgate will not, on account of the natural losses of water, mentioned in the last section,[2] receive at the place of use the full quantity of the water if that exact quantity of water was measured at the headgate. But in cases of the shortage of water, the natural tendency would be and from experience is that the appropriator will take such steps as possible to stop all leakage, and to prevent, as far as possible, the excessive seepage and evaporation. Upon the other hand, if the water is measured at the margin of the irrigated field, or even at the head of the lateral leading to it, the tendency would be and is that the irrigator becomes careless as to the condition of the ditch or canal, permitting excessive loss, so long as he gets the full quantity of water, according to the duty fixed therefor, at the place of use. This has been a puzzling question for

7 For these statutes, see Part XIV. 2 See Sec. 907.
1 See Sec. 906.

irrigators, those in charge of the administration of the irrigation laws, such as water commissioners, and for the courts, and it can by no means be called settled at the present time. Water commissioners insist that it is practically impossible to measure the quantity of water covered by each appropriation at the head of the user's lateral.[3] Assuming that this statement is correct, and it probably is, there is another method of compensating for the natural loss of the water, and that is by making due allowance at the headgate for the necessary seepage and evaporation. Now the question arises, Should this allowance be made?

In the State of Idaho, where there is a low minimum duty of water of one second-foot for each fifty acres of irrigated land, the Court holds that the water must be measured at the point where the water is diverted from the natural channel of the stream from which the water is taken.[4] This was upon the theory that every act on the part of the appropriator that tends to waste water is to be discouraged rather than encouraged. "The necessity of measuring to each claimant, at the point of diversion from the natural stream, the waters appropriated and used by him is apparent." This is also the rule adopted in that State by the Reclamation Service.[5]

The rule adopted in Idaho may be all right for that State, owing to the fact of the exceedingly low minimum duty of water prescribed by the statute of one second-foot for each fifty acres of land irrigated, but, as said by Mr. Mead, "In order to plan for the just distribution of the volume entering the headgate, the losses in transit must be provided for."[6] In Nebraska, where the higher duty of water is fixed by statute of one second-foot for each seventy acres, the attorney-general holds to the same rule, and that the place of measurement must be at the head of the ditch, since allowing this quantity at the point of use would deprive the owners of later rights of the quantities lost from the ditch rather than the owners of the poorly constructed ditch. In other words, it would be placing a premium on poor construction, at least, giving no in-

centive to good construction.[7] As a general rule, in the other States where the minimum duty of water is provided for by statute, no place is designated where the measurement of the water shall be made. Therefore, this question is left to the courts to determine. But unless the natural or necessary losses are provided for, the appropriator will not receive at the place of use the quantity of water to which he is entitled under his appropriation. The correct rule is to measure the water at the place where it is diverted from the stream. But the appropriator is entitled to have so much water diverted for his use as will yield at the place of use the quantity required and covered by his claim after the *necessary* loss by seepage and evaporation is allowed for. Any unnecessary loss either by seepage, evaporation, or leakage, on account of defective ditches, canals, or other works, may then be considered as wasted water, and treated accordingly. "The soundness of the doctrine is unquestioned."[8] As we view the question, no definite rule can apply generally to all cases, and it should be left to be determined from all the facts surrounding each particular case.

**§ 909. Rotation as a matter of economy.**—The question of rotation in the use of water between the consumers from the same stream or ditch as a matter of economy and enlarging the duty of water has, within the last few years, occupied the attention of irrigation experts and hydraulic engineers of this country, and more recently occupied the attention of the courts. This system has also been adopted in many communities as a matter of contract[1] between the consumers themselves or between consumers and ditch or canal companies, which contracts have invariably been upheld by the courts. The theory of rotation between users comes directly under the subject of suppression of waste and the question of

natural losses in transit, described in other sections of this chapter.[2] But it stands to reason that where a greater proportion of what are called natural losses in transit can be saved and the duty of a certain quantity of water can be enlarged with better results to the users by a mere change in the method of conducting the water that this method should be adopted and enforced by the courts, whether based upon contract, statute, custom, or without any of these, but upon a mere fact of a saving of the water and a suppression of waste.

The situation is better illustrated by an actual case in which the writer was engaged, involving the rights of all parties using the water from Big Cottonwood Creek, Salt Lake County, Utah. The particular feature of the case was that of a small ditch having the right to seven-tenths of a second-foot of continuous flow when the entire stream equaled one hundred and twenty cubic feet per second. This amount awarded the ditch was proportionately cut down during the dry season. This ditch supplied six small farms with water for irrigation. It was found from actual experience that where the seven-tenths of a second-foot was divided up and conducted by various small ditches to the various farms and used simultaneously by the respective owners that there was much more water lost in transit than was applied to the land. Therefore, the owners of these interests got together and pooled their rights and a basis of one hundred and ninety-two hours, or eight days, was fixed for the division of the water. Each owner than took the whole flow of the ditch for the exact proportion of time of one hundred and ninety-two hours as the area of his tract of land bore to the total acreage of all. By this means each owner had a sufficient flow to give his land a good wetting every eight days. Again, during the extreme dry season of the year, when the flow of the water in all the ditches taken from the stream was cut down proportionately, the owners of this particular ditch pooled all of their interests with the interests of another ditch having similar rights, and this enabled the owners under each ditch to give their land a good wetting once in about every two weeks. If this method had not been followed the greater portion of the water would have been lost in transit by seepage or evaporation, for the reason that the

2 For the suppression of waste, see Secs. 911-916. For the loss of water in transit, see Secs. 907, 908.

stream would have been so divided that it would have practically all soaked away before it reached the land which it was intended to benefit. The Court in this case upheld the right of rotation.[3]

As was said before, irrigation experts and hydraulic engineers agree upon the proposition that rotation in the use of water, especially in cases where the supply is small, not only gives a higher duty to an available water supply, but it tends directly to suppress the actual waste of the water. As was said in a recent Idaho case:[4] "The use of water under the rotation system is approved by high engineering authorities." And the Court proceeds to quote from those great works by Robert B. Buckley and Sir Hanbury Brown, and we can do no better than to quote what these works say upon the subject: "The most wasteful system of irrigation possible is that under which all branch canals, distributaries, and village channels are in use continuously and the available supply is slowly dribbling into the fields. For not only is the actual loss of water greater, but under this system there is also this further disadvantage, that the velocities in all the distributaries and minor channels are reduced, and the silt in the water, which at these points of the system is nearly always advantageous to the fields, is largely deposited in the channels and not carried onto the cultivated ground. The system of irrigation by rotation or by tatils, as it is called in Upper India, is of great advantage, not only in checking the loss of water in the channel, but in teaching economical irrigation to the cultivators and in insuring an equitable division of the supply among the people."[5] "When the supply of water is not in excess of the demand, an economical and just distribution depends more on correct methods of administration than on the perfection and completeness of the regulating works. All countries that have practiced irrigation on a large scale have found it necessary to adopt some system of 'rotation' whereby water is alternately supplied and withheld for fixed periods. . . . The advantages of such a system are many: By concentrating the available supply in half, or

a third, or a less fraction of the canals, and giving the whole of it to the section whose turn it is to take the water, the irrigation is made easy in consequence of the higher water levels produced in the canals. At the same time, in other sections, which are not receiving water, the danger of the canals causing water-logging of the soil is removed, and they are either empty or flowing at a low level. The crops require water at certain intervals, and not continuously. It is better for them, as soon as they have received a watering, that the water supply should be shut off from their neighborhood, so that all excess of water over and above that used up or absorbed may be got rid of, and not be allowed to stagnate. Irrigation by rotation, moreover, is a system that conduces to economy of water, for the water is delivered just where and when it is wanted for irrigation, and is therefore not allowed to run to waste. The loss from evaporation and absorption is less, as the water is spread out over a less extent of canals." [6]

**§ 910. Rotation as a matter of economy—The law as applied to the subject.**—The system of rotation in the use of water as described in the previous section [1] has been adopted in many irrigation communities, and the law upon this subject must be recognized as one tending to enforce the more economical use of water and the suppression of waste.

Some of the States have enacted statutes upon the subject of rotation. For example, the statutes of Wyoming provide: "To bring about a more economical use of the available water supply, it shall be lawful for water-users owning lands to which are attached water rights to rotate in the use of the supply to which they may be collectively entitled; or a single water-user, having lands to which water rights of a different priority attach, may, in like manner, rotate in use, when such rotation can be made without injury to lands enjoying an earlier priority." [2]

As we have seen in previous sections, the courts will uphold valid contracts between users, and between users and ditch companies

upon the subject of rotation.[3] And upon the question of the application of the principle without contract or statute the courts are gradually falling in line, and are granting the right of rotation upon the theory that it tends to extend the duty of water and the suppression of waste. And although the cases are somewhat scarce upon this subject, the general tendency is to enforce rotation, where it can be done, without infringing upon the rights of others, even in cases of prior and subsequent appropriators upon the same stream on the ground that it tends toward a more economical use of a given quantity of water and the suppression of waste. As was said in a late Oregon case:[4] "We see no reason why, even in cases involving prior and subsequent appropriations of water, the courts can not require the appropriators to alternate in the use of the water. The time when water may be used recklessly or carelessly has passed in this State. With increasing settlement water has become too scarce and too precious to justify any but an economical use of it. An appropriator has only the right to use so much as his needs require, and at the time his needs require. And if these are satisfied by a use of the whole flow every other day, or every alternate week, he ought not to be heard to complain. . . . It must be conceded that there is a paucity of authority on the subject of requiring rotation in the use of water between appropriators. The remedy has frequently been applied in cases of dispute between riparian proprietors, and it is difficult to discern any difference in principle between the rights of a riparian proprietor and those of an appropriator in the beneficial use of water. The trend of the later decisions is to apply this method where practicable."[5]

In reversing a judgment of the lower court in a recent opinion handed down by the Supreme Court of California,[6] by way of suggestion to the trial court upon the question of rotation, it said: "If there is not water enough (and this appears to be the fact) to permit a diversion of the stream and a simultaneous use of part by both parties without injury, the Court may by its decree fix the times when, by rotation, the whole may be used by each at

[3] For contracts regulating rotation, see Sec. 923.

[4] McCoy v. Huntley, —— Ore. —, 119 Pac. Rep. 481.

[5] The rule laid down in the above case was reaffirmed in the more recent case of Cantrall v. Sterling Min. Co., —— Ore. ——, 122 Pac. Rep. 42.

[6] Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

different times in proportion to their respective rights. In doing so the Court should recognize the paramount and primary rights of the respondent to the first flow in a full ditch and the use of all of it, or a lesser quantity, for given periods during the irrigating season, as it may be required. If this can be done so that by giving respondent the first flow for a week, or every other week, or on certain days in the week, and the appellant the right thereto in the intervals, the wants of respondent are fully supplied, he obtains all he is entitled to, and has no ground of complaint. While this remedy of rotation and use of waters for irrigation purposes has been more generally applied as between riparian proprietors,[7] in principle there is no reason why it should not be made applicable as between claimants by appropriation."

Again, as was stated by the Washington Court:[8] "Respondents cite this case[9] to sustain the proposition that, it being shown that it was the custom throughout the Yakima Valley to deliver water in a continuous flow, we must hold this custom to have been within the contemplation of the parties when the contract was made. The answer to this is that a practice is shown to have existed, but the testimony does not show a custom. On the other hand, it shows a growing tendency to adopt an alternating system, which will give water in quantity at stated intervals. Nor does it show a necessity for a continuous flow." Again, the Idaho Court, in one of the first cases upon the subject, and also one of the last, holds to the same rule and adopts the following: "Rotation in irrigation undoubtedly tends to conserve the waters of the State and to increase and enlarge their duty and service, and is, consequently, a practice that deserves encouragement in so far as it may be done within legal bounds."[10]

The above language was adopted by the Idaho Court in a case decided very recently,[11] and in which the Court said: "The economical use of water in irrigation is of great importance to the

7 Citing Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725.

8 Shafford v. White Bluffs Land & Irr. Co., 63 Wash. 10, 114 Pac. Rep. 883.

9 Hewitt v. San Jacinto etc. Co., 124 Cal. 186, 56 Pac. Rep. 893.

10 Helphrey v. Perrault, 12 Idaho 451, 86 Pac. Rep. 417.

11 State v. Twin Falls Canal Co., — Idaho ——, 121 Pac. Rep. 1039.

State, and under the provisions of Section 3293, Revised Codes, the users of water are prohibited from using more than good husbandry requires for the crop or crops they cultivate. The duty of careful and economical use of water is one that by statute, as well as public policy, is imposed upon every water-user, and under the various Carey Act projects in this State provisions have been made for the conservation and best use of the water supply and to make it perform as high a duty as possible, and if the rotation system more nearly accomplishes that purpose, it should be adopted." [12].

Following the above cases, undoubtedly the courts of other States will adopt the same rule, as the general tendency in all jurisdictions is for a more economical use of the water and for a suppression of all unnecessary waste.

But whether there is a statute upon the subject or not, in the State where this right is claimed or exercised, the vested rights of all others who take water from the same stream and not parties to the rotation should be considered and protected. In Colorado under a statute the rotation of water is termed the "exchange" or "loaning" of water.[13] But whatever may be the terms, the principles covered by this statute are practically the same as those relative to the necessities and rules of rotation discussed in these sections. And upon the subject of the protection of vested rights of others the Colorado Court holds that if, as a matter of fact, these loans were made under the conditions and under the circumstances which permit of exchanges and loans of water, it is only right and proper that the burden of establishing the same be put upon the parties thereto. The Court upon this subject further said: "That this is the rule that should prevail seems only fair and just. . . . Such being the law of this State, when such exchanges or loans are made, or attempted to be made, they ought not to be permitted, if at all, until the parties seeking their benefits have clearly established that the alleged qualified right has been exercised in such a way, and at such times, and in such circumstances, that the vested rights of others are not injured." [14]

14 Fort Lyon Canal Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37. The

**§ 911. Wasting water—The need of suppression of.**—We come now to that most important subject of the wasting of water and its suppression. Of course, the wasting of water is the converse of using it economically, and has in the previous sections been treated from that standpoint in our discussion in this chapter of the subject of the economical use of water.[1] We have also seen that there is a difference between the absolute wasting of water and the necessary losses of water in transit from seepage and evaporation.[2] But there are some questions upon the subject of wasting water which we will treat from that standpoint.

This subject of the wasting of water has occupied the attention of the courts, practical irrigators, the Government, and State authorities, and all persons interested in irrigation since, owing to the increased demand for water throughout the West, there has been a shortage of water, as compared to the amount which might be used if there were a plenty for all. And today one of the most important questions which comes before the courts and legislators is how a certain amount of water may be made to perform the greatest duty with success, and thus accomplish the greatest good to the greatest number. Those who are at all familiar with the conditions of the water supply of the West, and the ever-increasing demand made upon it, are well aware of the fact that, in many sections of the country, an increase of the water supply seems to be improbable, for apparently all of the available local sources have been developed. A more economical use of the available supply and an entire suppression of the wasting of water are, then, the only ways in which new fields and new orchards may be provided for; but this must be done without injury to the rights of those who are at present using the water.[3] But as an appropriator acquires no title to the *corpus*, or very body of the water,[4] and only acquires a right to the use of such a quantity of water within the extent of his appropriation as he can use economically and without waste, he can not lawfully acquire a right to an excessive amount of water

above was quoted and reaffirmed in Bowman v. Virdin, 40 Colo. 247, 90 Pac. Rep. 506.

4 See Sec. 772.

for the purpose for which he appropriates it, nor can be acquire a right to use the water in a wasteful manner and thereby deprive others from its use. A close study of the reports and bulletins issued by the Government shows a wide variation in the amount of water used for irrigation, and that, too, where the conditions are uniform. This goes to show that many farmers in nearly all parts of the country are still laying claim to and are using excessive quantities of water.[5] And since there is water enough for only a small part of the land suitable for irrigation, this wasteful use not only limits by so much the area which can be watered ultimately, but it is a positive injury to the lands of the farmer and to the lands of others below him. The water wasted has swamped large areas of land once fertile, or brought up so much alkali as to injure and destroy vegetation, requiring drainage or the abandonment of the land.[6] It has, therefore, on this account been found necessary to study methods for removing alkali and the drainage of the surplus water.[7] Then, again, some irrigators do not take into

5 Mr. R. P. Teele, in the annual report of the irrigation investigations for the year ending June 30, 1907, of the Agricultural Department of the Government, at page 382, in discussing the losses of water, says: "The measurements of losses summarized relate to the quantity of water which actually enters the soil. Much more is wasted by careless irrigation, the amount varying with the degree of carelessness. Summing up the whole subject of losses: Not more than one-half of the water diverted by the average earthen canal reaches the land for which it is diverted; of that which reaches the land fully one-fourth or one-eighth of the whole is lost by evaporation under ordinary practice, while still another fraction is lost by careless use. It is safe to estimate that not more than one-third of the water diverted actually enters into the growth of crops. The remaining two-thirds represents the field for expansion when the visible water supply is exhausted. Some of this loss is unavoidable, and some can be prevented only at a prohibitive expense, but a large part can be prevented by careful use and an adaptation of methods of applying water to soil conditions."

6 For injuries from seepage, see Chap. 83.

7 See Report of Irrigation Investigations for 1900, Experiment Stations Bulletin No. 104, p. v., U. S. Dept. of Agriculture; Losses of Irrigation Water and Their Prevention, Report of Irrigation Investigations for 1907, by R. P. Teele, pp. 369-386, U. S. Dept. of Agriculture; Drainage of Irrigated Lands, by Chas. F. Brown, 1909, Farmers' Bulletin No. 371, U. S. Dept. of Agriculture; Distribution of the Water in the Soil by Furrow Irrigation, 1908, by R. H. Loughridge, Experiment Stations Bulletin No. 203, U. S. Dept. of Agriculture.

consideration the fact that by the use of an excessive amount of water on their lands that not only is a great portion of the water wasted, but the results obtained are often of less value than would have been the case if a more economical use of the water had been made. By the use of too great a quantity of water upon a certain tract of land some of the most valuable species of grasses and other vegetation are drowned out, and swamp grasses, tules, and weeds take their places. Thus the employment of too much water by one man not only diminishes the water supply for other persons desiring its use, but it also injures the property of the user; and then, again, it is an illegal use of the water.

**§ 912. Wasting water—What acts constitute—Excessive diversion.**—There is no general definition which will apply to all cases as to just what acts upon the part of an appropriator will constitute the wasting of water. In every use of water for irrigation there is some loss of the water either by seepage or evaporation which is unavoidable. This necessary or natural loss of the water can not be counted as waste, and what might be a necessary loss in one case might be counted as an extreme case of waste in another. Therefore, as near as we can come to a definition of the wasting of water which will apply to all cases is that it is that amount of water which is lost to the appropriator which by a reasonable amount of labor or the expenditure of a reasonable amount of money upon his part might be saved for the use of growing crops; or it is that amount of water which an appropriator attempts to claim under an appropriation which he does not apply to some beneficial use or purpose, and which may be appropriated by others subsequent in time. But, as can be readily seen, at best, as to what constitutes the actual wasting of water depends upon the facts surrounding each particular case; and in determining as to just what constitutes waste the Court may examine all the facts bearing thereon relative to the proper duty of water for the land, the means of diverting the water and conducting the same to the place of use, whether the canals and ditches are in a reasonably good condition to convey the water without unnecessary loss thereof, the condition of the land to receive the water, and the methods of applying the water to the land, and any other facts in any particular case bearing upon the question.

If an amount of water is being conducted to a certain tract of land in excess of the fixed duty for the same, or if there is not a fixed duty of water in excess of the amount of water which the land when put in the proper condition to receive water will absorb for the actual production of the crops thereon, then there is a waste of the amount in excess of the quantity which is actually needed for that purpose. An excessive amount of water used upon the land is at times more injurious to the land itself than a scarcity, and where it is thus used others may successfully lay claim to the excessive amount.[1]

As was well said in a recent Colorado case: "If the defendants have no present or immediate need of the full quantity of water

1 For proper condition of land to receive the water, see Sec. 914.

For the duty of water, see Secs. 902-916.

That all the water appropriated must be applied to a beneficial use or purpose, see Sec. 727.

Water is too valuable to be wasted through an extravagant application to the purpose for which it was appropriated. Town of Sterling v. Pawnee D. Co., 12 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238.

See, also, Montrose Canal Co. v. Loutsenhizer, 23 Colo. 233, 48 Pac. Rep. 532; Courthouse etc. Co. v. Willard, 75 Neb. 408, 106 N. W. Rep. 463; Farmers' Co-op. D. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481; Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111; Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867; Power v. Switzer, 21 Mont. 523, 55 Pac. Rep. 32; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; Siever v. Frink, 7 Colo. 148, 2 Pac. Rep. 901.

An appropriator who permits part of the water to run to waste, or fails to use a certain portion of it for some beneficial purpose, is only entitled to that part of the water actually applied to a beneficial use. Becker v. Marble Cr. Irr. Co., 15 Utah 225, 49 Pac. Rep. 892.

See, also, Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275; Ft. Morgan Land & C. Co. v. South Platte D. Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259; Farmers' etc. Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 1067.

"Again, it has been so often demonstrated as to become a matter of common knowledge that lands after years of irrigation do not require the amount which, when first applied, was essential to the successful growing of crops. This law of nature, added to improved methods, greatly reduces the quantity required." Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

See, also, United States v. Conrad Invest. Co., 156 Fed. Rep. 123; Seaweard v. Pacific L. Co., 49 Ore. 157, 88 Pac. Rep. 963; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Anderson v. Bassman, 140 Fed. Rep. 14; Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867.

which they may divert and use, they can not waste it, but it is their duty to allow such portion as they have no immediate need for to remain in the natural stream, or, if diverted, to return such surplus again into the same stream where, unless they then intend to recapture it, it becomes subject to diversion by the various ditches in accordance with their numerical priorities."[2]

As is the case with appropriators so is also the case with riparian proprietors. There must not be such a diversion of the waters of the stream to the extent that there is a wasting of the water.[3] It therefore follows that a lower riparian proprietor may enjoin an upper one from diverting the waters from a stream which the latter does not apply to some beneficial use, but allows to run to waste.[4]

**§ 913. Wasting water—Defective appliances for conducting.**—As was said in a preceding section, there is always some necessary loss by seepage and evaporation in conducting the water from the

A riparian proprietor is not entitled to take water from a stream for use on land which is valueless for agricultural purposes. Montecito etc. Co. v. City of Santa Barbara, 151 Cal. 377, 90 Pac. Rep. 935; *Id.*, 144 Cal. 578, 77 Pac. Rep. 1113.

A riparian proprietor must not drain, collect, or divert waters for the sole purpose of wasting them. Stillwater W. Co. v. Farmer, 89 Minn. 58, 93 N. W. Rep. 907, 60 L. R. A. 875, 99 Am. St. Rep. 541.

4 Campbell v. Grimes, 62 Kan. 503, 64 Pac. Rep. 62, citing Kinney on Irr., 1st Ed., Secs. 165, 166.

point of diversion to the place of use and its application at that point. But any loss by means of defective appliances for conducting the water will not be treated as necessary loss, but as waste. So, also, where there is excessive seepage from the ditches and canals which might with a reasonable effort and expense be prevented.[1] Water is too valuable to be wasted, either through an extravagant application to the purpose for which it was appropriated, or, again, by waste resulting from the means employed to carry it to the place of use, which can be avoided by the exercise of a reasonable degree of care to prevent unnecessary loss. With water each year growing scarcer as compared with the need for it, as the law now stands in all jurisdictions it will not countenance a diversion of a volume or quantity of water from a stream which, by reason of the loss resulting from the defective appliances used to convey it, is many times that amount which actually reaches the point of use and is there consumed for the purpose for which it is appropriated.[2]

§ 914. **Wasting water—By application to land of extravagant amounts of water.**—There is another method of wasting the water, after it has been conducted to the place of use, and to which the courts have begun to pay attention. This is by the application of extravagant amounts of water to the land being irrigated. This is largely due to the habits of some of the farmers in every part of the West still clinging to their original claim to a certain amount of water, although it may be many times what they actually need for their purposes, and partially caused by ignorance as to the results of this method of irrigation.[1] Too many farmers throughout the whole West attempt to cultivate their lands with water by applying excessive quantities thereto. The result of this habit is not only injurious to their own lands and to the crops being raised thereon, but it is also injurious to the lands of others lying below theirs, and

1 Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867.

Parties may be compelled to keep their flumes and ditches in good repair so as to prevent any unnecessary waste. Barrows v. Fox, 98 Cal. 63, 32 Pac. Rep. 811; Little Walla Walla Irr. Union v. Finis Irr. Co., —— Ore. ——, 124 Pac. Rep. 666.

2 Town of Sterling v. Pawnee D. Co., 42 Colo. 421, 94 Pac. Rep. 339, 15 L. R. A., N. S., 238; Montrose Canal Co. v. Loutsenhizer D. Co., 23 Colo. 233, 48 Pac. Rep. 532; Courthouse etc. Co. v. Willard, 75 Neb. 408, 106 N. W. Rep. 463.

1 See Secs. 875, 876.

it is a waste of water of the most extravagant kind. It is a well-known fact, which has long since passed the scientific stage of investigation, that a fair amount of labor expended in the cultivation of the soil not only keeps down weeds, but it also prevents the evaporation of the water from the soil. Upon the other hand, where excessive amounts of water are applied to the land when it is taken off it either runs into pools or low places or it stands upon the land and thereby under the hot sun excessive evaporation is caused, and the crust of the soil will be found in many cases to be baked hard. To let it remain in this condition until the next irrigation period it can be readily seen that the land will be in poor condition to receive the water, as the crust will prevent the percolation of the water into the soil. The same operation is then repeated. Between the irrigation periods, if the land is stirred up with the cultivator, the soil will be in much better condition to receive the water which, when a reasonable amount is applied, will sink below the surface and thereby its excessive evaporation is prevented; neither will it run off into pools or the low places. Of course, there are some crops which can not be cultivated, but orchards and everything planted in rows with room between them can be. Many times in these cases a greater amount of cultivation and a less amount of water will produce better results than the old method, and at the same time will not waste the water.[2]

There are not many cases where the courts have paid any attention to the waste of the water from the standpoint of the unfit condition of the land to receive the water, but it is the duty of the courts to consider this loss in connection with other losses from the wasting of water. The Supreme Court of Idaho, in a very late case, took this position, and, in our opinion, very correctly

2 "The tendency of farmers seems to be to use all the water that can be obtained, often to the injury of their crops and lands. Such farmers need to be shown the better results obtained by others who use the water economically." R. P. Teele, in Experiment Stations Bulletin No. 119, U. S. Dept. of Agriculture.

See, also, Experiment Stations Bulletins Nos. 86, 104, 303.

See, also, Preparing Land for Irrigation and Methods of Applying the Water, Experiment Stations Bulletin No. 145; Drainage of Irrigated Land, by Chas. F. Brown, Farmers' Bulletin No. 371, U. S. Dept. of Agriculture; Losses of Irrigation Water and Their Prevention, by R. P. Teele, from annual report of Office of Experiment Stations for year ending June 30, 1907.

decided that, in determining the duty of water, reference should always be had to lands that have been prepared and reduced to a reasonably good condition for irrigation, and that economy must be required and demanded in the use and the application of water. And the Court further held that water-users should not be allowed an excessive quantity of water to compensate for and counterbalance their neglect or indolence in the preparation of their lands for the successful and economical application of the water. "One farmer, although he has a superior right, should not be allowed to waste enough water in the irrigation of his land to supply both him and his neighbor simply because his land is not adequately prepared for the economical application of the water."[3] The Colorado Court has taken the same position, and has recently held that water was too valuable to be wasted through an extravagant application of the water to the land.[4]

In a recent Oregon case, relative to the wasting of water by the application thereof, it was said: "Extravagant or wasteful application, even to a useful project, or an employment of water in a non-beneficial enterprise, is not included in the term 'use' as contemplated by the law of waters. Then, too, when even an appropriator is not using the water it is available for the use of others."[5]

We deem this position an important step in the right direction, strictly within the power of the Court to enforce, and one which will tend toward a greater suppression of wasting the water than in almost any other direction.

But, upon the other hand, so long as an appropriator uses the water without waste, and in accordance with his appropriation, no one has the right to complain, and under such circumstances the Court can not change his manner of use and require him to furrow the land before irrigating the same.[6]

See, also, Doherty v. Pratt, —— Nev. ——, 124 Pac. Rep. 574.

[6] Nephi Irr. Co. v. Vickers, 29 Utah 315, 81 Pac. Rep. 144.

**§ 915. Wasting water—Influence of statutes upon the waste of water.**—The legislatures of many of the States of the arid and semi-arid West have enacted statutes prohibiting in general terms the wasting of water without prescribing what constitutes this waste in all cases. Criminal statutes are also enacted usually making it a misdemeanor to willfully waste any of the waters of any stream.[1] As we have also seen in previous sections,[2] tending toward this same end of the suppression of waste, statutes have also been enacted fixing the minimum duty of water, or the maximum amount which may be appropriated within the respective jurisdictions for the irrigation of a certain amount of land. These Acts in and of themselves have not tended to any great extent to accomplish the purpose for which they were enacted. Even the statutes fixing the maximum duty of water for a certain tract of land are pronounced failures, as far as the economical use of the water is concerned. Between absolute waste of water which can be detected and stopped by a public official and the economical use of the water there is a wide margin for saving which can be reached only by making it an object to the appropriators to economize. From this standpoint the civil statutes upon the subject fall into two classes: Those which allow the acquirement of rights to fixed quantities of water; and, second, those which allow rights for certain specified tracts of land. In the first case the appropriator must apply all of the water to some beneficial use or purpose, and if the appropriation is for irrigation, he will spread it over as great an area of land as possible, for he knows that if he does not use all the water he is liable to lose the excess. The owner of the right under the second class can use the water only on the designated tract, if he follows the statute,[3] and, as a general thing, he claims the maximum amount of water which he is entitled to within the statutory limit. Any saving upon his part remains in the stream for the use of some one else, without any advantage to the one who saved it,

1 "Any person or persons who shall willfully or wantonly waste any of the waters of any stream . . . or by allowing such water to waste by running into depressions or dry channels so that the same can not be used for irrigation, nor reach the original channel of the stream from which it has been diverted, is guilty of a misdemeanor." Idaho Stat. 1899, p. 336.

For other Acts of legislatures, see Part XIV.

2 See Secs. 901-908.

3 But see for water right as a fixed appurtenance, Secs. 1015, 1016.

and hence the tendency is in these cases to claim and use in some manner the maximum allowance, and although they do not use the water in an economical manner, they may not come within the rule of wasting the water as provided for by the statute. Mr. R. P. Teele, one of the Government experts, investigating this subject of the effect of the various statutes as influencing the economical use of the water, says: "The whole experience of the arid region shows that the former system leads to the more economical use of the water."[4]

As we view the question, it is impossible for the legislatures to prescribe any general rule as to the economical use of water which will apply to all cases any more than a definition can be given which will fit every case. Each individual case stands alone, and upon the questions of the economical use of the water or whether the water has been wasted, must be decided upon all the facts surrounding that particular case; hence this is left to the courts, the powers of which we will discuss in the following section.[5] Therefore, as far as the legislatures are concerned in this respect, as far as they can effectively go is to enact some general law providing that all the water must be used economically and prohibiting all waste, and leave the determination as to what constitutes the economical use of the water, or the wasting of it, to the courts to decide under the facts surrounding each particular case.[6]

Upon the question of the power of the legislature, it is clearly within the province of the legislature to enact such laws respecting the appropriation and distribution of water as will tend to prevent unnecessary loss and waste.[7]

[4] Annual report of the Office of Experiment Stations for year ending June 30, 1907, U. S. Dept. of Agriculture, pp. 385, 386. "Under the Northern Canal, in the Pecos Valley, New Mexico, water was delivered under both systems and those paying the acreage rate used 27 per cent more water than those paying the quantity rate." P. 385. Measurements made under the Ridenbaugh Canal in the Boise Valley, Idaho, showed that those paying the acreage rates used 40 per cent more water than those paying the quantity rate.

[5] See Sec. 916.

[6] As to the power of the courts, see Sec. 916.

[7] Nash v. Clark, 27 Utah 158, 75 Pac. Rep. 158, 101 Am. St. Rep. 953; affirmed, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Am. Cas. 1171, 49 L. Ed. 1085; Stickney v. Hanrahan, 7 Idaho 424, 63 Pac. Rep. 189.

In a number of States what constitutes the wasting of water from artesian wells is defined by statute and penalties prescribed therefor.[8]

§ 916. **Wasting water—Duty of the courts to suppress.**—There is no question as to the power of the courts in all jurisdictions throughout the arid and semi-arid West, as the law now stands, in all cases properly brought before them, in which one of the issues is the amount of water necessary for any given purpose, to suppress all wasting of water, and even to go further and declare what shall constitute the economical use of the water, and to fix its proper duty by a decree awarding the use of a certain amount of water for that purpose. Not only have the courts the power, but it is their duty, to do this. Water is too precious an article in the arid region to be permitted to run to waste, and the great weight of modern authorities hold that where a person has diverted a certain portion of the waters of a stream and permits part of the water so diverted to run to waste, or fails to use a certain portion of the water for some beneficial use or purpose, he can only hold that part of the water diverted which has been actually applied to some beneficial use, and his priority only extends to the quantity so used. Also, the authorities hold that there was no appropriation as to the water not used, and which ran to waste, but that the same might be subsequently appropriated and held by other parties, provided they took all the proper steps and they themselves applied it to some beneficial use or purpose. The final test in all cases is whether *all* of the water diverted is actually applied to some useful or beneficial purpose.[1]

[8] For these statutes, see Part XIV.

See, also, Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

[1] Campbell v. Grimes, 62 Kan. 503, 64 Pac. Rep. 62, citing Kinney on Irr., 1st Ed., Secs. 165, 166; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Anderson v. Bassman, 140 Fed. Rep. 27; Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728, all citing Kinney on Irr., 1st Ed., Sec. 30.

An excessive diversion of water can not be regarded as a diversion for a beneficial use. Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275.

"The appropriation does not confer such an absolute right to the body of the water diverted that the owner can allow it after its diversion to run to waste, and prevent others from using it." Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583.

See, also, Fort Morgan etc. Co. v.

As was said in a recent case in Colorado, "No waste of water from natural streams should be countenanced by the court."[2] And, again, as was said in a recent Idaho case, "It is the policy of the law to prevent the waste of water."[3] In a recent case decided by the Supreme Court of California,[4] it was said: "The use of water in this State is of such great necessity as to preclude its being allowed to run to waste, and its full beneficial and economical use requires that when the wants of one appropriator are supplied another may be permitted to use the flow for his benefit."[5]

As to the second phase of the proposition, the power of the court of equity to determine what is an economical use of the water and to make a decree accordingly, we take the same view. As we have said, there is a wide margin between the absolute waste of the water and its economical use.[6] But the difference between the two questions is one of degree only. And even in those States which by statute fix a minimum duty of water or the maximum amount which may be appropriated to irrigate a given tract, the Court has the power to go fully into the question and determine the proper duty; and if it is found that the duty for any particular tract is too low, by decree to cut down the amount of water to the quantity necessary, even below the amount allowed by statute. And in these cases the Court must hear the evidence of persons who are competent to testify on the subject, and who can do so, not from guesswork or hearsay, but from actual measurements and tests and the actual application of the water to the lands irrigated. This is so held by the Supreme Court of Idaho, which State seems to be in the lead

South Platte D. Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683; Abbott v. Reedy, 9 Idaho 577, 75 Pac. Rep. 764; Van Camp v. Emery, 13 Idaho 202, 89 Pac. Rep. 752; Farmers' Co-op. D. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481.

2 X Y etc. Co. v. Buffalo Cr. Irr. Co., 25 Colo. 529, 55 Pac. Rep. 720.

3 Gerber v. Nampa etc. Irr. Dist., 16 Idaho 1, 100 Pac. Rep. 80; *Id.*, 19 Idaho 765, 116 Pac. Rep. 104.

4 Hufford v. Dye, —— Cal. ——, 121 Pac. Rep. 400.

5 See, also, State v. Twin Falls etc. Co., —— Idaho ——, 121 Pac. Rep. 1039.

6 See previous section, No. 915.

See, also, Losses of Irrigation Water and Their Prevention, by R. P. Teele, Annual Report of Office of Experiment Stations for year ending June 30, 1907, p. 385.

in applying this new rule to an old principle—that all of the water appropriated must be applied to some useful or beneficial purpose. The object of this new application of the rule, as can be readily seen, is to make a certain amount of water go as far as possible, and do the greatest good to the greatest number. As was said in a very recent case decided by the Idaho Court, "If it should be found that even a very slight increase in the duty of water per acre can be had, it will in the aggregate amount to several thousand additional acres of land that may be irrigated." [7]

In the determination of these questions by the Court an arbitrary standard which will apply to all cases can not be fixed, and no attempt should be made to accomplish the impossible. Each case must stand alone, and on the facts surrounding each case must the appropriate decree rest, governed, of course, by those general rules of the admissibility of competent evidence, weighing the evidence and applying legal principles common to all legal controversies.[8]

[7] Farmers' Co-op. D. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481.

"The law only allows the appropriator the amount actually necessary for the useful or beneficial purpose to which he applies it. The inquiry was therefore not what he had used, but how much was actually necessary." Abbott v. Reedy, 9 Idaho 577, 75 Pac. Rep. 764.

See, also, Van Camp v. Emery, 13 Idaho 202, 89 Pac. Rep. 752; Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

[8] X Y Irr. D. Co. v. Buffalo Cr. Irr. Co., 25 Colo. 529, 55 Pac. Rep. 720; *Id.*, 9 Colo. App. 438, 49 Pac. Rep. 264.

A witness in order to be competent and qualified to testify as to the number of inches of water necessary for the successful irrigation of lands, must have had some observation or experience in the measurement of water. Farmers' etc. Co. v. Riverside Irr. Dist., 16 Idaho 525, 102 Pac. Rep. 481.

For the measurement of water, see Sec. 888-899.

In California it was held that where the evidence of the amount of the water claimed under a certain appropriation was admitted without objection, and a competent hydraulic engineer testified to the making of measurements and calculations, and he reached a conclusion as to the amount of water and there was no conflicting testimony, the court properly acted on the evidence and rendered judgment in accordance therewith. Evans Ditch Co. v. Lakeside Ditch Co., 15 Cal. App. 119, 108 Pac. Rep. 1026.

See, also, Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396.

§ 924. Contracts settling disputes between riparian owners.
§ 925. Contracts for the use of ditches and canals of others.
§ 926. Contracts for the development of water.

§ 917. **Scope of chapter.**—Water rights, ditches, and canals being real property, all contracts relating to the sale or alienation thereof come within the statute of frauds, and must be in writing.[1] This subject will be treated in other chapters, and will not be further discussed here. Another principal subject of contract are the rights of consumers to the use of water furnished by irrigation and ditch companies. This subject will be discussed in a future portion of this work.[2] The question of contracts for water rates and the power of the legislatures to limit the same will also be discussed by itself.[3] Other questions upon the subject of contracts have been and will be discussed in connection with subjects where the contracts are incidental to the main subject. This chapter, therefore, will be necessarily brief, and will be confined to those questions of contracts which are not discussed in connection with some other question. We will also confine the discussion in this chapter to contracts between individuals, leaving the subjects of contracts between water companies and individuals to the chapter on water companies.[4]

§ 918. **Contracts—In general.**—It is our purpose to discuss the subject of contracts in this work only so far as they relate to the

1 For the sale and alienation of water rights and rights of way, see Secs. 994-1032.

2 For contracts with water companies, see Secs. 1509-1529.

3 For water rates, see Secs. 1368-1385.

4 For contracts with private water companies, see Chap. 77.

subject matter in hand. As a general rule, contracts relating to water rights, canals, and other works are governed and construed by the principles of law governing other contracts. A right to the use of water may be thus acquired either from a riparian owner or settled as between riparian owners.[1] It may be acquired from the owners of such rights, where the title to the same rests originally in a valid appropriation under the Arid Region Doctrine.[2] It may be acquired from a water company organized for the purpose of selling and distributing water to consumers.[3] It may be acquired from any person having such a right to dispose of. Rights to ditches, rights of way for ditches, and the right to the use of the ditches of others may also be acquired by contract. But as both water rights and the ditches, canals, and other works are real property, and governed by the law of the statute of frauds, in order to acquire a permanent right to any of these, such contracts should be in writing.[4] However, parol contracts affecting water rights and ditches as relating to real property are within the statute of frauds. Rights growing out of such contracts will be determined to be permanent rights, and will be enforced by a court of equity when there has been such a performance of the contracts as to take them out of the operation of the statute.[5]

Water rights may be represented by shares in corporations organized for the purpose of furnishing its stockholders with water. When this is the case the rights are treated as personal property, and the law of contracts relating to personal property and the transfer and sale of stock in corporations obtains.[6] Again, certificates issued by an unincorporated irrigating ditch association to its members, and treated by them as evidence of the right to control its property, and to appropriate water by means of a common ditch, are water right contracts, and a sale thereof by the holder is, in

1 For the settlement of rights between riparian owners, see Sec. 924.

2 For the Arid Region Doctrine, see Secs. 595-626.

3 For contracts with water companies, see Chap. 77.

4 See Secs. 978, 979.

See, also, Metropolitan etc. Co. v. Topeka etc. Co. (Kan.), 132 Fed. Rep. 702.

5 For parol executed contracts, see Secs. 997-1000.

6 For transfer of stock in mutual companies, see Chap. 75.

See, also, Fairbanks v. Rollins, 121 Cal. 17, 54 Pac. Rep. 79; Snyder v. Murdock, 20 Utah 419, 59 Pac. Rep. 91.

effect, a conveyance of his water rights and his interests in the property.[7] Again, as we have seen, water severed from its natural source of supply and diverted into ditches, canals, or reservoirs, is personal property, and a contract concerning such water is a contract concerning personal property.[8]

Generally where there are joint obligees the contract is joint. Where, however, the contract requires the obligor to account to each of the obligees, respectively, or by the use of any words, imports a separate right of action, the contract is several, and each obligee may sue thereon. Therefore, a contract between a canal company and the members of an unincorporated joint stock association whereby the former, party of the first part, agrees to furnish to the "respective" parties of the second part, and the latter agree to rent their "respective" shares in the association to the first party, is a several contract, and any one of such members may maintain a suit for damages occurring to him thereunder, without joining the others.[9] Contracts may be made by agents, but where an agent makes a contract on behalf of his principal in excess of his authority he is personally liable thereon under an implied warranty of authority, even though he made no false representations.[10]

**§ 919. Construction of contracts.**—In the construction of contracts of this nature the intention of the parties must be ascertained in the first instance by reference to the language used by them, and the language used must be given its ordinary meaning, and where it is clear and unambiguous it must be interpreted by the Court to its full effect.[1] The rights of the respective parties under

[7] Biggs v. Utah etc. Co., 7 Ariz. 331, 64 Pac. Rep. 494.

For unincorporated water companies, see Chap. 73.

[8] That water severed from the natural stream is personal property, see Sec. 773.

See, also, People *ex rel.* Heyneman v. Blake, 19 Cal. 579; Spring Valley Water Co. v. Schottler, 110 U. S. 347, 28 L. Ed. 173, 4 Sup. Ct. Rep. 48; Hesperia etc. Co. v. Gardner, 4 Cal. App. 357, 88 Pac. Rep. 286; Hagerman Irr. Co. v. McMurry, —— N. M. ——, 113 Pac. Rep. 823; Cookinham v. Lewis, 58 Ore. 484, 114 Pac. Rep. 88; on rehearing, 115 Pac. Rep. 343; King v. Chamberlin, —— Idaho ——, 118 Pac. Rep. 1099.

[9] Consolidated Canal Co. v. Peters, 5 Ariz. 80, 46 Pac. Rep. 74.

[10] Anderson v. Adams, 43 Ore. 621, 74 Pac. Rep. 215.

[1] Quirk v. Rich, 40 Mont. 552, 107 Pac. Rep. 821, where it is held that, in the interpretation of contracts the language employed must be given its ordinary meaning, in a case where the

such a contract are to be governed by the express terms thereof.[2] In such cases parol evidence is inadmissible to vary the terms thereof.[3] However, it was held in a recent case in Colorado that,

rights of persons to the use of water were based on a contract between themselves, and that neither was entitled to use more water after the date of the contract than he was actually, beneficially, and necessarily using at the time of making it.

A contract which recites that the second party agrees to supply the first party "with water for irrigation of his premises" is a contract to furnish water for the property mentioned only, the first party at the time of the execution of the contract owning but one tract on the creek. Ferrea v. Chabot, 121 Cal. 233, 53 Pac. Rep. 689; *Id.*, 63 Cal. 564.

Where a contract to furnish water for irrigation provided that the second party was to receive water annually "for the above described tract," and to pay therefor . . . annually "$2 per acre for the use of the water," it was held that he was to pay the $2 per acre only for the number of acres on which the water was used, and not for the entire tract. Purser v. Baker, 129 Cal. 607, 62 Pac. Rep. 109.

A clause in a contract for the delivery of water at the head of grantee's ditch, reserving the right to use it for mining purposes, confers no right to pollute it to any greater extent than that permitted by law. Chessman v. Hale, 31 Mont. 577, 79 Pac. Rep. 254, 68 L. R. A. 410.

Where a contract for the construction of a flume provided that the contractor waived all rights to mechanics' liens, it was held that it did not purport to waive sub-contractors' rights to liens for materials and labor. Jarvis v. State Bank, 22 Colo. 309, 45 Pac. Rep. 505, 55 Am. St. Rep. 129.

Under a contract for the construction of an irrigation ditch, providing that the decision of the engineer shall be final as to the meaning, intent, and purport of the plans and specifications, the engineer has no power to vary the meaning of the plain terms used in the contract. Dyer v. Middle Kittitas Irr. Dist., 40 Wash. 238, 82 Pac. Rep. 301.

See, also, Welsh v. Bardshar, 137 Cal. 154, 69 Pac. Rep. 977; Sefton v. Prentice, 103 Cal. 670, 37 Pac. Rep. 641; Davis v. Randall, 44 Colo. 488, 99 Pac. Rep. 323; Bonslett v. Butte etc. Co., —— Cal. App. ——, 122 Pac. Rep. 821.

"In the construction of a written contract, if there is room for doubt as to its true meaning, the facts and circumstances out of which such contract arose should be considered and the contract construed in the light of such facts and circumstances. It is the universal rule in the construction of contracts that the intention of the parties should be ascertained, if possible, and given effect." State v. Twin Falls etc. Co., —— Idaho ——, 121 Pac. Rep. 1039.

See, also, Gard v. Thompson, —— Idaho ——, 123 Pac. Rep. 497.

2 Consolidated Canal Co. v. Mesa Canal Co., 177 U. S. 296, 44 L. Ed. 777, 20 Sup. Ct. Rep. 628; affirming *Id.*, 6 Ariz. 135, 53 Pac. Rep. 575.

See, also, as to the construction of contracts with corporations, Chap. 77.

3 A contract being perfectly clear in its terms, parol evidence of prior conversations between the parties, and of what was understood respecting the

although the word "assigns" means any person to whom property is transferred by any title, it was competent to show by oral evidence that the word as used was intended to be restricted to a certain investment company.[4]

Where, however, the terms of the contract are ambiguous and uncertain in its construction, it is proper for the Court to consider the subject matter, the situation of the parties at the time the contract was executed, and all the facts and circumstances surrounding each particular case, and tending to shed any light upon the true intent of the parties.[5] This is true regardless of what the construction would be under the literal interpretation of the terms of the instrument itself.[6] In order to ascertain the true intention

consideration, was properly rejected. Bryan v. Idaho etc. Co., 73 Cal. 249, 14 Pac. Rep. 859.

See, also, Babcock-Cornish Co. v. Urquhart, 53 Wash. 168, 101 Pac. Rep. 713.

4 Farmers' Pawnee Canal Co. v. Henderson, 46 Colo. 37, 102 Pac. Rep. 1063.

5 "As a guide to a correct interpretation, the law permits the subject-matter of a contract, the situation of the parties at the time of its execution, and all surrounding facts and circumstances to be taken into consideration." True v. Rocky Ford etc. Co., 36 Colo. 43, 85 Pac. Rep. 842.

See, also, Durkee v. Cota, 74 Cal. 313, 16 Pac. Rep. 5; Gagnon v. Molden, 15 Idaho 727, 99 Pac. Rep. 965; Booth v. Chapman, 59 Cal. 149; Blankenship v. Whaley, 142 Cal. 566, 76 Pac. Rep. 235; South Side Imp. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107; Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881; Daly v. Ruddell, 137 Cal. 671, 70 Pac. Rep. 784; Alexander v. Winters, 23 Nev. 475, 49 Pac. Rep. 116; 24 Nev. 143, 50 Pac. Rep. 798; Fogarty v. Fogarty, 129 Cal. 46, 61 Pac. Rep. 570; Bean v. Stoneman, 104 Cal. 49, 37 Pac. Rep. 777, 38 Pac. Rep. 39; Feeney v. Chester, 7 Idaho 324, 63 Pac. Rep. 192; Salt Lake City etc. Co. v. Salt Lake City, 24 Utah 249, 25 Utah 441, 67 Pac. Rep. 672, 71 Pac. Rep. 1067, 61 L. R. A. 648; Brighton & North Point Irr. Co. v. Little, 14 Utah 42, 46 Pac. Rep. 268; Brixen v. Jorgensen, 33 Utah 97, 92 Pac. Rep. 1004, 28 Utah 290, 78 Pac. Rep. 674, 107 Am. St. Rep. 720; Los Angeles v. Los Angeles City W. Co., 124 Cal. 368, 57 Pac. Rep. 211, 571; Stone v. Harris, 146 Cal. 555, 80 Pac. Rep. 711, where it was held that a certain contract was not a lien; Gard v. Thompson, —— Idaho ——, 123 Pac. Rep. 497.

6 Tilton v. Sterling etc. Co., 28 Utah 173, 77 Pac. Rep. 758, 107 Am. St. Rep. 689.

Though a corporation may enter into a contract in a wrong name, it will be binding when it appears that such corporation was intended. North Point etc. Co. v. Utah etc. Co., 14 Utah 155, 52 Pac. Rep. 168, 824.

Where the parties to a contract radically disagree as to the meaning and insist on diametrically opposite constructions, it was held by the California Court in a recent case that

of the parties, local customs, when reasonable, uninterrupted, and uniform, in the locality or district, and not contrary to public policy, may be considered by the Court in the construction of contracts, and may affect their interpretation by raising the presumption that such contracts made in that locality were made with respect to such customs.[7] The construction given to the contract by the parties thereto may also be considered; but the construction placed upon a contract by the parties thereto is important only where the express language of the contract is doubtful or ambiguous.[8] An agreement between parties who have settled upon land near a stream as to the relative quantity of water which each shall be entitled to use, where such an agreement has been acted upon for a long time, will be enforced by a court of equity.[9]

**§ 920.—Void and voidable contracts—Duress.**—Contracts entered into in restraint of trade, or in restraint of compromises or settlement of litigation, are void as against public policy. Therefore, a contract by which owners of water rights on a stream make a written contract and agree under the penalty of $10,000 "agreed and liquidated damages" not to sell their individual rights to certain persons, and not to make any settlement or compromise with certain other persons claiming the rights without the consent of all the others, was held void as against public policy, being analagous to a contract in restraint of trade, and also imposing a restraint and condition upon compromises or settlements of litigation and disputes, which are favored by the law.[1] As is the case with all other contracts, these contracts must be freely and voluntarily entered into by the parties thereto. Therefore, contracts entered into under duress are void if not voidable.[2]

there is such an ambiguity as will justify parol testimony to aid in its construction. Bonslett v. Butte County Canal Co., —— Cal. App ——, 122 Pac. Rep. 821.

7 Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829.

See, also, Frith v. Barker, 2 Johns 327 (N. Y.).

See, also, Tilton v. Sterling etc. Co., 28 Utah 173, 77 Pac. Rep. 758, 107 Am. St. Rep. 689.

9 Combs v. Slayton, 19 Ore. 99, 26 Pac. Rep. 661.

For the settlement of disputes between parties, see Secs. 923, 924.

1 Ford v. Gregson, 7 Mont. 89, 14 Pac. Rep. 659.

See, also, for rights of owners to settle disputes, Secs. 923, 924.

2 Green v. Byers, 16 Idaho 178, 101 Pac. Rep. 79, citing 9 Cyc., p. 450.

**§ 921. The performance—Breach—Enforcement and liabilities under.**—There is nothing peculiar to contracts relative to water rights and other kindred rights in regard to their performance. The rules of law governing the performance of contracts in general also govern these contracts. They must be performed according to a reasonable construction of their terms, otherwise certain liabilities arise for their breach. Neither is there anything peculiar as to the performance or breach of these contracts as between individuals and as between water companies. But as the latter class of contracts occur more frequently than those between individuals, in these days of companies and corporations, and in order not to duplicate the discussion in this work upon certain definite subjects, we will discuss the performance of such contracts, the breach, enforcement, and liabilities thereunder in the chapter upon the subject of control by private water companies.[1]

**§ 922. Contracts settling disputes between appropriators.**—One of the most common sources of contracts relative to water and kindred rights is the settlement of disputes between appropriators, between riparian owners, or between appropriators and riparian owners. As a general rule, such contracts, involving real property as their subject matter, should be in writing.[1] However, as settlements of disputes and compromise of suits are favored in law,[2]

See, also, for contracts with water companies void as against the statute or public policy, Chap. 77, Sec. 1511.

1 See Chap. 77.

1 For the sale and transfer of water rights, see Secs. 994-1032.

See, also, Biggs v. Utah etc. Co., 7 Ariz. 331, 64 Pac. Rep. 494, where certificates issued by an unincorporated irrigating ditch company were held to be contracts fixing the right of the holders thereof and his right to participate in the affairs of the association and in the management and control of the general property of the association.

Where a contract providing for the distribution of the waters of a spring between plaintiff and defendant was entered into in good faith, for the purpose of adjusting and placing beyond dispute the rights and claims of the respective parties to the water, and the plaintiff's claim was at least doubtful, the settlement of the dispute constituted a sufficient consideration for the contract. Hutchinson v. Mt. Vernon etc. Co., 49 Wash. 469, 95 Pac. Rep. 1023.

See, also, Miller & Lux v. California etc. Co., 163 Fed. Rep. 462, 90 C. C. A. 8; Schilling v. Rominger, 4 Colo. 100; Oliver v. Burnett, 10 Cal. App. 403, 102 Pac. Rep. 223; Metropolitan etc. Co. v. Topeka etc. Co., 132 Fed. Rep. 702.

2 Ford v. Gregson, 7 Mont. 89, 14 Pac. Rep. 659.

where a parol agreement settling the rights of the parties and dividing the water is made, and where the parties have acted upon it, taken possession, and have acquiesced in its terms for a considerable time, such an agreement is not within the statute of frauds, and the courts will enforce the same regardless of the fact that the contract was not in writing.[3] "This doctrine is based on the common-sense proposition that when a dispute exists between two parties they may adjust their differences by mutual agreement, which, when executed by them, will be held binding as to each."[4] And where such a contract is entered into, the settlement of the dispute constitutes sufficient consideration for the same.[5] And afterward neither party to the contract is entitled to use more water than the terms of it provide.[6]

§ 923. **Contracts for the use of water as between appropriators —Rotation.**—The law of contracts also may be applied in cases of uses of the water between the various appropriators from the same stream or the same ditch, in cases where there is no dispute between them as to their legal rights. All such contracts which are entered into between such parties and are not in violation of public policy will be sustained by the courts. Again, contracts between consumers and ditch companies subject to the same restrictions as above will also be sustained.

The question of the rotation of the water between the various consumers from the same stream or the same ditch may also be

[3] Where the parties have entered into an oral agreement settling disputed water rights, which is carried into effect, and have acquiesced in it for a considerable time, such agreement is not within the statute of frauds. Bree v. Wheeler, 4 Cal. App. 109, 87 Pac. Rep. 255.

See, also, Combs v. Slayton, 19 Ore. 99, 26 Pac. Rep. 661; Stoner v. Mau, 11 Wyo. 366, 72 Pac. Rep. 193, 73 Pac. Rep. 548; Saunders v. Robison, 14 Idaho 770, 95 Pac. Rep. 1057; Churchill v. Russell, 148 Cal. 1, 82 Pac. Rep. 440; Flickenger v. Shaw, 87 Cal. 126, 25 Pac. Rep 268, 11 L. R. A. 134, 22 Am. St. Rep. 234; Blankenship v. Whaley, 124 Cal. 300, 57 Pac. Rep. 79; Coffman v. Robbins, 8 Ore. 278, 8 Morr. Min. Rep. 131; Weill v. Baldwin, 64 Cal. 476, 2 Pac. Rep. 249.

[4] Bree v. Wheeler, 4 Cal. App. 109, 87 Pac. Rep. 255, holding that this rule is analogous to the rule of law settling boundary line disputes by parol agreement.

[5] Hutchinson v. Mt. Vernon etc. Co., 49 Wash. 469, 95 Pac. Rep. 1023.

[6] Quirk v. Rich, 40 Mont. 552, 107 Pac. Rep. 821.

provided for by contract, so also between the consumers and ditch companies. And these contracts, when legally made and not in violation of public policy or the direct law upon the subject, will be sustained by the Court. As was held by a recent case decided by the Supreme Court of Idaho,[1] that although there were no statutory provisions providing for rotation in the use of water, contracts providing for rotation will be enforced by the courts. And although the courts are somewhat late in deciding this question, the Idaho decision referred to above is the general rule upon the proposition as far as the same has been decided.[2]

**§ 924. Contracts settling disputes between riparian owners.**—As it is with the owners of water rights acquired by appropriation,[1] so it is with the owners of riparian rights. They may settle their disputes by a contract providing the extent to which each may use the waters of a stream running by their premises. And such a contract between the owners of adjacent lands as to the use and enjoyment by the respective parties of the waters of a stream to which they are severally entitled, made for the mutual benefit of themselves, their heirs, and grantees, runs with the land, and binds not only the contracting parties, but also their heirs and grantees, although in subsequent deeds of the respective premises no mention is made of such covenant or of the rights accruing therefrom.[2]

1 State v. Twin Falls Canal Co., — Idaho ——, 121 Pac. Rep. 1039.

2 See, also, Helphrey v. Perrault, 12 Idaho 451, 86 Pac. Rep. 417; Shafford v. White Bluffs Land & Irr. Co., 63 Wash. 10, 114 Pac. Rep. 883, in which the Court said: "Respondent cites this case to sustain the proposition that, it being shown that it was the custom throughout the Yakima Valley to deliver water in a continuous flow, we must hold this custom to have been within the contemplation of the parties when the contract was made. The answer to this is that a practice is shown to have existed, but the testimony does not show a custom. On the other hand, it shows a growing tendency to adopt the alternating system which will give water in quantity at stated intervals."

See, also, rotation as a matter of economy, Secs. 909, 910.

See, also, McCoy v. Huntley, —— Ore. ——, 119 Pac. Rep. 481.

For decrees providing for rotation, see Chaps. 78, 79.

For rotation as a matter of economy, see Secs. 909, 910.

1 See Sec. 923.

2 Horn v. Miller, 136 Pa. 640, 20 Atl. Rep. 706, 9 L. R. A. 810; Lawrence v. Whitney, 115 N. Y. 410, 22 N. E. Rep. 174, 5 L. R. A. 417; People's Ditch Co. v. Fresno etc. Co., 152 Cal. 87, 92 Pac. Rep. 77; Outhouse-Cottel v. Berry, 42 Ore. 593, 72 Pac.

Such a contract will be binding as between the parties to it, but as all the riparian owners upon a stream have equal rights to the use of the waters thereof, such a contract can not, of course, in any manner bind those not parties.[3]

A covenant in a partition deed that the owners of the entire property should continue to use the waters of the stream in equal shares, as theretofore, did not necessarily secure any riparian rights to subsequent grantees of land not contiguous to the stream.[4]

**§ 925. Contracts for the use of ditches and canals of others.**—As we have discussed in other portions of this work, rights of way for ditches, canals, and other works, or rights to the use of these works already constructed, by the enlargement thereof, may be acquired by deed,[1] prescription,[2] or by eminent domain.[3] These rights may also be acquired by contract, even where such contract does not attain the dignity of a deed or a technical conveyance. In fact, a very common subject of contract in this Western country is where the owner of a water right, in order to utilize it to the best advantage, agrees with the owner of works already constructed that, by the enlargement of such works, and keeping his proportion in repair, he may have the privilege of diverting and conducting his water through these works to a point nearest to his place of use. These contracts, relating to real property, like others of this nature, should be in writing.[4] And where in writing, if the terms are definite and certain, they will be construed according to the terms thereof.[5] But such is not always the case, and the authorities

[5] For the construction of contracts, see Secs. 919, 1513.

See, also, Consolidated C. Co. v. Mesa C. Co., 177 U. S. 296, 44 L. Ed. 777, 20 Sup. Ct. Rep. 628; affirming *Id.*, 6 Ariz. 135, 53 Pac. Rep. 575.

Under a written contract between adjoining land owners for the enlargement of an irrigating ditch, and determining the rights of the parties

hold that such a contract or agreement, even if by parol, if acted upon and expense incurred is irrevocable, and will be enforced in equity.[6] Therefore, a parol agreement of a land owner that if an adjoining land owner will help him to enlarge an irrigation ditch on his lands, he will permit the latter to use the waters thereof, is, after performance by such adjoining land owner, enforceable in equity against the owner of the lands on which the ditch is located and those claiming under him with notice, although such agreement is within the statute of frauds.[7] "When such is the case, a court of equity, in accordance with familiar rules, considering that done which ought to be done, will protect the right obtained as readily and as fully as a legal title."[8] So, again, where one makes a parol agreement with the owner of certain lands that in consideration of a right of way through the same, such owner shall have an interest in such ditch to the extent of sufficient water therefrom to irrigate his lands, and such an agreement has been acted upon and the ditch

therein, and providing that the first party should at all times have the right to draw from the ditch five cubic feet of water, and that all water in excess of five feet should be the property of the second party, the second party was obligated to abstain from any willful act interfering with the first party's use of the first five feet of water. Stoner v. Mau, 11 Wyo. 366, 72 Pac. Rep. 193; see, also, Mau v. Stoner, 15 Wyo 109, 87 Pac. Rep. 434.

# CHAPTER 51.

## RIGHTS OF WAY OVER PUBLIC DOMAIN.

§ 927. Scope of chapter.
§ 928. Distinction as to property rights.
§ 929. Necessity for rights of way.
§ 930. No title to early rights of way.
§ 931. Act of Congress of 1866 the first Act granting rights of way.
§ 932. Act of 1870 amending Act of 1866.
§ 933. Construction of Acts of 1866 and 1870—Priority governs.
§ 934. Construction of Acts of 1866 and 1870—Effect of Acts.
§ 935. Lands once entered and afterward forfeited.
§ 936. Reservations in patents of rights of way for ditches and canals constructed by the Government—Act of August 30, 1890.
§ 937. Right of way through public lands and reservations to canal or ditch companies for irrigation—Act of March 3, 1891.
§ 938. Construction of Act of March 3, 1891.
§ 939. Effect of Act of 1891 upon Acts of 1866 and 1870.
§ 940. Construction of Act of March 3, 1891—Purpose originally to aid irrigation only.
§ 941. Text of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891.
§ 942. Construction of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891.
§ 943. Text of amendatory Act of May 11, 1898, amending the Acts of March 3, 1891, and January 21, 1895.
§ 944. Construction of Acts of March 3, 1891, and January 21, 1895, as amended by Act of May 11, 1898—Scope of amendment.
§ 945. Procedure under Act of March 3, 1891, for acquisition of right.
§ 946. Act of March 3, 1891—Procedure where jurisdiction comes under two departments.
§ 947. Official acts under Act of March 3, 1891—Approval of application.
§ 948. Nature of title granted under Act of March 3, 1891, and amendments thereto.
§ 949. Effect of approval of application under Act of March 3, 1891.
§ 950. Secretary has no jurisdiction over water rights under Act of March 3, 1891.
§ 951. Segregated reservoir sites—Text of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17 of the Act of March 3, 1891, and the Act of February 26, 1897.
§ 952. Segregated reservoir sites—Construction of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17 of the Act of March 3, 1891.

§ 953. Segregated reservoir sites—Act of February 26, 1897, opening same up for use by private parties or States—Cause of its passage and construction.
§ 954. Rights of way over National Forests—Regulations and procedure under Act of March 3, 1891.
§ 955. Rights of way over National Forests—Act of February 1, 1905.
§ 956. Rights of way over National Forests—Construction of Act of February 1, 1905.
§ 957. Rights of way over National Forests—Regulations and procedure under Act of February 1, 1905.
§ 958. Rights of way over National Forests—Effect of Acts of March 3, 1891, and February 1, 1905, upon the Acts of 1866 and 1870.
§ 959. Over forest reserves and reservoir sites—Act of March 3, 1899—Construction of Act.
§ 960. Rights of way over National Forests—Applicants may take Department of Agriculture permits, under both Acts of March 3, 1891, and February 1, 1905.
§ 961. Rights of way over National Forests—Revocable permits issued by the Secretary of Agriculture.
§ 962. Rights of way over National Forests—Water power regulations.
§ 963. Permissive use of rights of way over reservations and public parks—Text of Act of February 15, 1901.
§ 964. Permissive use of rights of way over reservations and public parks—Construction of Act of February 15, 1901.
§ 965. Grants for fifty years upon public lands, National Forests, and reserves—Act of March 4, 1911, for the transmission and distribution of electrical power.
§ 966. Reservoirs for watering stock—Act of January 13, 1897.
§ 967. Over National Forests—Divided jurisdiction between secretaries of the Interior and Agriculture.
§ 968. General jurisdiction of the respective departments.
§ 969. Proceedings to forfeit right on account of non-performance of conditions—Under Act of March 3, 1891, and February 1, 1905.
§ 970. Rights to construct dams over navigable streams.
§ 971. Over State lands.

**§ 927. Scope of chapter.**—In this chapter we will confine our discussion to the rights of way granted under the various Acts of Congress over the public domain of the United States, and how and for what purposes they may be acquired. We will also discuss rights of way over State lands. Rights of way over private lands we will take up in a succeeding chapter.[1] Rights of way acquired

[1] See Chap. 52, Secs. 972-993.

by eminent domain [2] and prescription [3] will be discussed in succeeding chapters of this part.

§ 928. **Distinction as to property rights.**—As we have discussed in previous sections, the property in a water right and that in a ditch, canal, or other works by the means of which water is diverted, stored, and conducted to the place of use, is of entirely different character.[1] And even where these rights are used together, the ownership of the one may be in an entirely different party from the ownership of the other. They may, therefore, be acquired and disposed of separate and apart from each other, and the sale or other disposal of one does not necessarily include the other.[2] Again, there is a distinction between the property right in a ditch or canal, which is land and corporeal,[3] and the rights of way for a ditch or canal over the lands of others, which are generally considered easements, and are mere privileges which one person may have over the lands of others, and are intangible and incorporeal.[4]

§ 929. **Necessity for rights of way.**—If the appropriator could always take the water out on his own lands by dams, ditches, or canals constructed thereon, and use it on his lands without crossing those of others, there would be no necessity for rights of way, and a large portion of the law upon the Arid Region Doctrine of appropriation would be eliminated. But as under this law any lands may be irrigated, or the use of the water for other purposes need not be upon lands which are riparian to the stream from which the water is taken, "the law of necessity" was invoked at a very early day in the history of the doctrine,[1] and the appropriator was per-

2 For eminent domain, see Chap. 55, Secs. 1059-1098.

3 For rights acquired by prescription, see Chap. 54, Secs. 1033-1058.

1 For character of property in a water right, see Secs. 757-774.

For character of property in ditches and canals, see Secs. 833, 834.

2 For the sale of these separate rights, see Secs. 994-1032.

Possessory rights to right of way for irrigation ditches, and the right to the use of the water, may have an existence independent of each other. Ada County Farmers' Irr. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485.

3 See Secs. 833, 834.

4 That ditches, canals, etc., are not in themselves, see Secs. 833, 834.

1 See Secs. 598-605.

mitted to construct ditches and canals, sometimes many miles in length, in order to conduct the water to the place of use. This right to conduct the water to the place of use is as necessary as the right to the use of the water itself; and although they are different characters of property, and depend upon entirely different principles of law as to their origin, they must be used conjointly, as the right to one in this arid region would be worthless without the right to the other. Therefore, a great deal of the law of the doctrine of appropriation relates directly to the rights of way for the ditches, canals, reservoirs, and the other necessary works of the appropriator, also to the character of the works themselves, their location, construction, changes, and other subjects which attach directly to the works themselves, and are entirely exclusive of the right to the use of the water. In fact, it may be said that there are as many questions which relate directly to the different phases of the necessary works of the appropriator as there are which relate to his right to the use of the water. And if we may be permitted to judge as to the results of the future from the experience of the past, there are many of these questions which are by no means settled for all time. While all these laws are necessary under our Western system of water rights as matters now stand, we can but think that at an early day, when all of the lands and waters were upon the public domain, and when the United States had the absolute title to, as well as the sole sovereignty over them, instead of being so profuse in its gifts to the individual, had our Government evolved some uniform system for the acquisition of water rights and rights of way applicable to all parts of the Western country where irrigation is necessary, a much simpler and more uniform system would have been established. It might have been made so as to guard the rights of the individual, and at the same time the use of the available water supply would have had greater efficiency, and millions of dollars would have been saved in litigation in the past and millions more would be saved in the future. Other countries did this, notably the provinces of Canada.[2] It is true that they have profited largely by our mistakes, but the result of their system has been successful, uniform, efficient, and safe in the extreme, both to the Government and to the individual. As proof

[2] For the water laws of Canada, see Secs. 177-237. For those of Alberta and Saskatchewan, see Secs. 182-201.

of this, turn to the reports of their courts of last resort and see how few cases involving water rights have ever reached them for decision,[3] as compared to the thousands which have reached our appellate courts, and the thousands of others which have been tried in our *nisi prius* courts which have never been appealed. As compared to the water laws of some other countries, where the right to the use of the water may be acquired for the same purposes as they may be acquired in the arid and semi-arid West, our laws in general are not uniform, and are crude in the extreme. Again, there still are in the majority of cases no record of the rights themselves or of the amount of water used under each right, and many times the rights are not assured to present users, or to those contemplating the use of the water, for the reason that the appropriator does not know just what he owns, and therefore he gets all that he can and is eternally standing guard against the encroachment of others upon his rights. But, as we have said before, we must treat these subjects as we find them, and not as they might have been.

§ 930. **No title to early rights of way.**—In our chapter upon the history of the Arid Region Doctrine of appropriation [1] we discussed at some length the fact that for a period of eighteen years, from 1848 to 1866, although the Government was the sole owner of and had the absolute sovereignty over both the lands and waters, out of the very necessities of the case parties desiring the use of the waters of the natural streams upon the public domain went upon these lands without any authority of law and simply took what they needed for their various uses. The same may also be said as regards the land needed for their ditches and canals. They simply took possession of such land as might be necessary for the diversion of the water and its conveyance to the place of use. They had absolutely no title to the lands taken possession of for this purpose before any Act of Congress, and instead of having "rights of way" they were mere trespassers upon the public domain of the United

[3] As stated by Mr. F. H. Peters, Commissioner of Irrigation for the Provinces of Alberta and Saskatchewan, Canada, in a letter to the author under date of March 20, 1912: "I would also say that there has been practically no litigation arising over conflicting rights under the Irrigation Act, and to my knowledge the appellate courts have had no occasion to construe the provisions of the Act."

[1] For history of doctrine, see Secs. 595-626.

States. The only sanction to these acts was the forbearance of the General Government, and the local regulations and customs of the miners as enforced and moulded by the courts, and the legislation of the States and Territories wherein these customs prevailed. So when Congress came to take steps relative to the disposal of its public lands to the miners and settlers, it found many of them already in the possession of appropriators of water and in use for their ditches and canals for conducting the water. And although they were held by no legal title, Congress felt bound to and did recognize them. As held by the Supreme Court of the United States, by an opinion rendered by Mr. Justice Miller, they were rights which the Government had, by its conduct, recognized and encouraged, and was bound to protect before the passage of the Act of 1866.[2] This subject, however, has been fully discussed in a previous chapter of this work upon the subject of the history of the Arid Region Doctrine of appropriation.[3]

§ 931. **Act of Congress of 1866 the first Act granting rights of way.**—In 1866 Congress passed the first Act which recognized the rights of way for ditches and canals over the public domain of the United States, which had theretofore been held without title,[1] by providing that, in connection with the water rights therein granted,[2] "and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage."[3]

3 See Chap. 32, Secs. 595-626.

1 That there was no title to rights of way at first, see Sec. 930.

2 As to the water rights granted in the Act, see Secs. 611-619.

3 See 7 Fed. Stat. Ann., 1905, p. 1090; 2 U. S. Comp. Stat., 1901, p. 1437; Rev. Stat. U. S., Sec. 2339; Act of July 26, 1866, 14 Stat. L., Chap. 262, p. 253, Sec. 9.

See, also, Secs. 611-619.

This provision was inserted in the Act of Congress of that date, providing for the disposal of the mineral lands of the United States, and we have related in a previous portion of this work as to how it came to be passed.[4] This provision in and of itself was sufficient to give title to rights of way for all ditches and canals, the vested right to which had accrued at the time of the passage of the Act. In fact, the Supreme Court of the United States, in construing the provisions of the Act of 1866, before its amendment, held that this Act alone, as to all ditches in existence before or at the date of its passage, "was an unequivocal grant of the right of way, if it was no more."[5] And when the Government came to sell the lands through which the ditches and canals had been constructed, the grantees took the title subject to the rights of way which had vested and accrued prior to their inception of title to the land.[6] This was a consequence which naturally followed from the well-settled law of conveyancing; and although there was no reservation clause in the Government patents prior to those issued after the Act of 1870, wherever the title of the United States to any portion of the public domain was thus burdened the same burden would, on general principles, accompany the title, if transferred to any subsequent or private owner. Therefore, whoever succeeded to the title of the United States, through any mode of acquisition or conveyance, would acquire the title subject to the same servitude which before existed in favor of the owner of the ditch or canal.[7] But

[4] For history of the Arid Region Doctrine of appropriation, see Secs. 595-626.

[5] "As to the canal of the defendant: so far as it ran through the land of the United States, at the date of this Act it was an unequivocal grant of the right of way, if it was no more. As the plaintiff's right commenced subsequent to this statute, as to the lands patented to him and his brother, he took the title subject to this right of way and can not now disturb it." Broder v. Natoma W. Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621.

owing to the fact of the difference of opinion of the courts in construing the Act as to whether it related only to the rights which had vested and accrued at the time of its passage or was prospective in its operation, a subject which has long since become obsolete as far as any extended discussion needed here is concerned,[8] Congress, as we shall see in the next section, afterward amended the Act.[9]

§ 932. **Act of 1870 amending Act of 1866.**—Four years after the Act of 1866 was passed, owing to the uncertainty stated in the previous section,[1] Congress, by the Act of July 9, 1870, amended, or rather supplemented, the first Act by providing: "All patents granted, or pre-emption or homesteads allowed, shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights, as may have been acquired under or recognized by the preceding section."[2] This latter Act has been construed to be simply declaratory or explanatory of the terms of the provisions of the Act of 1866.[3] Our own opinion, however, is that this is not the proper construction of the Act. It not only explains the old Act of 1866, but it also adds considerably to it and to its scope. It provides that "all patents granted," etc., shall be subject to any vested and accrued water rights or rights of way, and not only those which had vested and accrued at the time the Act was passed, but also those which might vest and accrue in the future and prior to the granting of the patents, or rather, as has been construed by the courts prior to the

good v. El Dorado W. Co., 56 Cal. 571, 5 Morr. Min. Rep. 37; Copp's Mining Dec., 1873, 1874.

However, after the lands have been withdrawn from the public lands, such burden can not be added to or increased. Campbell v. Flannery, 32 Mont. 119, 79 Pac. Rep. 702, 80 Pac. Rep. 240.

8 See Secs. 813-815.

9 See Sec. 932.

See, also, Secs. 611-619.

2 See 7 Fed. Stat. Ann., 1905, p. 1096; 2 U. S. Comp. Stat., 1901, p. 1437; Rev. Stat. U. S., 1878, Sec. 2340; Act of July 9, 1870, Chap. 235; 16 Stat. L. 218.

For full text of Secs. 2339, 2340, see Secs. 611, 615.

See, also, Secs. 611-620.

3 See Black's Pomeroy on Riparian Rights, 1893, Sec. 28.

See, also, Bouvier, Sub., "Declaratory." Something which explains or ascertains what was before uncertain or doubtful; as, a declaratory statute, which is one passed to put an end to a doubt as to what the law is, and which declares what it is and what it has been. 1 Bla. Com. 86.

inception of the right upon which a patent was afterward granted.[4] At least, this has been the construction of the Land Department and the courts since the supplemental Act of 1870 was passed, and all patents from the Government which have been issued since the Act of 1870 went into effect contain the following reservation clause: "Subject to any vested and accrued water rights for mining, agriculture, manufacturing, or other purposes, and rights to ditches and reservoirs used in connection with such water rights as may be recognized and acknowledged by the local customs, laws, and decisions of courts." It will be noticed that this clause embodies the substance of both the ninth section of the Act of 1866 and that of 1870. And although the grant to the rights to the water and the rights of way would have been as absolute, and the patentee would have taken the title subject thereto, had the clause quoted not been inserted in the patents,[5] however, it was thought best by the Land Department that the clause be inserted to remove all misapprehensions between the owners of such rights and the patentees of the land. The interpretation given the Act of 1870 by the General Land Office is explained in the letter of Commissioner Drummond, dated March 21, 1872, a portion of which letter is quoted in our note.[6]

[4] For the inception of rights to patent, see Sec. 445.

For the doctrine of relation, see Secs. 742-756.

[5] This is the rule relative to patenting lands granted by a State, where the rights of way are allowed over State lands, or which had vested and accrued under the laws of the United States prior to the grant of the lands to the State. See Parkersville Drainage Dist. v. Wattier, 48 Ore. 332, 86 Pac. Rep. 775; Carson v. Gentner, 33 Ore. 512, 52 Pac. Rep. 506, 43 L. R. A. 130; Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Isaacs v. Barber, 10 Wash. 124, 38 Pac. Rep. 871, 30 L. R. A. 665, 45 Am. St. Rep. 772.

[6] "Although from an examination of the ninth section of the mining Act of July 26, 1866, and the seventeenth section of the amendatory Act of July 9, 1870, I am satisfied that the rights to the use of the water for mining, manufacturing, agricultural, or other purposes, and rights for the construction of ditches and canals, used in connection with such water rights, *are fully protected by law;* yet, in order that all apprehensions that might exist between the holder or claimant of such right and such patentee might be set at rest, it was determined in all patents hereafter granted in mineral regions of the United States to insert an additional clause of condition, expressly protecting and reserving such water rights, and making the patent subject thereto, the same as before it was granted." See Copp's U. S. Mineral Lands, 2d Ed., p. 84.

**§ 933. Construction of Acts of 1866 and 1870—Priority governs.**—The Acts of Congress of 1866 and 1870, in addition to the granting rights to the use of water by appropriation,[1] constitute a continuing grant of rights of way for the ditches, canals, and reservoirs, or other works necessary, where the possession of the same is prior in time to the possession of the land through which they run. In other words, it was the intention of Congress, as indicated by these Acts, to give the owners of water rights the right of way over the public domain for the construction of the works necessary to make the water available for use. The grant of the right to use the water would have been worthless, had not the grant for the rights of way accompanied it.[2]

In a Colorado case it was held that Sections 2339, 2340, of the Revised Statutes of the United States are a recognition of the legality of water rights given by local customs and laws and the lands granted to the Pacific railroads under the Pacific Railway Acts are subject to such rights. And the Court said: "As to lands granted under the provisions of the Pacific Railroad Acts, which are precisely the same in the case at bar as in that case,[3] it was also held that under the reservation clause of the Act of July 2, 1864, the railway company took the lands therein granted subject to 'other lawful claims.' Under the Act of 1866 it was held that whenever the United States Government had, by its conduct, recognized and encouraged such rights to the use of water for agricultural purposes, and the right of way for the construction of ditches therefor, as were recognized and acknowledged by the local customs, laws, and the decisions of the courts, the Government was bound, even before the passage of the Act, to protect those persons in whom such rights became vested. Under the Pacific Railroad Acts it was held that when such lawful claims as the right of way for ditches for agricultural purposes had been so recognized by the Government, the grant to the railway company of lands under that Act was subject to such lawful claims, and that such lawful claims are

1 For the construction of the Acts as relating to water rights, see Secs. 611-620.

For the Acts themselves, see Secs. 611, 615.

2 Noteware v. Stearns, 1 Mont. 311, 4 Morr. Min. Rep. 650.

3 Broder v. Natoma Water Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621.

unaffected by the grant."[4] But in order to take advantage of the portion of the law granting rights of way for the purposes mentioned in the Acts, the appropriator must first have acquired a right to water which may be conveyed through his ditch or canal for which the right of way is claimed. As it is only the right to, or the right of way for, such ditches, canals, or reservoirs as are used in connection with a vested water right that the owner of the latter can successfully claim. Therefore, unless the claimant to the right of way first acquires a vested and accrued water right, he is not entitled to an easement over the public lands for his ditch, canal, or other works.[5] But with this condition complied with, the right of way over the public lands is given by the Act, and there is no need of condemnation proceedings.[6]

In this case, as in others involving the Arid Region Doctrine of appropriation, priority of the respective rights governs and gives the one who was first in time the superior right to the land covered by such right of way.[7]

For appropriation as against riparian rights, see Chap. 44, Secs. 810-823.

"In harmony with the above provisions, patents granted under the timber and stone law state that the grant is subject to any vested and accrued water rights for mining, agricultural, manufacturing, or other purposes, and rights to ditches and reservoirs used in connection with such water rights as may be recognized and acknowledged by the local customs, laws, and decisions of courts." John H. Parker, 40 Land Dec. 431.

**§ 934. Construction of Acts of 1866 and 1870—Effect of Acts.**—By these two Acts Congress recognized, as far as the public lands were concerned, all those rights which had been acquired prior to their passage, and also provided for the acquisition of similar rights in the future, both as to water rights and also the rights of way over the public domain for the construction of ditches and canals or other works to make the water available for use.[1] Therefore, these two Acts of Congress have been construed as prospective in their operation, in the sense that they do not in any manner qualify or limit the effect to those patents issued before their passage, but relate to all rights of way over the public domain which were prior in time to the inception of any rights of settlers or others to title to the land in the future, after the passage of the Acts, as well as to all rights to rights of way which had vested and accrued prior to their passage.[2] And all parties whose inception to title to land afterward patented to them by the Government was or is subsequent to the actual construction of ditches, canals, or reservoirs, or the inception of the right to construct these works, take the title

1 "The Government enacts that any one may go upon its public lands for the purpose of procuring water, digging ditches for canals, etc., and when rights have become vested and accrued which are recognized and acknowledged by the local customs, laws, and decisions of courts, such rights are acknowledged and confirmed." Bear Lake etc. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7; affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 368; Telluride etc. Co. v. Rio Grande W. R. Co., 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245; dismissing *Id.*, 16 Utah 125, 51 Pac. Rep. 146; Same v. Same, 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 178; dismissing *Id.*, 23 Utah 22, 63 Pac. Rep. 995; Noteware v. Stearns, 1 Mont. 311, 4 Morr. Min. Rep. 650; Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039; Ada Co. etc. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. For the Arid Region Doctrine of appropriation, see Chap. 31, Secs. 585-594.

For the history of the doctrine, see Chap. 32, Secs. 595-626.

For the construction of the two Acts as relating to the appropriation of waters, see Secs. 611-620.

2 "The Act of Congress of July 26, 1866, is prospective in its operation." Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Broder v. Natoma M. Co., 101 U. S. 274, 25 L. Ed. 790; affirming 50 Cal. 621; Basey v. Gallagher, 87 U. S. 20 Wall. 670, 22 L. Ed. 452, 1 Morr. Min. Rep. 683; Beaver Brook Res. etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066.

to the land subject to the burden of such easements.[3] And the land is subject to the same servitude in the hands of a transferee that it was in the hands of the original patentee.[4] But the owner of an irrigation ditch constructed over public land never has the title in fee to it, but a conditional easement, which will be defeated by his failure to use it for the original purpose for which it was obtained.[5] Where an appropriator has become entitled to a right of way for his canal, he has a possessory right or interest in the land at the time of the inception of his right, which becomes absolute by the subsequent construction of the works, provided that the construction is prosecuted with all due and reasonable diligence to completion.[6] But there must be something more than the mere filing of a claim for or taking possession of land for a right of way and staking out the line of the canal to be constructed over the land. The works must be constructed with reasonable diligence.[7] Under these statutes no right or title to land, or the right of way over or through the same, vests as against the Government, in the party entering upon possession from the mere fact of such possession, unaccompanied by the performance of any labor thereon.[8]

The staking out of a line of canal, if the work is diligently prosecuted to completion, is the inception of a right of way. Conger v. Weaver, 6 Cal. 548, 65 Am. Dec. 528, 1 Morr. Min. Rep. 594.

[7] For reasonable diligence, see Secs. 733-741.

[8] Bear Lake etc. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. St. Rep. 7; affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 368; Sullivan v. Northern Spy M. Co., 11 Utah 438, 40 Pac. Rep. 709, 30 L. R. A. 186.

But, as is the case in all controversies involved in the Arid Region Doctrine of appropriation, priority of rights give the superior title in matters involving rights of way, as well as to the right to the use of the waters conveyed thereover. As was said in a recent Wyoming case:[9] "In the case before us the ditch, having been constructed and in actual use over and across the southeast quarter of the southeast quarter of Section eighteen, while it was unoccupied public land of the United States, and used continually thenceforth as a conduit, must, we think, be held to be a vested right within the provisions of Sections 2339 and 2340, *supra*, as against one who is not in a position to dispute the water right and deraigns title by grant from the Government thereafter. In Broder v. Natoma Water & M. Co.[10] it was held that the owners of a ditch located on public land and in actual use will be protected against subsequent entrymen. There are numerous decisions to the effect that if an appropriator is first in time with reference to possession and use as compared with the date of an entry made, the rights of the entryman are junior and inferior."[11] And if a settler is in possession under any of the laws for the acquisition of a title to the land, he has such a title as will enable him to recover damages for the construction of a ditch across his property before he obtains his patent.[12] This is also the case where the possession of a mining claim is held under the Federal laws, providing for such possession.[13] And in cases of this nature, in order to acquire a right of way over the land, it must be done in some method known to law for the acquisition of such rights over private lands, and discussed

in a subsequent chapter.[14] But the right to acquire a right of way for a ditch across the public land can not be disputed by one who is merely in possession of the land across which the ditch runs, and who takes no steps to perfect his title to the land.[15]

Such being the rights of the owner of a right of way for ditches and canals over the public lands as against the Government, undoubtedly these rights as against third persons are acquired by priority of possession, and the Government will and does recognize such rights as between such parties,[16] as is also the case of the rights to the water by appropriation.[17] As was said by the Supreme Court: "But in order to establish any rights under the statute it was incumbent upon the defendants to prove their priority of possession, or at least disprove priority on the part of the plaintiff. The question, Who had acquired this priority of possession? was not a Federal question, but a pure question of fact, upon which the decision of the State Court was conclusive."[18] And, therefore, where the inception of the title to the land is prior to the inception of that of the right of way over the land, the absolute title to the land vests in the patentee and is subject to no burden or easement for the right of way.[19] And where there was a filing

upon the land for a pre-emption entry, which was afterwards abandoned, and an entry made for the same land under the homestead laws, there is no right to recover damages for the location of the ditch which was prior to the homestead entry.[20]

It is held by the Land Department that Sections 2339 and 2340 of the statutes were not repealed by the Act of March 3, 1891, and the priority of right in a right of way for a canal is protected by the provisions of said sections, although the right of way can not be approved under the terms of the Act of 1891.[21]

It has been contended that the rights of way under the Acts of 1866 and 1870 were repealed and superseded by the Act of 1891, but this contention can not be sustained. This subject, however, will be discussed in another section of this part.[22] In a recent decision by the Secretary of the Interior,[23] it was held that the right of way provision of the Act of 1866 never applied to the acquisition of rights of way for power purposes either upon the reserved or unreserved public domain, the opinion saying: "The law found in the Revised Statutes under Section 2339 constitutes merely a recognition by the United States of water rights acquired under usage, customs, and the laws of the State, and in addition thereto recognizes the rights of persons acquiring such rights to go across the public lands. It is too obvious for argument that in 1866, the date of the original Act constituting this law, Congress did not contemplate power companies, because they were not in existence at that time."

**§ 935. Lands once entered and afterward forfeited.**—The provisions for rights of way under the Acts of 1866 and 1870 [1] only apply to the unreserved public lands of the United States. They do not apply to the reserved lands included in Indian, forest, park,

See, also, Secs. 611-620.

or other reserves,[2] nor do they apply to lands which have been once segregated from the public lands of the United States by private entries under some of the public land laws.

They do not apply to Indian reserves until the title of occupancy by the Indians has been extinguished[3] and the lands thrown open to settlement as a part of the public lands.[4]

After lands have once passed into private ownership, rights of way can only be acquired in accordance to the laws of the State relating to the acquisition of such rights over private lands, and discussed fully in a subsequent chapter.[5] But, upon the other hand, where lands have once been entered and either forfeited or abandoned, they again become public lands of the United States and subject to future entry the same as though no entry had ever been made thereon. And it is immaterial in cases of this nature whether the right of way was acquired prior or subsequent to the time the Government was reinvested with title and all subsequent entrymen or owners take the title subject to such rights of way over the same.[6]

**§ 936. Reservations in patents of rights of way for ditches and canals constructed by the Government—Act of August 30, 1890.**—The next law to be enacted by Congress upon the subject of rights of way over the public domain is to be found as Section 1 of the

St. Rep. 650; reversing on rehearing *Id.*, 83 Neb. 678, 120 N. W. Rep. 184.

Sundry Civil Appropriation Act of August 30, 1890,[1] which Act is as follows:

". . . That in all patents for lands hereafter taken up under any of the land laws of the United States or on entries or claims validated by this Act west of the one-hundredth meridian, it shall be expressed that there is reserved from the lands in said patent described a right of way thereon for ditches or canals constructed by the authority of the United States."[2]

It will be noticed by the provisions of the Act that the expression is used that the rights of way are reserved "for ditches or canals constructed by the authority of the United States." Although no Act was passed for the construction of ditches, canals, or other works by the Government until twelve years afterward, when the National Reclamation Act was passed, it is evident that Congress, by the passage of the Act of 1890, was paving the way for National reclamation of lands by the reservation in all patents of rights of way for ditches and canals, which the Government might utilize in the future when such a reclamation Act should be passed. This law will be more thoroughly discussed when we come to the subject of rights of way for irrigation works for use by the Government under the National Reclamation Act of 1902.[3]

This Act is construed by the Secretary of the Interior in the regulations issued by him under date of May 31, 1910,[4] as follows: "All lands, however, taken up under any of the land laws of the United States subsequent to October 2, 1888, are subject to the right of way for ditches or canals constructed by the authority of the United States.[5] All entries made upon the lands referred to are subject to the following proviso of the Act cited:[6] "Should a homestead entry embrace land that is needed in whole or in part for purposes contemplated by said proviso, the land would be taken for

4 38 Land Dec. 620.

5 Act of August 30, 1890, 26 Stat. 391; circular approved by department July 25, 1903.

6 Quoting Proviso, *supra*.

such purpose, and the entryman would have no claim against the United States for the same." It is also held that the Act applies to Indian allotments, and that all lands allotted after the Act of August 30, 1890, were subject to the reservation provided by that Act, to be expressed in the patent for right of way for ditches or canals constructed by the authority of the United States.[7]

It was held by the Idaho Supreme Court [8] that the Act in question in reserving to the Government an easement for ditches and canals over the lands therein named does not apply to railroad grants for rights of way acquired under the provisions of the Act of March 3, 1875. And the Court said: "When we come to consider the language of the Act itself, we find that all its terms have special reference to lands 'taken up' and lands on which 'entries' are made and for which 'patents' are issued. All these terms indicate a purpose to deal with lands to which the Government grants the absolute fee and which are conveyed in quantity or bulk by legal subdivisions, and indicate no purpose to refer to special and qualified estates or easements granted by Congress for definite and specific purposes." [9]

**§ 937. Right of way through public lands and reservations to canal or ditch companies for irrigation—Act of March 3, 1891.**—But Congress did not let the matter of rights of way for ditches and canals for the purpose of irrigation rest with the Acts of 1866 and 1870, which we have discussed in our previous sections.[1] By Sections 18 to 21 of the Act of March 3, 1891, "An Act to repeal the timber-culture laws, and for other purposes," [2] Congress provided as follows:

"Section 18. That the right of way through the public lands and reservations of the United States is hereby granted to any canal or ditch company formed for the purpose of irrigation and duly

organized under the laws of any State or Territory which shall have filed, or may hereafter file, with the Secretary of the Interior a copy of its articles of incorporation, and due proofs of its organization under the same, to the extent of the ground occupied by the water of the reservoir, and of the canal and its laterals, and fifty feet on each side of the marginal limits thereof; also, the right to take from the public lands adjacent to the canal or ditch, material, earth, and stone necessary for the construction of such canal or ditch; *provided,* that no such right of way shall be so located as to interfere with the proper occupation by the Government of any such reservation, and all maps of location shall be subject to the approval of the department of the Government having jurisdiction of such reservation, and the privilege herein granted shall not be construed to interfere with the control of waters for irrigation and for other purposes under the authority of the respective States and Territories.

"Sec. 19. That any canal or ditch company desiring to secure the benefits of this Act shall, within twelve months after the location of ten miles of its canal, if the same be upon surveyed lands, and if upon unsurveyed lands, within twelve months after the survey thereof by the United States, file with the register of the land office for the district where such land is located a map of its canal or ditch and reservoir; and upon the approval thereof by the Secretary of the Interior, the same shall be noted upon the plats in said office, and thereafter all such lands over which such rights of way shall pass shall be disposed of subject to such right of way. Whenever any person or corporation in the construction of any canal, ditch, or reservoir, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

"Sec. 20. That the provisions of this Act shall apply to all canals, ditches, or reservoirs heretofore or hereafter constructed, whether constructed by corporations, individuals, or associations of individuals, on the filing the certificates and maps herein provided for. If such ditch, canal, or reservoir has been or shall be constructed by an individual or association of individuals, it shall be sufficient for such individual or association of individuals to file with the Secretary of the Interior, and with the register of the land

office where said land is located, a map of the line of such canal, ditch, or reservoir, as in case of a corporation, with the name of the individual owner or owners thereof, together with the articles of association, if any there be. Plats heretofore filed shall have the benefits of this Act from the date of their filing as though filed under it: Provided, that if any section of said canal or ditch shall not be completed within five years after the location of said section, the rights herein granted shall be forfeited, as to any uncompleted section of said canal, ditch, or reservoir, to the extent that the same is not completed at the date of the forfeiture.

"Sec. 21. That nothing in this Act shall authorize such canal or ditch company to occupy such right of way except for the purpose of said canal or ditch, and then only so far as may be necessary for the construction, maintenance, and care of said canal or ditch."

§ 938. **Construction of Act of March 3, 1891.**—By the Act of March 3, 1891, quoted in the preceding section,[1] Congress granted rights of way upon and through the public lands and Government reservations for reservoir sites and rights of way for ditches and canals, to the extent of the land occupied by the water of a reservoir, and fifty feet on each side of the marginal limits thereof; also the right to take from the public lands adjacent to the line of the ditch or canal material, earth, and stone necessary for the construction of such ditch or canal. By Section 18 of the Act the grant runs to any canal or ditch company formed for the purpose of irrigation and duly organized under the laws of any State or Territory upon complying with the conditions of the statute as to filing a copy of its articles of incorporation and proof of its organization, and also complying with the other conditions of the Act hereinafter discussed.[2] But by Section 20 the Act is made to apply to all canals, ditches, or reservoirs heretofore or hereafter constructed, whether

Where the lands sought are within an Indian reservation they are within the scope of the Act, notwithstanding they may have been allotted to individual Indians. Fresno Water Right Canal, 35 Land Dec. 550.

See, also, United States v. Conrad Inv. Co., 156 Fed. Rep. 123.

However, the right is subject to the condition that the location and construction of the canal or ditch shall not interfere with the proper occupation of the reservation for Government purposes. Op. Atty. Gen., 33 Land Dec. 563.

constructed by corporation, individuals, or association of individuals, upon complying with the other conditions prescribed in the Act. And by the amendatory Act of February 26, 1897,[3] the scope of the Act was extended so as to include reservoir sites theretofore reserved by the Government, and also any State was authorized to improve and occupy such reservoir sites to the same extent as an individual or private corporation.[4]

Section 21 of the Act of 1891 also provides that nothing in the Act shall authorize the occupation for such right of way except for the purpose of the ditch and canal, which purpose is declared by Section 18 to be that for irrigation. It is further provided that if any section of the canal or ditch shall not be completed within five years after the location of said section, the rights granted in the Act shall be forfeited as to the uncompleted portion of the canal, ditch, or reservoir.[5] As the Act relates wholly to the public domain of the United States, the jurisdiction as to the execution of the Act is vested with the Secretary of the Interior, and it is further provided that where the right of way applied for is over any Government reservation, all maps of location shall be subject to the approval of the department of the Government having charge

See, also, Rio Verde Canal Co., 27 Land Dec. 421; overruling *Id.*, 26 Land Dec. 381, and Florida Mesa D. Co., 14 Land Dec. 265.

The provisions of the Act of March 3, 1891, do not contemplate the allowance of such rights over lands reserved by the Government for reservoir sites under the Act of October 2, 1888. Blue Water etc. Co., 23 Land Dec. 275.

For rights of way over segregated reservoir sites, see Secs. 951-953.

The provisions of the Act of March 3, 1891, are applicable to the Sequoia National Park Reservation, subject to the condition that the right of way, if granted, shall not interfere with the proper occupation of the reservation by the Government. H. V. Grueningen, 20 Land Dec. 253.

[3] 7 Fed. Stat. Ann., 1905, p. 1098; 2 U. S. Comp. Stat., 1901, p. 1556, Chap. 335; 29 Stat. L. 599.

[4] See, also, Secs. 951-953.

[5] Where a reservoir right of way has been approved, but the reservoir was not constructed within the statutory period, a transferee of the reservoir company may be permitted to file a new map of location, to operate only upon such portions of the public lands as are free from any claims at the date of the approval of the new map of location. Franklin F. Noxon, 27 Land Dec. 585.

See for amended applications, Secs. 945-947.

of such reservation.[6] The original Act did not apply to forest reservations,[7] for mining or domestic purposes, or to Alaska.[8]

For the purpose of carrying out the provisions of the Reclamation Act of June 17, 1902, the Government may avail itself of the privileges conferred by the Act of March 3, 1891, to the same extent that individuals, corporations, or associations of individuals may exercise such privileges, and subject to the same conditions and limitations.[9]

The Act further provides that upon the approval of the maps and plats of the applicant for a right of way by the Secretary of the Interior the same shall be noted upon the plats in his office, and thereafter all such lands over which such rights of way shall pass shall be disposed of subject to such right of way.[10]

The Act of March 3, 1891,[11] is not inconsistent with the Act of February 15, 1901, providing for the permissive rights of way over reservations and parks,[12] since the former Act applies to canals and ditches, the main purpose of which is irrigation, and for which an easement attaches which becomes permanent on the approval of the Secretary of the Interior after the land has been surveyed, while the Act of February 15, 1901, refers to the grant of a mere license, revocable at any time, of the right to construct, canals, etc., over the public land which may be used for parks and reserva-

6 Where the jurisdiction is under two departments, see Sec. 946.

12 For Act of Feb. 15, 1901, and construction thereof, see Secs. 963-965.

tions.[13] The extent of the grant made by the Act of 1891 is defined by the statute, and the Secretary of the Interior is not authorized to accord a qualified approval of applications filed thereunder for the purpose of limiting the estate thereby granted.[14]

It is held by the Land Department that the Act of March 3, 1891, contemplates and requires that *prima facie* evidence of the right to waters to be conveyed in or to the canals or reservoirs covered by the right of way sought must be furnished by the applicant, "it not being contemplated that easements shall be granted where the applicant has no water to convey therein."[15] And it was further held that where the Government has filed notices of appropriation and asserted its claims to the unappropriated waters of a stream under the National Reclamation Act, applications for rights of way under the Act of March 3, 1891, in conflict with or detrimental to the Government project when such rights are based upon appropriations made or use attempted to be initiated subsequent to the assertion of the claims of the Government, should not be allowed.[16]

In the case of Francis W. Bosco,[17] which case involved international rights between this country and Mexico, as to the waters of the Rio Grande River, and where the granting of rights of way under the Act of March 3, 1891, would tend to embarrass the situation, it was held by the Secretary of the Interior that he could make withdrawals of land from the operation of the Act.

**§ 939. Effect of Act of 1891 upon Acts of 1866 and 1870.**—The Act of 1866 as amended by the Act of 1870 is still in full force and effect, both as to the water rights and as to the rights of way over the public lands of the United States.[1] As held by the Supreme Court of the United States, these Acts constitute "an unequivocal grant of the right of way."[2] While Section 20 of the

[2] Broder v. Natoma W. Co., 101 U. S. 274, 35 L. Ed. 790; affirming 50 Cal. 621.

Act of March 3, 1891,[3] provides "That the provisions of this Act shall apply to all canals, ditches, or reservoirs heretofore or hereafter constructed," this clause simply extends the benefits of that Act to all canals, ditches, or reservoirs theretofore constructed upon the public domain, among which is the right to file in that behalf with the Land Department a map of such works for which the right of way is claimed under the Act of 1866 as amended, and secure the approval of the Secretary of the Interior therefor, yet the rights of claimants under the previous Act are in nowise dependent upon the later Act or upon an approval of such maps.

As was said by Secretary Hitchcock, of the Department of the Interior, in a case decided by him on February 23, 1904:[4] "But it is contended that while Section 2339 of the Revised Statutes did not require, preliminary to the acquirement of rights thereunder, that formal claims should be placed on record in the Land Department, yet the Act of March 3, 1891, *supra,* does require such record to be made, in that Section 20 thereof provides that the provisions of the Act shall apply to 'all canals, ditches, or reservoirs heretofore or hereafter constructed.' This contention is not sound. While the clause above quoted from Section 20 of the Act of March 3, 1891, extends the benefits of that Act to all canals, ditches, or reservoirs theretofore constructed upon the public domain, among which is the right to file in that behalf with the Land Department a map of such canals, ditches, and reservoirs, and secure the approval of the Secretary of the Interior thereof, yet the rights of claimants under Section 2339 of the Revised Statutes are in nowise dependent upon said act or upon an approval of such maps.[5] The

City of Los Angeles, 37 Land Dec. 152, where it is said: "For if the right has in fact been acquired under Sections 2339 and 2340 of the Revised Statutes no further steps are necessary to protect it, and the filing of maps and field notes and the approval of the application for a right of way will add nothing to the right."

See, also, Lincoln etc. Co. v. Big Sandy Reservoir Co., 32 Land Dec. 463; South Platte etc. Co., 20 Land Dec. 154; Cache Valley etc. Co., 16 Land Dec. 192; Pecos Irr. etc. Co., 15 Land Dec. 470, 575; Baldridge etc. Co. v. Leon Lake etc. Co., 20 Colo. App. 518, 80 Pac. Rep. 477; United States v. Rickey, 164 Fed. Rep. 496;

purpose of the Act of March 3, 1891, in respect to this was primarily to extend to such claimants the right to place their claims of record with the Land Department for their better protection. It may be, too, that it enlarged the privileges conferred by Section 2339 of the Revised Statutes, in that it gave the right to the use of fifty feet of land on each side of the marginal limits on canals, ditches, and reservoirs—a privilege not carried by said section—but, however this may be, it surely did not operate to make the continued enjoyment of rights conferred by said section dependent upon the filing of the maps provided for in the Act."

The Act of 1891 also enlarged the privileges conferred by the earlier Acts in that it gave the right of way to the use of fifty feet of land on each side of the marginal limits of canals, ditches, and reservoirs, a right which was not given by the former Acts. The Act of 1891 also provided for the acquisition of rights of way over the reservations of the United States, which rights were not provided for in the Act of 1866. The Acts of 1866 and 1870 do not authorize the Secretary of the Interior to grant any right of way for ditches and canals, but simply to recognize such rights as may have accrued upon the public domain according to the local usages and customs.[6]

As we view the law, the Acts of 1866 and 1870 are in full force and effect, and rights of way may be acquired under them. These Acts were not repealed or altered by the Act of 1891, nor was it intended to take from the States and Territories the right to make local laws not inconsistent with the laws of Congress.[7] "The Act of Congress approved March 3, 1891, *supra,* extends to those in possession of public lands the benefit of that legislation, but in our opinion does not supersede the earlier statute."[8]

The Acts of 1866 and 1870 are not repealed by the Act of March 3, 1891, and priority of possession on the part of canal owners is protected by the provisions of said Acts. Cache Val. Canal Co., 16 Land Dec. 192.

[8] Rasmussen v. Blust, 85 Neb. 198, 122 N. W. Rep. 862, 133 Am. St. Rep. 650, where it was held that the failure of an irrigator to file a map in the land office and to secure the ap-

But in all cases where a large expenditure of money is called for in the construction of ditches, canals, and reservoirs, it is better for the applicant for rights of way to proceed under the provisions of the Act of 1891 and the regulations promulgated thereunder by the Secretary of the Interior. Under this Act greater privileges are allowed, and the applicant also has the benefit of a complete record of the rights acquired.[9]

§ 940. **Construction of Act of March 3, 1891—Purpose originally to aid irrigation only.**—The purpose of the Act of March 3, 1891,[1] was solely in the aid of irrigation, and any application for rights of way for ditches and canals, or for the construction of reservoirs, the object of which even included any other purpose than that of the sole purpose of irrigation, prior to the amendatory Acts hereinafter discussed[2] was refused by the Secretary of the Interior, who had the sole jurisdiction to determine as to whether or not the right of way should be granted.[3] As was held by Secre-

proval of the Secretary of the Interior in accordance with the Act of March 3, 1891, and the Acts supplementary thereto, does not destroy the privileges protected by Sections 2339, 2340 of the Revised Statutes of the United States.

For the text of the Act, see Sec. 937.

2 See Secs. 941-944.

3 The Act of March 3, 1891, grants a right of way through the public lands and reservations of the United States to any canal or ditch company "formed for the purpose of irrigation" only, and has no application to a company formed for other purposes. Denver etc. Co. v. Hydro-Electric Pr. Co., 32 Land Dec. 452.

Town of Delta, 32 Land Dec. 461, where the purpose was to convey water to a town for domestic and other purposes, the application was refused.

Opinion of Atty. Gen., 28 Land Dec. 474, to the effect that the right to construct a reservoir or ditch for use solely for mining or domestic purposes was not within the purport of the Act, even after the passage of the amendatory Act of May 11, 1898. For this Act, see Sec. 941.

H. H. Sinclair, 18 Land Dec. 573, where application was refused where the water was to be used for the generation of electricity.

Wm. Marr, 25 Land Dec. 344, application refused where the water was to be used for domestic and manufacturing purposes.

Chafee etc. Co., 21 Land Dec. 63, application refused where the water

tary Bliss upon this point, an application for a right of way under the Act could not be approved unless it was made to appear that the right of way was desired solely for the purpose of irrigation.[4] This rule, as may be readily seen, greatly hampered the appropriation of water for all beneficial purposes. Under the Arid Region Doctrine of appropriation water could be appropriated and a title to the use thereof could be acquired for any beneficial use or purpose.[5] In other words, the water flowing over these public lands might be appropriated for any useful purpose; but, upon the other hand, rights of way under the Act of 1891, for the purpose of conducting the very water so appropriated to the place of use, could only be acquired where the sole purpose was for irrigation. Worded as the Act was, the Secretary of the Interior was entirely without authority to approve applications even where the purpose for which the water was to be used included irrigation, together with some other use. And his rulings were correct upon the subject. This defect in the law led to certain amendatory Acts by Congress, which we will discuss before taking up the other provisions of the Act.[6]

**§ 941. Text of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891.**—The scope of the rights conferred by the law as it stood after the passage of the Act of March 3, 1891, as to the right of companies or individuals to acquire rights of way over the public domain of the United States was very much enlarged by the later Acts of Congress, both as to the lands over which such rights of way might be acquired and also as to their purpose or use.

was to be used in mines, mills, and lands, and for floatage purposes.

South Platte etc. Co., 20 Land Dec. 154, application refused where it appeared that the principal use of the water would be for municipal purposes.

See, also, South Platte etc. Co., 20 Land Dec. 464; H. H. Sinclair, 18 Land Dec. 573; South Platte etc. Co., 20 Land Dec. 154.

For the doctrine of appropriation, see Chap. 31, Secs. 585-593.

[6] See Secs. 942-944.

The first of these Acts, which were, in fact, amendatory to the Act of March 3, 1891, was the Act of January 21, 1895, entitled "An Act to permit the use of the right of way through the public lands for tramroads, canals, and reservoirs, and for other purposes."[1] This Act, in turn, has also been amended by later amendatory Acts, and, with these, is as follows:

"Section 1. That the Secretary of the Interior be, and hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of the right of way through the public lands of the United States not within the limits of any park, forest, military or Indian reservation for tramroads, canals, or reservoirs to the extent of the ground occupied by the water of the canals and reservoirs and fifty feet on each side of the marginal limits thereof; or fifty feet on each side of the center line of the tramroad, by any citizen or any association of citizens of the United States engaged in the business of mining or quarrying or of cutting timber and manufacturing lumber."[2]

This Act was amended by the Act of May 11, 1898,[3] by adding a second paragraph to above Section 1, which is as follows: "That the Secretary of the Interior be, and hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of right of way upon the public lands of the United States not within the limits of any park, forest, military, or Indian reservations for tramways, canals, or reservoirs, to the extent of the ground occupied by the water of the canals and reservoirs and fifty feet on each side of the marginal limits thereof, or fifty feet on each side of the center line of the tramroad, by any citizen or association of citizens of the United States *for the purpose of furnishing water for domestic, public, and other beneficial uses.*"[4]

However, prior to the amendment to Section 1, by adding the paragraph thereto, quoted above, the Act of January 21, 1895,[5]

1 6 Fed. Stat. Ann., 1905, p. 510; 2 U. S. Comp. Stat. 1901, p. 1572; 28 Stat. L. 635.

2 For the construction of this section, see Sec. 942.

This Act was also amended by the Act of May 11, 1898, 6 Fed. Stat. Ann., 1905, p. 512; 2 U. S. Comp. Stat., 1901, p. 1572; 30 Stat. L. 404, by adding another paragraph thereto.

3 6 Fed. Stat. Ann., 1905; 2 U. S. Comp. Laws, 1901, p. 1572; 30 Stat. L. 404.

4 For the construction of this amendment, see Sec. 942.

5 *Supra.*

was amended by the Act of May 14, 1896, by adding a second section thereto,[6] which section is as follows:

"Sec. 2. That the Secretary of the Interior be, and hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of right of way to the extent of twenty-five feet, together with the use of necessary ground, not exceeding forty acres, upon the public lands and forest reserves of the United States, by any citizen or association of citizens of the United States, for the purpose of generating, manufacturing, or distributing electric power."[7]

§ 942. **Construction of Acts of January 21, 1895, May 14, 1896, and May 11, 1898, amendatory to the Act of March 3, 1891.**—By the Act of January 21, 1895,[1] the Secretary of the Interior is authorized and empowered, under general regulations to be fixed by him,[2] to permit the use of the right of way through the public lands of the United States, not within the limits of any park, forest, military, or Indian reservation for canals and reservoirs to the extent of the ground occupied by the water and fifty feet on each side of the marginal limits thereof, by any citizen or association of citizens of the United States engaged in the business of mining or quarrying or of cutting timber and manufacturing lumber.

By the amendatory Act of May 14, 1896,[3] Section 2 was added to the Act of January 21, 1895, *supra,* whereby the Secretary of the Interior was authorized and empowered, under general regulations to be fixed by him, to permit the right of way to the extent of twenty-five feet, together with the use of necessary ground, not exceeding forty acres, upon the public lands and forest reservations of the United States, by any citizen or association of citizens of the United States, for the purpose of generating, manufacturing, or

[3] 6 Fed. Stat. Ann., 1905, p. 510; 2 U. S. Comp. Stat., 1901, p. 1573; Chap. 179, 29 Stat. L. 120.

For full text of the Act, see Sec. 941.

See, also, Secs. 943, 944.

distributing electric power.[4] It will be noticed that the right granted by Section 2 is but a permissive right.[5]

By the still further amendatory Act of May 11, 1898,[6] a second paragraph was added to Section 1 of the Act of January 21, 1895, *supra*, providing that over the same lands and by the same parties, as provided for in the original Act, permits to the use of rights of way might be given by the same methods, where the purpose of the use of the water was for "furnishing water for domestic, public, and other beneficial uses."[7] The Act of January 21, 1895, *supra*, was still further amended by adding another section thereto by the Act of May 11, 1898, but as the amendment was also amendatory to the Act of March 3, 1891, it will be discussed in our following sections.[8]

It is to be especially noted that all of these Acts differ from the other right of way Act of 1891[9] in that they merely authorize a permission to use instead of making a grant, and that they give no right whatever to take from the public lands adjacent to the right of way any material, earth, or stone for construction or for any other purpose.[10] It was therefore held by the Secretary that where permission to use the public lands under the Act of January 21, 1895, was given that the right terminated with the disposal of the lands; and any person receiving title from the United States takes the land free from any charge or burden thereon by reason of the right granted under the Act. In other words, the permission given

4 For regulations under the Act, see 23 Land Dec. 519, 27 Land Dec. 495.

The Act necessarily contemplates such destruction of timber along the line of such right of way as results from the use and maintenance of the right. Irrigators etc. v. Electric etc. Co., 32 Land Dec. 178.

5 The right of way Acts of March 3, 1891, and May 14, 1898, differ so widely in the character of the estate granted, as well as the uses to which the right of way may be devoted, and the extent thereof, that an application can not be properly allowed on the two Acts taken together; the permission must rest either upon one Act or the other. W. H. O'Melveny, 24 Land Dec. 560.

For Act of March 3, 1891, see Sec. 937.

10 Regulations, 27 Land Dec. 495. See, also, Regulations cited *supra*.

by the Secretary did not in itself constitute an easement in the land, and the right to so use the land terminated upon the disposal of the land by the Government.[11] But an entirely different construction must be given as to the nature of the right after the passage of the amendatory Act of May 11, 1898.[12]

**§ 943. Text of amendatory Act of May 11, 1898, amending the Acts of March 3, 1891, and January 21, 1895.**—The Act of March 3, 1891,[1] and the Act of January 21, 1895,[2] were amended by the Act of May 11, 1898,[3] and their scope was very much enlarged by Section 2 of said Act, which is as follows:

"Sec. 2. That the rights of way for ditches, canals, or reservoirs heretofore or hereafter approved under the provisions of Sections 18, 19, 20, and 22 of the Act entitled 'An Act to repeal timber-culture laws, and for other purposes,' approved March 3, 1891, may be used for purposes of a public nature, and said rights of way may be used for purposes of water transportation, for domestic purposes, or for the development of power, and subsidiary to the main purpose of irrigation."[4]

**§ 944. Construction of Acts of March 3, 1891, and January 21, 1895, as amended by Act of May 11, 1898—Scope of amendment.**—The Act of May 11, 1898,[1] was not only amendatory of the Act of January 21, 1895, but it was also amendatory of the earlier Act of March 3, 1891,[2] by providing that the rights of way for ditches, canals, or reservoirs heretofore or hereafter approved under the

See, also, Secs. 942, 943.

provisions of Sections 18 to 21 of the Act of March 3, 1891, may be used for "purposes of a public nature; and said rights of way may be used for purposes of water transportation, for domestic purposes, or for the development of power, and subsidiary to the main purpose of irrigation." The scope of the Act of 1891, which limited the purpose for which the right of way might be used to irrigation only, was extended so that it might, "as subsidiary to the main purpose of irrigation," be acquired for the other purposes named in the Act.[3] And, therefore, an application for a right of way under the Act of 1891, by a company formed for the purpose of irrigation, will be approved under the provisions of Sections 18 to 21 of the Act, and under those of the amendatory Act of May 11, 1898, notwithstanding the articles of incorporation may permit the company to engage in the business of furnishing and using water "for purposes of a public nature, and for the purposes of water transportation, domestic use, and development of power, as subsidiary to the main purpose of irrigation."[4] But the main purpose must be for irrigation, and the expression, "purposes of a public nature," as used in the amendatory Act of May 11, 1898, does not authorize the approval of an application under the Act of 1891, where the use of the right of way is not desired for irrigation.

As was held by the Secretary of the Interior that a right of way, under the Act of March 3, 1891, may be acquired only by a company formed for the purpose of irrigation; but a right of way secured under that Act may, under the Act of May 11, 1898, be used for purposes of a public nature, as subsidiary to the main purpose of irrigation, it was therefore held that a company organized chiefly for the purpose of generating and distributing power is not within

[3] For the regulations under the Act, see 30 Land Dec. 325, 31 Land Dec. 504, 36 Land Dec. 567.

See, also, circular, June 27, 1900, 30 Land Dec. 325.

Application for a railroad right of way through a narrow canyon in an Indian reservation, which is the most feasible site for a reservoir for irrigation of lands in the vicinity, was rejected by the Secretary of the Interior for the reason that construction of the road as contemplated would prevent use of the canyon for reservoir purposes, and that it was practicable to construct the railroad at a higher grade without interfering with the reservoir site. San Carlos Reservoir Site, 40 Land Dec. 470.

[4] Sierra D. etc. Co., 35 Land Dec. 154.

See, also, Allen v. Denver Power & Irr. Co., 36 Land Dec. 490; Sierra Ditch & Water Co., 38 Land Dec. 547.

the purview of the Act of March 31, 1891, and where application by such a company for right of way under that Act has been approved for lands then within a National Forest, the company may be permitted to relinquish all rights under such approval and amend its application to bring it within the Act of February 15, 1901, failing to do which action should be taken by the Land Department to the revocation of the approval.[5]

The nature of the grant for a right of way under the Act of 1891, as amended by the Act of 1898, *supra*, is not that in the nature of a grant of lands in fee, but is a base or qualified fee. The possession and right of use of the lands are given for the purposes contemplated by the Acts, but a reversionary interest remains in the United States, to be conveyed by it to the person to whom the land may be patented, but whose rights will be subject to those of the grantee of the right of way. Therefore, all persons settling upon a tract of public land, to part of which a right of way has attached for a canal, ditch, or reservoir, take the land subject to such right of way, and at the total area of the subdivision entered, there being no authority to make deductions in such cases. If, however, a settler has a valid claim to land existing at the date of the filing of the map of definite location, his right is superior, and he is entitled to a reasonable measure of damages for right of way as may be determined upon by agreement or in the courts. This question, however, does not come within the jurisdiction of the Land Department, but is entirely within the jurisdiction of the courts of the State within which the land is situated.[6]

[5] Kern River Co., 38 Land Dec. 302; Town of Delta, 32 Land Dec. 461; Op. Atty. Gen., 28 Land Dec. 474, where it is held that "the controlling idea was still, as in the Act of 1891, irrigation." See, also, Op. Atty. Gen., 28 Land Dec. 476.

Inyo etc. Co., 37 Land Dec. 78, where it is also held that the department can not assume the burden of pointing out to applicants for right of way the particular facts necessary to establish the right asserted in each particular case; but the application will not be allowed except upon a satisfactory showing that the right of way is desired for the primary purpose of irrigation.

It is held that no company will hereafter be recognized as a beneficiary under the provisions of the Act of March 3, 1891, granting rights of way over the public lands and reservations to canal and ditch companies organized for the purpose of irrigation until the formal presentation of an application for a specific right of way. Pacific Gas & Electric Co., 40 Land Dec. 125.

[6] Regulations, June 6, 1908, 36 Land Dec. 568; Regulations, 34 Land Dec. 215, 31 Land Dec. 506; Homer E.

It is to be noted here that the courts hold, and correctly, that if the right of the settler has vested prior to the date of the approval of the application by the Secretary of the Interior, that his right is superior and entitled to protection.[7]

Section 21 of the Act of March 3, 1891, provides that the grant of a right of way for a canal, ditch, or reservoir, does not necessarily carry with it a right to the use of fifty feet on each side, but only such land may be used as is necessary for construction, maintenance, and care of the canal, ditch, or reservoir. But the size of reservoirs is not limited by the Act, and an application will be approved "to the extent of the ground occupied by the water of the reservoir" and fifty feet on each side of the marginal limits thereof.[8]

§ 945. **Procedure under Act of March 3, 1891, for acquisition of right.**—The administration of the provisions of the Act of March 3, 1891, comes under the jurisdiction of the Secretary of the Interior and under the General Land Office. Where, however, the land through which the right of way is sought is within a military or some other reservation under the direct charge and control of some department of the Government other than that of the Department of the Interior, all maps of location are also subject to the approval of the department of the Government having jurisdiction of such reservation.[1] Under his general power the Secretary has the authority to make all needed rules and regulations for the administration of the Act. This he has done from time to time as circumstances or amendment of the law required.

That the applicant to purchase the land will be required to pay for the entire area of the legal subdivision applied for regardless of rights of way, see John W. Wehn, 32 Land Dec. 33.

See, also, Regulations, 30 Land Dec. 325, 327.

[8] Irrigators etc. v. Electric etc. Co., 32 Land Dec. 178.

[1] For the approval of other departments, see Sec. 946.

For rights of way over National Forests, see Secs. 954-968.

The rules prescribed in the regulations must be followed accurately, as well as the forms prescribed by the Land Department, as no changes or additions are allowable in the substance thereof, except when the facts differ from those assumed therein.[2]

Where the applicant is an incorporated company, organized under the laws of any State or Territory, it must file with the register of the land office in which the right of way is sought, a copy of its articles of incorporation, duly certified to by the proper officers of the company under its corporate seal, or by the Secretary of the State or Territory where organized, a copy of the State or Territorial law under which the company was organized, with a certificate of the Governor or Secretary of the State or Territory, under seal, that the same was the law at the date of the incorporation, together with the proof that the articles were duly filed according to law with the proper officer, and that the corporation is authorized to do business in the State or Territory where the right of way is sought, by complying with its laws relative to foreign corporations, where its organization was under the laws of some other State or Territory. There must be also filed a true list, signed by the president, under the seal of the company, showing the names and designations of its officers at the date of the filing of the proofs.[3] The company must also file a copy of its title or right to appropriate the water needed for its canals, ditches, and reservoirs, certified as required by the State or Territorial laws. If the miner's inch is the unit of measurement used,[4] its equivalent in cubic feet per second must be stated. If the right to appropriate the water has been adjudicated, a certified copy of the decree should be filed; if it has not been adjudicated, a certified copy of the notice of appropriation will be sufficient. The notice of appropriation must also be accompanied with maps or plats sufficient to identify it with the canal or reservoir for which the right-of-way application is made, where the notice itself does not so identify it. If the water right claim has

2 For the last rules promulgated by the Secretary of the Interior, see 36 Land Dec. 567.

3 An application by a corporation should be accompanied by the certificate of the proper officer of the State that the articles of the incorporation have been filed in accordance with the local law. Farmers' Canal Co., 13 Land Dec. 166.

See, also, Long's Peak etc. Co., 27 Land Dec. 126; Regulations of June 6, 1906, 36 Land Dec. 570.

4 For measurement of water, see Secs. 888-900.

been transferred by other parties, an abstract of title must be filed. The papers must be accompanied also with a copy of the State or Territorial laws governing water rights and irrigation, with the certificate of the Governor or Secretary of the State or Territory that the same is the existing law. And in order to show that there is any water which may be appropriated by the company, there must be given the maximum, minimum, and average flow of water in the stream supplying the canal, ditch, or reservoir at the point of diversion or damming during the preceding year or years, and as far back as the records are available.

It is, therefore, invariably held that before a right of way will be granted by the Land Department the applicant must furnish sufficient proof to the effect that he is the owner of water rights which may be utilized by means of ditches and canals constructed over such right of way. As was said in the instructions under date of October 21, 1910:[5] "The Act of March 3, 1891, and the regulations thereunder approved June 6, 1908,[6] contemplate and require that *prima facie* evidence of the rights to waters to be conveyed in or to the canals and reservoirs covered by the right of way sought be furnished by the applicant, it not being contemplated that easements shall be granted where the applicant has no water to convey therein."

The company must, also, within twelve months after the location of ten miles of its canal, if the same be upon surveyed lands, and if upon unsurveyed lands within twelve months after the survey thereof by the United States, file with the register of the land office a location map of its canal, ditch, or reservoir, based upon accurate surveys of the same, together with the field notes of the same as prescribed by the regulations.[7] And written on the map

[5] 39 Land Dec. 334.

[6] 36 Land Dec. 567.

[7] See Sec. 19 of the Act.

Also see 36 Land Dec. 571, 572.

That maps and plats must be filed in duplicate, see Chas. E. Day, 13 Land Dec. 282; Kern Val. W. Co., 13 Land Dec. 707; H. B. Jones, 13 Land Dec. 357; Armstrong and Ogle, 14 Land Dec. 28; A. J. Bothwell, 14 Land Dec. 30.

For data necessary of survey, see A. J. Bothwell, 14 Land Dec. 30; Armstrong and Ogle, 14 Land Dec. 28; Pecos etc. Co., 15 Land Dec. 470; Rio Colorado Res., 14 Land Dec. 516; Long's Peak Res. etc. Co., 27 Land Dec. 126.

The dates of the survey and definite location of a reservoir are not essential, where the map is not filed until after construction. John B. Wilson, 27 Land Dec. 316.

The provision requiring a map of

in duplicate there must be the engineer's affidavit and applicant's certificate which must both designate by termini and length each canal, ditch, or lateral, and by initial point and area each reservoir shown on the map, for which right of way is asked. Applicants must also include in the certificate the statement: "And I further certify that the right of way herein described is desired for the main purpose of irrigation."[8]

Where the application is made by an individual or association of individuals for a right of way, the same proceedings must be followed, with the exception of the rules as to filing the articles of incorporation and the proof thereof. Associations of individuals must, however, in addition to the other papers necessary, file their articles of association; but if there be none, this fact must be stated over the signature of each member of the association.

In case it should be found that an amended location is desired, new maps and field notes in full, as in the regulations provided, changed to agree with the facts in the case, must be filed. The map must show clearly the portions amended or bear a statement describing them, and the location must be described in the forms as the amended survey and the amended definite location. In such cases the applicant must file a relinquishment, under seal, of all rights under the former approval as to the portions amended; said relinquishment to take effect when the map of the amended definite location is approved by the Secretary of the Interior. If the canal or reservoir has been constructed on the location originally approved, and is to be used until the canal or reservoir on the amended location is ready for use, the relinquishment may be made to take effect upon completion of the canal or reservoir on the amended location.[9]

location to be filed within twelve months after the location of the works, if upon surveyed lands, or within twelve months after survey, if upon unsurveyed lands, is directory, with respect to the time so fixed, and not mandatory. Battlement Res. Co., 29 Land Dec. 112.

[8] See Regulations, 36 Land Dec. 574.

[9] The Land Department has jurisdiction to approve an application for a right of way under the Act, covering, with other public land, a tract included in a prior approval, but it is not bound to do so; and where it appears that the enjoyment sought depends upon the destruction of the prior right, the granting of the later right may be withheld until the prior approval is set aside or the applicant is shown to be entitled to make use of the right sought. Allen v. Denver etc. Co., 36 Land Dec. 490.

**§ 946. Act of March 3, 1891—Procedure where jurisdiction comes under two departments.**—By the proviso in Section 18 of the Act of March 3, 1891,[1] no right of way will be granted over reservations so as to interfere with the proper occupation of the Government, and all maps shall be subject to the approval of the department of the Government having jurisdiction of such reservation.[2] Where, however, the land is partly within and partly without such reservation, the applicant need not go to the expense and trouble of making separate applications to each department, but may make it in regular form to the Department of the Interior, and if there found regular will be approved by that department, and then transmitted to the other department for its consideration and approval so far as it affects the reserve.[3] This mode of procedure must also be followed where the application is over lands entirely within the jurisdiction of some other department than that of the Department of the Interior. The application must be filed with the Department of the Interior, in accordance with the regulations, and it will then be submitted by it to the department having jurisdiction.[4]

**§ 947. Official acts under Act of March 3, 1891—Approval of application.**—When the maps and other papers are filed, the register of the land office must note the date of filing over his written signature. Notations must also be made on the records of the local land office as to each unpatented tract affected, that the application for the right of way is pending, giving the date of filing and the name of the applicant. The register must also certify on each map, over his written signature, that unpatented land is affected by the

See, also, Deseret Irr. Co., 33 Land Dec. 469.

The maps and papers pertaining to a right of way proceeding may be delivered to the receiver of an irrigation company, for purposes of amendment, on due showing that he is acting under judicial authority. Gila Bend etc. Co., 26 Land Dec. 154.

NOTE.—The above are in general the required regulations as last promulgated at the date of this writing. These regulations have been changed from time to time, and applicants should always send to the General Land Office for the last rules promulgated upon the subject, before filing the application, as the rules in force at the time of the application will be literally followed.

1 For Act, see Sec. 937.

See, also, preceding sections, Nos. 938-945.

2 For rights of way over National Forests, see Secs. 954-967.

3 Instructions, 34 Land Dec. 64.

4 Regulations, 36 Land Dec. 567; *Id.*, 34 Land Dec. 212.

proposed right of way. The maps and field notes in duplicate and all other papers filed in connection with the application must then be promptly transmitted to the General Land Office. If no unpatented land is involved in the application, the local officers will reject it.[1] And any valid right of settlers or others existing at the date of the filing of an application will not be affected by the filing or the approval thereof. Upon the approval of a map of location by the Secretary of the Interior, the duplicate copy will be sent to the local officers, who will mark upon the township plats the lines of canals, ditches, or reservoirs as laid down upon the map. They will also note the approval in ink on the tract books, opposite each tract marked, as required above, and report to the General Land Office that the notations have been made, and that the applicant has been notified of the approval.[2]

§ 948. **Nature of title granted under Act of March 3, 1891, and amendments thereto.**—The nature of the title granted under the Act of March 3, 1891, as defined by the Secretary of the Interior in the regulations of June 6, 1908,[1] is as follows: "The right granted is not in the nature of a grant of lands, but is a base or qualified fee. The possession and right of use of the lands are given for the purposes contemplated by law, but a reversionary interest remains in the United States, to be conveyed by it to the person to whom the land may be patented, whose rights will be subject to those of the grantee of the right of way. All persons set-

[1] The Secretary of the Interior has no jurisdiction to act upon an application for a right of way, under the Act of 1891, unless it affirmatively appears that some portion of the public domain is affected thereby. Mt. Nebo Res., 15 Land Dec. 345.

But an application may be approved, in so far as it affects unoccupied Government land, though the line for the greater part traverses lands that do not belong to the public domain. Kern Val. W. Co., 15 Land Dec. 577.

[2] Regulations, 36 Land Dec. 574.

As to the effect of the approval, see Sec. 949.

An application can not be approved until presented in conformity with the regulations of the department. Northern Pac. etc. Co., 13 Land Dec. 110.

A map showing the location of a canal will not be approved, where a portion of the line traverses unsurveyed land. Inyo Canal Co., 15 Land Dec. 245; Arrowhead Res. Co., 16 Land Dec. 148; Santa Cruz etc. Co., 13 Land Dec. 660; Cache Val. Canal Co., 16 Land Dec. 192.

[1] 36 Land Dec. 568.

tling on a tract of public land, to part of which right of way has attached for a canal, ditch, or reservoir, take the land subject to such right of way, and at the total area of the subdivision entered, there being no authority to make deductions in such cases."[2] As held by the courts, "The Act of March 3, 1891, is general and permanent in its character, and operates continuously to convey the title to public lands to all persons complying with its provisions."[3] And one of the conditions of the grant is that the land must be continually occupied and used for the purpose for which it is granted, otherwise the right of way reverts to the United States or to the persons to whom the land, covered by such a right of way, has been acquired from the Government.[4]

§ 949. **Effect of approval of application under Act of March 3, 1891.**—Under Section 19 of the Act of March 3, 1891,[1] a canal, ditch, or reservoir is not definitely located in the sense that a right of way therefor over the public lands attaches, until the map and application for the same have been approved by the Secretary of the Interior. And the approval by the Secretary of the application, filed under the provisions of the Act, carries only the right of way over the public lands covered by such location as are vacant and

2 "The Act of March 3, 1891, under which the Denver company's application was filed and approved, is very similar to the Act of March 3, 1875 (18 Stat. 482), by which rights of way across the public lands are granted to railroad companies. Respecting this Act of 1875, the Supreme Court has decided that after an application has been approved by the Secretary of the Interior, a vested right is acquired which can not be disturbed by any subsequent action of the Department; that with the approval the title passes, and with the title passes all authority or control of the executive department over the land and over the title which it has conveyed." Allen v. Denver Power & Irr. Co., 36 Land Dec. 490.

See, also, Noble v. Union River etc. Co., 147 U. S. 165, 37 L. Ed. 123, 13 Sup. Ct. Rep. 271; T. A. Sullivan, 38 Land Dec. 493; McMillan Reservoir Site, 37 Land Dec. 6.

3 United States v. Whitney, 176 Fed. Rep. 593.

4 See, also, Whitmore v. Pleasant Valley etc. Co., 27 Utah, 284, 75 Pac. Rep. 748; Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766; *Id.*, 26 Colo. 74, 56 Pac. Rep. 577; Rasmussen v. Blust, 85 Neb. 198, 122 N. W. Rep. 862, 133 Am. St. Rep. 650; United States v. Lee, 15 N. M. 382, 110 Pac. Rep. 607; De Weese v. Henry Investment Co., 39 Land Dec. 27; Minidoka etc. Co. v. Weymouth, 19 Idaho 234, 113 Pac. Rep. 455.

1 For full copy of Act, see Sec. 937. See, also, preceding sections, Nos. 938-948.

unappropriated at the time of the approval, and in nowise affects other tracts. Hence it does not authorize one proceeding under its provisions to interfere with even the possessory right of *bona fide* settlers, though without title, where the inception of the settler's right was prior to the approval of the application of the right of way.[2]

It will be noticed that the Act prescribes that "upon approval" of the application, and not until then, by the Secretary, that "thereafter all such lands over which such rights of way shall pass shall be disposed of subject to such right of way." The right does not relate back to the date of beginning the construction of the works.[3]

The section further prescribes that whenever any person or corporation, in the construction of any canal, ditch, or reservoir, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage. This clause is an additional protection to the vested rights of settlers. This subject also comes wholly within the jurisdiction of the courts and not the Land Department.

By the Federal Court it was held that under the Act of March 3, 1891, upon the filing of a map thereof and its approval by the Secretary of the Interior, such approval is essential, and where it

2 Nippel v. Forker, 26 Colo. 74, 56 Pac. Rep. 577; affirming *Id.*, 9 Colo. App. 106, 47 Pac. Rep. 766. See same case before the Land Dept., *in re* protest of Tillie Gibson, 19 Land Dec. 304, where it was said: "As it appears, therefore, that the applicant (Nippel) has complied with the regulations prescribed under the Act of March 3, 1891, this department can not inquire into the merits of the protests, but must refer the parties to the courts for their proper remedies, if in anywise injured in their possession by the building and use of the proposed reservoir."

The mere fact of an outstanding approved right of way will not prevent the approval of a conflicting application for right of way, but in such case the conflict should be given proper weight in determining whether approvals should be given to the later application, especially where the previous right of way has been actually utilized. Deseret Irr. Co. v. Sevier River L. & W. Co., 40 Land Dec. 463; Baldridge v. Leon Lake etc. Co., 20 Colo. App. 518, 80 Pac. Rep. 477; United States v. Conrad Inv. Co., 156 Fed. Rep. 123; Whitmore v. Pleasant Valley Coal Co., 27 Utah, 284, 75 Pac. Rep. 748; O'Riley v. Noxson, 49 Colo. 362, 113 Pac. Rep. 486.

3 Nippel v. Forker, 26 Colo. 74, 56 Pac. Rep. 577, 9 Colo. App. 106, 47 Pac. Rep. 766; F. F. Noxon, 27 Land Dec. 585.

But see H. Pope, 28 Land Dec. 402.

was refused as to a reservoir, because the site had been previously withdrawn from sale or entry and reserved by the United States, the company acquired no right or easement by the filing of its maps.[4]

Section 21 of the Act forbids the occupancy of the right of way except for the purposes of the canal or ditch, and then only so far as may be necessary, and the acquirement of such a right of way gives the owner no right to use the land for any other purposes.[5]

Under Section 20 the canal or other works must be completed within five years or the rights are forfeited; also any section not completed within that time will be forfeited as to the uncompleted portion. A suit may be brought by the United States to declare such forfeiture,[6] or the rights may be held to be forfeited in a suit brought in the State courts by private parties without any special action to declare the forfeiture by the Government, especially where the claimant has lost his right to appropriate the water to conduct which the right of way was granted.[7]

§ 950. **Secretary has no jurisdiction over water rights under Act of March 3, 1891.**—The jurisdiction of the Secretary of the Interior, or the Land Department, under the Act only extends to the subject matter of the granting or rejecting the application for the rights of way over the public lands. The department is without jurisdiction to determine the question as to the right to the water, that being a matter solely within the province of the State courts.[1] Therefore, while the Act in question grants rights of way over the public lands necessary to the maintenance

4 United States v. Rickey Land & Cattle Co., 164 Fed. Rep. 496.

5 The right of way can not be used for the purpose of a saloon. Whitmore v. Pleasant Valley Coal Co., 27 Utah 284, 75 Pac. Rep. 748.

In approving an application for a right of way for a ditch, the department does not determine the marginal width necessary for the construction and maintenance of the ditch. Lewis J. Dawson, 16 Land Dec. 425.

6 Deseret Irr. Co., 33 Land Dec. 469.

and use of ditches, canals, and reservoirs, the control of the flow and use of the water is, so far as this Act is concerned, vested in the States, under the laws thereof, and the jurisdiction of the Department of the Interior is limited to the approval of the maps and the application for the bare right of way over the public lands necessary for the construction of the works through which the water may be conducted to the place of use.[2] However, in making the application the applicant must make at least *prima facie* proof that he has a valid water right to use with the right of way.[3] And it is invariably held that where the applicant does not furnish sufficient proof of a right to the use of water to be conveyed in or to the canals and reservoirs covered by the right of way sought that such right of way will not be granted.[4]

§ 951. **Segregated reservoir sites—Text of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17, of the Act of March 3, 1891, and the Act of February 26, 1897.**—Evidently anticipating the construction of irrigation works by the Federal Government some time in the future, Congress provided for the segregation of reservoir sites for that purpose fourteen years before the National Reclamation Act was passed whereby these sites might be utilized.

In the Sundry Civil Appropriation Act of October 2, 1888,[1] Congress enacted the following:

" . . . For the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation, and the segregation of irrigable lands in such region, and for the selection of sites for reservoirs and other hydraulic works necessary

For the National Reclamation Act, see Chap. 65, Secs. 1235-1286.

for the storage and utilization of water for irrigation and the prevention of floods and overflows, . . . the work to be performed by the Geological Survey, under the direction of the Secretary of the Interior. . . . And all lands which may hereafter be designated or selected by the United States surveys for sites for reservoirs, ditches, or canals for irrigation purposes and all the lands made susceptible of irrigation by such reservoirs, ditches, or canals are from this time henceforth hereby reserved from sale as the property of the United States, and shall not be subject after the passage of this Act, to entry, settlement, or occupation until further provided by law: *Provided,* That the President may at any time in his discretion, by proclamation, open any portion or all of the lands reserved by this provision to settlement under the homestead laws."[2]

The above provision was amended by Section 1 of the Sundry Civil Appropriation Act of March 2, 1889,[3] which provides as follows:

"Sec. 1. . . . *Irrigation Survey.*—For the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation and the segregation of irrigable lands in such arid region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation and for ascertaining the cost thereof, and the prevention of floods and overflows, and to make the necessary maps, . . . and the Director of the Geological Survey, under the supervision of the Secretary of the Interior, shall make a full report to Congress on the first Monday in December of each year, showing in detail how the said money has been expended, the amount used for actual survey and engineer work in the field in locating sites for reservoirs, and an itemized account of the expenditures under this and future appropriation."

By Section 1 of the Sundry Civil Appropriation Act of August 30,

2 For the results of this Act, see the many Water-Supply Papers, issued by the Department of the Interior, U. S. Geological Survey, which contain much valuable information.

3 7 Fed. Stat. Ann., 1905, p. 1097; 2 U. S. Comp. Stat., 1901, p. 1553; 25 Stat. L. 960.

For the construction of this amendatory Act, see Sec. 952.

1890, the general withdrawal of lands provided for in the foregoing Acts, was repealed,[4] which repealing Act is as follows:

"Sec. 1. So much of the Act of October 2, 1888, entitled, 'An Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes,' as provides for the withdrawal of the public lands from entry, occupation, and settlement, is hereby repealed, and all entries made for claims initiated in good faith and valid but for said Act, shall be recognized and may be perfected in the same manner as if said law had not been enacted, except that reservoir sites heretofore located or selected shall remain segregated and reserved from entry or settlement as provided by said Act, until otherwise provided by law, and reservoir sites hereafter located or selected on public lands shall in like manner be reserved from the date of the location or selection thereof."

By the amendatory Section 17 of the Act of March 3, 1891,[5] the above laws were again amended by the provision as follows: "Sec. 17. That reservoir sites located or selected and to be located and selected under the provisions of 'An Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes,' and amendments thereto, shall be restricted to and shall contain only so much land as is actually necessary for the construction and maintenance of reservoirs; excluding as far as practicable lands occupied by actual settlers at the date of the location of said reservoirs."

The above Acts were still further amended by the Act of February 26, 1897,[6] entitled, "An Act to provide for the use and occupation of reservoir sites reserved," by individuals, private corporations, or by any State, which Act provides:

"That all reservoir sites reserved or to be reserved shall be open to use and occupation under the Right of Way Act of March 3, 1891, and any State is hereby authorized to improve and occupy such

reservoir sites to the same extent as an individual or private corporation, under such rules and regulations as the Secretary of the Interior may prescribe: *Provided,* That the charges for water coming in whole or in part from reservoir sites used or occupied under the provisions of this Act shall always be subject to the control and regulation of the respective States and Territories in which such reservoirs are in whole or in part situated.'' [7]

§ 952. **Segregated reservoir sites—Construction of Act of October 2, 1888, and amendatory Acts of March 2, 1889, August 30, 1890, and Section 17 of the Act of March 3, 1891.**—By the Act of October 2, 1888,[1] Congress provided that all lands which might be thereafter designated or selected by the United States surveys for sites for reservoirs, ditches, or canals for irrigation purposes and all the lands made susceptible of irrigation by such reservoirs, ditches, or canals, were from that time forward by the Act reserved from sale as the property of the United States, and should not after the passage of the Act be subject to entry, settlement, or occupation until further provided by law: *Provided,* That the President of the United States may at any time in his discretion, by proclamation, open any portion or all of the lands reserved by the provision of the Act to settlement under the homestead laws. The cause leading to the passage of this Act was the agitation throughout all of the arid West to induce Congress to take up the subject of irrigation as a National work and have the Government construct the reservoirs, ditches, and canals at its own expense, and then dispose of the lands under them to settlers. The work of selecting these sites was assigned by the Act to the Geological Survey under the direction of the Secretary of the Interior.[2] But a tract of land embraced

7 For the causes leading up to the enactment of this law, and the construction of the Act, see Sec. 952.

1 7 Fed. Stat. Ann., 1905, p. 1096, 2 U. S. Comp. Stat., 1901, p. 1552; Chap. 1069, 25 Stat. L. 526.

For full text of Act, see Sec. 951.

2 ''The object sought to be accomplished by the foregoing provision is unmistakable. The water sources and the arid lands that may be irrigated by the system of National irrigation are now reserved to be hereafter, when redeemed to agriculture, transferred to the people of the territories in which they are situated for homesteads.'' Circular of Land Commissioner, August 5, 1889, 9 Land Dec. 282.

The provisions of Sections 18-21 of the Act of March 3, 1891, conferring right of way privileges for irrigation purposes over the public domain and reservations of the United States, do

within a valid entry at the date of the passage of the Act is excepted by such entry from the operation of the general withdrawal declared by the Act for reservoir purposes.[3] This is so for the reason that when land is once appropriated for any purpose, it from that moment is severed from the mass of the public lands, and no subsequent law or proclamation will be considered to embrace it or operate upon it.[4] But an entry of land made after the passage of the Act of 1888, *supra*, and subsequently designated as a part of a reservoir site, is subject to selection by the Government, and the entryman takes the risk of his entry being canceled where the land is needed for that purpose.[5]

In the Sundry Civil Appropriation Act of March 2, 1889,[6] the Act of October 2, 1888, was confirmed, by providing that, for the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation and the segregation of the irrigable lands in such region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation and for ascertaining the cost thereof, and to make the necessary maps, the Director of the Geological Survey, under the supervision of the Secretary of the Interior shall make full report to Congress on the first Monday in December of each year, showing in detail how the said money has been expended, the amount used for actual survey and engineer work in locating sites for reservoirs, and an itemized account of the expenditures under this and any further appropriations.

Congress two years later, by the Act of August 30, 1890,[7] thereby

not contemplate the allowance of such rights over lands reserved by the Government for reservoir sites under the Act of October 2, 1888. Blue Water etc. Co., 23 Land Dec. 275.

**§ 953. Segregated reservoir sites—Act of February 26, 1897, opening same up for use by private parties or States—Cause of its passage and construction.**—The Geological Survey, to which was assigned the duty of selecting reservoir sites under the Acts of 1888 and 1889, and amendatory Acts,[1] acted with great diligence in the matter and many valuable reservoir sites were selected, and a great deal of land under them was reserved and withdrawn from entry throughout the whole Western country. The matter ran along in this manner for nearly nine years, and the Government continued to select and reserve reservoir sites under the provisions of the Act of 1888, *supra*, and the amendments thereto, *supra*. In the meantime no Act was passed by Congress to utilize the sites so selected and reserved. The withdrawal of these lands from entry, without any attempt upon the part of Congress to provide for some reclamation law at the time, raised a perfect storm of protests from the West. Not only would Congress do nothing toward the utilization of the sites and again open the lands for entry and settlement, but by the absolute reservation of these lands from occupation, in many instances, private enterprise was hampered and prevented from utilizing and developing these advantageous sites.

When, owing to the protests against these withdrawals, and the demand of the people of the West that the lands so reserved be reopened for settlement and exploitation, Congress by the Act of February 26, 1897,[2] provided that all reservoir sites reserved or to be reserved shall be open to use and occupation under the Right of Way Act of March 3, 1891, discussed in the previous sections of this chapter.[3] And it was also further provided that any State was thereby authorized to improve such reservoir sites to the same extent as an individual or private corporation, under such rules and regulations as the Secretary of the Interior may prescribe. And a proviso was added that the charges for water coming in whole or in part from reservoir sites used or occupied under the provisions

[1] For the text of Acts of October 2, 1888, and March 2, 1889, and construction thereof, see Sec. 951.

[2] 7 Fed. Stat. Ann., 1905, p. 1098; 2 U. S. Comp. Stat., 1901, p. 1556; Chap. 335, 29 Stat. L. 599.

For full text of the Act, see Sec. 951.

For the Act of October 2, 1888, and amendatory Acts, see previous section, No. 951.

See, also, construction of the Act in the preceding sections, Nos. 938-950.

of the Act shall always be subject to the control and regulation of the respective States and Territories in which such reservoirs are in whole or in part situated.[4]

**§ 954. Rights of way over National Forests—Regulations and procedure under Act of March 3, 1891.**—By Section 24 of the Act of March 3, 1891, the President was authorized by proclamation to declare the establishment of National forest reservations and the limits thereof.

Section 24 of the Act of March 3, 1891, reads as follows: "That the President of the United States may, from time to time, set apart and reserve, in any State or Territory having public land bearing forests, in any part of the public lands wholly or in part covered with timber or undergrowth, whether of commercial value or not, as public reservations, and the President shall by public proclamation, declare the establishment of such reservations and the limits thereof." [1]

The provisions of the Act of March 3, 1891, known as the Right of Way Act, and discussed in the preceding sections of this chapter,[2] also include rights of way over the "reservations of the United States." Also the right was granted by the Act of February 1, 1905, as set forth in the next section.[3] It therefore follows that there are two Acts of Congress under which rights of way for reservoirs, ditches, and canals may be acquired over National forests. These are the Act of March 3, 1891,[4] and that of February 1, 1905,[5] And as the terms of these Acts are different and different rights

[4] For last regulations by the Secretary, see 36 Land Dec. 575, where it is provided that when an application is made under the Act, a reference to it should be made. In other respects, the application should be prepared according to the preceding regulations, and discussed in our previous sections. See Sec. 945.

[2] For the text of the Act, see Sec. 937.

For construction of the Act, see Secs. 938-950.

[3] See Sec. 955.

[4] For Act of March 3, 1891, and construction thereof, see Secs. 937-950.

[5] For the right as given under the Act of February 1, 1905, see Sec. 955.

are granted under the same it requires a different set of rules and regulations under each Act. These have been promulgated by the Secretary of the Interior to aid in the execution of the Acts.

Under the Act of March 3, 1891, whenever a right of way is applied for through a National forest, the applicant must enter into such stipulation and execute such bond as the Forest Service may require for the protection of such National forest. No construction will be allowed in a National forest until an application for right of way has been regularly filed and approved by the Secretary of the Interior or unless permission for such construction work has been specifically given. The application must comply with the terms of the regulations as promulgated by the Secretary of the Interior relating to such rights and discussed in a previous section of this work.[6] And, in addition, it must comply with the following:

Under the regulations approved June 6, 1908,[7] if the right of way is through a *proposed* National forest, the applicant must file the following stipulations under seal:

"(a) That the proposed right of way is not so located as to interfere with the proper occupation and use of the reservation by the Government.

"(b) That the applicant will cut no timber from the reserve outside the right of way, and will remove no timber from the land within the right of way except such as is rendered necessary for the proper use and enjoyment of the privilege for which application is made.

"(c) That he will remove from the reservation, or destroy, under such safeguards as may be deemed necessary by the General Land Office, all standing, fallen, and dead timber, as well as all tops, lops, brush, and refuse cuttings on the right of way, for such distance on each side of the central line as may be required by the General Land Office to protect the forest from fire.

"(d) That the applicant will furnish free of charge such assistance in men and material for fighting fires as may be spared without serious injury to the applicant's business.

[6] For the rules and regulations under the Act of March 3, 1891, see Sec. 945.

See, also, Regulations, under date of June 6, 1908, 36 Land Dec. 567-575.

[7] 36 Land Dec. 569.

"(e) That should any portion of said right of way be included in a National forest, the applicant will build new roads, trails, and crossings, as required by the Forest Service, in case any roads or trails are destroyed or intercepted by construction work or flooding upon said right of way.

"The applicant will also be required to give bond, to be approved by the Commissioner of the General Land Office, stipulating that the United States will be compensated 'for any and all damage to the public lands, timber, natural curiosities, or other public property on such reservation, or upon the lands of the United States, by reason of such use and occupation of the reserve, regardless of the cause or circumstances under which such damage may occur.' A bond furnished by any surety company that has complied with the provisions of the Act of August 13, 1894,[8] will be accepted. The amount of the bond can not be fixed until the application has been submitted to the General Land Office, when a form of bond will be furnished and the amount thereof fixed."

**§ 955. Rights of way over National Forests—Act of February 1, 1905.**—By the Act of February 1, 1905, entitled, "An Act providing for the transfer of forest reserves from the Department of the Interior to the Department of Agriculture," it was provided in Section 4 thereof that rights of way for the purposes named in the Act may also be acquired over the forest reservations, or "National Forests," established under the provisions of Section 24 of the Act of March 3, 1891,[1] and the Acts supplemental to and amendatory thereof. A copy of said Section 4 is as follows:

"Sec. 4. That rights of way for the construction and maintenance of dams, reservoirs, water plants, ditches, flumes, pipes, tunnels, and canals, within and across the forest reserves of the United States, are hereby granted to citizens and corporations of the United States for municipal or mining purposes, and for the purpose of milling and reduction of ores, during the period of their beneficial use, under such rules and regulations as may be prescribed by the Secretary of the Interior, and subject to the laws of the State or Territory in which said reserves are respectively situated."[2]

[8] 28 Stat. 279.

For construction of Act, see Secs. 956-958.

**§ 956. Rights of way over National Forests—Construction of Act of February 1, 1905.**—By the Act of February 1, 1905, Section 4,[1] Congress made still further provisions for rights of way over the National forest reserves by providing that rights of way for the construction and maintenance of dams, reservoirs, water plants, flumes, pipes, tunnels, and canals, within and across the forest reserves of the United States, were thereby granted to citizens and corporations of the United States for municipal or mining purposes, and for the purposes of milling and reduction of ores, during the period of their beneficial use, under such rules and regulations as may be prescribed by the Secretary of the Interior, and subject to the laws of the State or Territory in which said reserves are respectively situated. The right granted under the Act is not in the nature of a grant of the lands in fee. However, it is a base or qualified fee giving the possession and the right of use of the land for the purposes contemplated by the Act, during the period of the beneficial use. When the use ceases, the right terminates, and thereupon proper steps will be taken by the Government to revoke the grant; and, when revoked, the land will revert to the Government free from the burden of the easement.[2] The Act also differs from

1 10 Fed. Stat. Ann., 1906, p. 405; Supp. U. S. Comp. Stat., 1905, p. 378; Chap. 288, 33 Stat. L. 628, Sec. 4.

For full text of Act, see Sec. 955.

See, also, Secs. 956-965.

2 See regulations, 36 Land Dec. 584, 585.

The rights of way granted by the Act of February 1, 1905, are limited to municipal and mining purposes, including milling and the reduction of ores, and an application under that Act should not be allowed where it appears that the chief purpose for which the right is desired is the generation of power for commercial use and that its utilization for mining operations is merely incidental to such purpose. Northern Cal. Pr. Co., 37 Land Dec. 80.

"The reservation in question is no bar to the approval of the right of way under the Act of March 3, 1891." Hamilton Irr. Co., 21 Land Dec. 330.

For the question of exercising due diligence in the prosecution of the construction of irrigation works, where the location for the same is upon National Forest reserves and a permit from the Government is required, see Wishon v. Globe Light & Power Co., 158 Cal. 137, 110 Pac. Rep. 290; Inyo Consol. Water Co. v. Jess, —— Cal. ——, 119 Pac. Rep. 934.

Section 4 of the Act of February 1, 1905, granting rights of way for dams, reservoirs, water plants, ditches, flumes, pipes, tunnels, and canals within or across forest reserves of the United States applies to and is operative in forest reserves in the District of Alaska. Alaska Treadwell Gold Mining Co., 40 Land Dec. 426.

the terms of the Act of March 3, 1891, in that no right whatever is given to take any material, earth, or stone for the construction of the works or other purposes, nor is any right given to use any land outside of what is actually necessary for the construction and maintenance of the works. No construction will be allowed in National forests until an application for a right of way has been regularly filed in accordance with the regulations and has been approved by the Secretary of the Interior, or unless permission has been specifically given.

§ 957. **Rights of way over National Forests—Regulations and procedure under Act of February 1, 1905.**—The applicant must also set forth in his affidavit the purposes for which the right of way is desired with reference to the Act under which the application is made. The applications for rights of way under this Act must be made in the form of a map and field notes, in duplicate, based upon the accurate survey of the proposed works, and must be filed in the local land office for the district in which the land traversed by the proposed right of way is situated; if the land is in more than one district, duplicate maps and field notes need be filed in only one district and single sets in the others. Evidence of water rights acquired under the laws of the State in which the proposed right of way is situated must also be filed with the application, in accordance with the regulations as prescribed in other cases.[1]

An affidavit by the applicant that he is a citizen of the United States must accompany the application. If the applicant is an association of citizens, each member must make affidavit of citizenship, and a complete list of the members must be given in an affidavit of one of them. A copy of their articles of association must also be furnished, or if there be none, the fact must be stated over the signature of each member of the association. If the applicant is not a native-born citizen, he must file the usual proof of naturalization. If the applicant is a corporation, the articles of incorporation and the proofs of organization must be prepared in accordance with the prescribed forms, and in accordance with the regulations, discussed in a previous section of this chapter.[2] When the application

1 Regulations, 36 Land Dec. 570, 585.
See, also, Sec. 945.

2 See Sec. 945.
Regulations, June 6, 1908, 36 Land Dec. 585.

is made for a right of way for water plants, the location and extent of the ground proposed to be occupied by buildings or other structures necessary to be used in connection therewith, must be clearly designated on the map and described in the field notes. In addition to this the buildings or other structures must be platted on the map in a separate drawing on a scale sufficiently large to clearly show their dimensions and relative positions. The applicant must also file an affidavit setting forth the dimensions and proposed use of each of the structures, and must show definitely that each is necessary to the proper enjoyment of the right of way granted by the Act.

The applicant must enter into such stipulation and execute such bond as the Forest Service may require for the protection of the National forest. A stipulation on the part of the applicant that no timber will be taken from the land within the reservation outside of the reservoir, or right of way, or from the land not occupied by the waterway, is also required.[3]

All applications for rights of way over National Forests when received from the General Land Office at Washington will be referred to the Forester, and by him referred to the District Forester of the district in which the rights of way applied for are situated, in order that the District Forester may, before recommending the approval of the right of way, require the applicant to file such stipulations and bond, if any, as may be necessary to protect the National Forest interests.[4]

Upon the filing of an application under this Act, the register of the local land office will note the same in pencil on the tract books, opposite the tracts traversed, giving the date of the filing and the name of the applicant, and also indorse on each map, over his writ-

[3] Hamilton Irr. Co., 21 Land Dec. 330.

Whenever a right of way is located upon a forest or timber reserve, the applicant must enter into such a stipulation and execute such a bond as the Secretary of Agriculture may require for the protection of such reserves. Regulations, April 28, 1906, 34 Land Dec. 538.

See, also, for divided jurisdiction over National Forests under the Act of February 1, 1905, Sec. 967.

[4] For the procedure upon reference of an application to the Forest Service, see the National Forest Manual, Special Uses, 1911, pp. 23, 24.

See, also, for regulations issued by the Secretary of the Interior for procedure upon application for rights of way over National Forests, approved June 6, 1908, 36 Land Dec. 581.

ten signature, the name of the land office and the date of filing. If it appears that no portion of the public lands in a National Forest would be affected by the approval of such maps, they will be returned to the applicant with notice of the fact, by the register. If unpatented lands are affected by the proposed right of way, the register will so certify on the map and duplicate, over his signature, and will promptly transmit the same to the General Land Office, with the report that the required notations have been made. Upon the approval of a map of location by the Secretary of the Interior, the duplicate copy will be sent to the local land officers, who will then mark upon the township plat the lines of the right of way as laid down on the map. They will also note the approval in ink on the tract books, opposite each legal subdivision affected, with reference to the Act mentioned on the map.[5]

**§ 958. Rights of way over National Forests—Effect of Acts of March 3, 1891, and February 1, 1905, upon the Acts of 1866 and 1870.**—Although the term "public domain" is used in the Act of 1866,[1] it has been construed especially by the Land Department as not applying to forest or other reserves, but as applying to what are strictly known as the "public lands" of the United States,[2] especially since the Acts of March 3, 1891, and February 1, 1905, were passed. And it is practically held by the Land Department that as far as the public reserves, such as forest, Indian, and others are concerned, that the Acts of 1891 and 1905 repealed by implication the Act of 1866.[3] This, however, we deem to be a somewhat strained construction upon the part of the Land Department for the reason that the Act of 1866 applies to the "public domain" which, under the authorities, includes all lands owned by the Government,

5 The above is taken from the regulations of June 6, 1908, 36 Land Dec. 584. They are, however, subject to change, and the last rules promulgated should be followed.

1 For the Act of 1866, and construction thereof, see Sec. 611.

2 For distinction between "public domain" and "public lands," see Secs. 391, 392.

3 See the opinion of the Attorney General, 22 Op. 13, 26 Op. 421.

See, also, Kern River Co., 38 Land Dec. 302.

But see United States v. Conrad Investment Co., 156 Fed. Rep. 123, holding that the Act of 1866 was still in force in reserved land, so far as works which are so constructed as not to interfere with Government occupancy.

See, also, Denver Power & Irr. Co. v. Colorado Southern R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383.

including reserves. However, as the Department takes this position it is the law upon the subject, and applications for rights of way over forest and other reserves must be made under the Acts of March 3, 1891, and February 1, 1905. As far as the protection of the rights, both of the Government and the applicant, this is the better rule and should be followed in all cases.

§ 959. **Over forest reserves and reservoir sites—Act of March 3, 1899—Construction of Act.**—In the deficiencies appropriation Act of March 3, 1899,[1] Congress granted rights of way over forest reserves and reservoir sites for wagon roads, railroads, or highways, which Act is as follows:

"Sec. 1. That in the form provided by existing law the Secretary of the Interior may file and approve surveys and plats of any right of way for a wagon road, railroad, or other highway over and across any forest reservation or reservoir site when in his judgment the public interests will not be injuriously affected thereby."[2]

The grantee under this Act does not secure a full and complete title to the land on which the right of way is located. There is obtained only the right to use the land for the purposes for which it is granted and for no other purpose, and the grantee may hold such possession, if it is necessary for that use, as long and only as long as that use continues. When the Government conveys the fee simple title in the land over which the right of way is granted to the person to whom patent issues for the legal subdivision on which the right of way is located, such patentee takes the fee, subject only to the right of way theretofore granted to the land.[3]

§ 960. **Rights of way over National Forests—Applicants may take Department of Agriculture permits under both Acts of March 3, 1891, and February 1, 1905.**—Although applications for permanent rights of way under the Acts of March 3, 1891,[1] and February 1, 1905,[2] must be filed in the proper local

[1] 6 Fed. Stat. Ann., 1905, p. 513; 2 U. S. Comp. Stat., 1901, p. 1584; 30 Stat. L. 1233.

[2] The Act of March 3, 1899, *supra*, is limited in the scope of its operation to reservations falling within the control or under the jurisdiction of the Secretary of the Interior. Brainard & Northern Min. R. Co., 29 Land Dec. 257.

[3] For regulations under the Act of March 3, 1899, see 27 Land Dec. 788.

[1] For which see Sec. 945.

[2] For which see Sec. 957.

land office of the Department of the Interior, it must be noted, however, that the Acts above mentioned granting rights of way amounting to easements for irrigation reservoirs and canals, and reservoirs, canals, and water plants for mining and municipal purposes, do not in any way prevent or interfere with the securing of permits for these purposes from the Department of Agriculture. And the issuance of a permit for any of the purposes above named will not in any way prevent the party acquiring the same from filing a map of location for approval and record with the Secretary of the Interior, under the Right of Way Acts above mentioned. The granting of an Interior Department right of way supersedes the permit issued by the Department of Agriculture, and vests in the grantee a permanent right of way, whereas, under the permit, he simply has a license to use the land for this purpose which is revocable by the Secretary at any time.[3]

**§ 961. Rights of way over National Forests—Revocable permits issued by the Secretary of Agriculture.**—As was stated in the preceding section, applicants could acquire permits from the Secretary of Agriculture for rights of way over National forests. By the Act of June 4, 1897,[1] the Forest Service was created and the control and management of all things necessary to the National forests was vested in the Secretary of the Interior. Afterward, as we have seen, the jurisdiction of the National Forests was divided between the Secretary of the Interior and the Secretary of Agriculture.[2] By the Act in question the Secretary of the Interior (now the Secretary of Agriculture) was empowered to "make provisions for the protection against destruction by fire and depredations upon the public forests and forest reservations which may have been set aside or which may be hereafter set aside under the said Act of March 3, 1891, and which may be continued; and he may make such rules and regulations and establish such service as will insure the objects of such reservations, namely, to regulate their occupancy and use and to preserve the forests thereon from destruction." Under the

For special uses of National Forests under permits issued by the Secretary of Agriculture, see Secs. 963-965.

[1] 7 Fed. Stat. Ann., 1905, p. 311; 2 U. S. Comp. Stat., p. 1538; 30 Stat. L. 34.

[2] For divided jurisdiction of National Forests, see Sec. 967.

above provisions the Secretary of Agriculture, now having jurisdiction of the various uses of the forests, relative to which temporary permits may be issued, has promulgated certain regulations relative to such temporary use as follows:

*Permits.*

"Reg. 6. Permits are necessary for all occupancy, uses, operations, or enterprises of any kind within National Forests, whether begun before or after the National Forest was established, except: (a) Upon patented lands; (b) upon valid claims for purposes necessary to their actual development and consistent with their character; (c) upon rights of way amounting to easements for the purposes named in the grants; (d) prospecting for minerals, transient camping, hunting, fishing, and surveying for lawful projects.

"Reg. 7. Permits for the use of the National Forests, unless otherwise specifically fixed by regulation, may be granted by the Forester for any term consistent with National Forest interests. The Forester may also make a reasonable charge for any permit, right, or use.

"Reg. 8. Permits are not assignable, and abandonment in favor of another necessitates new application and permit. In case of abandonment and issuance of new permit, the original permittee may sell his improvements to the new permittee, and any payments made by him may apply on the new permit, in the discretion of the Forester.

"Reg. 9. Occupancy under permit secures no right or claim against the United States, either to the land or to any improvements upon it, beyond the uses conferred by the permit. Improvements made by the permittee, except fences, may not be removed except with the written consent of the supervisor.

"Reg. 10. The Forester and such officers as he may designate may issue, extend, or renew permits for special uses within National Forests with such conditions as to area, time, and requirements as they may deem best, and they may make reasonable charges for such permits. The Forester alone may revoke special-use permits."

Regulation 19 provides that the following acts within National Forests are forbidden: (a) Squatting upon land within a forest or making settlement, except in accordance with the Act of June 11, 1906; (b) the building among other things of ditches, dams, canals,

pipe lines, flumes, tunnels, or reservoirs without a permit or in violation of the terms of the permit except as otherwise allowed by law, and except upon patented land or upon a valid claim, when necessary for the actual development of such claim consistent with the purposes for which it was initiated; (c) the erecting or conducting among other things power lines, power plants, or other structures or "carrying on any kind of work except as allowed by law and the National Forest Regulations, and except upon patented lands or upon a valid claim."[3]

It is also provided under the regulations that "National Forest land should not be devoted to an inferior use so as to preclude a higher use. For instance, after the issuance of a pasture permit it may be found that the area covers the only available reservoir site for the water supply of the community. In such a case the District Forester should exercise his discretion and cancel the permit. Compensation should be made, if possible, by refunding unearned payments or by granting another area for pasture purposes. Wherever possible, this point should be determined during the field examination, and where it is evident that eventually a higher use can be made of the area than the one applied for, a clause should be inserted providing for the higher utilization, thus: This permit is issued subject to an application for the use of the area for . . . (a reservoir for municipal purposes, an irrigation ditch, school purposes, etc.) The welfare of the community or the number of people benefited should be the factor determining a higher use rather than the amount of money to be obtained for the use. If the supervisor rejects a special-use application, he will at once inform the applicant by letter, giving the reason for rejection and will forward all papers in the case to the District Forester for review. All papers will be returned to the supervisor for filing. The supervisor will not revoke special-use permits. When the necessity for revocation arises, the supervisor will report the case to the District Forester, who will take the necessary action in cases where the permits were issued by the supervisor. Permits issued by the District Forester may be revoked by the Forester or the Secretary of Agriculture. Notice of revocation of permit will be sent in duplicate to the super-

[3] See, also, the National Forest Manual, Special Uses, of March 18, 1911, and Schedule of Charges for Special Use Permits, pp. 6-8.

visor, the original for transmittal by registered mail to the permittee."

Relative to conduits and reservoirs for irrigation the regulations also provide: "No charge will be made for permits for irrigation projects.[4] As, under the Act of March 3, 1891, as amended by the Act of May 11, 1898, easements can be secured for irrigation projects on National forests, it is unlikely that supervisors will be called upon to issue permits for many large projects, although applications may be received pending the approval of application for easement to the Department of the Interior. For small projects the procedure will be the same as in other special-use cases. For large projects more accurate and detailed maps may be required, and also *prima facie* evidence of water appropriation and plans for dams and other structures, if the supervisor considers such requirements necessary. If in the opinion of the supervisor an examination should be made by the district engineer, he will make such a request to the District Forester, who, if he considers it advisable, will authorize the examination. The report of the forest officer should show, if possible, whether or not any development of water power for the generation of electric energy is contemplated."

The power granted by the Act to the Secretary to make regulations has been upheld by the Supreme Court of the United States in two very recent cases.[5]

**§ 962. Rights of way over National Forests—Water power regulations.**—As was said before, the Secretary of the Interior has jurisdiction over all matters relating to the patenting and official survey of lands in the National Forests and of grants of rights of way amounting to easements. By practice and regulations of the Department of the Interior, applications for rights of way in the National Forests are referred to the Secretary of Agriculture by the Secretary of the Interior, for his recommendation before final action thereon.[1] Upon the question of water power rights within the National Forests the Secretary of Agriculture promulgated certain

[4] Regulation L-32; see National Forest Manual, Special Uses, 1911.

[5] Light v. United States, 120 U. S. 523, 55 L. Ed. 570, 31 Sup. Ct. Rep. 485; Grimaud v. United States, 220 U. S. 506, 55 L. Ed. 563, 31 Sup. Ct. Rep. 480; reversing *Id.*, 170 Fed. Rep. 205.

[1] For divided jurisdiction between the Secretary of the Interior and the Secretary of Agriculture, see Sec. 967.

rules under the date of December 28, 1910, relative to the use of National Forests for the purpose of generating and transmitting power.[2] An abstract of these regulations is as follows:

Reg. L-1. *Preliminary and final permits.*—Preliminary water-power permits will allow the applicant the occupancy of the lands of the United States within National Forests for the purpose of securing data for an application for a final permit and for such construction as may be necessary to preserve water appropriation during that period. Final water-power permits will allow the occupancy and use of such lands for the construction, maintenance, and operation thereon of works for the main purpose of the generation of electrical power.

Reg. L-2. *Definitions.*—"The term 'non-commercial water-power works' will be applied to water-power works owned and used solely by the permittees for one or more of the following purposes: In operation of their own mines or in the milling and reduction of ores therefrom; as auxiliary to irrigation works owned and operated by permittees; temporarily, in the construction of other works for which permission has already been granted the permittees; by municipalities for municipal purposes; or for such other miscellaneous uses not herein enumerated as may be determined by the Secretary of Agriculture to fall within this class. No charge will be made for the use and occupancy of lands for non-commercial water-power works. All other water-power works will be termed 'commercial.'"

Reg. L-3. *Priorities.*—Priority of application for a preliminary and final water-power permit shall be established by filing applications as prescribed. "Priority established under an application for final permit shall be lost if the permit is revoked. No other application for a like use, covering in whole or in part the same lands, shall be accepted from the permittee whose priority of application is lost, until the expiration of one year thereafter."

Reg. L-4. *Occupied Lands.*—No final water-power permit shall be issued if the works to be constructed thereunder will in any way physically interfere with the works operated or constructed or to be constructed under a final water-power permit. Nor will a final water-power permit be issued for the construction of works within an area covered by a prior preliminary permit until after the filing

2 See Use Book, Water Power, 1911, pp. 8-33.

of final application or the loss of priority by the prior preliminary permittee.[3]

Reg. L-5. *Privileges granted.*—"The occupancy and use of National Forest land is the sole privilege granted under a water-power permit. In the issuance of such permits no attempt will be made to adjudicate water rights, since water rights are acquired under State laws and adjudicated by the courts. Therefore, no protests against the granting of an application, if based upon alleged lack of water rights, will be considered; nor, in general, will any allegation that the time of beginning or completion of construction has been or is delayed by litigation over water rights be accepted as a sufficient reason for granting any extensions of time."

Reg. L-6. *Termination of permit.*—Unless sooner revoked by the Secretary of Agriculture a final water-power permit shall terminate at the expiration of fifty years from the date of the permit and may then be deemed to be an application by the permittee for a new permit to occupy and use such lands as are occupied and used under the original permit. The permittee must notify the Secretary of Agriculture that it desires such a new permit.

Reg. L-7. *Changes under permit.*—"The occupancy and use of lands of the United States within National Forests under a preliminary or final water-power permit, other than non-commercial, shall be conditioned upon the payment of an annual charge, based upon the value for power purposes of such lands, and the measure of said value shall be the net power capacity of the works, as defined in Regulation L-8, and the rates at which the charge shall be calculated shall be for each net electrical horsepower per annum, as follows: 'For the first year, 0.10; for the second year, 0.20; for the third year, 0.30; for the fourth year, 0.40; for the fifth year, 0.50; for the sixth year, 0.60; for the seventh year, 0.70; for the eighth year, 0.80; for the ninth year, 0.90; for the tenth and each succeeding year, 1.00. The above rates per net electrical horsepower per annum.'"

*Sale or transfer.*—"If the original permittee sells or transfers his improvements in accordance with Regulation L-15 and a new permit is issued to the vendee or transferee, the subsequent annual charges shall be at the rates that would have been required under the original permit, and any advance payments made by the original permittee

[3] As amended by Regulation of July 7, 1911.

may be applied *pro tanto* on the new permit. If all or any part of the amounts due for charges as required in the preliminary permit shall, after due notice has been given, be in arrears for sixty days, then and thereupon the preliminary permit shall terminate and be void. If all or any part of the amounts due for charges as required in the final permit shall, after due notice has been given, be in arrears for six months, then and thereupon the final permit shall terminate and be void."

Reg. L-8. *Definition.*—In this regulation the term "gross power capacity" is defined to mean the power capacity of the entire works to be constructed and the term "net power capacity" upon which the charges are based shall be determined by making certain deductions as therein prescribed.

Reg. L-9. *Applications.*—This regulation provides for the form and procedure in filing applications for preliminary permits.

Reg. L-10. *Applications.*—This regulation provides for the form and procedure in filing applications for final permits.

The regulations also provide that before a water permit for noncommercial or commercial works shall be issued that the permittee shall execute a stipulation as required by the regulations. During the progress of construction amendments to maps of location or plans of structures will be required from the permittee, if there is a physical interference with the use of lands granted by existing permits or pending application. An extension of the periods stipulated by the permittee for beginning construction may upon certain terms be extended.[4]

**§ 963. Permissive use of rights of way over reservations and public parks—Text of Act of February 15, 1901.**—By the Act of February 15, 1901, entitled, "An Act relating to rights of way through certain parks, reservations, and other public lands,"[1] *a permissive right* may be acquired to the use of rights of way through certain parks named in the Act, reservations, and other public lands for canals, ditches, pipes, and pipe lines, flumes, tunnels, or other

[4] See, also, the instructions to the forest officers upon the granting of preliminary and permanent permits, the Use Book, Water Power, 1911, pp. 61-80.

[1] 6 Fed. Stat. Ann., 1905, p. 513; 2 U. S. Comp. Stat., 1901, p. 1584; 31 Stat. L. 790.

water conduits, and for water plants, dams, and reservoirs used to promote irrigation and other purposes. The full text of the Act is as follows:

"That the Secretary of the Interior be, and hereby is, authorized and empowered, under general regulations to be fixed by him, to permit the use of rights of way through the public lands, forest and other reservations of the United States, and the Yosemite, Sequoia, and General Grant National Parks, California, for electrical plants, poles, and lines for the generation and distribution of electrical power, and for telephone and telegraph purposes, and for canals, ditches, pipes, and pipe lines, flumes, tunnels, or other water conduits, and for water plants, dams, and reservoirs used to promote irrigation or mining or quarrying, or the manufacturing or cutting of timber or lumber, or the supplying the water for domestic, public, or any other beneficial uses to the extent of the ground occupied by such canals, ditches, flumes, tunnels, reservoirs, or other water conduits, or water plants, or electrical or other works permitted hereunder, and not to exceed fifty feet on each side of the marginal limits thereof, or not to exceed fifty feet on each side of the center line of such pipes and pipe lines, electrical, telegraph, and telephone lines and poles, by any citizen, association, or corporation of the United States, where it is intended by such to exercise the use permitted hereunder or any one or more of the purposes herein named: *Provided*, That such permits shall be allowed within or through any of said parks or any forest, military, Indian, or other reservation only upon the approval of the chief officer of the department under whose supervision such park or reservation falls and upon a finding by him that the same is not incompatible with the public interest: *Provided further*, That all permits given hereunder for telegraph and telephone purposes shall be subject to the provisions of title sixty-five of the Revised Statutes of the United States, and amendments thereto, regulating rights of way for telegraph companies over the public domain: *And provided further*, That any permission given by the Secretary of the Interior under the provisions of this Act may be revoked by him or his successors in his discretion, and shall not be held to confer any right, or easement, or interest in, to, or over any public land, reservation, or park." [2]

[2] For the construction of the Act of February 15, 1901, see Sec. 964.

**§ 964. Permissive use of rights of way over reservations and public parks—Construction of Act of February 15, 1901.**—By the Act of February 15, 1901,[1] it was provided that the Secretary of the Interior was authorized [2] and empowered, under general regulations to be fixed by him, *to permit the use of* rights of way through the public lands, forest, and other reservations of the United States, and the Yosemite, Sequoia, and General Grant National Parks, California, for, among other purposes, electrical plants, poles, and lines for the generation and distribution of electrical power, and for canals, ditches, pipes, and pipe lines, flumes, tunnels, or other water conduits, and for water plants, dams, and reservoirs used to promote irrigation or mining or quarrying, or the manufacturing or cutting of timber or lumber, or the supplying of water for domestic, public, or any other beneficial uses, to the extent of the ground occupied by such canals, ditches, or other works, and not to exceed fifty feet on each side of the marginal limits thereof, by any citizen, association, or corporation of the United States, where it is intended by such to exercise the use permitted hereunder or any one or more of the purposes herein named: *Provided,* That such permit shall be allowed within or through any of said parks or any forest, military, Indian, or other reservation only upon the approval of the chief officer of the department under whose supervision such park or reservation falls and upon a finding by him that the same is not incompatible with the public interest:[3] *Provided, further,* That any permission by the Secretary of the Interior under the provisions

1 6 Fed. Stat. Ann., 1905, p. 513; 2 U. S. Comp. Stat., 1901, p. 1584; 31 Stat. L. 790.

For full text of Act, see Sec. 963. See, also, Sec. 965.

2 The jurisdiction under this Act was afterward transferred to the Secretary of Agriculture as to National Forest reservations, under the Act of Feb. 1, 1905; 10 Fed. Stat. Ann., 1905, p. 404; Supp. U. S. Comp. Stat., 1905, p. 343; 33 Stat. L. 628.

See previous section, No. 955.

3 The term "public interest" contemplates not merely the public interest in the Yosemite National Park for use as a park only, but the broader public interest which requires such reservoir sites to be utilized for the highest good to the greatest number of people. And under the provisions of the Act, the Secretary of the Interior is authorized to permit the utilization of reservoir sites in the park in connection with the municipal water supply system for the City of San Francisco. City of San Francisco, 36 Land Dec. 409.

But the right will not be permitted if incompatible with public interest. Op. Atty. Gen., 33 Land Dec. 389.

See, also, 33 Land Dec. 563; Inyo Consolidated W. Co., 37 Land Dec. 78; Northern Cal. Power Co., 37 Land

of the Act may be revoked by him or his successor in his discretion, and shall not be held to confer any right, or easement, or interest in, to, or over any public land, reservation, or park.[4]

As to the nature of the right, it is to be specially noted that this Act does not make a grant in the nature of permanent easement running with the land, as is the case under the Acts of 1891,[5] and Section 4 of the Act of February 1, 1905,[6] but it authorizes a mere permission in the nature of a license, revocable at any time, and it gives no right whatever to take from the public lands, reservations, or parks, adjacent to the right of way, any material for the purpose of construction.[7]

As to the rights granted under the Act, through the National forests only, by Section 1 of the Act of February 1, 1905,[8] discussed in our previous section,[9] the occupation or use under the Act being but temporary, and in no way affecting the fee or clouding the title of the United States, the absolute jurisdiction was transferred from that of the Secretary of the Interior to that of the Secretary of Agriculture. Therefore, when it is desired to obtain permission over lands wholly within a National forest reserve, an application should be prepared in accordance with the instructions issued by the Department of Agriculture, and the same filed with the officer in charge of such National forest.[10] In case the application involves rights and privileges upon public lands partly within and partly

See, also, Regulations, 36 Land Dec. 583.

6 See Secs. 955-958.

7 See United States v. Lee, 15 N. M. 382, 110 Pac. Rep. 607, where it is said: "The Act, while using the term 'public land,' applies it to lands subject to use for parks, reservations, and other purposes by the act of the United States necessitating the granting of a permit or license only for right of way purposes," and holding that the Act did not apply to other public lands.

8 10 Fed. Stat. Ann., 1906, p. 404; Supp. U. S. Comp. Stat., 1905, p. 343; Chap. 288, 33 Stat. L. 628, Sec. 1.

9 See Sec. 963.

10 See current Use Book of the Forest Service; Op. Atty. Gen., 33 Land Dec. 389, 33 Land Dec. 563.

See, also, for regulations, 36 Land Dec. 579-581.

without a National forest, separate applications must be prepared, and the one affecting the lands within the forest reserve filed with the forest officer in charge and the other filed in the local land office.

Where the application is for a right over lands outside of National forest reserves, it comes wholly within the jurisdiction of the Secretary of the Interior, and if it is over a National park, a military, Indian, or other reservation, it is subject to the approval of the chief officer of the department under whose supervision such park or reservation comes.

The application must be in the general form prescribed for applications under the Act of March 3, 1901, and discussed in previous sections. It must be accompanied with proof of citizenship of the applicant or applicants, and the applicant must set forth in an affidavit the purpose for which the right of way is to be used. Buildings proposed to be erected must be platted in the main drawing and in a separate drawing. Whenever a right of way is applied for through any of the National parks designated in the Act, the applicant must show to the satisfaction of the department that the location and use of the right of way for the purposes contemplated will not interfere with the uses and purposes for which the park was originally dedicated, and will not result in damage or injury to the natural conditions of property or scenery existing therein.[11] The applicant must also make a *prima facie* showing of his right to appropriate water to be used in connection with the right of way; but it is not within the province of the department to determine the validity of such appropriation, but this is left to the laws of the respective States and for their courts to determine.[12]

Applications for right of way under this Act, all of which is located upon land within an Indian reservation, must be filed with the Commissioner of Indian Affairs. Applications for right of way affecting lands within and without Indian reservations must be filed with the local land office for forwarding to the Commissioner of the General Land Office. Before such applications are transmitted to the department they will be submitted by the Commissioner of the General Land Office to the Commissioner of Indian Affairs for such

12 Kings River Pr. Co. v. Knight, 32 Land Dec. 144.

action and recommendation as that officer may deem proper. The notations upon the plats and the procedure in this respect are the same as those discussed under the Act of February 1, 1905.[13] All applications for permission to use rights of way for the purposes specified in the Act must be submitted under the regulations promulgated thereunder. Where, however, it is sought to acquire a right of way for the main purpose of irrigation, as contemplated by Sections 18 to 21 of the Act of March 3, 1891, and Section 2 of the Act of May 11, 1898,[14] the application must be submitted in accordance with the regulations issued under said Acts.[15] Application for permission to use the desired right of way, through the lands designated in the Act of February 15, 1901, must be filed and permission be granted, before any rights can be claimed thereunder.[16]

**§ 965. Grants for fifty years upon public lands, National Forests, and reserves—Act of March 4, 1911, for the transmission and distribution of electrical power.**—By the Act of March 4, 1911,[1] Congress provided as follows: "That the head of the department having jurisdiction over the lands be, and he hereby is, authorized and empowered, under general regulations to be fixed by him, to grant an easement for rights of way, for a period not exceeding fifty years from the date of the issuance of such grant, over, across, and upon the public lands, National forests, and reservations of the United States for electrical poles and lines for the transmission and distribution of electrical power, and for poles and lines for telephone and telegraph purposes, to the extent of twenty feet on each side of the center line of such electrical, telephone, and telegraph lines and poles, to any citizen, association, or corporation of the United States, where it is intended by such to exercise the right of way herein granted for any one or more of the purposes herein named: *Provided*, That such right of way shall be allowed within or through any National park, National forest, military, Indian, or any other reservation only upon the approval of the chief officer of the department under whose supervision or control such reservation

13 See Secs. 955-957.

14 See Secs. 937-950; Regulations, 36 Land Dec. 580.

15 Regulations, 36 Land Dec. 567-575, 584-586. These are the regulations last issued by the department, but, as they are subject to change, the last issued should be consulted.

16 Op. Atty. Gen., 32 Land Dec. 597.

1 Public, No. 478. For a copy of the Act, see, also, 40 Land Dec. 30; 36 Stat. L. 1253.

falls, and upon a finding by him that the same is not incompatible with the public interest: *Provided,* That all or any part of such right of way may be forfeited and annulled by declaration of the head of the department having jurisdiction over the lands for non-use for a period of two years or for abandonment.

"That any citizen, association, or corporation of the United States to whom there has heretofore been issued a permit for any of the purposes specified herein under any existing law, may obtain the benefit of this Act upon the same terms and conditions as shall be required of citizens, associations, or corporations hereafter making application under the provisions of this statute." As construed by the Secretary of the Interior, on April 14, 1911,[2] the Act as closely as possible, in the accomplishment of its purpose, follows the language of the Act of February 15, 1901, discussed in the preceding sections,[3] which Act authorizes mere revocable permits or licenses for such lines and other purposes. It is held that the Act of March 4, 1911, merely authorizes additional or larger grants and does not modify or repeal the Act of February 15, 1901, and should be construed and applied in harmony with it. And the Secretary of the Interior also ordered that the regulations issued under the Act of February 15, 1901, in so far as they are applicable, shall control in the presentation, consideration, and the granting of applications for easements under the Act of March 4, 1911.[4]

**§ 966. Reservoirs for watering stock—Act of January 13, 1897.**—By the Act of January 13, 1897,[1] it was provided that any person, live-stock company, or transportation company engaged in the breeding, grazing, driving, or transporting live stock may construct reservoirs upon unoccupied public lands of the United States, not mineral, or otherwise reserved, for the purpose of furnishing water to such live stock, and shall have control of such reservoir, under regulations prescribed by the Secretary of the Interior, and the lands upon which the same is constructed, not exceeding 160 acres, so long as such reservoir is maintained for such purpose: *Provided,*

[2] 40 Land Dec. 30.

[3] See Secs. 963, 964.

[4] For the regulations under the Act of February 15, 1901, see Secs. 963, 964.

[1] 6 Fed. Stat. Ann., 1905, p. 511; 2 U. S. Comp. Stat., 1901, p. 1574; Chap. 11, 29 Stat. L. 484.

That such reservoir shall not be fenced and shall be open to the free use of any person desiring to water animals of any kind.

Two years are allowed after the filing of the declaratory statement provided for in the Act to complete the reservoir, otherwise the statement will be subject to cancellation. If completed within the time specified, and it has been approved by the Secretary of the Interior, thereafter such land shall be reserved from sale so long as such reservoir is kept in repair and water kept therein. Although the title of the Act indicates that the lands are to be sold for reservoir sites, the Act itself does not provide for any sale of any lands, and therefore no lands can be sold under its provisions. The Act, however, directs the Secretary to reserve the lands from sale after the approval of the map showing the location of the reservoir.

When the applicant is a corporation there must be filed a copy of its articles of incorporation and proofs of its organization as required by the regulations.[2] The declaratory statement must be made under oath and also in accordance with the forms prescribed by the department.[3] The location of the reservoir must be described by the smallest legal subdivisions, its area in acres, its capacity in gallons, and the source from which the water is to be obtained for such reservoir, and whether there are any streams or springs within two miles of the land sought to be reserved; and if so, where. After the construction of the reservoir the applicant shall have the same accurately surveyed and mapped, and the map and field notes must be filed in the proper local land office, where the proper notations must be made by the local officers and the papers then forwarded by them to the General Land Office for approval. After the same have been approved, in order that the reservation be continued, it is necessary that the reservoir "shall be kept in repair and water kept therein." For this reason the owner of the reservoir is required during the month of January of each year to file in the local land office an affidavit to the effect that the reservoir has been kept in repair during the preceding year, and that the provisions of the Act have been complied with. Upon failure to file such affidavit, steps will be taken to revoke the reservation.[4]

[3] Regulations, *supra*.

[4] The above is abstracted from the last regulations, 36 Land Dec. 576. The applicant should always consult the last regulations issued.

The Act of June 13, 1897, providing for the use of public lands for

**§ 967. Over National Forests—Divided jurisdiction between Secretaries of the Interior and Agriculture.**—By the Act of February 1, 1905,[1] it was provided: "That the Secretary of the Department of Agriculture shall, from and after the passage of the Act, execute or cause to be executed all laws affecting the public lands hereafter reserved under the provisions" of the Act of March 3, 1891, as provided in Section 24,[2] "and Acts supplemental to and amendatory thereof, after such lands have been so reserved, excepting such laws as affect the surveying, prospecting, locating, appropriating, entering, relinquishing, reconveying, certifying, or patenting of any of such lands." This Act has been construed by the Secretary of the Interior, the Secretary of Agriculture, and the Attorney General, that the Department of Agriculture is thereby invested with the jurisdiction to pass upon all applications for the granting of permission to occupy and use lands in a forest reserve which occupation or use is of a temporary character, and which, if granted, will in nowise affect the fee or cloud the title of the United States should the reserve be discontinued; but that the Department of the Interior retains jurisdiction over all applications affecting lands within a forest reserve the granting of which amounts to an easement running with the land.[3] Therefore, as rights of way acquired under the Act of 1891, constitute easements running with the land, and settlers and others can only acquire a title to the land, subject thereto, the jurisdiction over this class of rights of way comes clearly within the powers of the Secretary of the Interior. However, whenever a right of way is granted through a National forest, the applicant must enter into such a stipulation and execute such a bond, as the Forest Service may require for the protection of such National Forest.[4]

construction of reservoirs for watering stock, contemplates the reservation of only so much land as may be necessary for the practical purposes for which the reservoir is established; and the Secretary of the Interior has the power at any time to reform the reservation and restore to settlement and entry all lands not necessary for the free use and enjoyment of the rights contemplated by the Act. Marsh v. Rambousek, 40 Land Dec. 559.

1 10 Fed. Stat. 1906, p. 404; U. S. Comp. Stat. Supp., 1905, p. 343; Chap. 288, 33 Stat. L. 628.

See, also, Secs. 954-965.

2 For text of Section 24 of the Act of March 3, 1891, relative to the reservation of forest lands, see Sec. 954.

3 For jurisdiction of rights of way over forest reserves, see 33 Land Dec. 609; Instructions, 34 Land Dec. 64.

4 Regulations, 36 Land Dec. 569; Regulations, 34 Land Dec. 583.

It therefore follows that, as the rights of way granted under the Act of March 3, 1891, discussed in our previous sections,[5] and those granted under the Act of February 1, 1905, also discussed,[6] constituting permanent easements running with the land, come under the sole jurisdiction of the Secretary of the Interior. And, upon the other hand, the Secretary of Agriculture is invested with the jurisdiction of all rights, which are merely permissive in character, under any law of the United States, to occupy and use lands in National forest reserves, where the occupation and use is temporary, and will in nowise affect the fee or cloud the title of the United States should the forest reserve be discontinued.[7]

As was said in a recent case decided by the Secretary of the Interior:[8] "The terms of this Act clearly contemplate that within forest reserves[9] those laws affecting the surveying, entering, and patenting of lands shall continue as theretofore to be executed by and under the supervision of the Interior Department; and also all such laws as affect prospecting, locating, and appropriating any such lands. Here is an express Congressional declaration reserving to the Land Department the execution and enforcement of those laws governing the latter class of Acts in the same terms and with no element of distinction as are employed with reference to the former, the departmental jurisdiction over which no one will question. The legislative announcement recognized the right, authority, power, and jurisdiction as already existent and vested, and declares that such power and authority shall remain where now seated, viz.: with the Interior Department."[10]

8 H. H. Yard, 38 Land Dec. 59.

9 Now National Forests.

10 The approval of the Secretary of Agriculture of an application for a right of way under the Acts of March 3, 1891, and May 11, 1898, for a reservoir site within a forest reserve does not pass title to the land covered thereby, but is merely advisory to the Secretary of the Interior, and is subject to his paramount jurisdiction under said Acts. The exercise of jurisdiction of the Secretary of the Interior over applications for rights of way within reservations of the United States involves the exercise of more than mere legal discretion, and he should look beyond the mere technical sufficiency of the application and in broad view subserve the interests of the whole people. California-Nevada Canal, Water & Power Co., 40 Land Dec. 380.

§ 968. **General jurisdiction of the respective departments.**—The general jurisdiction of the Federal Land Department over the matters relating to the acquisition of rights of way over the public lands is almost absolute. The officers of the Land Department are specially designated by law to receive, consider, pass upon proofs presented, and to allow or to disallow the applications. The courts will not review the decisions of the Land Department on any question of evidence, nor as to the method of the officers thereof in arriving at their conclusions. The findings of such officers and conclusions as to matters of fact are conclusive, and if such officers err in that respect the remedy is by appeal from one officer to another to the head of the department or the Secretary of the Interior.[1] It is only when such officers err in the construction of the law applicable to the facts in any particular case or if their decision is brought about by fraud or collusion that their findings may be reviewed and annulled by the court having the jurisdiction in a proper case. As was said in a recent Colorado case:[2] "The officers of the Land Department are specially designated by law to receive, consider, and pass upon proofs presented with respect to the matters here involved. If they err in the construction of the law applicable to the facts of the case, or if their decision is brought about by fraud, their findings may be reviewed and annulled by the courts, in a proper case, but their findings and conclusions as to matters of fact are conclusive, and if they err in that respect, the remedy is by appeal from one officer to another of the department. . . . The courts will not review the decisions of the Land Department on questions of evidence, nor as to the method of the officers thereof in arriving at their conclusions. Unless the facts, and all the facts, together with the findings upon such facts, are disclosed, or enough undisputed facts are presented, which were proven before the Department to clearly establish that an error of law was committed, and that the party complaining was thereby deprived of his substantial rights, courts can not hold that the law was misconstrued by the officers of the department."[3] And the

1 Durango etc. Co. v. Evans, 80 Fed. Rep. 425, 25 C. C. A. 523; O'Reilly v. Noxon, 49 Colo. 362, 113 Pac. Rep. 486.

2 O'Reilly v. Noxon, 49 Colo. 362, 113 Pac. Rep. 486.

3 Citing Moore v. Robins, 96 U. S. 530, 24 L. Ed. 848; Marquez v. Frisbie, 101 U. S. 473, 25 L. Ed. 800; Durango etc. Co. v. Evans, 80 Fed Rep. 425, 25 C. C. A. 523.

approval of an application is held to have the following effect: "The approval of the company's application was, in effect, the sovereign, saying to all, such company has an apparent right to the premises described, which must be recognized and respected until the sovereign in some proper procedure inquires into its validity. It may be, when the inquiry is made, the apparent right becomes, in reality, no right at all, but, until such inquiry and determination, the apparent right must be respected."[4]

As to the jurisdiction over forest reserves by the Act of February 1, 1905, the Secretary of Agriculture was invested with the same as far as the granting of the right to occupy and use such National forests, which occupation and use is of a temporary character, and which if granted will in nowise affect the fee or cloud the title of the United States, should the National forest be discontinued. It, therefore, follows that the Secretary of Agriculture as to these uses of a temporary character has the power and authority to promulgate all rules and regulations controlling and regulating the use of such forest lands, both as respects special licenses for rights of way, grazing privileges, and the use of the timber growing thereon. In two recent cases decided by the Supreme Court of the United States[5] it was held that the Secretary of Agriculture under the provisions of the Forest Reserve Acts had full authority to make rules and regulations covering National Forests, and that the provisions of the Acts, making a violation of those rules and regulations a criminal offense, was not unconstitutional.[6] Although the decisions rendered relative to the authority of the Secretary of Agriculture to make rules cited regulating and controlling the various

[4] O'Reilly v. Noxon, 49 Colo. 362, 113 Pac. Rep. 486.

[6] See, also, Dastervignes v. United States, 122 Fed. Rep. 30, 58 C. C. A. 346; affirming *Id.*, 118 Fed. Rep. 199; United States v. Shannon, 151 Fed. Rep. 863; *Id.*, 160 Fed. Rep. 870, 88 C. C. A. 52; United States v. Deguirra, 152 Fed. Rep. 568; United States v. Domingo, 152 Fed. Rep. 566; United States v. Bale, 156 Fed. Rep. 687; United States v. Rizzinelli, 182 Fed. Rep. 675.

It was only some of the lower courts that held such regulations by the Secretary of Agriculture to be invalid. United States v. Blasingame, 116 Fed. Rep. 654; United States v. Matthews, 146 Fed. Rep. 306; Dent v. United States, 8 Ariz. 138, 71 Pac. Rep. 920; reversing 8 Ariz. 413, 76 Pac. Rep. 455.

uses of the National Forests were relative to grazing privileges, by analogy, it may be said that the same power is vested in the Secretary to make rules and regulations relative to permissive rights of way and such rules and regulations must be strictly followed by the applicants, in order to acquire such permissive rights.[7]

**§ 969. Proceedings to forfeit right on account of non-performance of conditions under Acts of March 3, 1891, and February 1, 1905.**—Where there has been a failure to perform a condition subsequent by the owner of a right of way, which has attached by virtue of the approval of the Secretary, there are two methods of declaring a forfeiture, depending entirely upon the nature of the right granted. Where the right granted is simply permissive, there is no question but that the Secretary has the power to declare a forfeiture without there being any proceeding brought in court for that purpose.

But where the right granted is in the nature of a permanent easement running with the land, as is the case under the rights granted under the Act of March 3, 1891, and of February 1, 1905,[1] no authority exists in the Secretary, or the head of any other department of the Government, to work a forfeiture by a simple declaration of the same; but an action to adjudicate the question as to whether or not the right has been actually forfeited under the law must be brought, after such a decision by the department has been made, in the proper court having jurisdiction over the subject-matter and the parties thereto.

Section 20 of the Right of Way Act of March 3, 1891, among other things, provides that if any section of said canal or ditch shall not be completed within five years after the location of said section, the rights therein granted shall be forfeited as to any uncompleted section of said canal, ditch, or reservoir, to the extent that the same is not completed at the date of the forfeiture.[2] This requirement is in the nature of a condition subsequent, and the rule undoubtedly is that a failure to comply with such provisions does not operate *ipso facto* to devest the grantee of the title to the right of way for the canal, ditch, or reservoir, and reinvest the United

[7] See National Forest Manual, Special Uses, 1911, pp. 22-25.

[1] See Secs. 937-950, 955-958.

[2] For full text of Sec. 20 of Act of March 3, 1891, see Sec. 937.

States therewith; but that to be effectual, the default of the claimant must be followed with a declaration of forfeiture by some competent authority, and be followed by appropriate judicial proceedings.[3]

The proceedings of this nature as laid down by the regulations of the Department of the Interior are as follows: If upon examination proper grounds are shown for the institution and maintenance of such a suit to declare a forfeiture, the Commissioner of the General Land Office will call upon the grantee of the right of way or his successor in interest, as the same may be, to show cause within ninety days why the proper proceedings shall not be instituted to declare the right of way forfeited. If no satisfactory showing shall be made within the prescribed time, such action will be taken as the circumstances of the case seem to warrant.[4]

It is also held by the Secretary of the Interior that upon the approval by the department of an application for right of way under the Act of March 3, 1891, jurisdiction is lost and the department may not thereafter properly approve of another application which conflicts to a material extent with the approved application. And where an application for a right of way was inadvertently approved during the pendency and without consideration of a conflicting application, under which superior rights are claimed, the department may recommend the institution of a suit to cancel the approval and reacquire jurisdiction for the purpose of determin-

3 "This requirement being in the nature of a condition subsequent, the rule undoubtedly is that failure to comply therewith does not operate *ipso facto* to devest the grantee of the title and re-invest the grantor therewith, but that to be effectual, the default must be followed with a declaration of forfeiture by some competent authority, and, the grant here being of a public nature, such declaration can be made only by an Act of Congress, or by appropriate judicial proceedings." United States v. Whitney, 176 Fed. Rep. 593.

See, also, Kern River Co., 38 Land Dec. 302; Rio Grande etc. Co. v. United States, 215 U. S. 266, 54 L. Ed. 190, 30 Sup. Ct. Rep. 97; United States v. Rickey, 164 Fed. Rep. 496; Baldridge v. Leon Lake Co., 20 Colo. App. 518, 80 Pac. Rep. 477; O'Reilly v. Noxon, 49 Colo. 362, 113 Pac. Rep. 486; Schulenberg v. Harriman, 88 U. S. 21 Wall. 44, 22 L. Ed. 551.

See, also, Rio Grande Dam & Irr. Co. v. United States, 215 U. S. 266, 54 L. Ed. 190, 30 Sup. Ct. Rep. 97, where an injunction against the construction of a reservoir and dam was finally granted, upon the theory that the defendant had, by forfeiture, lost its right to construct the reservoir and dam.

4 Regulations, 34 Land Dec. 358.

See, also, Instructions, October 20, 1910, 39 Land Dec. 309.

ing to which of the rival applicants the right of way should be awarded.[5]

And, further, where the United States is not particularly interested in the matter of having a right of way declared forfeited, the department holds that there is no good reason why interested parties may not themselves institute and maintain such a suit in the name of the United States. It is, therefore, held that interested private parties, upon their proper application to the Department of the Interior and upon the execution of a good and sufficient bond to indemnify the United States against liability, and upon a further application to the Department of Justice for a commission to the applicant's attorney as special United States attorney, authorizing him to represent and defend the interests of the United States in such suit or suits as may be allowed, that actions may be so brought to declare forfeitures. The actions being so brought will then be tried upon their merits and a forfeiture declared of the right of way or not, as the evidence may warrant.[6]

But, as was held in a recent case in Colorado,[7] the approval of an application was in effect the sovereign saying to all, such applicant has an apparent right to the premises described which must be recognized and respected until the sovereign in some proper procedure inquires into its validity. "It may be, when the inquiry is made the apparent right becomes, in reality, no right at all, but, until such inquiry and determination, the apparent right must be respected."

§ 970. **Rights to construct dams over navigable streams.**—There is another subject which we have discussed in another portion of this work, and that is the right which may be acquired to construct dams or other works across and on the navigable streams of the

[7] O'Reilly v. Noxon, 49 Colo. 362, 113 Pac. Rep. 486.

United States and to which but a reference will be made here.[1] Under the Act of June 23, 1910, authority may be granted either by Congress or by an official or officials of the United States, to any person to construct and maintain a dam for water power or other purposes across or in any of the navigable rivers of the United States, but such dam is not to be built or commenced until the plans and specifications of the same and all accessory works, together with the drawing of the proposed construction and a map of the proposed location have been submitted to the Secretary of War and Chief of Engineers for their approval, nor until they have actually approved such plans and specifications, and the location of such dam and accessory works. The construction, control, and management of such dams are always under the direct supervision of the officers of the Government named in the Act and a full compliance with all questions of law as prescribed in the Act and the rules and regulations of the officers in charge must be made before any such right is granted. And, furthermore, any person who shall fail to comply with any lawful order of the Secretary of War and the Chief of Engineers made in accordance with provisions of the Act, shall be deemed guilty of a violation of the Act, and any person who shall be guilty of a violation of the Act shall be deemed guilty of a misdemeanor and on conviction thereof shall be punished by a fine not exceeding $5,000, and every month such person shall remain in default shall be deemed a new offense and subject such persons to additional penalties therefor. And the Secretary of War and Chief of Engineers may, upon the refusal of the persons owning or controlling any such dams and accessory works to comply with any lawful order issued by them in regard thereto, cause the removal of such works as obstructions to navigation at the expense of the persons owning or controlling such works.[2]

§ 971. **Over State lands.**—The rights of way for ditches, canals, reservoirs, or other works, to be used in connection with water rights acquired by appropriation of the water for beneficial uses, for the purpose of conducting the water to the place of use, or the

[1] For the protection of Navigation, the Dam Acts of Congress of March 3, 1899, and June 21, 1906, and June 23, 1908, see Secs. 351, 352.

For the Dam Act of Congress of June 23, 1910, see Chap. 360, p. 593, 2d Session, 61st Congress.

[2] See Sec. 351.

storage thereof, are not limited to the lands of the public domain of the United States, which subject we have discussed in the preceding sections of this chapter, but rights of way for these purposes may be acquired over State lands.[1] Of course, where rights of way were acquired over lands while those lands were a part of the public domain of the United States, and afterward the lands were granted to a State by the Government, the State as grantee of the Government takes the lands subject to all rights of way acquired over the lands prior to the date of the grant, or the selection of the land by the State, the same as would an individual.[2] It therefore follows that the subsequent grantee of the State will also take the land subject to the same burden. The statutes of the various States provide for the recognition of these rights, and also in all conveyances of State lands the statutes usually provide for the reservation of such vested rights of way.[3] And not only this, but also the statutes of the most of the Western States provide for the granting, over lands owned by the States, upon certain conditions, either with or without compensation, of rights of way for the purposes of ditches, canals, or reservoirs to be used in connection with the use of water appropriated for irrigation or for other beneficial and useful purposes.[4] And, also, where the right of way is acquired under State statutes, the land is subject to the same servitude in the hands of a transferee that it was in the hands of the original patentee, even if no reservation was made in the deed.[5]

1 For the various methods of acquiring such rights, see the statutes under the various States in Part XIV.

2 Shoemaker v. Hatch, 13 Nev. 261, where it was held that one constructing a ditch across public lands for irrigation and mining purposes under an Act of Congress authorizing the same is not liable for damages for the digging of such ditch to one coming into possession of the lands subsequently thereto, where, although an application by a State was made previous to the construction of the ditch, the land was not selected by the State until after its construction, and the grant to the State relates back only to the date of the selection.

See, also, Carson v. Gentner, 33 Ore. 512, 52 Pac. Rep. 506, 43 L. R. A. 130.

3 See the statutes of the various States, Part XIV.

4 See the statutes of the various states, Part XIV; Toyaho Cr. Irr. Co. v. Hutchins, 21 Tex. Civ. App. 274, 52 S. W. Rep. 101.

5 Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322; Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

In a recent case in Texas[6] it was held that the legislature, to facilitate the sale of school lands and to enhance their value, may grant an easement on the lands for dam and reservoir sites to impound water for irrigation, such power being inherent in the sovereign Government and growing out of necessities of the case.

The various States of the West have also passed statutes granting rights of way for ditches, canals, etc., over State lands, constructed by the authority of the United States, especially for those constructed under the authority of the National Reclamation Act.[7]

[6] Imperial Irr. Co. v. Jayne, —— Tex. ——, 138 S. W. Rep. 575.

[7] For National Reclamation Act, see Chap. 65, Secs. 1235-1286.

For the statutes of the various States, see Part XIV.

# CHAPTER 52.

## RIGHTS OF WAY OVER PRIVATE LANDS.

§ 972. Scope of chapter.
§ 973. Right of way defined—Nature of right of way.
§ 974. Early cases upon the subject—Yunker v. Nichols.
§ 975. Right of the land owner to protection from trespass.
§ 976. Contracts not limited.
§ 977. When the granting of right of way by an entryman before patent is not in violation of the Federal statutes.
§ 978. Rights of way acquired by contract—Deeds—Statute of frauds.
§ 979. The terms of contracts relative to ditches and canals construed.
§ 980. Rights acquired by parol executed contract for a consideration.
§ 981. Rights acquired by parol contract—Licenses—In general.
§ 982. Rights acquired by parol contract—Permissive right a revocable license.
§ 983. Parol licenses—Irrevocable licenses.
§ 984. The doctrine of estoppel as applied to parol contracts and licenses.
§ 985. Rights acquired by parol contract—A prescriptive right can not be based on permission.
§ 986. Rights of way acquired by prescription.
§ 987. Rights of way may be acquired under the power of eminent domain.
§ 988. Public canals—Right to the use of.
§ 989. Private canals—Right to use may be acquired by contract.
§ 990. Ditches and canals—Right to enjoy easement—Construction of works.
§ 991. Easement for the flow of water in natural streams over private lands—Right to enjoy.
§ 992. Ditches and canals—Right to enjoy easement—Right to make repairs.
§ 993. Ditches and canals—Duty to keep works in repair.

**§ 972. Scope of chapter.**—In this chapter we will discuss the rights of way over private lands and how they may be acquired by contract. Also the right to enjoy the easement so acquired and the construction and care of the works thereon. The right to acquire rights of way over private lands by adverse possession amounting to prescription will be discussed in a subsequent chapter.[1] We will also discuss the right to acquire rights of way under the power of eminent domain in a separate chapter relating to that subject.[2]

[1] For prescriptive rights, see Chap. 54, Secs. 1033-1058.

[2] For rights by eminent domain, see Chap. 55, Secs. 1059-1098.

**§ 973. Right of way defined—Nature of right of way.**—As well defined by the Oregon Court in a recent case:[1] "A right of way is an easement of perpetual use, a charge or burden upon the land of one for the benefit of another."

It has been frequently held by the Court that a right of way for a ditch or canal over the lands of another is an easement, and should be treated in all respects in accordance with the law of easements.[2] No fee to the land is granted unless it is particularly specified in the deed of conveyance.[3]

**§ 974. Early cases upon the subject—Yunker v. Nichols.**—As we have seen in our chapter upon the history of the Arid Region Doctrine of appropriation, the State of Colorado was one of the first to abrogate the common law of riparian rights. This State did this upon the ground of the absolute necessities of the case, and upon the further ground that the common law of riparian rights was not fitted for the physical conditions existing in the State of Colorado. And in this connection the early decisions of the Colorado Court went to a greater extreme than is allowed under present law and the constitutions of the various States, and that of the United States, in holding that in Colorado lands are held in subordination to the dominant rights of appropriators, who must necessarily pass over them to obtain a supply of water to irrigate their

1 Shaw v. Proffitt, 57 Ore. 192, 109 Pac. Rep. 584; rehearing denied, 110 Pac. Rep. 1092.

2 That the ditch or canal itself is not an easement, but land, see Sec. 833.

That a right of way for ditch or canal is an easement, see Sec. 834.

See, also, Shaw v. Profit, *supra;* Smith v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148; Blake v. Boye, 38 Colo. 55, 88 Pac. Rep. 470, 8 L. R. A., N. S., 418; Burris v. People's Ditch Co., 104 Cal. 248, 37 Pac. Rep. 922; Mesnager v. Engelhardt, 108 Cal. 68, 41 Pac. Rep. 20; Gregory v. Nelson, 41 Cal. 278, 12 Morr. Min. Rep. 124; Joseph v. Ager, 108 Cal. 517, 41 Pac. Rep. 422; Dixon v. Schermier, 110 Cal. 582, 42 Pac. Rep. 1091; Jacob v. Day, 111 Cal. 571, 44 Pac. Rep. 243; Campbell v. West, 44 Cal. 646, 1 Morr. Min. Rep. 218; Quinlan v. Noble, 75 Cal. 250, 17 Pac. Rep. 69; Allen v. San Jose etc. Co., 92 Cal. 138, 28 Pac. Rep. 215, 15 L. R. A. 93; Anaheim v. Ashcroft, 153 Cal. 152, 94 Pac. Rep. 613; Mayberry v. Alhambra etc. Co., 125 Cal. 444, 54 Pac. Rep. 530, 58 Pac. Rep. 68; Los Angeles v. Pomeroy, 125 Cal. 420, 58 Pac. Rep. 69; North Fork etc. Co. v. Edwards, 121 Cal. 662, 54 Pac. Rep. 69; Bean v. Stoneman, 104 Cal. 49, 37 Pac. Rep. 777, 38 Pac. Rep. 39.

3 See Sec. 834.

own lands, and that such rights could be acquired without condemnation proceedings, and in this holding the case of Yunker v. Nichols,[1] was the leading case.[2] But the rule as laid down in this case was shortly after limited in its effect.[3] And after the adoption of the State constitution the rule was entirely changed, and it was then held that the acquiring of right of way over another man's property for ditches and canals could only be done by virtue of the right of eminent domain on condemnation proceedings.[4] And it may be now said that it is the general law upon the subject that no one can acquire a right of way over the lands of another for ditches and canals against his will, except it be by virtue of the right of eminent domain, prescription, or some other method known to law.[5] And it is well settled that such a right can not be acquired by mere trespass.[6]

**§ 975. Right of the land owner to protection from trespass.**—Rights of way for ditches, canals, or other works, to be used in connection with a water right appropriated for any beneficial purpose, may also be acquired over private lands. But when lands

2 See, also, Schilling v. Rominger, 4 Colo. 100; Brannagan v. Dulaney, 8 Colo. 413, 8 Pac. Rep. 669.

3 See Chrisman v. Heiderer, 5 Colo. 589, in which it was said: "The appropriation of the water at the point named carried with it an implied authority to do all that should become necessary to secure the benefit of the appropriation; to this extent the appropriator acquired an easement in the adjoining lands; but the right thus acquired is one which is held to the narrowest limits compatible with the enjoyment of the principal easement, which is the right to the use of the water. The most reasonable mode of effecting the object must be adopted, and it must be done in such a manner as to occasion as little damage as possible to the owner of the adjoining premises. The necessity of obtaining water to run the mill did not justify the appellant in arbitrarily adopting a method which was calculated to greatly damage the property of others; it has been well said that the necessity of one man's business is not to be made the standard of another man's rights; the great maxim of the law, '*sic utero tuo ut alienum non laedas*,' applies with as much force to the enjoyment of water rights as to rights of any other description."

4 See Stewart v. Stevens, 10 Colo. 445, 15 Pac. Rep. 786.

See, also, United States etc. Co. v. Gallegos, 89 Fed. Rep. 769, 32 C. C. A. 470, 61 U. S. App. 13; Snyder v. Colorado etc. Co., 181 Fed. Rep. 62, 104 C. C. A. 136.

5 That the rights of the land owner are protected, see the next section.

6 See next section, No. 975.

have once passed into private ownership, no other person has the right to construct a ditch or canal across them without the owner's consent, unless the right is acquired under the power of eminent domain, or in some other way known to law.[1]

This rule also holds good even where the one in lawful possession of the land has no legal title to the same. He has a legal right to prevent an unlawful entry by any degree of force necessary short of taking human life.[2] Therefore, no easement can be acquired over the lands of others by a mere trespass,[3] unless the trespass

1 For eminent domain, see Secs. 1059-1098.

Blankenship v. Whaley, 124 Cal. 300, 57 Pac. Rep. 79, 76 Pac. Rep. 235, where it is held that such a right can only be enjoyed over the lands of others by procuring a right of way over them.

"The United States and the State of Montana have recognized the right of an individual to acquire the use of water by appropriation; but neither has authorized, nor, indeed, could authorize, one person to go upon the private property of another for the purpose of making an appropriation, except by condemnation proceedings." Prentice v. McKay, 38 Mont. 114, 98 Pac. Rep. 1081.

"Plaintiff in error also forgets that it is just as necessary to the creation and preservation of a water right to provide a means for the continual diversion of the water from its natural channel and for conducting it to the point where it is to be applied to the beneficial purpose. And he can not arbitrarily seize and use another's ditch, or interest in a ditch, for that purpose." McRae v. Small, 48 Ore. 139, 85 Pac. Rep. 503, and holding that where a ditch had been thus seized there was no valid appropriation of the water.

See, also, McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773.

One who has not acquired a right of way for an irrigation ditch while the lands were public lands of the United States, and where afterward such lands were entered as a homestead, must make arrangements for such right of way with the entrymen or take proper proceedings according to law to appropriate the land for that purpose. Rasmussen v. Blust, 85 Neb. 198, 122 N. W. Rep. 862, 133 Am. St. Rep. 650.

For the works necessary for the appropriation of water, see Secs. 717, 718, 824-836.

2 Johnston v. Meagher, 14 Utah 426, 47 Pac. Rep. 861; Bishop, Criminal Law, Secs. 857, 861.

"Mere occupancy of land, however recent, gives the possessor a title against one who can not show a better claim, and is sufficient to enable him to maintain an action against a stranger." 2 Watson, Trespass, p. 246.

Look v. Norton, 55 Me. 103; Kilborn v. Rewee, 8 Gray (Mass.) 415.

A trespasser can not acquire the right. Smith v. Denniff, 24 Mont. 22, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

See, also, Alta Land Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

3 Crescent M. Co. v. Silver King M. Co., 17 Utah 144, 54 Pac. Rep. 244, 70

shall have continued for such a period that the right has been acquired by prescription.[4] A permit from the State engineer or from the Secretary of the Interior after the lands have passed into private hands gives no right as against the owner.[5]

It is, therefore, now held in all jurisdictions that rights of way can not be acquired by a mere trespass as against the rights of the owner of the land. As was said by the Supreme Court of the United States in a recent case:[6] "A final objection urged is that the plaintiff's land is taken without compensation. It would seem that this is merely technical in this case. There does not appear to have been any discussion of the point below, and it is probable that the water is the only thing that has substantial value or really is cared for. But the plaintiff is authorized to have his damages assessed, if he desires, by Chapter 55, Section 4,[7] as we have mentioned. We think that it would be unjust to disturb the decree on

Am. St. Rep. 810; *Id.*, 14 Utah 57, 45 Pac. Rep. 1093; but where it was held that under the circumstances of the case, the remedy at law being complete, the plaintiff would be required to resort to such remedy for the recovery of damages for the alleged trespass, and that an injunction would not be granted under the circumstances.

See, also, Hoye v. Sweetman, 19 Nev. 376, 12 Pac. Rep. 504; Thorn v. Sweeney, 12 Nev. 251; Mann v. Parker, 48 Ore. 321, 86 Pac. Rep. 598; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

See, also, cases cited *supra*.

The fact that a party has located a water right in accordance with law does not give him any right to build ditches and canals across the lands of others until he has acquired the easement and right of way therefor either by purchase or condemnation. Swank v. Sweetwater etc. Co., 15 Idaho 583, 98 Pac. Rep. 297.

Boglino v. Giorgetta, 20 Colo. App. 338, 78 Pac. Rep. 612.

[4] For easements by prescription, see Sec. 1044.

[5] Vanderwork v. Hewes, 15 N. M. 439, 110 Pac. Rep. 567, in which it was said: "It would be doing violence to the Act of 1907 to hold that the territorial engineer was empowered by it to authorize another applicant to go upon lands held in private ownership, construct ditches and appropriate seepage water or waters from snows, rain, or springs, not traceable to or forming a stream or water course, or from constructed works, as the limitations contained in Secs. 1 and 53, defining the waters over which the engineer has been given jurisdiction plainly indicate."

See, also, Baldridge v. Leon Lake etc. Co., 20 Colo. App. 518, 80 Pac. Rep. 477; Marshall v. Niagara Orch. Co., — Idaho —, 125 Pac. Rep. 208, decided June 8, 1912.

[7] Now Rev. Stat., Sec. 3202.

this ground, although in other circumstances the objection might be grave."[8]

Under this rule the inchoate rights of settlers to their lands either entered according to some law of Congress or settled upon and held in their lawful possession, are protected from trespass by others for the purpose of constructing ditches and canals over the lands.[9] Also under the same rule the right of miners to protect the lands covered by their valid locations is enforced.[10] Also when the lands have become the private property of a railway company, under a Congressional grant, or otherwise, it is entitled to the same protection from the encroachment of parties constructing ditches and canals over them without the consent of the railroad company.[11]

[8] See, also, Blankenship v. Whaley, 124 Cal. 300, 57 Pac. Rep. 79; Stewart v. Stevens, 10 Colo. 445, 15 Pac. Rep. 786; Tripp v. Overacker, 7 Colo. 72, 1 Pac. Rep. 695; Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766; affirmed in 26 Colo. 74, 56 Pac. Rep. 577; Blake v. Boye, 38 Colo. 55, 88 Pac. Rep. 470, 8 L. R. A., N. S., 418; Baldridge v. Leon Lake etc. Co., 20 Colo. 518, 80 Pac. Rep. 477; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 405, 102 Pac. Rep. 168; Vestal v. Young, 147 Cal. 715, 82 Pac. Rep. 381; Ball v. Kehl, 95 Cal. 606, 30 Pac. Rep. 780; McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384; Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Prentice v. McKay, 38 Mont. 144, 98 Pac. Rep. 1081; Vanderwork v. Hewes, 15 N. M. 439, 110 Pac. Rep. 567; Castle Rock Irr. Co., v. Jurisch, 67 Neb. 377, 93 N. W. Rep. 690; Toyaho etc. Co. v. Hutchins, 21 Tex. App. 274, 52 S. W. Rep. 101; Willow Creek Irr. Co. v. Michaelson, 21 Utah 248, 60 Pac. Rep. 943, 51 L. R. A. 280, 81 Am. St. Rep. 687; Wiedensteiner v. Malley, 55 Wash. 79, 104 Pac. Rep. 143; Atkinson v. Washington Irr. Co., 44 Wash. 75, 86 Pac. Rep. 1123, 120 Am. St. Rep. 978; Rasmussen v. Blust, 83 Neb. 678, 120 N. W. Rep. 184; *Id.*, 85 Neb. 198, 122 N. W. Rep. 862, 133 Am. St. Rep. 650.

See, also, the cases cited throughout this chapter upon the various phases of this question.

[9] For the inception of rights of settlers, see Secs. 445, 755, 807.

[10] Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Noteware v. Stevens, 1 Mont. 311, 4 Morr. Min. Rep. 650; Oliver v. Agasse, 132 Cal. 297, 64 Pac. Rep. 401; Miocene etc. Co. v. Jacobson, 2 Alaska 573.

[11] Bybee v. Oregon etc. Co., 139 U. S. 663, 35 L. Ed. 305, 11 Sup. Ct. Rep. 641; affirming 26 Fed. Rep. 586.

But a purchaser of land from a railroad company, with notice that another had constructed an irrigation ditch thereon, supposing it to be on the public domain, and was claiming a right of way therefor over the land, it having been constructed before the land was surveyed and then found to belong to the railroad company, acquired no title to such ditch, and he takes the land subject to the right of way for the same. Childs v. Sharai, 8 Idaho 378, 69 Pac. Rep. 111.

A ditch and water right are, however, separate and distinct properties, and, therefore, the granting of a right of way for a ditch does not necessarily convey therewith a water right.[12] And, again, the ownership of a water right does not necessarily imply that the ownership of the ditch through which the water flows is vested in the same person. The ownership of the ditch and the ownership of the water right, to flow through such ditch, may exist in different parties.[13] Outside of the right of exercising the power of eminent domain there are two methods by which rights of way may be acquired over private lands, and these are: First, by grant or contract; and, second, by prescription, which, of course, presupposes a grant. In the following sections we will discuss these subjects in the order named.[14]

**§ 976. Contracts not limited.**—As in the case of contracts for the use of water,[1] it may be said that there is almost no limitation within the range of the law upon contracts which may not be taken advantage of in relation to rights of way for ditches and canals or other works over the lands of others. The general law of contracts also applies to this subject. Valid contracts may be made by a land owner and another granting rights of way by the first to

So, too, a patentee under the homestead laws of the United States of land included in a railroad grant, but which had been forfeited and had reverted to the Government, takes the land subject to a pre-existing right of way for a ditch or canal, although the ditch had been constructed before the title had reinvested in the Government. San Jose Land etc. Co. v. San Jose Ranch Co., 189 U. S. 177, 47 L. Ed. 765, 23 Sup. Ct. Rep. 487; affirming 129 Cal. 673, 62 Pac. Rep. 269.

That the servitude can not be increased to the injury of the patentee, see changes which may be made, Chap. 48, Secs. 856-873.

See, also, Oliver v. Agasse, 132 Cal. 297, 64 Pac. Rep. 401; Jatunn v. O'Brien, 89 Cal. 57, 26 Pac. Rep. 635.

12 Anaheim W. Co. v. Semi-Tropic W. Co., 64 Cal. 185, 30 Pac. Rep. 623.

See, also, for the sale of ditches and canals, Secs. 1003, 1004, 1017.

That they are separate and distinct rights, see Secs. 764-767.

13 Swank v. Sweetwater Irr. & Pr. Co., 15 Idaho 583, 98 Pac. Rep. 297; Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; Stocker v. Kirtley, 6 Idaho 795, 59 Pac. Rep. 891; Parke v. Boulware, 7 Idaho 490, 63 Pac. Rep. 1045; Browning v. Lewis, 39 Ore. 11, 64 Pac. Rep. 304.

See, also, Secs. 764-767.

14 For rights of way by contract, see Secs. 976-985.

For rights of way by prescription, see Secs. 1044-1046.

1 For contracts for the use of water, see Secs. 917-926.

the latter. Upon the other hand, the land owner may sell his land and reserve in the deed of conveyance a right of way over the same for a ditch or canal, or a right to run water appropriated by him through a ditch or canal already constructed upon the land. But in such a reservation the purpose should be specified for which the right of way is so reserved. It is held that a reservation of a "mere right of way" does not include the right to dig ditches or canals for the conducting of water over the land, since such appropriation contemplates only a right of ingress and egress to and from the land conveyed.[2]

A sale of a ditch may carry with it a water right as an appurtenance to the same, unless the water right should be specifically reserved.[3] Again, a ditch and a water right may be sold separate and apart from each other.[4] A ditch or canal may be mortgaged and the mortgage foreclosed;[5] it may be levied upon by and sold under an execution;[6] it is also subject to mechanics' liens, which may be foreclosed in accordance with the law and property sold thereunder.[7]

**§ 977. When the granting of right of way by an entryman before patent is not in violation of the Federal statutes.**—Section 2290 of the Revised Statutes of the United States, as amended by the Act of March 3, 1891,[1] provides that any entryman of land for homestead, pre-emption, etc., must make and file before the proper land office an affidavit that he or she "has not directly or indirectly made, and will not make, any agreement or contract in

[1] 6 Fed. Stat. Ann. 1905, p. 290; 2 U. S. Comp. Stat. 1901, p. 1389; 26 Stat. L. 1098.

any way or manner, with any person or persons, corporation, or syndicate whatsoever, by which the title which he or she might acquire from the Government of the United States should inure, in whole or in part, to the benefit of any person, except himself or herself," etc.

The following section, 2291, as amended by the Act of March 3, 1877, also provides that the entryman, upon application for patent, must make an "affidavit that no part of such land has been alienated, except as provided in Section 2288."

Section 2288 of the Revised Statutes, as amended by Act of March 3, 1891,[2] provides as follows: "Any *bona fide* settler under the pre-emption, homestead, or other settlement law shall have the right to transfer, by warranty against his own acts, any portion of his claim for church, cemetery, or school purposes, or for the right of way of railroads, canals, reservoirs, or ditches for irrigation or drainage across it; and the transfer for such public purposes shall in no way vitiate the right to complete and perfect the title to his claim."

By the last section above it is specifically provided that transfers may be made by a settler before patent for rights of way for canals, reservoirs, ditches for irrigation, or drainage across it, and such a transfer is an exception of the rule laid down in the previous section above cited.

It was held in a recent Washington case[3] that the granting of an easement by a homesteader before patent was not an alienation of the land contrary to the statutes of the United States. And the Court said: "In any event, the permission to cross respondent's lands without cost, other than the use of water, was in no sense an alienation of land, and hence not within the purview of Section 2288, Revised Statutes,[4] which furnishes the basis for the rule announced in the Railsback case, since the ownership of the ditch includes no ownership of the soil, nor of any fee in the land, but consists only of a right of way over the land."[5] In the Railsback case referred to in the above opinion, and decided by the same

3 Methow Cattle Co. v. Williams, 64 Wash. 457, 117 Pac. Rep. 239.

4 U. S. Comp. Stat. 1901, p. 1385.

5 See, also, Mt. Carmel Fruit Co. v. Webster, 140 Cal. 183, 73 Pac. Rep. 826; Hailey v. Riley, 14 Idaho 481, 95 Pac. Rep. 686, 17 L. R. A., N. S., 86; Lobdell v. Hall, 3 Nev. 507, where the court held that, although an Indian

Court in an earlier decision,[6] construing United States Revised Statutes, Sections 2290, 2291, providing that no homesteader, before final proof, shall alienate any interest in the land homesteaded in connection with Section 2288 of the Revised Statutes, as amended by the Act of March 3, 1891, which provides that a homesteader shall have the right to transfer any portion of his claim for a right of way for canals, reservoirs, or ditches for irrigation or drainage across it, it was held that a transfer by a homesteader before final proof of a right of way across his claim for a water flume to convey the waters of a river from the point of diversion to the place of intended use for power purposes for the generation of electricity was not within Section 2288, for the reason that "the words 'canals, reservoirs, or ditches' are qualified by the words 'for irrigation or drainage across it,' and it was not claimed or pretended that the ditch in question was for either of these purposes." It was, therefore, held that such an agreement was void and not subject to specific performance.

**§ 978. Rights of way acquired by contract—Deeds—Statute of frauds.**—Rights of way over private lands for the construction and use of ditches, canals, or other works, may be acquired by contract between the one seeking the right and the owner of the land, based, of course, upon the consent of the latter. The right of way being an easement over the land, the general law of contracts applies for securing rights of way for these purposes as applied to the acquisition of rights of way for other purposes.[1] To become a permanent easement the right of way must be acquired by a deed [2]

could not sell land, there was no objection to the sale of a water right owned by an Indian.

6 Cascade Public Service Corporation v. Railsback, 59 Wash. 376, 109 Pac. Rep. 1062.

1 That the right of way is an easement, see Secs. 834.

2 An instrument in the form of a deed, reciting that the grantors grant, bargain, sell, convey, and confirm unto the party of the second part, and to his heirs and assigns, a right of way for a pipe line over, upon, and across certain described lands, to have and to hold unto the party of the second part, his heirs and assigns forever, constitutes a grant of such right of way, and is not a mere license, terminable at will. Everett W. Co. v. Powers, 37 Wash. 143, 79 Pac. Rep. 617.

See, also, McCue v. Bellingham Bay W. Co., 5 Wash. 156, 31 Pac. Rep. 461; Spear v. Cook, 8 Ore. 380.

A deed conveying a right of way for a water ditch across certain described lands to carry water for irrigation from a canal through the tract, with

or as the result of an executed contract founded upon a good and sufficient consideration, to entitle the party seeking the right to a specific performance of the contract by the Court, or by operation of law by virtue of prescription.[3] As was held by a recent Oregon case, while ordinarily an easement in land can be created only by a writing under seal, it may be created by adverse user, by estoppel, or by part performance of a parol agreement.[4] A perpetual easement in land for ditches or canals can not be created by parol, with the above exceptions, any more than it can be so created for other purposes by the same method, for the reason that it would be contrary to the statute of frauds, which invalidates the conveyance of any interest in lands, other than agreements for leasing for a short period, without an instrument in writing.[5] This can now be con-

the right of ingress to and egress from the same to maintain and keep the ditch in repair, conveyed an easement only, and not the fee, in the land covered by the ditch. Hayward v. Mason, 54 Wash. 649, 104 Pac. Rep. 139; *Id.*, 104 Pac. Rep. 141.

But see Sweetland v. Grants Pass etc. Co., 46 Ore. 85, 79 Pac. Rep. 337; Senior v. Anderson, 138 Cal. 716, 72 Pac. Rep. 349.

Where by condemnation a right of way was granted, it was held that it was merely an easement and not an absolute title. Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148.

3 "An easement is an interest in land that can not be created, granted, or transferred except by operation of law, by an instrument in writing, or by prescription." Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

For easements by prescription, see Secs. 1044, 1045.

For easements by eminent domain, see Secs. 1059-1086.

See, also, Alta Land & W. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217; Prentice v. McKay, 38 Mont. 114, 98 Pac. Rep. 1081.

4 Shaw v. Proffitt, 57 Ore. 192, 109 Pac. Rep. 584; rehearing denied, 110 Pac. Rep. 1092.

See, also, Oliver v. Burnett, 10 Cal. App. 403, 102 Pac. Rep. 223.

5 The principle, which can not be disregarded, is that, where there is a parol license—for example, to lay a water main across the licensor's lots—a perpetual right can not be maintained, inasmuch as it can not be granted by parol without doing violence to the statute of frauds. Great Falls etc. Co. v. Great Northern R. Co., 21 Mont. 487, 54 Pac. Rep. 963.

See, also, Wood v. Leadbetter, 13 Mees & W. 838, 16 Eng. Ruling Cas. 49, 14 L. J. Exch., N. S., 161; Fabian v. Collins, 3 Mont. 215; New Iberia Rice Mill Co. v. Romero, 105 La. 439, 29 So. Rep. 876, where by a contract a company engaged in furnishing water to rice farmers for irrigation, whereby the right was acquired to conduct the water by means of a canal or ditch through one farm to another, it was held not to impose a real servitude on the land through which the water was conducted.

sidered the settled rule in all jurisdictions that the acquirement of a permanent right of way for ditches and canals over the lands of others by grant of contract comes within the statute of frauds, the same being an interest in real estate, and therefore should be in writing.[6] Such a conveyance, in writing, is binding upon the transferee of either party to the contract.[7] It is good between the parties to the grant and purchasers with notice even if the instrument was not acknowledged or recorded. As was said in a Washington case:[8] "The grant in this case was evidenced by writing, and this Court has held, in common with most courts, that an unacknowledged deed is good as between the parties thereto, and against subsequent purchasers with notice thereof.[9] The written instrument attached to the complaint as an exhibit in this action was, therefore, a valid grant as between the parties, and is equally valid against the respondents, if they purchased with notice of the prior grant to the appellants, as alleged in the complaint."

See, also, Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553.

The law is jealous of a claim to an easement, and the party asserting such a claim must prove his right to it clearly. Minneapolis W. R. Co. v. Minneapolis etc. Co., 58 Minn. 129, 59 N. W. Rep. 983.

See, also, Hodgkins v. Farrington, 150 Mass. 19, 22 N. E. Rep. 73; Lawrence v. Springer, 49 N. J. Eq. 289, 24 Atl. Rep. 933, 31 Am. St. Rep. 702; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508.

A conversation, by which defendant claimed gave him permission to go on and construct a ditch across plaintiff's land, if conceded to have occurred, is not a legal grant of a right of way, and is not binding upon plaintiff as an estoppel. Stewart v. Stevens, 10 Colo. 440, 15 Pac. Rep. 786.

All conveyances of any interest in, and all contracts creating any incumbrance on real estate, shall be by deed. Hathaway v. Yakima Water etc. Co., 14 Wash. 469, 44 Pac. Rep. 896, 53 Am. St. Rep. 874.

6 See cases *supra*.

However, in an early Colorado case, it was held that a right to convey water over the land of another for the purpose of irrigating one's land may be acquired under the then existing statute, and that such a grant did not need a grant from the owner of the servient estate to support it. Yunker v. Nichols, 1 Colo. 551, 8 Morr. Min. Rep. 64. But this case was practically overruled in a later case. See Stewart v. Stevens, 10 Colo. 440, 15 Pac. Rep. 786.

For power of the legislature to enact statutes granting rights of way, see Sec. 1063.

7 O'Keiffe v. Cunningham, 9 Cal. 581; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508.

8 Little v. Gibb, 57 Wash. 92, 106 Pac. Rep. 491.

9 Citing Matson v. Johnson, 48 Wash. 256, 93 Pac. Rep. 324, 125 Am. St. Rep. 924, and cases cited.

**§ 979. The terms of contracts relative to ditches and canals construed.**—A deed is valid and grants a right of way, even where the exact boundaries are not described where the ditch or canal is to run; it is sufficient if it describes the tracts of land over which it is to run. As was said in a recent California case:[1] "It is settled law that where an unlocated right of way is granted or reserved, the owner of the servient estate may in the first instance designate a reasonable way, and if he fails to do so, the owner of the dominant estate may designate it."[2] Where the party to whom the right is granted goes upon the land described, selects a strip, and constructs his works over the same, the grant then becomes fixed and certain.[3] Where a location and duration of a right of way are not defined, they may be fixed by use and acquiescence of the parties.[4] But an indefinite easement can not be enlarged or changed, as its limits have been defined by practical construction in the absence of provisions in the grant providing for such change.[5]

1 Ballard v. Titus, 157 Cal. 673, 110 Pac. Rep. 118.

2 Citing Jones on Easements, Sec. 337; Kripp v. Curtis, 71 Cal. 62, 65, 11 Pac. Rep. 879; Blum v. Weston, 102 Cal. 362, 369, 36 Pac. Rep. 778, 41 Am. St. Rep. 188.

3 Everett W. Co. v. Powers, 37 Wash. 143, 79 Pac. Rep. 617; McCue v. Bellingham Bay W. Co., 5 Wash. 156, 31 Pac. Rep. 461, where the Court held that when the company went upon the land described in the deed, and cleared and prepared its right of way, its grant became fixed and certain. Kern Island etc. Co. v. City of Bakersfield, 151 Cal. 403, 90 Pac. Rep. 1052.

4 Washburn on Easements, Sec. 239; Knight v. Cohen, 7 Cal. App. 43, 93 Pac. Rep. 396.

5 Winslow v. City of Vallejo, 148 Cal. 723, 84 Pac. Rep. 191, 5 L. R. A., N. S., 851, 113 Am. St. Rep. 349, 7 Am. & Eng. Ann. Cas. 851, in which it was said: "But we see nothing in the language of this grant, or in the conditions existing when it was executed, to indicate that it was intended to give the defendant the right to increase from time to time the number of pipes laid. The appellant's plea for such construction is based largely on the fact that the conveyance throughout uses the words 'pipes' and 'mains' in the plural number, and that, therefore, the parties could not have intended to limit the city to a single pipe. But while the city might, at the outset, have laid more than one pipe, the most that can be said regarding this language is that the grant is indefinite as to the number of pipes. The city, having elected to lay one, is bound by this election."

See, also, Graham v. Redlands Heights Water Co., 3 Cal. App. 732, 86 Pac. Rep. 989; Tarpey v. Lynch, 155 Cal. 407, 101 Pac. Rep. 10; Colegrove W. Co. v. City of Hollywood, 151 Cal. 425, 90 Pac. Rep. 1053, 13

Such a grant is held to include everything necessary for the full enjoyment of the easement. As was said in a recent Oregon case:[6] "The uses and purposes for which the way is granted included doing any work which may be necessary for maintaining, repairing, and operating the pipe line, which will include the maintenance of a telephone line, if the same is necessary or convenient for the proper or prompt repair, maintenance, or operation of the line, which necessity is very apparent."[7] In general, as was said by the Oregon Court:[8] "Whether a reservation or covenant in a deed shall be construed to create an easement in gross or one appurtenant to the land is a matter to be deduced (1) from the terms of the instrument itself, or (2), if that is ambiguous, then from a consideration of all the circumstances surrounding its execution, always bearing in mind the rule that the court should construe an instrument to convey an easement appurtenant rather than one in gross." And, again, as was said by the same Court:[9] "In determining whether a right granted is appurtenant or in gross, courts must consider the terms of the grant, the nature of the right, and the surrounding circumstances, giving effect, as far as possible, to the legally ascertained intention of the parties, but favoring always the construction of the grant as of an easement appurtenant rather than of a right in gross."

**§ 980. Rights acquired by parol executed contract for a consideration.**—A permanent easement for a right of way over the lands of others for ditches and canals may be acquired as the result of an executed parol contract, or where it is a written contract but not attaining to the dignity of a deed of conveyance, provided that

L. R. A., N. S., 904; Vestal v. Young, 147 Cal. 715, 82 Pac. Rep. 381; Rhoades v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884; Allen v. San Jose etc. Co., 92 Cal. 138, 28 Pac. Rep. 215, 15 L. R. A. 93; McCue v. Bellingham Bay W. Co., 5 Wash. 156, 31 Pac. Rep. 461.

See, also, for changes which may be made, Secs. 856-873.

However, after an easement has become fixed and certain, in an action to prevent the interference therewith, the allegations in the complaint must describe and define the easement with sufficient definiteness. Carter v. Wakeman, 42 Ore. 147, 70 Pac. Rep. 393.

6 City of Portland v. Metzger, 58 Ore. 276, 114 Pac. Rep. 106.

7 See, also, for right of repairs, Secs. 992, 993.

8 Tone v. Tillamook City, 58 Ore. 382, 114 Pac. Rep. 938.

9 Ruhnke v. Aubert, 58 Ore. 6, 113 Pac. Rep. 38.

the facts surrounding the contract are sufficient to entitle the party seeking the right to a specific performance of the contract.[1] Under this rule it is sufficient consideration for the contract that the ditch was constructed for the joint benefit of both the owner of the land and the party seeking the right of way, the former giving the use of the land for the right of way and the latter constructing the ditch.

1 "Since part performance of a parol contract respecting land will take it out of the statute of frauds, equity will enforce the rights thus acquired." Schilling v. Rominger, 4 Colo. 100.

See, also, Bloomstein v. Clees, 3 Tenn. Ch. 433, 6 Cent. Law Journal 50.

"The rule is well settled in this State that if a party has paid a consideration therefor, or has been encouraged by any participation in a common enterprise, or induced by definite oral agreement to expend money in making permanent valuable improvements, the parol license upon the faith of which he has acted in executing it can not be revoked to his prejudice." Ewing v. Rhea, 37 Ore. 538, 62 Pac. Rep. 790, 52 L. R. A. 140, 82 Am. St. Rep. 783.

In determining whether a parol grant granting a right of way for a ditch was intended as an easement or a revocable license, the grantor's intent is held in Montana to be the controlling consideration. McDonnell v. Huffine, —— Mont. ——, 120 Pac. Rep. 792.

"When the owner of lands voluntarily consents to the construction of an irrigation ditch across or over the same, the right of the owner of such ditch to maintain and use the same as built is absolute against all persons." Arthur Irr. Co. v. Strayner, 50 Colo. 371, 115 Pac. Rep. 724.

See, also, Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

A parol sale of land and appurtenant water rights for a consideration, and a surrender of possession thereof to the purchaser, create an equitable estate, which a court of equity is bound to protect. Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39.

See, also, Sprague v. Jessup, 48 Ore. 211, 83 Pac. Rep. 145, 84 Pac. Rep. 802, 4 L. R. A., N. S., 410; Combs v. Slayton, 19 Ore. 99, 26 Pac. Rep. 661; Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546; Baldock v. Atwood, 21 Ore. 73, 26 Pac. Rep. 1058; Schilling v. Rominger, 4 Colo. 100; Hallock v. Suitor, 37 Ore. 9, 60 Pac. Rep. 384; De Graffenried v. Savage, 9 Colo. App. 131, 47 Pac. Rep. 902; Miser v. O'Shea, 37 Ore. 231, 62 Pac. Rep. 491; Chicosa Irr. D. Co. v. El Moro D. Co., 10 Colo. App. 276, 50 Pac. Rep. 731; Wyatt v. Larimer etc. Co., 18 Colo. 298, 33 Pac. Rep. 144, 36 Am. St. Rep. 280; Coffman v. Robbins, 8 Ore. 278, 8 Morr. Min. Rep. 131; Huston v. Bybee, 17 Ore. 140, 20 Pac. Rep. 51, 2 L. R. A. 568; Curtis v. Le Grande W. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484; McBroom v. Thompson, 25 Ore. 559, 37 Pac. Rep. 57, 42 Am. St. Rep. 806; Garrett v. Bishop, 27 Ore. 349, 41 Pac. Rep. 10; Miller & Lux v. Kern County L. Co., 154 Cal. 785, 99 Pac. Rep. 179; Vannest v. Fleming, 79 Iowa 638, 44 N. W. Rep. 906, 8 L. R. A. 277, 18 Am. St. Rep. 387.

And in cases of this kind the right of the latter can only be lost by abandonment.[2] For the Court to refuse specific performance in cases of this nature would be to sanction fraud, and allow a statute passed for the prevention of frauds to become the means of accomplishing fraud.[3] The equity to a deed is perfect; and when such is the case a court of equity, in accordance with the familiar rule considering that as done which ought to be done, will protect it as readily and as fully as a legal title.[4] A contract of this nature will also bind the successors in interest of the respective parties.[5] But,

2 Patterson v. Mills, 138 Cal. 276, 71 Pac. Rep. 177; Feeney v. Chester, 7 Idaho 342, 63 Pac. Rep. 192, where the Court held upon the subject that, the defendant having paid the consideration by giving the right of way for the ditch through his land, and having received and enjoyed, for some seven or eight years, the use of the ditch and water, it would be inequitable to permit the plaintiff to now deprive him thereof while retaining the benefit of the consideration given by defendant therefor.

See, also, Stowell v. Tucker, 7 Idaho 312, 62 Pac. Rep. 1033, where, in a similar case to the above, the Court said: "The predecessor in interest of the appellants received the full benefit that could accrue to it from the contract, even if said contract had been in writing, acknowledged, and recorded, and appellants now seek to evade the obligations of the contract by invoking an equitable remedy (injunction). The appellants ask equity but refuse to do equity." Held that the injunction did not lie.

See, also, Blankenship v. Whaley, 124 Cal. 300, 57 Pac. Rep. 79; Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39; Sprague v. Jessup, 48 Ore. 211, 83 Pac. Rep. 145, 84 Pac. Rep. 802, 4 L. R. A., N. S., 410, and note; Pomeroy, Spec. Perf. of Contracts, 2d Ed., Sec. 115; Waterman, Spec. Performance, Sec. 261; Wagonblast v. Whitney, 12 Ore. 83, 6 Pac. Rep. 339.

The certainty of such a contract must be established by evidence sufficient to satisfy a court of equity of the truth of the allegations of the complaint. Sprague v. Jessup, *supra*, and note, L. R. A.; Odell v. Morin, 5 Ore. 96; Coffman v. Robbins, 8 Ore. 278, 8 Morr. Min. Rep. 131; Plymale v. Comstock, 9 Ore. 318; Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; Le Fevre v. Le Fevre, 4 Serg. & R. 241 (Pa.), 8 Am. Dec. 696.

The evidence of it should be clear and convincing, and show a permission to do the particular act which has been accomplished or some participation in its execution by the owner of the easement. McBroom v. Thompson, 25 Ore. 559, 37 Pac. Rep. 57, 42 Am. St. Rep. 806.

3 Flickinger v. Shaw, 87 Cal. 126, 25 Pac. Rep. 268, 11 L. R. A. 134, 22 Am. St. Rep. 234.

4 Morrison v. Wilson, 13 Cal. 494, 73 Am. Dec. 593; Rerick v. Kern, 14 Serg. & R. 267, 16 Am. Dec. 497; Pope v. Henry, 24 Vt. 560; Swartz v. Swartz, 4 Pa. 353, 45 Am. Dec. 697; Hayes v. Fine, 91 Cal. 391, 27 Pac. Rep. 772.

5 See cases cited *supra*; Feeney v. Chester, 7 Idaho 324, 63 Pac. Rep. 192.

upon the other hand, the fact that a party partly performed such an agreement can not avail, unless the facts in the case are sufficient to entitle him to a specific performance of the contract.[6]

**§ 981. Rights acquired by parol contract—Licenses—In general.**—There is another method by which a person can acquire a right of way over the lands of another, and that is by license. A license is a permission to do a certain act or series of acts upon another's land without acquiring any estate therein.[1] It may be given in writing or verbally, notwithstanding the statute of frauds.[2] A parol license, generally speaking, may be revoked at the will of the licensor, even though a consideration for it has been paid; and it terminates with the death of the licensor.[3] But, as we shall see in a subsequent section, by the act of the parties what was originally a mere license, and therefore revocable, may be merged into

6 Dorris v. Sullivan, 90 Cal. 279, 27 Pac. Rep. 216; Arguello v. Bours, 67 Cal. 447, 8 Pac. Rep. 49; Kentfield v. Hayes, 57 Cal. 409; Miller v. Fulton, 47 Cal. 146.

(Can.) 152; Rerick v. Kern, 14 Serg. & R. 267, 16 Am. Dec. 497; Ricker v. Kelly, 1 Greenl. 117, 10 Am. Dec. 38; Chicago City R. Co. v. People, 73 Ill. 541.

See, also, Morrell v. Mackmen, 24 Mich. 279, where the Court held that a license is a permission to do some act or series of acts on the land of the licensor, without having any permanent interest in it. It is founded on personal confidence, and is therefore not assignable. It may be in writing or by parol; it may be without consideration; it is subject to revocation and is not within the statute of frauds.

Hunter, 108

simply permissive, it may be revoked at any time, though money has been expended thereon by the licensee.[2] Such a licensee is conclusively presumed, as a matter of law, to know that a license is revocable at the pleasure of the licensor; and if he expends money in connection with his entry upon the land of the latter, he does so at his peril.[3] Such a license creates no interest in land. It is founded on personal confidence, and is not assignable, and its continuance depends on the will of the party giving it, and is revocable, unless the license is executed under such circumstances as would authorize the interference of equity to prevent fraud.[4] And it terminates at the death of the party conferring it.[5] A sale of the land by the owner instantly works its revocation, and in no sense is it property descendible to heirs.[6] The revocation of a license to

use a ditch does not terminate the licensee's water rights, provided that he has independent appropriation.[7]

§ 983. **Parol licenses—Irrevocable licenses.**—It has been oftentimes held, and we believe correctly, that what was originally but a mere parol revocable license [1] by the acts of the parties interested, the nature of the grant may be changed to that of a permanent easement, or to an irrevocable license. And in determining the question of the respective rights of the parties the doctrine of estoppel is oftentimes invoked. Although by no means unanimous, the great weight of authority now holds that where a parol license without consideration is granted by the owner of lands to another to construct ditches and canals over the same, and such owner not only assents, but aids and encourages the performance of the work, and the licensee expends money, or its equivalent in labor, in the construction of the same, the owner of the land is thereafter estopped from denying the right of the licensee, and such license then becomes irrevocable, and the nature of the grant for the right of way changes to that of a permanent easement over the land, or, at least, "the license will continue for so long a time as the nature of it calls for." [2] As was said in a California case: "The general rule, no doubt, is that one who rests his claim to an easement on a verbal contract alone, unexecuted and unaccompanied by any other facts, has no rights thereto which he can enforce. But there are many cases where a mere parol license, which has been executed, and where investments have been made upon the faith of it, has been

[7] Ison v. Sturgill, 57 Ore. 109, 109 Pac. Rep. 579, 110 Pac. Rep. 535.

[1] For parol revocable licenses, see Secs. 981, 982.

For revocable license to the use of water, see Secs. 1028.

[2] Where plaintiff granted defendant a parol license to construct an irrigation ditch over the plaintiff's land, and defendant entered under such license and expended over $7,000 in the construction of the ditch, the license became irrevocable, and it was held that the defendant was entitled to a permanent right of way over the plaintiff's land for the purpose of maintaining the ditch, and the rights of the ditch owner will continue for so long a time as the nature of it calls for. Stoner v. Zucker, 148 Cal. 516, 83 Pac. Rep. 808, 113 Am. St. Rep. 301, 7 Am. & Eng. Ann. Cas. 704.

See, also, Miller & Lux v. Kern County L. Co., 154 Cal. 785, 99 Pac. Rep. 179; Rerick v. Kern, 14 Serg. & R. (Pa.) 267, 16 Am. Dec. 497.

held irrevocable."[3] The theory upon which this holding is made is that it would countenance a fraud upon the part of the licensor if he were allowed, after the expenditure of money by the licensee, upon the faith of the continuance of the license, to cut short by revocation the natural term of its continuance and existence, and that under the doctrine of estoppel the licensor will not be allowed to do this. And, therefore, the authorities hold that, in cases of this nature, the licensor will be held to have conveyed an easement commensurate in its extent and duration to the right to be enjoyed, and that, too, where the license was originally given with-

[3] Smith v. Green, 109 Cal. 228, 41 Pac. Rep. 1022, citing Gould on Waters, Secs. 232, 324.

See, also, opinion of Mr. Justice Belford in Yunker v. Nichols, 1 Colo. 555.

To allow one to revoke a license when it is given to influence the conduct of another and cause him to make large investments, would operate as a fraud and warrant the interference of equity to prevent it, under the doctrine of equitable estoppel. Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484.

Where it was shown by the evidence that the defendant knew of the building of the ditch at the place and of the size made by the plaintiff and that he made some suggestions in regard thereto, but interposed no objections, and where the defendant admitted that he broke the flume in two and hitched his horses thereto and pulled it off the premises into the public road, it was held that the evidence did not sustain the allegations of defendant's answer, nor did it justify the defendant in electing to treat the plaintiff as a trespasser and destroying the flume, the Court saying: "A parol license to do an act on licensee's land is not revocable in so far as it has been executed." Jones v. Bondurant, — Colo. App. —, 120 Pac. Rep. 1047.

See, also, Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039; Springer v. Young, 14 Ore. 285; Garrett v. Bishop, 27 Ore. 349, 41 Pac. Rep. 10; Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546; De Graffenried v. Savage, 9 Colo. App. 131, 47 Pac. Rep. 902; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; Maple Orchard etc. Co. v. Marshall, 27 Utah 215, 75 Pac. Rep. 369; Jensen v. Hunter, 108 Cal. 17, 41 Pac. Rep. 14; Lavery v. Arnold, 36 Ore. 84, 57 Pac. Rep. 906, 58 Pac. Rep. 524; McPhee v. Kelsey, 44 Ore. 193, 74 Pac. Rep. 401, 75 Pac. Rep. 713; Sweetland v. Grants Pass etc. Co., 46 Ore. 85, 79 Pac. Rep. 337; Methow Cattle Co. v. Williams, 64 Wash. 457, 117 Pac. Rep. 239.

Rights in real estate may be obtained and irrevocably fixed by matter *in pais*. Rhodes v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884.

See, also, Davis v. Martin, 157 Cal. 657, 108 Pac. Rep. 866; Shaw v. Proffitt, 57 Ore. 192, 109 Pac. Rep. 584; rehearing denied, 110 Pac. Rep. 1092; Arterburn v. Beard, 86 Neb. 733, 126 N. W. Rep. 379; Prentice v. McKay, 28 Mont. 114, 98 Pac. Rep. 1081; Great Falls etc. Co. v. Great Northern Ry. Co., 21 Mont. 437, 54 Pac. Rep. 963.

out a consideration passing from the licensee to the licensor.[4] A parol license to construct and maintain a flume over the lands of the defendant, in order to conduct water to the land of the plaintiff having been acted upon by the Court, and the flume having been constructed at the time when the statutes gave the plaintiff a right to condemn a right of way for the construction of such flume was held irrevocable in a recent case decided by the Wyoming Court.[5]

But the authorities are not all unanimous upon this proposition. Some very eminent authorities hold to the contrary, for example, Judge Cooley.[6] But the same eminent jurist, in a Michigan case, recognized the injustice and hardship which might follow the revocation of such a license, but held that it seems to be a reproach to the law that it should fail to provide some adequate protection against it.[7] And in this connection it may be said that the later authorities have modified the common law rule in this respect and have afforded adequate protection against the act of revocation in such cases by holding that, after the licensee has entered upon the land under a parol license and has made his improvements thereon, such a license is irrevocable. This is especially true in the arid West, where such licenses have been given to construct ditches and canals over the lands of others for the purpose of conducting water for irrigation or other useful purposes.[8] So, therefore, a parol

[4] Stoner v. Zucker, 148 Cal. 516, 83 Pac. Rep. 808, 113 Am. St. Rep. 301, 7 Am. & Eng. Ann. Cas. 704.

[5] Gustin v. Harting, — Wyo. —, 121 Pac. Rep. 522.

Minneapolis etc. Co., 51 Minn. 304, 53 N. W. Rep. 639; Great Falls etc. Co. v. Great Northern R. Co., 21 Mont. 487, 54 Pac. Rep. 963; Pifer v. Brown, 43 W. Va. 412, 27 S. E. Rep. 399, 49 L. R. A. 497 and note.

[7] See Maxwell v. Bay City Bridge Co., 41 Mich. 453, 2 N. W. Rep. 639, where he said: "But the injustice of a revocation after the licensee, in reliance upon the license, has made large and expensive improvements, is so serious that it seems a reproach to the law that it should fail to provide some adequate protection against it. Some of the courts have been disposed to enforce the license as a parol contract which has been performed on one side."

For parol executed contracts for a consideration, see Sec. 980.

[8] So, where the land owners knew of an extension of a canal that was being made over their lands, and they were interested in the improvement, both as stockholders of the canal company and as owners of land dependent upon it for water, and made no objection to the extension while it was being made, or ever afterward, but

license to enter the land of the owner to construct a ditch, canal, or other works, for the purpose of conducting water, operates as an irrevocable grant, after entry, and the construction of the works at considerable expense, and after commencing the use of the water; and the rights thus acquired under the grant will be protected in equity.[9] However, a license clearly expressed in terms to show

did, in selling their lands irrigable from the improved canal, transfer to their vendees shares of their stock with their incidental water rights, it was held that their vendees were estopped from objecting to the maintenance of the canal. Crescent C. Co. v. Montgomery, 143 Cal. 248, 76 Pac. Rep. 1032, 65 L. R. A. 940; Foster v. Bear Valley Irr. Co., 65 Fed. Rep. 836.

See, also, Ewing v. Rhea, 37 Ore. 583, 62 Pac. Rep. 790, 52 L. R. A. 140, 82 Am. St. Rep. 783, but where it is held that mere silence is not sufficient; Flannery v. Campbell, 30 Mont. 172, 75 Pac. Rep. 1109.

9 Maple Orchard etc. Co. v. Marshall, 27 Utah 215, 75 Pac. Rep. 369, where it is held that a parol license to enter on the land of the owner to construct a pipe line to carry water for the purpose of irrigation operates as an irrevocable grant, after entry, and the construction of the pipe line at considerable expense, and after commencing the use of the water, and the rights acquired under the grant will be protected in equity.

"A license may become an agreement on valuable consideration, as where the enjoyment of it must necessarily be preceded by the expenditure of money; and when the grantee has made improvements or invested capital in consequence of it, he has become a purchaser for a valuable consideration. Such a grant is a direct encouragement to expend money, and it would be against all conscience to annul it as soon as the benefit expected from the expenditure is beginning to be perceived." Rerick v. Kern, 14 Serg. & R. (Pa.) 16 Am. Dec. 497.

See, also, Huff v. McCauley, 53 Pa. 206, 91 Am. Dec. 203; Garrett v. Bishop, 27 Ore. 349, 41 Pac. Rep. 10; Lee v. McLeod, 12 Nev. 280; Jackson v. Philadelphia etc. R. Co., 4 Del. Ch. 180.

"An executed license is treated like a parol agreement in equity. It will not allow the statute of frauds to be used for a cover for fraud." Curtis v. LeGrande Hydraulic W. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484.

Raritan etc. Co. v. Veghte, 21 N. J. Eq. 463; De Graffenried v. Savage, 9 Colo. App. 131, 47 Pac. Rep. 902, where the court held that the right of way for an irrigation ditch may be acquired by contract between the parties, by condemnation proceedings, or by the gratuitous license of the land owner. In either case, after entry and expenditure of money, the right is irrevocable. "After entry under license, and construction of the ditch, the license operates as an irrevocable grant."

McPhee v. Kelsey, 44 Ore. 193, 74 Pac. Rep. 401, 75 Pac. Rep. 713.

For right of way acquired by license, see Secs. 980-985.

See, also, for sale of ditches and canals, Secs. 1003, 1004.

the intent that it was to be temporary only is revocable even after it has been executed.[10]

**§ 984. The doctrine of estoppel as applied to parol contracts and licenses.**—The doctrine of estoppel is oftentimes invoked to sustain a right claimed by one person to an easement for ditches and canals over the lands of others. But as we shall discuss this subject more fully in another chapter, it need be discussed here only in a general way.

Of course, in order to successfully invoke the doctrine of equitable estoppel in cases of this nature, there must be present all of the essential elements recognized by the law as necessary.[1] There can be no estoppel as to a land owner where it does not appear that he did something or said something to mislead the one claiming the right of way.[2] Mere silence or passive acquiescence upon the part of the land owner is not sufficient.[3] To constitute such an estoppel

10 Lanham v. Wenatchee etc. Co., 48 Wash. 337, 93 Pac. Rep. 522; Wiedensteiner v. Malley, 55 Wash. 79, 104 Pac. Rep. 143; Hathaway v. Yakima Water Co., 14 Wash. 469, 44 Pac. Rep. 869, 53 Am. St. Rep. 874; Prentice v. McKay, 38 Mont. 114, 98 Pac. Rep. 1081; Lewis v. Patton, 42 Mont. 528, 113 Pac. Rep. 745; Davis v. Martin, 157 Cal. 657, 108 Pac. Rep. 866; McIntyre v. Harty, 236 Ill. 629, 86 N. W. Rep. 581.

Rep. 240; Atkinson v. Washington Irr. Co., 44 Wash. 75, 86 Pac. Rep. 1123, 120 Am. St. Rep. 978; Verdugo Canyon W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021; Madison v. Spokane etc. Co., 40 Wash. 414, 82 Pac. Rep. 718, 6 L. R. A., N. S., 257; Southside Imp. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107; Mitchell v. Amador C. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246.

"We do not think that upon principle a mere naked license, which is predicated upon an invasion of another's right, and is, in effect, a trespass upon his property, so encourages a party to act upon the faith of the implied permission as to render it irrevocable, even when money has been expended in improving the property under the belief that the uninvited use relied upon will never be inter-

the person sought to be estopped must do some act or make some admission with the intention of influencing the conduct of another, or that he had reason to believe would influence his conduct, and which act or admission is inconsistent with the claim he afterward makes. The other party, too, must have acted upon the strength of such admission or conduct.[4] As was well said in a recent Colorado case:[5] "He that remains silent when conscience requires him to speak shall not be heard to speak when conscience requires him to remain silent. The defendant was silent when the circumstances should have impelled it to speak, if its rights were invaded. The policy of the law will not now permit it to appropriate unto itself an alleged additional right of way, which it might have possessed by exercising a proper diligence, when plaintiffs, acting in good faith, and believing that they, and not it, were the owners of, and entitled to its use, have expended large sums of money in placing permanent improvements thereon."

§ 985. **Rights acquired by parol contract—A prescriptive right can not be based on permission.**—That a prescriptive right can not be based upon a permission is one of the elementary principles of the law of real property. Neither can a prescriptive right be acquired under a parol license as long as the permission under that license continues. But in spite of this principle, it has often occurred that where permission under a parol license had been given by the owner of a certain tract of land, for the use of a strip of the land for a ditch or canal, that afterward the party so obtaining the permission, or his assignee, has claimed the right of way as a matter of right, either by prescription[1] or by an executed contract for a consideration.[2] Consequently the courts have often

rupted." Ewing v. Rhea, 37 Ore. 583, 62 Pac. Rep. 790, 52 L. R. A. 140, 82 Am. St. Rep. 783, and overruling Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484, in so far as that decision is in conflict with the principle here announced.

4 Madison v. Spokane Val. etc. Co., 40 Wash. 414, 82 Pac. Rep. 718, 6 L. R. A., N. S., 257; Rigney v. Tacoma etc. Co., 9 Wash. 576, 38 Pac. Rep. 147, 26 L. R. A. 425; New York Rubber Co. v. Rothery, 107 N. Y. 310, 14 N. E. Rep. 269, 1 Am. St. Rep. 822.

5 Arthur Irr. Co. v. Strayer, 50 Colo. 371, 115 Pac. Rep. 724.

1 For right of way by prescription, see Secs. 1044, 1045.

2 For rights of way by a parol executed contract, see Sec. 980.

been called upon to decide the rights of the parties in interest. Such a permission or license being revocable at the will of the licensor,[3] the correct rule in cases of this nature is that the permissive use of a ditch or canal by one party over the lands of another, no matter how long continued, can not give title by prescription to the party so using the land.[4] Under this state of circumstances, before there can be any adverse holding, it is necessary for the party claiming the easement for a right of way to have repudiated the license, or permission, and to have brought the knowledge of such repudiation home to the owner of the land giving such permission; and thereafter he must have continued to have held the right adversely for a time sufficient under the statute for the acquisition to an interest in the land by prescription.[5] The right can not be regarded as adverse, while the licensee acknowledges the right of the land owner and pays a compensation for the use of the land.[6]

[3] That a permissive right is a revocable license, see Sec. 982.

[4] The permissive use of the ditch across respondent's land, no matter how long continued, could not give title by prescription to the appellant. Weidensteiner v. Malley, 55 Wash. 79, 104 Pac. Rep. 143.

Under this rule, an adverse possession can not grow out of a permissive enjoyment; and so speak the decisions without a dissenting voice, including this court. Curtis v. La Grande W. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484.

§ 986. **Rights of way acquired by prescription.**—Rights of way may also be acquired over the private lands of another by adverse possession of the land for this purpose amounting to prescription. In general, in order to acquire a permanent right of way by this means for a ditch, canal, reservoir, or other works, over the lands of another, the party claiming the right must have had the peaceable, open, notorious, exclusive, uninterrupted, and adverse possession of the land in question for this purpose and use under a claim of right, and for the statutory period provided in the respective States for acquiring other interests in land by adverse possession amounting to prescription. But as this subject requires an extended discussion, and also rights to the use of water may be acquired by the same means, we will discuss the whole subject of the rights which may be acquired by prescription in a separate chapter.[1]

§ 987. **Rights of way may be acquired under the power of eminent domain.**—Rights of way or easements for ditches, canals, or other works may also be acquired by condemnation proceedings under the power of eminent domain. Again, the ditches, canals, or other works already constructed, together with the rights of way for the same, may be acquired by the same means. And, again, rights of way through ditches and canals for use in common with the original owners may also be acquired. As we shall see, the right to the use of water, under certain conditions, may also be acquired. As this subject requires an extensive treatment, we will treat all rights which may be acquired under the power of eminent domain in a separate chapter.[1]

§ 988. **Public canals—Right to the use of.**—Having discussed at considerable length the acquisition of rights of way over private lands by contract,[1] we will now turn our attention briefly to the subject of the right to use public canals, or those canals which are strictly public, as distinguished from those which are owned by quasi-public or public service corporations. The rights and duties of these companies we will discuss in a subsequent chapter of this

1 See Chap. 54, Secs. 1033-1058.
1 See Chap. 55, Secs. 1059-1098.
1 See Secs. 976-985.

work.[2] The necessity for irrigation in the Western part of this country, and for that purpose the conducting of waters from the natural streams to the place of use is so great that the construction of ditches or canals by a State or by some subdivision of the State authorized by the legislature is a matter of such a public nature by way of internal improvement that the taxing power of the State may be exercised for their accomplishment. When a ditch or a system of irrigation is so constructed it becomes the property of the public, and each person of the public, within the range of the operation of the ditch or irrigation system, and entitled to water, may demand the use of the ditch or system in conducting that water, as far as it can be done, toward his place of use. Such canals are recognized and treated as public property, in much the same way that a public road under our laws is regarded. Hence every land owner under such a canal, whether he uses the water or not, is required to contribute his quota in money or labor in the maintenance and preservation of the canal. The first legislation in this country upon the subject of public ditches is to be found in Arizona and New Mexico, and follow closely the old Spanish and Mexican laws upon the subject.[3] The community ditch, or "public acequia," as termed in the statutes, was at an early day the usual and ordinary means for the diversion of water. Each village or group of farmers constructed its own common ditch. The management and control of the ditch was regulated by law, and not by the agreements or contracts of the users of the water under it.[4]

Some of the States have provided by legislation for the construction of such ditches and canals as works of internal improvement, and authorized public aid to be extended in the construction of such works. This is the case in Nebraska, where the law provides that "canals and other works constructed for irrigation or water power

For laws of Arizona, see Chap. 85.

For laws of New Mexico, see Chap. 94.

4 Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332.

In Candelaria v. Vallejos, 13 N. M. 140, 81 Pac. Rep. 589, it was held that the right to have the original community ditch run through or near the lands of the plaintiff, upon its ancient course, was a property right in plaintiff, and that the majority interested in the ditch could not change the ditch from its ancient course against the consent of the owners to be injuriously affected by such change.

purposes, or both, are hereby declared to be works of internal improvement, and all laws applicable to works of internal improvement are hereby declared to be applicable to such canal and irrigation works."[5] The constitutionality of these laws has been generally upheld.[6] But the general proposition must be conceded that a canal is not a work of public character if the chief purpose of its construction is to create a water power or other water right wholly for private gain, and in which the public is only incidentally or indirectly interested.[7] Hence it necessarily follows that the general public, taxed for the construction and maintenance of the works, having use for the water, must, under the proper restrictions, be allowed the right to use the works for the purpose of conducting the water to the place of use.

**§ 989. Private canals—Right to use may be acquired by contract.**—The right to the use of a private ditch or canal for the purpose of conducting water to the place of use may be acquired by contract. And a contract executed on a sufficient consideration can not be revoked at will of the party granting the right.[1] Again, one over whose land the ditch is constructed may, in consideration of the right of way, contract for a right to the use of the ditch for the conveying of water to his land, or he may be given the right to use a certain amount of water flowing in the ditch, and such an agreement, when executed, is not void because it is not in writing,

5 Comp. Stat. Neb. 1899, Sec. 5491.

6 That part of the statute authorizing counties and cities to extend aid in the construction of canals both for irrigation and power purposes was held, by the Federal Court, not to be invalid on the ground that such a use was not consistent with a work of public utility, and not a proper object with the exercise of the taxing power, but should be construed only to authorize such aid to the construction of such works devoted to public uses, and other incidental objects not prejudicial to the public interest. City of Kearney v. Woodruff, 115 Fed. Rep. 9, 53 C. C. A. 117.

See, also, Cummings v. Hyatt, 54 Neb. 35, 74 N. W. Rep. 411; Perkins County v. Graff, 114 Fed. Rep. 441, 52 C. C. A. 243.

For right to condemn a way through existing canals, see Sec. 1085.

but will be specifically enforced.[2] And there are no limitations as to the rights of the respective parties to deal with this matter by contract. And there is no inconsistency in the right of the land owner in granting an easement over his lands for a ditch or canal, and either reserving or contracting for an easement through the ditch or canal to conduct his own water to the place of use, so long as such use is subordinate to the principal easement and does not restrict or limit its use.[3] Again, it is well settled as a general proposition that even without a specific contract the owner of the servient estate may use his property in any manner and for any purpose consistent with the enjoyment of the easement. Thus in the case of a right of way, "he may himself use it as a way . . . unless the rights of the owner of the easement are exclusive."[4] As was said in a California case:[5] "The owner of property subject to an easement may use his property in any manner and for any purpose not inconsistent with the full and free enjoyment of the easement."[6] Again, the owner of an irrigation ditch can not rescind an agreement made by him to a third person, to the effect that he would have a right to water from the ditch, if he would do certain work thereon, after he had accepted the proposition and had performed part of the work and was ready and willing to perform the rest.[7] Again, the right to the use of a ditch may be reserved by the grantor in the sale of the same to another.[8] The right to the use of a ditch or canal may also be acquired by the agreement of several parties and by its construction at their joint expense, the specific rights of the users being agreed upon between

them.[9] The contract may and often does provide that the expenses for the maintenance of the ditch are to be shared jointly between the parties using the same.[10] These cases come under the general law of contracts. And the rights of the respective parties to such an agreement, where for a good consideration one of the parties is to have the right to the use of the ditch or canal of the other for the purpose of conveying water of his own, are to be governed entirely by the terms of the contract.[11]

The right to the use of a ditch of another may also be acquired by prescription.[12] And, again, the use of a ditch on a right of way for the same acquired by prescription over the land of another may be made by the land owner, the prescriptive right of the owner of the right of way being limited to his use, measured by the quantity of water carried through the ditch by him, and should the ditch have a further capacity, it may be used by such owner.[13] The right to the use of a private ditch may also be acquired by the acts of the owner, amounting to an estoppel. So, an owner of an irrigation ditch upon the public land of the United States, who, without objection, saw others enlarge and repair his ditch, increase its capacity, take up lands in its vicinity which could only be irrigated through his ditch, and make improvements thereon on the faith of obtaining water through his ditch to the extent of its increased

"One may acquire a prescriptive right to use an irrigation ditch to convey a limited quantity of water to his land, while another retained the right to use the ditch for his own purposes to the extent of the remaining capacity." Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553.

capacity, is estopped to deny the right of such parties to so use such ditch.[14]

**§ 990. Ditches and canals—Right to enjoy easement—Construction of works.**—Where a permanent easement has once been acquired by the user of water over the lands of another, whether it was acquired by deed,[1] executed contract,[2] prescription,[3] or by the exercise of the power of eminent domain,[4] the owner thereof has the right to enter the premises and construct the ditch and canal, or other works, for which the easement was acquired, and for the purpose of keeping them in repair. This right to enter the lands of the owner for the purpose of construction and repair are incidental to the easement itself, and are called by some of the authorities "secondary easements."[5] In the construction of a ditch or canal the original route as planned need not be exactly followed out, if no further injury is done by the change.[6] But, upon the other hand, where there would be any material further injury to the land by a change from the original plans, either by a different location, width, or depth of the ditch or canal, a new easement or right of way must be acquired to conform to the new plans; or, if the owner of the original right goes ahead and so constructs the works according to the new plans, he will be liable in damages for the additional injuries to the land.[7] His right, in other words, in an easement is measured by the terms of his grant, or where the supposed original grant does not appear, by the prescriptive use.[8] And in the construction of the works, any radical changes from the original plans, either in the location or the size of the works, which add an increased burden upon the land over which

For changes which may be made, see Secs. 856-873.

7 For changes which may be made, see Secs. 856-873.

See, also, McGuire v. Brown, 106 Cal. 660, 670, 39 Pac. Rep. 1060, 30 L. R. A. 384; Welty v. Gibson, 42 Colo. 18, 93 Pac. Rep. 1093; Vestal v. Young, 147 Cal. 715, 82 Pac. Rep. 381; Weidensteiner v. Malley, 55 Wash. 79, 104 Pac. Rep. 143.

8 Joseph v. Ager, 108 Cal. 517, 41 Pac. Rep. 422; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390.

the original right of way was acquired, will compel the acquisition of a new right of way according to law.[9] Where a ditch crosses another ditch, the later comer must so construct a crossing that it will not interfere with the prior ditch.[10] So, it is held that even the owner of the land across which an easement has been acquired for a right of way for a ditch has a right afterward, only in subordination to such easement, to cross it with a pipe line or flume to utilize on one side of the ditch constructed on the easement water developed on the other side.[11]

§ 991. **Easement for the flow of water in natural streams over private lands—Right to enjoy.**—An appropriator of the waters of a natural stream flowing through the public domain acquires an easement over the lands through which the stream flows for the flow of the water to his point of diversion, as it was wont to flow when he first made the appropriation.[1] This right is also acquired as against the subsequent purchasers of the lands from the United States and their grantees. It therefore follows that an appropriator has the implied authority to do all that is necessary to secure the enjoyment of such an easement. He therefore has the right to go upon the lands after they have become private and remove obstructions from the bed of the stream, so as to permit the water to continue its flow in its original channel to the head of his ditch.[2]

9 For changes which may be made, see Secs. 856-873.

Where, after defendant had acquired an easement over plaintiff's land for an irrigation ditch, they commenced the construction of another ditch some distance from the original one, it is immaterial to the plaintiff's right to restrain such acts that the land taken for such additional ditch had no appreciable value. Vestal v. Young, 147 Cal. 715, 721, 82 Pac. Rep. 283, 381.

See, also, Knight v. Cohen, 7 Cal. App. 43, 93 Pac. Rep. 396.

The owners of a right to maintain a dam have no right to rebuild and maintain a new dam in such a way as to place a greater servitude or burden on the property of the owners of the land than had been put upon it by the maintenance of the old dam. Greeley Irr. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985.

10 Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Hotchkiss v. Young, 42 Ore. 446, 71 Pac. Rep. 324.

11 Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148.

1 See for right to the flow of water, Secs. 801-803.

2 Where one by the construction of his ditch, and the appropriation and user of the waters of a stream, acquires such an easement, he acquires, as against the subsequent purchasers

If, from natural causes, the stream becomes obstructed by deposits of gravel, fallen trees, or any other substance, so as to prevent the flow of the water to the head of the appropriator's ditch, the owner of the land of the servient tenement, is under no obligations to remove these obstructions, for the appropriator's enjoyment of his right to the water. Hence it follows that the duty of making such repairs and removing such obstructions essential to the appropriator's enjoyment of the easement devolves entirely upon the appropriator himself. However, in the exercise of this right to remove obstructions from the channel of the stream where it flows through the private lands of others, the appropriator must do so in as reasonable and proper manner as possible, and perform only such acts as are essential to his enjoyment of the water without injury to the land or damage to the owner of the land through which the stream flows. As held in one case, this right is to be held to the narrowest limits compatible with the enjoyment of the easement, which is the right to have the water flow as it was wont to his place of diversion.[3] As was said in a recent Idaho case:[4] "There can be no doubt of the right of appellants to employ such means as may be necessary and essential to keep this channel clear and in repair for the purpose of carrying and conveying the necessary body of water to meet the demands of their appropriation. This right, however, must be exercised with due diligence and with proper respect for the rights of other appropriators, and also of riparian proprietors as indicated in this opinion."[5] And the one attempting to remove an obstruc-

of the United States as complete and perfect a right to maintain his ditch, and have the water flow to, in, and through the same, as though such right or easement had vested in him by grant. Ware v. Walker, 70 Cal. 591, 12 Pac. Rep. 476; Crisman v. Heiderer, 5 Colo. 589.

[3] Crisman v. Heiderer, 5 Colo. 589; Natoma etc. Co. v. Hancock, 101 Cal. 42, 35 Pac. Rep. 112, 35 Pac. Rep. 334, 101 Cal. 42, 31 Pac. Rep. 112.

[4] Hutchinson v. Watson Slough Ditch Co., 16 Idaho, 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125.

[5] See, also, City of Bellevue v. Daly, 14 Idaho, 545, 94 Pac. Rep. 1036, 125 Am. St. Rep. 179, 14 Am. & Eng. Ann. Cas. 1136, 15 L. R. A., N. S., 992.

"The appropriator took the water with the right to have the stream flow as it was wont to flow," at the time he made the appropriation. Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703.

One who owns an easement over the lands of another has a right to enter on the land to keep the easement in repair, but aside from this and analogous purposes, he has no right of entry. Pico v. Colimas, 32 Cal. 578.

tion must be careful not to exceed his rights, for, if he does so, he will be liable as a trespasser. This is the rule of the doctrine of appropriation, and also the common law of riparian rights.[6] However, if the obstructions are placed in the stream by the land owner, it is his duty to remove them,[7] or provide some other way to bring the water to the lands of the appropriator at such a point that he may have the full use thereof.[8]

**§ 992. Ditches and canals—Right to enjoy easement—Right to make repairs.**—Where a permanent easement has once been acquired over the lands of another, and the ditch or canal has once been constructed, the owner of the primary easement has the right, as a secondary easement, to go upon the lands and remove obstructions from the ditch, and to make other repairs necessary, consistent with the full enjoyment of the easement. Such a right or easement carries with it the right to the full enjoyment of the easement itself. "The express or implied grant of an easement is accompanied by certain secondary easements necessary for the enjoyment

6 Miner v. Gilmour, 12 Moore P. C. C. 131, 7 Week. Rep. 328, 14 Eng. Reprint 861; Strong v. Benedict, 5 Conn. 210; Greenslade v. Halliday, 6 Bing. 379, 4 Moore & P. 71, 8 L. J. C. P. 124, where one having a right to place in a stream an obstruction composed of stones and a board to aid in irrigating his land, fastened the board by stakes, thereby giving it a permanent character, whereupon the lower owner undertook to remove the obstruction, it was held that, while he might remove the stakes, he would be liable if he removed the board also.

See, also, for injuries from obstructions, Chap. 83.

8 Though a dam maintained by defendant interrupts the flow of the water to which the plaintiff is entitled, defendant need not remove it, where the water would then injure his land, so long as he adopts other means to bring the water to the plaintiff's lands. Harrington v. Demaris, 46 Ore. 111, 82 Pac. Rep. 14, 1 L. R. A., N. S., 756, on rehearing, modifying *Id.*, *supra*.

See, also, Austin v. Chandler, 4 Ariz. 346, 42 Pac. Rep. 483.

See, also, Secs. 801-803.

of the principal one."[1] As was defined by the Washington Court:[2] "The term 'secondary easement' is applied to the right to enter and repair and do those things necessary to the full enjoyment of an easement as existing."[3] The right to preserve the flow of water in the ditch also extends to the removal of obstructions from the natural stream from which the water is taken. This right we have discussed in a previous section.[4] But these secondary easements must be exercised only when necessary, and in such a reasonable manner as not to needlessly increase the burden upon the servient tenement.[5] Such an easement does not give its owner the right to commit a trespass upon the servient tenement, or to exercise the use of the easement in any manner which happens to suit his pleasure.[6] The location of the ditch can not be changed,

See, also, Sec. 993, and cases cited.

6 In Pico v. Colimas, 32 Cal. 578, where the owner of an easement for a ditch entered upon the land of an-

neither can it be enlarged, if it will cause an additional burden upon the servient estate to its material injury.[7] But, in general, it may be said that the right of way for a ditch or canal for the purpose of conducting water over the land of another also includes the right to keep the ditch in such condition that it will perform the service for which it was constructed.[8] The owner of the easement can not be interfered with by the land owner as to this right to repair or clean out the ditch. If he is so interfered with, an injunction will lie.[9] Neither can the land owner destroy the lateral or subjacent support to the ditch to which the owner thereof is entitled.[10] But the mere right to maintain a ditch does not include the right to in any manner injure the servient estate. Therefore, it is held that the mere right to the easement and the right to maintain the ditch thereon does not include the right to use the soil adjoining it for the purpose of repairing the ditch.[11] Neither can the ditch owner so use his easement as to materially interfere with the ordinary use of the land by the land owner.[12] And should injury result from the ordinary use of the land by the land owner, either to the ditch or otherwise, it is the duty of the ditch owner to enter the land and

other and threw down a gate which the latter had placed in the ditch to divert water for his own use, the Court held that, as ancillary to the reasonable enjoyment of the plaintiff's easement he had a right to enter upon the upper proprietor's land for the purpose of keeping the ditch in repair and free it from obstructions prejudicial to the easement, but that if the enjoyment of the easement was not impaired by the gate there was no right to enter upon the land owner's premises to remove it.

12 See duty of ditch owner to repair ditch, Sec. 993.

take such steps to protect the ditch or other works from such injury as are reasonably necessary.[13]

**§ 993. Ditches and canals—Duty to keep works in repair.**—As is the general rule of easements, not only has the owner of the right of way for a ditch or canal over the lands of others the right to enter upon those lands in order to remove obstructions to the flow of the water and to make repairs, but it is his duty to keep the ditch or canal in repair, both in order for himself to have the full enjoyment of the easement as well as to prevent injuries to the land owner.[1] As was held in a recent Idaho case, as a general principle of law, it is the duty of an individual, or the public, entitled to an easement or right of way over the lands of another to keep up, maintain, and protect such easement or right of way, and the presumption as to such duty and obligation arises as one of law; and where it is sought to maintain an action on the theory that such duty rests upon the owner of the fee, it is necessary for the plaintiff to plead and prove the facts from which such duty or obligation arises.[2] Therefore, as far as injuries to his own rights are concerned from his failure to receive the water to which he is entitled, or from injuries to his ditch caused by the ordinary use of the land by the land owner, it is the ditch owner's duty to repair such damages at his own expense, and also to take such precautions necessary against the repetition of such injuries as may be consistent with his right to the enjoyment of the easement, and also to the right of the

13 Keller v. Fink, 103 Cal. 17, 37 Pac. Rep. 411; City of Bellevue v. Daly, 14 Idaho, 545, 94 Pac. Rep. 1036, 15 L. R. A., N. S., 992.

See, for duty of ditch owner, Sec. 993.

1 For the right to enjoy the easement, see Secs. 990-992.

Dec. 681, 4 Morr. Min. Rep. 612; Quinlan v. Noble, 75 Cal. 250, 17 Pac. Rep. 69; Bean v. Stoneman, 104 Cal. 49, 37 Pac. Rep. 777, 38 Pac. Rep. 39 where it is said: "The grantee or owner of an easement is bound to keep it in repair, and this applies as well to water ditches as to private ways."

The burden of keeping the ditch clear rests upon the owner of the easement. Durfee v. Garvey, 78 Cal. 546, 21 Pac. Rep. 302.

See, also, Goddard on Easements, 285; Gale & W. on Easements, 215; Prescott v. Williams, 5 Metc. 429, 39 Am. Dec. 688; Thomas v. Blainsell, 25 Nev. 223, 58 Pac. Rep. 903.

land owner to the ordinary enjoyment of his land. And in this connection it may be stated that, as a general proposition, every man has a right to the natural and ordinary use and enjoyment of his own property, and if, while lawfully in such use and enjoyment, without negligence or malice on his part, an unavoidable loss occurs to his neighbor, it is "*damnum absque injuria,*" for the rightful use of one's own land may cause damage to the other without legal wrong.[3] This rule has been applied to cases where the cattle of the land owner injured the ditch; and it is held that the burden of keeping the ditch clear, where the sides are caved in by the tramping of cattle, rests upon the owner of the easement, and that he has the right to enter the land and protect the ditch or works from such injuries.[4] But in Oregon it was held that the owner of sheep can be held in damages for injuries to an unfenced ditch running across the public commons by reason of the sheep going onto the same, and in the absence of proof that they were purposely or negligently driven thereon.[5]

Upon the other branch of the subject, the ditch owner is in duty bound to keep the ditch or canal in such repair as will prevent unnecessary injury to the land of the owner or to others interested in the land, or in the distribution of the water from the ditch. And the rule, as stated above, that every man has the right to the natural and ordinary use and enjoyment of his own property, must also be taken in connection with another general rule that every person shall so use and enjoy his property, however absolute and unqualified his title, that his use of it shall not be injurious to the equal enjoyment of others having an equal right to the enjoyment of their property, nor injurious to the rights of the public.[6] This rule is especially true in the case of easements, where two or more

5 Bileu v. Paisley, 18 Ore. 47, 21 Pac. Rep. 934, 4 L. R. A. 840.

But see Swanson v. Groat, 12 Idaho, 148, 85 Pac. Rep. 384.

6 People v. Truckee Lum. Co., 116 Cal. 397, 48 Pac. Rep. 374, 39 L. R. A. 581, 58 Am. St. Rep. 183.

are interested in the same property. But the general rule is the same, that, in order to prevent such injuries, it is the duty of the ditch owner to keep the ditch in repair, unless that duty, for any reason, contractual or otherwise, has shifted to the land owner, in which case the ditch owner must show such fact. Therefore, if through any fault or neglect of the owner of the ditch in not properly managing and keeping it in repair, the water overflows or breaks through the banks of the ditch and injures the lands or property of others, either by washing over the soil, covering the soil with sand, flooding crops, or doing any other injury to others, the law holds him responsible for his negligence.[7] And in this respect it makes no difference whether the ditch owner or the owner of the lands who was injured has the prior right of title. The ditch owner is bound in the construction and maintenance of his dam, ditches, and other works to so construct, maintain, and repair them as discreet and prudent men ordinarily do, or should do, in such cases, where their own interests are to be affected.[8]

The rule that the duty of making repairs is upon the owner of the ditch is even enforced where injuries result to the users of the

7 In Richardson v. Kier, 34 Cal. 63, 37 Cal. 263, 91 Am. Dec. 681, 4 Morr. Min. Rep. 612, it is stated: "He is bound to keep it in good repair, so that the water will not break through or overflow its banks, and destroy or damage the lands of other parties."

See, also, Hoffman v. Tuolumne etc. Co., 10 Cal. 413; Wolf v. St. Louis etc. Co., 10 Cal. 541, 10 Morr. Min. Rep. 636; Turner v. Tuolumne W. Co., 25 Cal. 397, 1 Morr. Min. Rep. 107; Robinson v. Black Diamond Coal Co., 50 Cal. 460; Darst v. Bush, 14 Cal. 81; Campbell v. Bear River etc. Co., 35 Cal. 697; Mathews v. Kinsell, 41 Cal. 512; Jenkins v. Hooper Irr. Co., 13 Utah, 100, 44 Pac. Rep. 829; Rogers v. West Riverside, 350-Inch Water Co., — Cal. App. —, 124 Pac. Rep. 447.

"They can not negligently or carelessly permit the ditch to fill up and obstruct the flow of the water so as to cause it to flow back and injure the plaintiff, nor can they enlarge their ditch or increase the flow of the water therein to the plaintiff's damage, or in any manner so operate or use their ditch as to render it a nuisance, or unnecessarily damage the servient estate." Board etc. v. Hutchinson, 46 Ore. 57, 78 Pac. Rep. 1028.

8 Hoffman v. Tuolumne etc. Co., 10 Cal. 413; Wolf v. St. Louis etc. Co., 10 Cal. 541, 10 Morr. Min. Rep. 636.

The easement must be exercised in a reasonable and proper manner and without damage to the land owner. Ware v. Walker, 70 Cal. 591, 12 Pac. Rep. 475.

See, also, Joseph v. Ager, 108 Cal. 517, 41 Pac. Rep. 422; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390.

water of the ditch from impurities from the cattle of the land owner. Therefore, it was held in a recent Idaho case that the fact that a municipality uses the water, which runs through a ditch constructed over the lands of another, does not of itself entitle the municipality to maintain an action against the owner of the land for a perpetual injunction restraining him from allowing his cattle to feed and graze in the field along the banks of the ditch, and to cross over the same or wade through the waters thereof, but that in such case the primary duty of fencing or protecting the ditch and the waters therein from impurities rested upon the owner of the easement and not upon the owner of the land.[9] However, in Colorado it was held that where the ditch owner negligently allowed the ditch to enlarge so that the stock of one using the land for pasture, holding under a license from the land owner, was lost by miring therein, the ditch owner was not liable to the owner of the stock for such loss.[10]

## CHAPTER 53.

### SALE AND ALIENATION OF WATER RIGHTS AND RIGHTS OF WAY.

§ 994. Scope of chapter.
§ 995. Sale or conveyance of water rights.
§ 996. Formalities necessary for the transfer of a water right—Must be by deed.
§ 997. Parol sale of water rights.
§ 998. Sale of a water right by parol executed contract for a consideration.
§ 999. Parol sale—Grantee takes as an appropriation by diversion.
§ 1000. Parol sale of water right with other improvements of settler upon relinquishment of claim.
§ 1001. Sale of water rights by transfer of stock in corporation—Pledge of stock.
§ 1002. Sale of land, reserving the water rights.
§ 1003. Sale of ditches, or other works, and easements for the same.
§ 1004. Sale of the land subject to the easement for ditches and canals, where the purchaser had notice.
§ 1005. Water rights—Appurtenances—In general.
§ 1006. Appurtenances—Sale of water rights with land when specifically mentioned.
§ 1007. Water rights—Appurtenances—Intent of the parties as affecting sale of—Terms of deed.
§ 1008. Water rights—Appurtenances—Intent of the parties as affecting the sale of—When the deed is silent.
§ 1009. Appurtenances—Sale of water rights when included in the word "appurtenances."
§ 1010. Appurtenances—Sale of water rights when not described or included in word "appurtenances."
§ 1011. Water rights—When in fact appurtenances to land—Where water is used for irrigation.
§ 1012. Water rights—When in fact appurtenances—Water used for mining.
§ 1013. Water rights—When in fact appurtenances—Water used by mills.
§ 1014. Appurtenances—Rule where the land is subdivided.
§ 1015. A water right is not an inseparable appurtenance to land.
§ 1016. A water right should not be an inseparable appurtenance to land.
§ 1017. Appurtenances—Ditches and canals when appurtenant to land.
§ 1018. Appurtenances—Water right appurtenant to ditch, or ditch to water right.
§ 1019. Mortgages—The alienation of water rights, ditches, and other works by means of.
§ 1020. Mortgages—After acquired water rights as affected by.
§ 1021. Mechanics' liens—To what property they attach.
§ 1022. Precedence of mechanics' liens over mortgages.

§ 1023. Vendors' liens—Liens for furnishing water supply.
§ 1024. Executions—Sale of water rights, ditches, and other works by means of.
§ 1025. Leasing water rights with land.
§ 1026. Leasing or renting water rights without land by consumers.
§ 1027. Sale of part of right—Surplus water can not be sold.
§ 1028. Licensing or loaning the use of water without land by consumers—"Doubling up"—Rotation.
§ 1029. Sale and transfer of riparian rights—As between the parties to the grant.
§ 1030. Sale of riparian rights—When grantee may transfer use to non-riparian lands.
§ 1031. Changes which the purchaser may make, where the right is by appropriation.
§ 1032. Sale of water after diversion.

§ 994. **Scope of chapter.**—In preceding chapters we treated the subject of the acquisition of the right to the use of water, or what are commonly called "water rights."[1] We also have treated the subject of the acquisition of rights of way, both over the public lands[2] and over private lands.[3]

In the present chapter we will treat the subject of the sale and alienation of water rights and rights of way after these rights have been once acquired. We will show that these property rights may be sold, conveyed, and transferred by the owners thereof, either together or separate and apart from each other, or with certain lands as appurtenances thereto.[4] We will show that the title to a right of way, together with the ditch or canal already constructed thereon, and the title to a water right may be acquired by adverse user amounting to prescription, as against the rights of the person who originally acquired the right of way, or the rights of the original appropriator of the water, or their grantees.[5]

Water rights and ditches and canals used in connection therewith may, under certain conditions, be acquired by the exercise of the power of eminent domain.[6] These rights may also be mortgaged

1 For the appropriation of water, see Chap. 38, Secs. 706-732.

2 For rights of way over public lands, see Secs. 927-971.

3 For rights of way over private lands, see Secs. 972-993.

4 For appurtenances, see Secs. 1005-1014.

5 For the acquisition of rights of way over private lands by prescription, see Secs. 1033-1058.

6 For the acquisition of a right of way over private lands by eminent domain, see Secs. 1059-1098.

and the mortgage foreclosed and the property sold, and thus title may be acquired in this manner.[7]

A mechanic's lien for labor, in certain instances, will attach to property rights of this nature, and the lien may also be foreclosed and the property sold under the decree of Court.[8] These rights are also subject to judgment liens, and are also subject to the levy and sale for money judgments acquired in the ordinary manner.

In fact, in this chapter we will endeavor to show that property of this nature is not exempt from any sale, conveyance, or alienation to which any other real property is subject, and that, generally speaking, the method pursued in these transactions is the same as that pursued in similar transactions for other real property. The sale of water rights by companies and corporations will be more thoroughly discussed when we come to that subject.[9]

§ 995. **Sale or conveyance of water rights.**—A water right, or the right to the use of a certain amount of water for a beneficial purpose, acquired under the Arid Region Doctrine of appropriation,[1] being a property right of the highest order,[2] is subject to the sale and transfer of the same as is any other species of property. Being an independent property right, based upon the prior appropriation of water, and consummated and perpetuated by the continuous application of the water to any beneficial use or purpose,[3] unless otherwise provided by statute,[4] it may be sold and transferred separate and apart from the land upon which it was intended to be used, and for the benefit of which the original appropriation was made; and, in fact, it may be sold independent of any land or interest in land. Even a sale or transfer of the whole or any part of the appropriation may then be made, either in connection with or separate and apart from the land, and the pur-

1 For the definition of a water right, see Secs. 758, 759.

For Arid Region Doctrine of appropriation, see Chap. 31, Secs. 585-594.

2 That a water right is a property right, see Secs. 768-771.

3 For the appropriation of water, see Secs. 706-732.

For the purposes for which water may be appropriated, see Secs. 690-705.

4 For the discussion of the recent codes upon the subject, see Secs. 1015, 1016.

chaser may use it for an entirely different and distinct purpose. As was recently held by the Federal Court: "Possessory rights on the public domain have always been recognized as transferable, and water rights can be transferred like other property."[5] Again, the water right may be sold separate and apart from the ditch or canal, by the means of which it was formerly utilized. The water right and the right of way and the ditch or canal constructed thereon may be sold separately, and the conveyance of the one does

[5] Thompson v. Pennebaker, 173 Fed. Rep. 849, 97 C. C. A. 591.

See, also, McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626; Barkley v. Tieleke, 2 Mont. 59, 4 Morr. Min. Rep. 666.

A priority to the use of water is a property right, which is the subject of purchase and sale, and its character and method of use may be changed, provided such change does not injuriously affect the rights of others. Seven Lakes Res. Co. v. New Loveland etc. Co., 40 Colo. 382, 93 Pac. Rep. 485.

The sale of a water right confers upon the purchaser all the rights and privileges acquired by his vendor through a prior appropriation thereof. Callahan v. Sullivan, 9 Land Dec. 6; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777.

See, also, Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82; Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3; Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541; Doyle v. San Diego etc. Co., 46 Fed. Rep. 709; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Daum v. Conley, 27 Colo. 56, 59 Pac. Rep. 753; Oppenlander v. Left Hand D. Co., 18 Colo. 142, 31 Pac. Rep. 854; Arnett v. Linhart, 21 Colo. 188, 40 Pac. Rep. 355; Gelswicks v. Todd, 24 Colo. 494, 52 Pac. Rep. 788; Crippen v. Comstock, 17 Colo. App. 89, 66 Pac. Rep. 1074; Child v. Whitman, 7 Colo. App. 117, 42 Pac. Rep. 601.

A sale of a water right separate from the land, whereby the right is applied to other lands, may be made if the rights of others are not infringed. Cache La Poudre Irr. Co. v. Larimer etc. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123, affirming 8 Colo. 237, 45 Pac. Rep. 525.

For the change of use by the purchaser, see Sec. 882.

See, also, Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986; Ada County Farmers' etc. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094; McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773; Hard v. Boise City etc. Co., 9 Idaho, 589, 76 Pac. Rep. 331, 65 L. R. A. 407; Boise City etc. Co. v. Stewart, 10 Idaho, 38, 77 Pac. Rep. 25, 325; Turley v. Furman, —— N. M. ——, 114 Pac. Rep. 278.

not necessarily include the other. After the sale the right may be utilized by means of other works already constructed or which may be constructed.[6] In other words, the exclusive possessory right to divert and use the waters of a natural stream, acquired by the prior appropriation of the same, is an independent property right, and may be sold, conveyed, and transferred either by an independent conveyance, or together with the ditch or canal by the means of which the right is utilized,[7] and either with or without the land for the irrigation of which the water was appropriated, or the particular interest or business for which the water was originally used.[8]

As was said in a recent Wyoming case upon the subject of the right of the appropriator to sell his water right: "The water in the stream is not his property, but his right to use that water, based upon his prior appropriation, for beneficial purposes, is a property right, and as such is capable of transfer."[9]

6 Wold v. May, 10 Wash. 157, 38 Pac. Rep. 875; Clifford v. Larrien, 2 Ariz. 202, 11 Pac. Rep. 397; Rogers v. Riverside etc. Co., 132 Cal. 9, 64 Pac. Rep. 95.

If the appropriator owns the channel of the stream, he may sell it without the water right and *vice versa*. Doyle v. San Diego etc. Co., 46 Fed. Rep. 709.

"We are of the opinion that possessory right to ditches and to the use of water may each have an existence independent of each other. A ditch may be conveyed, reserving the water right, or the water right may be conveyed, reserving the ditch." Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho, 793, 51 Pac. Rep. 990, 40 L. R. A. 485, citing Kinney on Irr., 1st Ed., Sec. 224.

7 For the sale of ditches and canals, see Sec. 1003.

8 For the right of the purchaser to change the place of use or the use, see Secs. 872, 1031.

9 Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

"The right to water acquired by priority is the subject of property, and may be sold and conveyed." Gould on Waters, Sec. 234.

"The exclusive right to divert and use the water of a stream, as well as the ditch or other structure through which the diversion is effected, may be transferred like other property, or rights analogous to property." Pom. Rip. Rights, Sec. 58.

See, also, Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Ortman v. Dixon, 13 Cal. 33; People's Ditch Co. v. Fresno Canal Co., 152 Cal. 87, 92 Pac. Rep. 77; Thompson etc. Co. v. Pennebaker, 173 Fed. Rep. 849, 97 C. C. A. 591; Fresno Canal Co. v. Park, 129 Cal. 437, 62 Pac. Rep. 87; Barkley v. Tieleke, 2 Mont. 59, 4 Morr. Min. Rep. 666; Fuller v. Swan River M. Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252; Kidd v. Laird, 15 Cal. 161, 76 Am. Dec. 472, 4 Morr. Min. Rep. 571; Smith v. O'Hara, 43 Cal.

A co-owner of a water right can convey his own interest in and to the same, but his rights extend no further; he can not convey so as to injuriously affect his cotenants' rights.[10] Not only may a water right be sold after it has been finally perfected or consummated,[11] but after the inception of a right has been properly begun, the inchoate or unperfected right may be sold, and the purchaser will succeed to the right of priority and to all the other rights of the one who originally instituted the appropriation. It then devolves upon the purchaser to complete the appropriation in a reasonable time and to comply with all the other conditions imposed by the law of appropriation.[12] But in Colorado it is held that where one canal company purchases the rights from another canal company, it must succeed to the charter rights of the grantor and prosecute the enterprise under the same franchise, so that the continuation of the work will practically be the same enterprise.[13] And when a valid transfer is made of a water right acquired by

371, 1 Morr. Min. Rep. 671; McDonald v. Bear River etc. Co., 13 Cal. 220, 1 Morr. Min. Rep. 626; *Id.*, 15 Cal. 145; Dalton v. Bowker, 8 Nev. 190; Union Water Co. v. Crary, 25 Cal. 504, 85 Am. Dec. 145, 1 Morr. Min. Rep. 196; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Drake v. Earhart, 2 Idaho, 750, 23 Pac. Rep. 541; Cantrall v. Sterling Min. Co., —— Ore. ——, 122 Pac. Rep. 42; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19; Rickey etc. Co. v. Miller & Lux, 152 Fed. Rep. 11, 81 C. C. A. 207; affirming *Id.*, 146 Fed. Rep. 574.

By the diversion and use for irrigation, a property right to the use of waters of the natural streams may be acquired. This priority is a property right, and, as such, is subject to sale and transfer. Ft. Morgan etc. Co. v. South Platte D. Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259.

10 Henderson v. Nichols, 67 Cal. 152, 7 Pac. Rep. 412; Biggs v. Utah etc. Co., 7 Ariz. 331, 64 Pac. Rep. 494; Reed v. Spicer, 27 Cal. 58, 4 Morr. Min. Rep. 330.

See, also, for rights of tenants in common, Chap. 73.

11 For the consummation of an appropriation, see Secs. 725-728.

12 For reasonable time within which to complete the appropriation, see Secs. 733-741.

See Wood v. Lowney, 20 Mont. 273, 50 Pac. Rep. 794.

Where a person who initiated the appropriation, but has not completed it, transfers the possessory title to which the water right was appurtenant, his successor can complete the appropriation. Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777.

13 Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580.

appropriation, the priority of the original appropriation is preserved as against the rights of others.[14] But where the inception of a right has begun and afterward was abandoned or forfeited by the original appropriator, all rights revert to the public, and an attempted sale of the same passes nothing to the purchaser.[15] In other words, there must be something to sell. As was said in a recent Utah case:[16] "The mere making of a survey and posting of a notice neither conferred nor initiated any such rights. They therefore had no such 'rights, interest, or property' as were subject to sale, assignment, or transfer. All that they had to sell or assign, or make over, was their knowledge and information in respect of the canyon and the river, and of the feasibility of an appropriation and diversion of unappropriated waters of the river for power and irrigation purposes, and the field notes, maps, and drawings of their survey."

Not only may the sale of a consummated appropriation be made, but also one may be made where the right is inchoate or in an incomplete condition. And if the purchaser proceeds with the necessary work within a reasonable time to finally complete the appropriation, his rights will relate back to the inception of the title of his grantor. In other words, the priority of the grantor will be preserved.[17] But, upon the other hand, where the work was not diligently pursued by the grantor, as we have seen from the cases cited above, the grantor has nothing to convey, and the deed, as far as the conveyance of any rights to the water is concerned, is null and void.

Under the recent irrigation or water codes adopted by most of the Western States, a sale may be made of a permit by the State engineer or other officer authorized to issue the same upon certain

conditions prescribed by the statute. The assignee of such permit may then proceed and complete the appropriation.[18]

**§ 996. Formalities necessary for the transfer of a water right—Must be by deed.**—As we have discussed in a preceding section, a water right is a species of real property.[1] It therefore follows that, being such property, sale or transfer of a water right should follow all the formalities required by the sale or transfer of any other real property. Therefore, it is the general rule of law respecting such transfers that they are within the statute of frauds, and where there is an independent sale of a water right, the transfer must be made by a deed, or an instrument in writing, which, together with the possession of the right, will be construed in effect to be a deed.[2] And any contract for the conveyance of a water right

See, also, Fudickar v. East Riverside

must be in writing, as the right is an interest in real estate, and, therefore, within the statute of frauds.[3] There are, however, certain exceptions to this general rule, which we will discuss in subsequent sections of this chapter.[4]

In most jurisdictions the necessity for a seal has been abolished by statute; but where the distinction between sealed and unsealed instruments still exists, the seal is necessary.[5] In accordance with the general rule governing the sale and transfer of real estate, the deed of conveyance must be acknowledged [6] in order to entitle it to record, and must be recorded.[7] But it was held in Montana that

Irr. Dist., 109 Cal. 29, 41 Pac. Rep. 1024; Ada County etc. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; McGinness v. Stanfield, 6 Idaho, 372, 55 Pac. Rep. 1020.

A water right in Idaho is held to be real estate, and must be conveyed as real estate; and it can not be conveyed by the mere handing over of a permit to appropriate water to a would-be purchaser. Gard v. Thompson, —— Idaho, ——, 123 Pac. Rep. 497.

The interest conveyed by an irrigation company's deed of water rights is not transferred by an assignment of the deed. Blakeley v. Ft. Lyon C. Co., 31 Colo. 224, 73 Pac. Rep. 249.

Kings River etc. Co., 60 Cal. 408; Grisezn v. Terwilliger, 144 Cal. 456, 77 Pac. Rep. 1034, where it was held that a parol sale of a water right operates *ipso facto* as an abandonment thereof.

A transfer of a right to a certain amount of the waters of a stream for irrigation purposes is an agreement for the transfer of an estate in real property, within the statute of frauds. Churchill v. Russell, 148 Cal. 1, 82 Pac. Rep. 440.

[4] For the parol sale of water rights, see Secs. 997-1000.

[5] Mattis v. Hosmer, 37 Ore. 523, 62 Pac. Rep. 17, 632; Barkley v. Tieleke, 2 Mont. 59, 4 Morr. Min. Rep. 666; Ortman v. Dixon, 13 Cal. 33; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054.

[6] Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054.

[7] Stanislaus W. Co. v. Bachman, 152 Cal. 716, 93 Pac. Rep. 858, 15 L. R. A., N. S., 359, holding that the recording in a book entitled "Miscellaneous Records," in which it had been the custom to record water contracts and like agreements, is the proper book in which to record it, so as to give constructive notice thereof.

See, also, Lyles v. Perrin, 119 Cal. 264, 51 Pac. Rep. 332; Partridge v. McKinney, 10 Cal. 181, 1 Morr. Min. Rep. 185; Leavitt v. Lassen Irr. Co., 157 Cal. 82, 106 Pac. Rep. 404, 29 L. R. A., N. S., 213, in which it was held that where a contract of conveyance was not acknowledged and a subsequent conveyance by proper deed was made to the same rights, that the lat-

where the statute providing that a conveyance of real estate not duly recorded shall be void as to the subsequent purchaser of such real estate, whose conveyance shall be first duly recorded, an appropriator of the water is not such a purchaser, within the terms of the statute, and a prior conveyance of a water right is valid as between the parties thereto, and is also valid as against the attempted subsequent appropriation of the water.[8] The sale of a water right or ditch is completed upon the delivery of the deed conveying the same and the possession of the property by the purchaser.[9]

In general it may be said that, owing to the loose methods by which water rights were sold and transferred, and the general lack of record of the claims of the appropriators of waters from the natural streams, especially as to the early rights, it is the tendency in all of the States by legislation to require that transfers of this nature should be executed in a more formal manner, and that the deeds of transfer be recorded. The statutes of many of the States also require that all claims to the use of water should be of record in some public office, usually the State engineer's office.[10] And where a water right is sold, should any question arise as to the title of the vendee, he must connect his right to the water with the rights of those who first made the appropriation. He must also give notice to the public that he succeeds to the rights of the original appropriator. This can only be done by deed and

ter conveyance would hold. And the Court said: "And as Purser had made a subsequent assignment of his rights under this very contract to a third person and it had been duly recorded, Leavitt's undoubted assignment became void." Citing Cal. Civ. Code, Sec. 1214.

8 Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054.

In Whalon v. North Platte etc. Co., 11 Wyo. 313, 71 Pac. Rep. 995, it was held that an instrument, though not acknowledged or recorded, as required by law, was sufficient to pass title between the parties, and was also sufficient as against one who had filed a conflicting application with the State engineer, before the transfer was filed.

In Lyles v. Perrin, 119 Cal. 264, 51 Pac. Rep. 332, where the plaintiff made a second sale of a water right before the first deed was recorded, it was held that he was not liable to punitive damages.

A purchaser of land having springs of water thereon takes the land free from all claims of one to the use of the water under an unrecorded deed without notice. Powers v. Perry, 12 Cal. App. 77, 106 Pac. Rep. 595.

9 Booth v. Chapman, 59 Cal. 149.

10 For State control, see Secs. 1337-1367.

For the adjudication of water rights, see Chaps. 78, 79.

the recording of the same, in which case the right of the grantee will relate back to the date of the inception of the original appropriator's title.[11] However, a recent case decided by the Supreme Court of Colorado, while holding to the rule that the use of water for irrigation is real estate, and that the proper method of conveying the title thereto is by deed, recognized the fact that since many of the early water rights acquired by appropriation have not passed by deed from the original appropriators, held that parol proof of the possession and use of a water right is *prima facie* evidence of title.[12] As to the amount of water intended to be conveyed by deed, the terms expressed therein must govern, in the absence of fraud or mistake, if by a reasonable construction thereof the intention of the grantor can be ascertained. If, however, the language used is ambiguous, the circumstances surrounding the making of the grant may be considered.[13] In the case of a mutual mistake or fraud, the rights of the respective parties may be determined in an action brought to establish prior rights to the water.[14]

**§ 997. Parol sale of water rights.**—A water right being an interest in real estate,[1] any sale or transfer of the same must be by deed

11 Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671.

Where, in a suit for unlawful diversion of the waters of a stream, plaintiff claimed by right of an earlier appropriation, and the evidence showed that although the water was used to irrigate plaintiff's land before defendant used it, but where plaintiff failed to connect himself in interest with those who first cultivated his land and appropriated and used the water thereon, it was held that the defendant's appropriation was the earlier one and that he will not be deprived of the water. Chiatovich v. Davis, 17 Nev. 133, 28 Pac. Rep. 239.

12 Bates v. Hall, 44 Colo. 360, 98 Pac. Rep. 3.

"The open and notorious possession and user of water from an irrigation canal through lateral ditches is constructive notice to a purchaser of the rights of the parties so in possession and using the water." McLure v. Koen, 25 Colo. 284, 53 Pac. Rep. 1058.

See, also, Park v. Park, 45 Colo. 347, 101 Pac. Rep. 406.

13 As the words "inch of water" have not acquired any fixed technical meaning, which must control when used in a grant, evidence of the circumstances surrounding the making of the grant must be considered. Jackson Mill Co. v. Chandos, 82 Wis. 437, 52 N. W. Rep. 759; Janesville Cotton Mills v. Ford, 82 Wis. 416, 52 N. W. Rep. 764, 17 L. R. A. 564; Emery v. Village of Three Rivers, 78 Mich. 438, 44 N. W. Rep. 401.

1 See Secs. 768-770.

or an instrument in writing, as being within the statute of frauds,[2] and with the exceptions hereafter mentioned, any attempt to transfer an independent water right by a mere parol or verbal contract [3] is void as against the rights of appropriators subsequent to the inception of the right attempted to be transferred and prior to the date of the attempted transfer, although such a sale, accompanied by the actual possession and use of the right, may be good as between the parties to the agreement. This has not always been the rule relative to parol transfers of water rights. In the early days, before the Act of 1866,[4] and during the period when the title to either water rights or mining claims was only that of possession, the mere possessory right to the use of water was sometimes held to be such a right that it was considered in the nature of personal property, and where so considered it was held that it might be sold and transferred by a mere parol agreement. It is even embodied in some of the early statutes that "such a right may be appurtenant to the land upon which such water is used, or it may be personal property, at the option of the rightful owner." [5] The same rule was held to be in force relative to the mere possessory title to mining claims, and that a written conveyance was unnecessary, where the actual possession was given.[6] During this period it was held that such transfers were not within the statute of frauds, and this loose method of making transfers of water rights was kept up for many years after these rights were acknowledged by Congress; and, in fact, it may be said that in practical working this custom is not

2 For transfer by deed, see Sec. 996.

For appurtenances, see Secs. 1006-1014.

4 For the Act of 1866, and construction, see Secs. 611-619.

5 2 Comp. Laws of Utah, 1888, Sec. 2782.

The right to use power created by an accumulation of water above a dam may be granted by parol. Johnson v. Bowersock, 62 Kan. 148, 61 Pac. Rep. 740.

6 The right to mining ground, acquired by appropriation, rests upon possession only; and rights of this character, not amounting to an interest in land, are not within the statute of frauds, and no conveyance other than a transfer of possession is necessary to pass them. Table Mountain Tunnel Co. v. Stranahan, 20 Cal. 198, 9 Morr. Min. Rep. 457.

See, also, Gatewood v. McLaughlin, 23 Cal. 179; Antoine etc. Co. v. Ridge etc. Co., 23 Cal. 219; Black v. Elkhorn M. Co., 163 U. S. 445, 41 L. Ed. 221, 16 Sup. Ct. Rep. 1101, 18 Morr. Min. Rep. 375; Union etc. Co. v. Taylor, 100 U. S. 37, 25 L. Ed. 541, 5 Morr. Min. Rep. 323.

entirely obsolete, and parol transfers or attempted parol transfers have been made at a very late date. During the later years, however, owing to the great importance of the right and the necessity of a record of the same, "the possessory estate thus acquired has been elevated to the dignity of other interests in realty, being recognized as an express grant from the Government,"[7] and with the exceptions hereafter discussed, require a deed or instrument in writing for their transfer.[8]

In a recent case decided by the Supreme Court of Utah[9] it was held that one seeking to have rights declared and enforced founded upon a verbal or written agreement and involving or growing out of an alleged trust or confidential relation, is required, among other things, to show, with at least reasonable certainty, the terms of the agreement and the character and extent of the trust or confidential relation; that these things can not be left to loose or flexible language or to vague or indefinite terms. Therefore, the Court held that the evidence in the case was not sufficient to support a finding that a party agreed to make an appropriation of water for irrigation in trust for another or to secure for others an interest in a corporation formed to acquire water rights for irrigation.[10]

There are four principal exceptions to the rule above stated that a transfer of a water right must be in writing, viz.: First, where the transfer was made by a parol executed contract for a consideration;[11] second, where the transferee takes the right as an actual appropriation by diversion;[12] third, where the water right is considered as an improvement of a settler on the public lands, who relinquishes his claim before patent and sells his improvements;[13] and, fourth, where the right is sold with land as an appurtenance thereto, and without being specifically mentioned in the deed of transfer.[14] As the rights acquired by the grantee in each of these cases differ, as well as the rules of law governing them, we will discuss these subjects in the order named.

**§ 998. Sale of a water right by parol executed contract for a consideration.**—As is the case with the acquisition of rights of way[1] and other interests in land, rights to the use of water, or water rights, may be acquired without a formal deed of conveyance. One of the exceptions mentioned to the general rule in a previous section[2] is by a parol contract, for a good consideration, all or a portion of which contract has been executed, and of such a character that a court of equity will enforce a specific performance. An agreement of this nature takes the case out of the statute of frauds, and is valid as against the original grantor and as against all parties having notice thereof.[3] It was also held in a recent Oregon case that a parol sale of land and appurtenant water rights, for a consideration, and a surrender of possession thereof to the purchaser, created an equitable estate in the water rights which a court of equity was bound to protect.[4] Therefore, the grantor can not re-

voke such a contract, after the grantee or licensee has expended money in making valuable improvements upon the strength of the contract, in order to conduct the water to the place of use.[5] So, under this principle, it is held that a parol agreement between parties who have settled upon lands near a certain stream as to the amount of water which each may take from the stream, if acted upon for a time by the parties, will be enforced in a court of equity.[6] But in order to successfully rely upon contracts of this nature it is held that it must be made for a consideration,[7] and must be either executed in full or partly executed, and the grantee must be able and willing to fully execute the contract upon his part.[8] But before a specific performance of such a parol contract is enforced, and where the legal title to the water right is in the grantor, and the grantee has but the mere equitable title, the grantee is not entitled to rely on the contract in a suit by a third party to restrain the diversion of such water in the absence of proof and a finding that the plaintiff purchased with notice, either actual or constructive, of the defendant's rights.[9] However, it is held in Colorado that open, continuous user of water from an irrigation canal by an owner of adjacent land, through lateral ditches, is possession, and gives constructive notice of his rights to a purchaser of the canal.[10] And, therefore, upon the other hand, water rights trans-

"His continued possession and occupancy is sufficient to convey to every one notice of his equitable rights in and to the estate." Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39.

ferred, in cases of parol executed contracts for a consideration, and coupled with the actual possession and use of the water for a considerable time, taken in connection with the improvements made upon the strength of the contract, as against all persons who have had actual notice of the grantee's claim, or whom the law deems to have had constructive notice, a court of equity will protect and enforce.[11] Furthermore, it was held by the Supreme Court of Montana, in a recent case,[12] that the rule, that the right to question the validity of a parol conveyance is available only to the parties or their privies, applies only to conveyances of water rights. And the Court said: "Appellant was a stranger to all of these conveyances; nor has he, by anything that has occurred since, been brought into privity with any of the parties to them. Being a stranger, he can not be heard to object to them. The right to question a contract on the ground stated is purely personal, and can not be asserted by one who is neither a party nor a privy to it."[13]

**§ 999. Parol sale—Grantee takes as an appropriation by diversion.**—An independent parol transfer of a water right may be good as between the parties to the agreement, provided the grantee enters into the possession and use of the water.[1] But should there not be sufficient water in the stream for all, as to third parties the transfer by parol may be void. This is especially true as to the rights of subsequent appropriators, the inception of whose rights

are subsequent to the inception of the right of the grantor in a parol transfer, and prior to the date of the transfer. The great weight of authority upon this subject throughout the Western States now holds that a parol or verbal sale of a water right, accompanied by actual possession and use for some beneficial purpose, is valid as between the parties to such an agreement. But in such a case it is further held that the grantee does not acquire the grantor's right to priority, but that he acquires a new right as an appropriator by actual diversion, dating only from the date of the transfer and such actual possession, which is, in effect, the same as though the grantee had upon that date consummated the appropriation himself. In other words, in such a transfer the doctrine of relation can not be invoked by the grantee back to the inception of his grantor's title to the right, as his right relates back only to the date of the parol transfer and his actual possession and use of the water.[2] In this case the priority of the grantor's appropriation is virtually abandoned, and the grantee takes the right simply as a subsequent appropriator by actual diversion in his regular order with the other subsequent appropriators of the waters of a certain stream, should there be any such subsequent appropriators; and, further, and most important, should there be any water remaining in the stream after the wants of the subsequent appropriators, who are prior to the date of the transfer, have been supplied. This right is the second exception to the general rule that the transfer to a water right must be by a deed or instrument in writing, mentioned in a preceding section.[3] It can be readily seen that such a right may or may not be of value, depending upon the size of the stream and the demands made upon its waters prior to the transfer.

One of the early leading cases upon this subject was decided by the Supreme Court of California,[4] where it was held that under a verbal or parol sale the grantee does not succeed to the rights of the seller so as to claim the seller's prior appropriation of the

water, but must date his appropriation from the time he enters into possession.[5]

The grantee under a parol sale, even accompanied by possession, can not tack his own use onto that of his grantor and thus cut out the rights of appropriators who were subsequent to his grantor, but prior to himself.[6] Upon the question of a parol sale working an abandonment, where the grantee takes the water as an appropriation by diversion, it can not be said that the water right is abandoned, but that the priority which originated with the inception of the grantor's title is abandoned, and the grantee takes the right for what it is worth simply as a subsequent appropriation in his regular order with the other subsequent appropriators.[7]

**§ 1000. Parol sale of water right with other improvements of settler upon relinquishment of claim.**—The third class of cases, which are exceptions to the general rule, that the transfer of a water

See, also, for parol sale working an abandonment, Sec. 997.

right must be in writing, under our classification,[1] are those cases where a settler upon the public land of the United States has appropriated water or has taken some steps to make such an appropriation, and, having an imperfect or inchoate right to the land itself, relinquishes his right to the land. Under such a condition of affairs the settler is permitted to sell his improvements upon the land. The same is also true in the cases of mere squatters or settlers holding possessory rights to a portion of the public lands. And upon the theory that the possessory right to the use of the water is an improvement in the sense that buildings and fences are improvements, a parol sale or transfer of such improvements is held to be valid and to include water rights, and to vest in the transferee the grantor's priority to the appropriation.[2] As was held by the Montana Court,[3] a transfer by parol of a settler's right of entry of lands carries with it a water right appurtenant thereto, entitling the transferee to the benefits of the priority of the appropriation.

1 For the classification of these exceptions, see Sec. 997.

2 A mere claim of right to the land held by a squatter, if accompanied by a diversion and application of the water in the reclamation thereof, is sufficient to entitle him to convey to another his interest in the water right, together with such as he may have in the land to which the water may be appurtenant. "But a mere squatter upon public lands may, *even by parol*, transfer his claim and interest, whatever it may be in this respect, to another, and the rights of the subsequent purchaser and of his successors in interest, if asserted under the doctrine of prior appropriation, relate back to the date of the first appropriation with whom there may be a privity of estate." Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

A settler in possession of Government land for which he has appropriated a water right, may transfer such land and water right by oral assignment, so that the transferee becomes his successor in interest in the water right, even though the transfer was without consideration. Wood v. Lowney, 20 Mont. 273, 50 Pac. Rep. 794.

See, also, Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Geddis v. Parrish, 1 Wash. 587, 21 Pac. Rep. 314; Nichols v. Lantz, 9 Colo. App. 1, 47 Pac. Rep. 70; Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972; Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39; Brown v. Newell, 12 Idaho 166, 85 Pac. Rep. 385; Featherman v. Hennessey, 42 Mont. 535, 113 Pac. Rep. 751; Whalon v. North Platte etc. Co., 11 Wyo. 313, 71 Pac. Rep. 995; Johnston v. Little Horse Creek etc. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

3 McDonald v. Lannen, 19 Mont. 78, 47 Pac. Rep. 648.

It will be noticed in this case that the Court seems to hold that the water right was an appurtenance to the possessory right to the land, and passed with it as such.[4] And in all of the cases cited in our notes it must be also noticed that the right granted was not an independent water right as such, but the water right was granted with other property, and usually the possessory right to the land.

But the right of a person claiming an appropriation of water can not be tacked to that of a mere squatter upon public lands, who, while he may have irrigated the land, has abandoned it.[5]

**§ 1001. Sale of water rights by transfer of stock in corporations—Pledge of stock.**—Although a water right is real property,[1] both it and the ditches and canals used in conveying the water to the place of use may be represented by shares of stock in a corporation; and when so, the shares of stock are treated as personal property, and may be sold or pledged in the manner provided for the sale and transfer of such personal property.[2] A tenant in common in a mutual association of individuals together owning water rights and ditches may also sell his interest without joining with his co-tenants or in any way disturbing their rights.[3] Again, where water rights, and the ditches through which they are enjoyed, are owned by tenants in common, who form a corporation, which issues shares of stock representing both the water rights and the ditch, a transfer of its shares operates as a transfer of both water rights and the ditch.[4] The subject of the sale and transfer of water

4 For appurtenances, see Secs. 1005-1018.

Co., 18 Colo. 142, 31 Pac. Rep. 854; Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275; Snyder v. Murdock, 20 Utah, 419, 59 Pac. Rep. 91; Wells v. Price, 6 Idaho, 490, 56 Pac. Rep. 266; Ruhnke v. Aubert, 58 Ore. 6, 113 Pac. Rep. 38; Brockman v. Grand Central C. Co., 8 Ariz. 451, 76 Pac. Rep. 602; George v. Robinson, 23 Utah, 79, 63 Pac. Rep. 819; Pederson v. North Yakima etc. Co., 63 Wash. 636, 116 Pac. Rep. 279.

rights where the same are represented by shares of stock will be more thoroughly discussed when we come to the question of the transfer of rights by means of the sale of stock in mutual water corporations.[5]

§ 1002. **Sale of land, reserving the water rights.**—As defined and distinguished by the California Court:[1] "The word 'reserved' in a strict technical sense is not synonymous with 'exception.' The former term is applied to a clause in a deed which creates some right or privilege for the benefit of the grantor in the land described as granted, and withholds it from the operation of the grant, so that the title to the thing passes to the grantee, and the right or privilege concerning it is the only thing retained by the grantor. The latter term applies to something which constitutes a part of the thing described as granted, and which would pass but for the excepting clause, the office of which is to exclude it from the thing described, and the title to the thing excepted remains in the grantor. The difference between the two terms is so slight and shadowy that in common parlance they are used interchangeably, 'and the technical meaning will give way to the manifest intent, even though the technical term to the contrary be used.'"[2]

If specified in the deed conveying a certain tract of land, the water right, although it may in fact be an appurtenance to the land, may be reserved by the grantor, who may then transfer the water claimed under the right to some other land, provided, of course, that the rights of others are not injured by the change.[3]

And a grantor conveying a water right without reservation has no right to use the water for any purpose.[4] And it was held in California[5] that a provision in a deed "reserving" to the grantor

[5] Peterson v. McDonald, 13 Cal. App. 644, 110 Pac. Rep. 465.

a right to use water from a well upon payment of monthly rental constituted only a personal contract to sell the water, and that the same was not a reservation which ran with the land.[6] Where the General Government granted to the State of Montana one section of land of a former military reservation, to be selected "so as to embrace the buildings and improvements thereon," it was held that it did not grant the right to the use of the water of a stream from which the Government had taken water for its own use, but that the water was subject to appropriation.[7] So, also, a grant of a canal may be made and the water right used in connection therewith may be reserved.[8] Again, a tract of land may be granted and a portion of the water right reserved by the grantor.[9] But one who appropriates water for sale, rental, or distribution can not, when he sells the system, reserve any part of the waters for irrigation of his private lands, unless he had through the same canal and ditches made a private appropriation for use on such lands, in which case his reservation must be limited to such private appropriation.[10] The theory upon which this is not allowed is that the appropriation of the waters was made for distribution of the waters to members of the public, and the appropriator as the agent of such public use had no power whatsoever to reserve to himself for his private purposes any part of the water.

A parol reservation of a spring on land conveyed, as held by the California Court, will not be specifically enforced in an action for that purpose.[11] Again, as is the case of sales of water rights, there must be something to grant;[12] so, also, in cases of reserva-

6 See, also, upon the subject of reservations, Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Kelly v. Hynes, 41 Mont. 1, 108 Pac. tions, in order to make a valid reservation there must be something to reserve. Hence, where the grantee's acceptance of a deed containing in terms a reservation to the grantor of a priority appropriation of water for a certain reservoir, when, in fact, no priority of appropriation had been secured, it was held by the Supreme Court of Colorado [13] that, there being nothing to reserve, the acceptance of the deed did not estop the grantee to claim an appropriation of its own for such reservoir.

**§ 1003. Sale of ditches, or other works, and easements for the same.**—We have discussed in previous chapters how rights of way may be originally acquired for ditches and canals and other works necessary for the utilization of the water under a water right, both over the public lands of the United States [1] and also over lands which have passed into private ownership.[2] When once acquired these easements, or rights of way, together with the ditches or other works constructed over the same, are property rights, and the subject of sale and transfer the same as any other species of real property, and under the same rules of law governing transfers of real property. It therefore follows that the ditch, canal, or other structure, by means of which the diversion of the water is effected, and the rights of way for the same, must be conveyed by a written instrument, as is the case of other real property.[3] A

Cook, 8 Ore. 380; Reed v. Spicer, 27 Cal. 58, 4 Morr. Min. Rep. 330; Clark v. Willett, 35 Cal. 534; Hart v. Plum, 14 Cal. 148; Merritt v. Judd, 14 Cal. 64, 6 Morr. Min. Rep. 62; Burnham v. Freeman, 11 Colo. 601, 19 Pac. Rep. 761, where the Court said: "The law recognizes but two ways of acquiring by purchase and ownership interest in such ditch. One by deed or prescription, which presupposes a grant, and the other by condemnation. An interest in such a ditch is an interest in realty. It can not pass by verbal sale."

See, also, Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671; Donnell v. Humphreys, 1 Mont. 518; Walley v. Platte etc. Co., 15 Colo. 579, 26 Pac. Rep. 129; Williams v. Harter, 121 Cal. 47, 53 Pac. Rep. 405; Fudicar v. East Riverside Irr. Dist., 109

ditch and easement over the land of another may be sold and transferred separate and apart from the land for the benefit of which the right of way was acquired and the ditch constructed. A ditch may also be conveyed reserving the water right, the waters under which right were formerly conveyed though the ditch; and the water right may also be conveyed, and at the same time the ditch and easement therefor may be reserved. It is a separate and distinct species of real property, and therefore may be sold and transferred separate from the water right or any other interest in land. The extent of the servitude is determined by the terms of the grant and the nature of the enjoyment by which it was acquired.[4]

"Whether a reservation or covenant in a deed shall be construed to create an easement in gross or one appurtenant to the land is a matter to be deducted (1) from the terms of the instrument itself; or (2), if that is ambiguous, then from a consideration of all the circumstances surrounding its execution, always bearing in mind the rule that the courts should construe an instrument to convey an easement appurtenant rather than one in gross."[5]

A grant of a right of way for a ditch does not necessarily include a conveyance of a right to take water from the stream from which the ditch was built. Zimmler v. San Luis etc. Co., 57 Cal. 221.

See, also, Wold v. May, 10 Wash. 157, 38 Pac. Rep. 875.

5 Tone v. Tillamook City, 58 Ore. 382, 114 Pac. Rep. 938; Ruhnke v. Aubert, 58 Ore. 6, 113 Pac. Rep. 39.

So distinct does the law deem these separate property rights that the courts hold that a water right, and the ditch including the right of way therefor, may be condemned separately;[6] that a decree as to the ditch right does not necessarily govern as to the water right, or the reverse;[7] that the abandonment of one right does not necessarily abandon the other;[8] that an injury to a water right can not be proved under a count for an injury to the ditch, or the reverse of the proposition.[9] It therefore follows, owing to the fact that these are separate and distinct property rights, that the grant of a ditch or canal together with the easement therefor does not necessarily include a water right formerly used through the same works.[10] However, the conditions may be such that the ditch, canal, or other works may be appurtenances to the land for the benefit of which they are used to conduct the water, and in that case will pass with the transfer of the land without special mention in the deed or the term "with appurtenances" being used.[11] Again, although as a physical fact there may be but one ditch, where a ditch is used in common for the conveyance of water for two appropriators, legally there are two—"two legal entities that had never merged or become identical," each of which may be sold and transferred separate from the other.[12] But the owner of an interest in an irrigation ditch can only sell rights in the same to the extent of his own interest.[13] Whether the interest in the

ditch is represented by shares of stock in a water company or upon a partnership interest, the courts agree with the rule that the rights to the ditch may be transferred separate from the land.[14]

It is held that the sale of a ditch will not pass title to laterals taken out from the main ditch and which are not expressly mentioned and are not in fact a part of the ditch sold.[15] The right to use water flowing in an irrigation ditch for the purpose of irrigation is an easement and an incorporeal hereditament, descendible by inheritance.[16]

**§ 1004. Sale of the land subject to the easement for ditches and canals, where the purchaser had notice.**—In case of the sale of the land over which there is a permanent easement for a ditch and canal constructed thereon, the grantee takes the land subject to such rights of way and their necessary use, and the open possession and use is sufficient notice to the purchaser.[1] As was said in a late Oregon case:[2] "Again, it is urged that, even though the license is irrevocable as to the licensor, it is not so as to his grantee. But the authorities that hold the license irrevocable also hold that it is binding upon the grantee of the licensor

2 Shaw v. Proffitt, 57 Ore. 192, 109 Pac. Rep. 584, 110 Pac. Rep. 1092.

who took with notice."[3] But it is held that a *bona fide* purchaser of land without knowledge, or actual or constructive notice, of the existence of an easement takes the title to the land, relieved of the burden of the easement.[4]

**§ 1005. Water rights—Appurtenances—In general.**—The fourth exception mentioned in a previous section,[1] to the general rule, that the transfer of a water right must be made by deed or an instrument in writing,[2] is the case where the title to a water right passes to the grantee with a sale of land as an appurtenance without being specifically mentioned in the deed of transfer. This subject we will now take up in our general discussion of the subject of water rights as appurtenances. Appurtenances are things belonging to another thing as principal, and which pass as incident to the principal thing.[3] It is that which belongs to another thing, but which did not belong to it immemorially.[4] Water rights

3 See, also, 3 Pomeroy Eq. Jur., Sec. 1295; 2 Pomeroy Eq., Sec. 613; McDougal v. Lame, 39 Ore. 212, 64 Pac. Rep. 864; German etc. Society v. Gordon, 54 Ore. 147, 102 Pac. Rep. 736; Sisk v. Caswell, 14 Cal. App. 377, 112 Pac. Rep. 185; Shaw v. Proffitt, 57 Ore. 192, 109 Pac. Rep. 584, 110 Pac. Rep. 1092.

But see Rubio Canyon Water Assn. v. Everett, 154 Cal. 29, 96 Pac. Rep. 811, where it was said: "It is contended that the rule is that subsequent purchasers of land take it subject to all servitudes then laid upon it for the support of easements of the class called 'apparent,' and which are attached to other land. The principle is well established, but the question whether or not an easement of the character of this pipe line is an apparent easement is not so clear. Many authorities declare that the word 'apparent,' as applied to an easement in this connection, does not necessarily mean visible, but refers to easements used by means of some artificial permanent structure on the servient tenement, such as a pipe, a sewer, or a ditch, as distinguished from those which use the servient tenement in its natural state, and at intervals, in the meantime leaving no visible sign of their existence, such as a way or a right of fishery or pasture."

4 Blake v. Boye, 38 Colo. 55, 88 Pac. Rep. 470, 8 L. R. A., N. S., 418; Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

1 See Sec. 997.

2 See Sec. 996.

3 Bouvier, Law Dict., Sub., Appurtenances.

4 Farmer v. Ukiah W. Co., 56 Cal. 11; 1 Ventris 407; Coke on Litt. 121b; New Ipswich etc. Factory v. Batchelder, 3 N. H. 190, 14 Am. Dec. 346.

"An appurtenance is that which belongs to another thing, but which has not belonged to it immemorially. Appurtenant denotes annexed or belonging to, but in law it denotes an annexation which is of convenience merely and not of necessity, and which may have had its origin at any time, in

may or may not be appurtenances to land. Therefore such rights may or may not pass with deeds conveying the land.[5] A water right, as we have seen in previous sections of this chapter, is a separate and distinct property right, and, except under recent water codes, may be sold and conveyed separate and apart from any land or interest in land.[6] The land may be sold together with the water right as an appurtenance thereto, without its being mentioned in the deed, or as described in the deed as a part and parcel of the land. Again, the land may be sold, and the appurtenant water right may be reserved from the transfer for use on other lands.[7] And, again, a tract of land may be sold, and with it there may also be conveyed a water right, which had formerly been used on other lands. In fact there is no end to the ramifications in the conveyancing of water rights which may be made. Therefore as to whether or not in the sale and transfer of land, the water right

both of which respects it is distinguished from appendant." Abb. Law Dict., title Appurtenance.

See, also, case of Crooker v. Benton, 93 Cal. 365, 28 Pac. Rep. 953, where the Court held that under Section 662 of the Civil Code, defining an appurtenance and providing that a "thing is deemed to be incidental or appurtenant to land when it is by right used with the land, etc.," the phrase "by right used with the land" does not refer to the owner's title to the incident, but has reference to the rightful *use* by which the incident has become an adjunct to the land, and remains such so long as it can be used therewith without lawful interference by third persons.

For the right to change the use, see Secs. 869-872.

formerly used in connection therewith will pass as an appurtenance thereto is a question of fact, depending entirely upon the intention of the parties as indicated, first, by the terms of the deed itself; and, in case that is ambiguous, then by the other facts surrounding each particular case.[8]

In our discussion of the subject of water rights and ditches and canals as being appurtenant to land, under the Western rules, it will be noticed that in some of the cases cited the terms "appurtenances" or "with appurtenances" are used, in others the rights are referred to as "incidents" or "incidents to the land," while in still others they are referred to as "parts and parcels of the land," but all meaning the same thing. And, in some of the cases these terms are used indiscriminately. This is due to the confusion of the nature of the rights known under the common law as the riparian rights of riparian owners, which are parts and parcels of the soil,[9] with the rights of appropriators of the water under the Arid Region Doctrine of appropriation, the nature of whose rights are incorporeal hereditaments which may or may not be appurtenant to the land. Therefore, where the rights are acquired by appropriation, the correct expression to use is to refer to them as "appurtenances," or "with appurtenances." The Wyoming Court in the case of Frank v. Hicks makes the proper distinction.[10] As we have seen in a previous section, water may be appropriated by a trespasser upon the lands of others.[11] But where this is the case, the water right so appropriated does not become an appurtenance to the land; but upon the removal of the trespasser from the land he may sever the water right and use the water claimed thereunder upon other lands.[12] We will now take up the subject of the rights acquired by appropriation as appurtenances.

8 See Secs. 1007-1012.

9 For the nature of riparian rights, see Secs. 450-456.

10 Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

That the nature of a water right is an incorporeal hereditament, see Sec. 771.

11 See, for appropriation of water by trespassers, Sec. 688.

§ 1006. **Appurtenances—Sale of water rights with land when specifically mentioned.**—Although, as we have seen in a previous section, that water rights and land are separate and distinct property rights, and may be sold and transferred separate and apart from each other, no reason exists in law or otherwise why they may not be sold together. And, furthermore, whatever may be the rule governing the transfer of water rights with a tract of land that, under certain circumstances, the water right is appurtenant to the land conveyed,[1] it can have no application to a case where, by the terms of a valid deed itself, such a right is expressly granted or reserved. In such a case the express terms of the deed must govern, and, according to the tenor thereof, the title to the water right described therein either passes to the grantee or is reserved, in which case the title still remains in the grantor.[2] It was, therefore, held in a recent Colorado case[3] that where a deed to a certain tract of land also specifically described the water rights granted, the grantee did not take by implication any additional water rights.

Although a water right may be appurtenant to a certain tract of land, it is the subject of property, and may be transferred either with or without the land.[4] Again, a portion of the water right may be transferred with the land and a portion reserved in the grantor.[5] Where a land owner conveys a tract of land lying under his canal and susceptible of irrigation, and includes in the conveyance a grant of the "free and perpetual use of water" from the grantor's canal sufficient to irrigate the land conveyed, it was held that the grant of such free and perpetual water right did not obligate the grantor or his successors to perpetually bear and pay the expense and cost of maintaining and protecting the canal and water right and delivering the water to the consumer.[6]

**§ 1007. Water rights—Appurtenances—Intent of the parties as affecting sale of—Terms of deed.**—As water rights, ditches, and canals and other works used in the diversion of the water and conducting it to the place of use are the subjects of independent property, and may be sold and transferred separate and apart from the land, or any interest in land,[1] as to whether in the sale of a certain tract of land the water rights, etc., pass to the grantee as appurtenances thereto depend largely upon the intent of the grantor that they should or should not so pass. This intention is a question of fact, which is to be ascertained, first, from the express terms of the deed transferring the land; or, second, when the deed is silent or ambiguous upon the question, from the presumption that arises from the circumstances and facts surrounding each particular case, including the question as to whether or not the water right claimed by the grantee as having passed by the deed was, at the date of the transfer, in fact an appurtenance to the land, and at that time owned by the grantor.[2] Relative to the first proposition, we will say that, owing to the law that a water right, although in fact appurtenant to a certain tract of land, may be sold and transferred with the land, or it may be specifically reserved in the deed conveying the land, where it is mentioned in the deed in sufficiently definite terms, so that the intent of the grantor as to whether it was to pass with the transfer of the land or not can, by a reasonable construction thereof, be ascertained, the terms expressed in the deed, in the absence of fraud or mistake must govern in the construction of the deed. The purchaser's intention, or his understanding as to what was conveyed in such a case, can in no way control.[3] It therefore follows, under the well-known rules of evidence, that in such cases

1 See Secs. 995, 1015, 1016.

"Although a water right may be appurtenant to the land, it is the subject of property, and may be transferred either with or without the land." Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Arnett v. Linhart, 21 Colo. 188, 40 Pac. Rep. 355; Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95; Bessemer Irr. Ditch Co. v. Woolley, 32 Colo. 437, 76 Pac. Rep. 1053, 105 Am. St. Rep. 91.

2 As to whether or not a water right is to be deemed an appurtenance in fact, see Secs. 1011-1013.

3 That the purchaser's intention can not control, see Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95.

See, also, Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107.

For the case of a mistake, where a right of way was sold and paid for and the deed included a water right and the mistake corrected in a suit to

the terms as expressed in the written instrument of conveyance can not be altered or varied by parol testimony.[4] But, however, owing to the fact that a water right and the ditches and other works used in connection therewith are of such an uncertain character, as far as their accurate description is concerned, the exact intent of the grantor, much more often than otherwise, in the sale and transfer of a water right, together with a certain tract of land, is not set forth by the terms of the deed itself with sufficient definiteness, so that by a reasonable construction of the language used it can be determined just exactly what the grantor intended to convey. It is self evident from the nature of a water right, or the right to the use of water, that it can not be described with the same degree of accuracy that the tract of land conveyed by the same instrument can be described—by the legal subdivisions of the Government survey, by lots and blocks, or by metes and bounds. And this is where the most of the trouble has arisen; and in deeds where there is no question as to the exact tract of land which was conveyed, the attempted descriptions of the water rights have been so vague and indefinite that the courts have oftentimes been called upon to determine as to just what was attempted to be conveyed in that respect. In construing deeds of this nature, the terms in the deeds themselves must be first considered, and if they are vague or indefinite as to the exact

determine priorities, see South Tule etc. Co. v. King, 144 Cal. 450, 77 Pac. Rep. 1032.

In an action for deceit in the sale of land and appurtenant waters, oral evidence of what occurred before and when the deed was signed is admissible to show the situation and intention of the parties, in order to explain ambiguity in the deed. Wilson v. Higbee, 62 Fed. Rep. 723.

A grantee may not plead ignorance of the covenants of deed executed to him, if he has accepted and had it recorded, as a ground for dereating the course and effect of the covenants in the same, in the absence of any fraud, practiced by the grantor preventing the grantee from familiarizing himself with the deed. Sisk v. Caswell, 14 Cal. App. 377, 112 Pac. Rep. 185.

See, also, Devlin on Deeds, Sec. 1002.

4 The vesting of title is determined by the legal effect of the terms of the grant, and can not be controlled or affected by subsequent statements or declarations of the vendor. Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568, where the Court said: "This is a fundamental principle of evidence that is too well established to require discussion."

See, also, Whitney v. Dewey, 10 Idaho 633, 80 Pac. Rep. 1117, 69 L. R. A. 572; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

water right or easement for a ditch, parol, or extrinsic testimony may be introduced, in order to explain away any ambiguity existing in the language used and to determine exactly what was intended to be conveyed.[5] So, where a deed purported to convey "one certain water ditch taken out of Montgomery Creek," and, also, "one certain water ditch taken from the tributary of Montgomery Creek, and taken out of said creek," etc., and it did not appear that the grantor owned any interest in any other ditch or ditches, and where the water right used in connection with the ditches was necessary for the irrigation of the land conveyed, it was held that a conveyance of the ditches was a conveyance of the right to the use of the water appropriated and conducted through the ditches.[6] Again, a deed conveying land and water rights in which the water rights were described as "And also one-half interest in a certain ditch," was construed by the Court as conveying a one-half interest in the ditch and the water rights, and also reserving a one-half interest in

[5] Farm Inv. Co. v. Gallup, 13 Wyo. 20, 76 Pac. Rep. 917, in which it is said: "The mortgage itself does not define the extent of the grantor's interest, nor the character of his title; and, from all that appears in that instrument, he might have been the sole owner. Upon extrinsic inquiry, however, it is learned that his right was limited to an undivided one-half interest," and holding that in construing conveyances of land and water rights, to ascertain what interest passed in the water rights and ditch, the instruments should be examined in the light of the facts regarding their use, both before and after their execution.

See, also, Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Hayes v. Buzard, 31 Mont. 74, 77 Pac. Rep. 423, where it is said: "The right of the plaintiff must therefore depend upon the interpretation to be given to the deeds furnishing the chain of title. . . . What rights, therefore, does the plaintiff appear to have acquired in the water under the deed, in the light of the facts as they existed, and the behavior of the parties with reference to it down to the commencement of this action? This deed does not, nor does any of the others following it, describe any particular right."

A deed of general warranty of "quiet and peaceable possession" does not warrant water rights unless they are in fact appurtenant to the land. "If they were, the absence of any mention of them in the deed is immaterial, but if not, the warranty does not include them." George v. Robinson, 23 Utah 79, 63 Pac. Rep. 819.

See, also, Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

[6] Williams v. Harter, 121 Cal. 47, 53 Pac. Rep. 405.

See, also, Allen v. Swadley, 46 Colo. 544, 105 Pac. Rep. 1097.

both, and that, too, whether the entire water before the conveyance was used upon the land sold thereby or not.[7]

The rule adopted by the Colorado courts is to the effect that, whether or not a deed to land conveys a water right formerly used thereon, depends upon the intention of the grantor, which is to be gathered, first, from the express terms of the deed; and, second, from the facts surrounding each particular case.[8] Also, in determining whether a right granted is appurtenant or in gross, it is the settled rule of law that the courts must consider the terms of the grant, the nature of the right and the surrounding circumstances giving effect, as far as possible, to the legally asserted intention of the parties, but always favoring the construction of the grant as of an easement appurtenant rather than a right in gross or as passing title to a certain parcel of land.[9]

§ 1008. **Water rights—Appurtenances—Intent of the parties as affecting the sale of—When the deed is silent.**—Where a tract of land is conveyed and at the time of the transfer the grantor was the owner of a water right, and ditches, canals, and a right of way for the same, used in connection with the land, and the deed is absolutely silent upon the question of the water rights, etc., the authorities also hold that it depends upon the intent of the grantor as to whether or not these rights were conveyed with the land. This intention is also a question of fact, and must be proven by the facts and

Coggins Granite Co., 116 Ga. 376, 42 S. E. Rep. 723; Cross v. Kitts, 69 Cal. 217, 10 Pac. Rep. 409, 58 Am. Rep. 558; Farmer v. Ukiah Water Co., 56 Cal. 11; Geddis v. Parrish, 1 Wash. 587, 21 Pac. Rep. 314.

circumstances which surround each particular case, including the acts of the parties, and such other facts as are admissible under the rules of evidence.[1] The burden of proof in such a case is upon the one claiming that these rights passed with the transfer of the land.[2] But the claimant need only prove, first, that the grantor at the time of the transfer was the owner of the rights claimed; and, second, that they were necessary to the full enjoyment of the land conveyed, or, in other words, that at the time of the transfer, they were in fact an appurtenance to that particular tract of land.[3] Having made this proof, under the rule that the conveyance of a particular tract of land conveys all rights which are in fact appurtenant thereto, a presumption arises in favor of the grantee, that such right was intended to pass and did pass with the conveyance of the land, and the burden then shifts to the grantor to prove that it was not intended that they should pass, and that they did not pass with the transfer of the land. And, in the absence of such evidence

[1] Farm Inv. Co. v. Gallup, 13 Wyo. 20, 76 Pac. Rep. 917; Clyne v. Benicia W. Co., 100 Cal. 310, 34 Pac. Rep. 714; Tucker v. Jones, 8 Mont. 225, 19 Pac. Rep. 571; Sweetland v. [3] As to when a water right is in fact an appurtenance to land, see Secs. 1011-1013.

of an intent to the contrary, it is well settled that the rights pass with the conveyance of the land as appurtenances thereto. This subject we will discuss more at length in connection with the particular features connected with these cases.[4] One of the circumstances in these cases, and upon which proof is competent and admissible, is the question of the actual consideration paid for the land. It is a well-known fact that in the arid portions of the West the land is practically worthless without a water right. If the price paid for the land was what might be considered a reasonable price for both the land and water, it is always competent that this fact be shown. As was said in a leading California case:[5] "The use of these waters to the extent at least to which they had been previously employed may have been, and it is fair to presume was, the chief, perhaps only, inducement to the purchase by plaintiffs and their grantors. To authorize judicially the diversion and material reduction of the waters would be a violation of the principle that they took with all apparent benefits and easements belonging to their purchase."

This question has been repeatedly passed upon by the courts of the States in the arid West as well as those of the Eastern States. Indeed, it is a rule in accordance with natural justice and reason that where one sells a house or a farm every right will pass to the purchaser which is necessary to the complete use and enjoyment of the property conveyed, unless expressly reserved in the instrument of conveyance itself. Take, for example, the case of a person in the arid region who owns a farm or an orange grove which is wholly dependent for water upon the right of the owner to divert a certain quantity from a neighboring stream, and perhaps also upon a right of way over the land of another person for his ditch to convey the water to the place at which it is needed; then, to carry our illustration still further, let us suppose that the water of a stream was all appropriated by the owner of the land and by others; then the owner sells the land, and leaves out the word "appurtenances"—perhaps designedly—from the deed conveying the land. The courts would hold under these circumstances that by the conveyance of the tract of land "every right will pass to the purchaser which is necessary to complete the use and enjoyment of the property conveyed unless

4 See Secs. 1009-1014, and cases cited.

5 Cave v. Crafts, 53 Cal. 135.

expressly reserved in the instrument of conveyance." If the law was otherwise the grantor could sell the naked land to one and the right to appropriate the water which was an absolute necessity to the enjoyment of the land to another, and thereby deprive the grantee of the land of any chance to get water with which to irrigate the crops or trees growing upon the same. Of course where the water right has been sold before the date of the conveyance of the land or is specially reserved in the deed the case is different.

**§ 1009. Appurtenances—Sale of water rights when included in the word "appurtenances."**—Where there is the sale of a certain tract of land by a valid deed and in which, after describing the land, there is the expression, "together with all and singular the appurtenances thereunto belonging and appertaining," or one of similar purport, using the word "appurtenances," unless there is a specific reservation of the water right, which is in fact an appurtenance to the land, the water right will pass with the transfer of the land the same as though it had been specifically mentioned in the deed. This follows the regular and well-settled rule of law as to the transfer of the land with "appurtenances," and the water right will pass with the land with the houses, barns, fences, and other appurtenances.[1] Under such a deed of conveyance, what water rights

1 "This conveyance would carry with it the water right appurtenant to the land at the time of the conveyance, unless it was specifically reserved in the deed or it could be clearly shown that it was known to both parties that the water right was not intended to be conveyed." Russell v. Irish, 20 Idaho 194, 118 Pac. Rep. 501; Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568; Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283; Mitchell v. Amador etc. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246; Crooker v. Benton, 93 Cal. 365, 28 Pac. Rep. 953; Pendola v. Ramm, 138 Cal. 517, 71 Pac. Rep. 624; Senior v. Anderson, 138 Cal. 716, 72 Pac. Rep. 349; Pogue v. Collins, 146 Cal. 435, 80 Pac. Rep. 623; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; North American Ex. Co. v. Adams, 104 Fed. 404, 45 C. C. A. 185, 21 Morr. Min. Rep. 65; Travelers' Ins. Co. v. Childs, 25 Colo. 360, 54 Pac. Rep. 1020; Mattis v. Hosmer, 37 Ore. 523, 62 Pac. Rep. 17, 632; Tucker v. Jones, 8 Mont. 225, 19 Pac. Rep. 571; Cave v. Crafts, 53 Cal., 135; Donnell v. Humphreys, 1 Mont. 518; Bessemer Irr. Co. v. Woolley, 32 Colo. 437, 76 Pac. Rep. 1053, 105 Am. St. Rep. 91; Ely v. Ferguson, 91 Cal. 187, 27 Pac. Rep. 587.

Where the language used was, "together with all appurtenances thereto belonging," it was held that the uncontroverted evidence showed that the parties intended to convey the water

are to be considered as appurtenances is a question of fact, which must be determined from the express terms of the deed, and the circumstances surrounding each particular case. As the rule, as to what in fact are to be deemed appurtenances, is the same whether the term "with appurtenances" is used in the deed or not, this subject will be discussed in a subsequent section.[2]

Where a water right is conveyed with a certain tract of land, the law does not hold that such a water right is inseparably connected to that particular tract, and that the grantee may not thereafterward sell and transfer the right or a part of the right separate and apart from the land. As we have seen in a previous section, a water right is a separate and distinct species of real property and may be sold and transferred either with or without the land with which it was formerly used.[3] Therefore, a grantor selling a tract of land with a water right can not limit the right of his grantee to sell the water right separate and apart from the land by providing that the water rights, "shall be deemed and treated as appurtenant to and as a part and for the benefit of said lands."[4]

right. Gelswicks v. Todd, 24 Colo. 494, 52 Pac. Rep. 788.

The right to the use of a ditch and water appropriated for irrigation purposes essential to the land for which it was appropriated and without which it would be practically valueless passes by a deed of such land as "appurtenances." Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727.

A grant of land containing the clause, "including all right, title, and interest in and to the waters of Seaman's Creek and the irrigating ditches appurtenant thereto," carries with it all the water and water rights that were in fact appurtenant to the particular tract of land conveyed, and the determination of the amount of water and the extent of the water right so conveyed must depend wholly upon the extent of the appurtenant rights at the time of the conveyance. Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568.

See, also, Toyaho etc. Co. v. Hutchins, 21 Tex. Civ. App. 274, 52 S. W. Rep. 101; Kimpton v. Jubilee Placer M. Co., 16 Mont. 379, 41 Pac. Rep. 137, 42 Mont. 102.

A water right used in irrigating lands passes by a conveyance of the lands, under the term "appurtenances"; if the grantor so intends and where such is the intention, the grantee may maintain an action to quiet title to such right. King v. Ackroyd, 28 Colo. 488, 66 Pac. Rep. 906.

A conveyance of land, "with all appurtenances," conveys the grantor's water right necessary to its use and enjoyment. Sweetland v. Olsen, 11 Mont. 27, 27 Pac. Rep. 339.

See, also, Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508.

2 See Sec. 1010.

3 See Sec. 955.

4 Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094.

See, also, that a water right is not

In States which have statutory provisions to the effect that a right to water appurtenant to land shall pass to the grantee of such land, unless especially reserved in the deed, it, of course, follows that such a right will pass whether the term "with appurtenances" is used in the deed or not.[5] Also, this is the case where under a general statute to the effect that "one who grants a thing is presumed to grant also whatever is essential to its use."[6] Again, the same rule would follow in States, where by statute the "statutory form" or the "short form" of deeds is provided for, with the provision that when such a deed shall be executed as required by law, it shall have the effect of a conveyance in fee simple to the grantee, etc., of the premises therein named, together with all appurtenances, rights, and privileges thereunto belonging.[7] A deed of the form provided by statute lawfully executed will pass the water rights owned by the grantor and appurtenant to the land conveyed, as though the water right was specifically mentioned or the term "with appurtenances" used in the deed.

**§ 1010. Appurtenances—Sale of water rights when not described or included in word "appurtenances."**—In the history of the transfers of water rights in this Western country together with land, it has often happened that, in the deeds of conveyance, no mention was made of the water rights, which in fact were connected with the respective tracts of land as parts or parcels thereof, and neither did the deeds contain the term "with appurtenances," or one of similar purport. The question now arises, as to when water rights under these conditions pass to the grantee with the land. The general rule upon this important subject is that, when a tract of land is transferred, and the grantor at the time of the transfer was the owner of a water right which had been used in connection with the land, and the deed is entirely silent upon the subject of the water rights, the title to these rights passes to the grantee, the same as though they had been expressly mentioned

an inseparable appurtenance, Secs. 1015, 1016.

[5] See Compiled Laws of Utah, 1907, Sec. 1288x32; Rev. Stat. Utah, Sec. 1281.

See, also, Snyder v. Murdock, 20 Utah 419, 59 Pac. Rep. 91.

[6] Cal. Civ. Code, Sec. 3522.

Smith v. Corbit, 116 Cal. 587, 48 Pac. Rep. 725.

[7] See Comp. Laws of Utah, 1907, Secs. 1981, 1982, 1983.

in the deed; provided, however, that to pass the title to a water right by a deed of the land, it must, in fact, have been made appurtenant to the land. And, this is the rule regardless of the use to which the water was put, whether it was for the irrigation of the land itself, the working of a mill, or mine, or for any other beneficial use or purpose. This rule is based upon the well-known principle of law that, when a person grants a thing, he by implication grants whatever is appurtenant and incident to it and necessary to its beneficial enjoyment. Or, as stated by the Supreme Court of Oregon: "The maxim of law is that whoever grants a thing is supposed, also, tacitly to grant that without which the grant would be of no avail." [1] Or, as stated by Mr. Justice Field, in somewhat different language, in rendering the opinion of the Supreme Court of the United States: "The true rule on the subject is this, that every thing essential to the beneficial use and enjoyment of the property designated is, in the absence of language indicating a different intention on the part of the grantor, to be considered as passing by the conveyance." [2]

"But the word 'appurtenances' is not necessary to the conveyance of the easement or water right in such cases. The general rule of law is that, when a party grants a thing, he by implication grants whatever is incident to it and necessary to its beneficial enjoyment. The incident goes with the principal thing." [3] This rule of law is

1 Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727.

2 Sheets v. Selden, 69 U. S. 2 Wall. 177, 17 L. Ed. 822.

See, also, Andrews v. Donnelly, — Ore. ——, 116 Pac. Rep. 569; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Leonard v. Leonard, 7 Allen 280.

3 Angell on Water Courses, 7th Ed. Sec. 153a.

"Where a right of way attaches to and in favor of a certain house, farm, ranch, or plantation, or a certain right of drainage exists in favor of the farm, or the use of a certain ditch and water for the irrigating of a farm, it will pass by the deed, even without the use of the word 'appurtenances'; for the acquisition of the easement or servitude was intended for the benefit of the estate, and by destination is to be considered as incidental to the use of and as a part and parcel of the realty." Tucker v. Jones, 8 Mont. 225, 19 Pac. Rep. 571.

"The word 'appurtenances' is not necessary to the conveyance of the easement. The general rule of law is that, where a party grants a thing, he by implication grants whatever is incident to it, and necessary to its beneficial enjoyment. The incident goes with the principal thing." Cave v. Crafts, 53 Cal. 135.

See, also, Donnell v. Humphreys, 1 Mont. 518.

applied in cases where the water rights are the riparian rights of the riparian owner as known under the common law and where they are not considered as appurtenances to the land but as a part and parcel of it.[4] So, also, it is the rule of law that, where the water right is acquired under the Arid Region Doctrine of appropriation;[5] and, where, in fact, the water right is an appurtenance to the land, a deed conveying the land, without any reference to the water right, will pass to the grantee all of such water rights then owned by the grantor. In order for the water right, or any portion thereof, not to pass with the deed transferring the land, there must be some limitation or reservation specifically expressed in the deed.[6] And the courts of this Western country have uniformly adhered to this rule, with the exception of some of the Colorado courts.[7]

[4] For the common law of riparian rights, see Secs. 450-551.

In Colorado, the Supreme Court, in the case of Strickler v. Colorado Springs,[8] in deciding that a water right was a separate and distinct property right and might be sold and transferred separate and apart from the land upon which it was used, made use of the following expression: "It logically follows that the right to the use of water for irrigation is a right not so *inseparably* connected with the land that it may not be separated therefrom." The decision nowhere intimates that in the transfer of land a water right used in connection therewith might not pass with the land as an appurtenance thereto, in the sense that the word "appurtenances"

See, also, that a water right can not be made an inseparable appurtenance to a definite tract of land. Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 108 Am. St. Rep. 986.

[8] 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245.

is used in connection with the sale and transfer of land, but it simply held that the water right was not an inseparable appurtenance.[9] But the Colorado Court of Appeals, evidently misconstruing the decision in the Strickler case,[10] in the case of Bloom v. West,[11] said, by way of *dictum* only, that: "It will be readily seen that it is utterly repugnant to the idea of water as 'appurtenant' under any circumstances." Yet, in the same case the Court held that where the owner of a tract of land, and of a water right used therewith, sells the land in two parcels to two different persons, and by common consent the water passes to them without any formal conveyance thereof, each vendee takes an interest in the water right proportioned to the amount of water previously used on the land bought by him.[12] In a later case,[13] the Court of Appeals also held that "a conveyance of land without mention of a water right can not be taken to transfer an interest in a ditch, although the water carried may have been used upon the land." Had the decisions in these cases prevailed in Colorado, in that jurisdiction, at least, the law upon the subject would have in effect been, that a water right could only have been transferred with land when such water right was specifically mentioned in the deed of transfer, and thus reversing the general rule that, unless specifically reserved, a transfer of the land will also pass to the grantee the water right which was in fact an appurtenance to the land. But the view of the Colorado Court of Appeals did not prevail even in that State. In the case of Gelwicks v. Todd,[14] the Supreme Court of the State, in effect, overruled the decisions of the Court of Appeals, and held that a water right may be appurtenant to land so as to pass by a conveyance of the land with its appurtenances, if incident and necessary to the beneficial enjoyment of the land without which its value would be greatly disproportionate to the consideration paid, which,

9 That a water right is not an inseparable appurtenance to land, see Secs. 1015, 1016.

10 See *supra*.

11 3 Colo. App. 212, 32 Pac. Rep. 846.

12 The Supreme Court of Wyoming, criticising the language used by the Colorado Court of Appeals in the above case, said: "It is only *dicta* of the latter case, tending to establish a doctrine dangerous, as we conceive, to great property interests heretofore considered secure." Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

13 Child v. Whitman, 7 Colo. App. 117, 42 Pac. Rep. 601.

14 24 Colo. 494, 52 Pac. Rep. 788.

with other circumstances, indicates a clear intention of the parties to transfer the water right with the land. And the Supreme Court in other cases has also held that, since a water right is the subject of property, it may be transferred either with or without the land upon which it has been used, and that the question whether it will pass by a conveyance of the land depends upon the intention of the grantor, which must be gathered from the express terms of the deed, or, when that is silent, from the presumption that arises from the circumstances of each particular case.[15] These decisions make the rule in Colorado uniform with the rule in the other States.

**§ 1011. Water rights—When in fact appurtenances to land—Where water is used for irrigation.**—We have stated in the preceding sections that in the sale and transfer of specific tracts of land, where the term "with appurtenances," or one of similar purport, is used in the deeds,[1] or even in cases where that term is not used,[2] and no mention is made of a water right under certain circumstances the water rights will pass with the conveyance of the land. And, upon this question as to whether or not a water right will pass to the grantee of the land will largely depend the fact as to whether or not, at the time of the transfer, the water right claimed by the grantee as having so passed was in fact an actual appurtenance to the tract of land described in the deed and transferred by it. If therefore becomes necessary at this point to know when a water right, ditch, or other structure, used for diverting and conducting water to the place of use, is in fact an appurtenance to the land upon which the water is used, in order to pass with the transfer of the land to the grantee. This question as to whether a water right, ditch, or canal, is appurtenant to a certain

15 See, also, Arnett v. Linhart, 21 Colo. 188, 40 Pac. Rep. 355; Travelers' Ins. Co. v. Childs, 25 Colo. 360, 54 Pac. Rep. 1020; Daum v. Conley, 27 Colo. 56, 59 Pac. Rep. 753; Bessemer Irr. D. Co. v. See, also, Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025, criticising the decision in Bloom v. West, *supra*.

1 For the conveyance of water rights as "appurtenances," see Secs. 1008, 1010.

2 See Sec. 1010.

tract of land, a mine, a mill, or to any other real property, is one of fact, and depends entirely upon the circumstances surrounding each particular case.[3] However, in general, we will say that a water right, which secures to the owner of a tract of land water for the irrigation of the same, or for some other use or purpose, necessary to the beneficial enjoyment of the land, the title to which is also in the owner of the land, becomes appurtenant to such land, but not an inseparable appurtenance.[4] The doctrine is well settled in the States of the arid region, that a water right used in connection with a certain tract of land for the irrigation thereof, where necessary to the beneficial enjoyment of the land, together with the ditch, canal, or other works necessary to conduct the water to the place of use, become appurtenances to the land, provided that they are all owned by the same parties. But they must be the property of the owner of the land to which it is claimed they are appurtenant, and not the property of another.[5] And the general rule of law in the case of

3 The mere fact that water was used upon a certain tract of land does not make it appurtenant to the land; as to whether or not the water right was or was not an appurtenance is a question of fact. Quirk v. Falk, 47 Cal. 453, 2 Morr. Min. Rep. 19.

In construing conveyances of land on which there is an irrigation ditch, to ascertain what interest in the ditch passed thereby, the instrument should be examined in the light of the facts regarding the use of the ditch before and after their execution. Farm Inv. Co. v. Gallup, 13 Wyo. 20, 76 Pac. Rep. 917.

The water right of one who appropriates water for the purpose of using it upon lands in his possession, but which he does not own, does not become appurtenant to such lands, without a conveyance in writing to the owner of the land. Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

The use of water by a trespasser upon the land of another does not make such water appurtenant to the land. Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678; Mitchell v. Amador etc. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246; Payne v. Cummings, 146 Cal. 426, 80 Pac. Rep. 620, 106 Am. St. Rep. 47.

One purchasing a tract of land and water rights after the owner had sold or relinquished certain water rights formerly appurtenant thereto by a duly recorded deed took no better title to the water rights than the owner at the date of the sale of the land. Cantrall v. Sterling Min. Co., —— Ore. ——, 122 Pac. Rep. 42.

4 That a water right is not an inseparable appurtenance to land, see Secs. 1015, 1016.

5 Ginocchio v. Amador etc. Co., 67 Cal. 493, 8 Pac. Rep. 29.

Where the rights of a community to the waters of a certain stream were appurtenant to the lands of the individuals composing the community, each individual had an appropriative right to his share of the water. Hil-

the sale or alienation of the land is that such water rights, unless specifically reserved in the deed, will pass to the grantee as appurtenances.[6] And the fact that the land upon which the water is used by the appropriator is unsurveyed public land of the United States, does not prevent the water from becoming appurtenant thereto.[7] So, the right to the water of a canal to the same extent as used by the mortgagor is appurtenant to the mortgaged tract, and passed

dreth v. Montecito etc. Co., 139 Cal. 22, 72 Pac. Rep. 395.

Water rights in an irrigation company, which are appurtenant to specific land, will be allowed against the receiver of the company. Atlantic Trust Co. v. Woodbridge, 86 Fed. Rep. 975, 79 Fed. Rep. 39; *Id.*, 79 Fed. Rep. 501.

6 "The disastrous results of separating the land and water are immensely greater here, and, from considerations strictly legal and technical, the water rights seem to be more thoroughly appurtenant to the land here than" at common law. Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

Water rights, ditches, etc., used appurtenant to homesteads are a part of them and exempt from execution. Payne v. Cummings, 146 Cal. 426, 80 Pac. Rep. 620, 106 Am. St. Rep. 47.

A transfer by parol of a settler's right of entry of lands carries with it a water right appurtenant thereto, entitling the transferee to the benefits of the priority of the appropriation. McDonald v. Lannen, 19 Mont. 78, 47 Pac. Rep. 648; Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972; Nevada D. Co. v. Bennett, 30 Ore. 59, 45 Pac. Rep. 472, 60 Am. St. Rep. 777; Sweetland v. Olsen, 11 Mont. 27, 27 Pac. Rep. 339; Crocker v. Benton, 93 Cal. 365, 28 Pac. Rep. 953; American Nat. Bk. v. Hoeffer, 18 Colo. 53, 70 Pac. Rep. 156.

with the land under the mortgage.[8] Again, a water right and the ditches used with the same are appurtenant only to such parts of a large tract of land as had been actually irrigated.[9] And, where the grantor had no right whatever in the water, the grantee, of course, takes no rights under the deed.[10] Again, the use of water upon land to which it is already appurtenant, by one who is a trespasser thereon, will give him no such right to the water that he may divert it from the land, or, upon being ejected therefrom, convey to a stranger a legal title in the water or in the use thereof.[11] By the statutes of some of the States, it is provided that the appropriation of water for irrigation must become appurtenant or fixed to some specific tract of land from which it can be separated only in the manner provided by the statute.[12] That a water right may become an appurtenance to a certain tract of land, under these statutes must be admitted, but that it must thereby become an inseparable appurtenance so that the owner thereof can not sell it separate and apart from the land, the same that he can sell any other property right, we deny. However, we will discuss this phase of the subject hereafter.[13] But, upon the other hand, where the facts surrounding any particular case show that the water right claimed was not in fact an appurtenance to a certain tract of land which has been conveyed, it will not pass with a conveyance of such land.[14] A water right can not always be deemed an appurtenance to a certain tract of land upon which it was formerly used as is the case where the land was sold before a canal on the land was completed and before any water therefrom had been used on the land. In such a case it was held by the Montana Court that the water right claimed by

the grantee was not an appurtenance to the land.[15] As was said in a recent California case:[16] "It attached as an easement appurtenant only to such lands of the tract as had been actually irrigated from it."[17] Again, a water right does not become such an appurtenance to land taken up under a desert entry, or other land entry under the laws of the United States, so that upon the abandonment of the entry it also works an abandonment of the water right. But the water may be transferred by the appropriator thereof to other lands and used by him there.[18] Neither do water rights become appurtenant to land when used thereon by a trespasser, but the trespasser may change the use to other lands.[19] Again, it is held that where the water rights are represented by stock in a corporation they do not become appurtenant to the land in connection with which they were acquired and used; and, if the owner disposes of the stock in the company, he or his grantees have no further claim to such rights for irrigation.[20] Then, again, where a tract of land to which a water right is appurtenant is partly sold, or all sold in parts, the water right will pass to the grantees in parts,

according to the specific amount that the water right was used on the respective tracts.[21]

But in order for a water right to be an appurtenance to land there must be some land, held by at least a possessory title to which it may become appurtenant. And a water right for the purposes of irrigation can no more exist, where there is no land to be irrigated, than can an easement for the passage of light to ancient windows exist where there have never been any windows. As we have seen, in order to acquire a water right by appropriation, and to continue the right, the application of the water must be made to some beneficial purpose.[22] "Where one thing depends upon another for its existence, it would seem entirely proper to call it an appurtenance to that thing upon which it so depends."[23]

**§ 1012. Water rights—When in fact appurtenances—Water used for mining.**—Water rights are deemed appurtenances to land in other cases than where the water is used for irrigation.[1] Oftentimes a water right is essential to the working of a mine, and, in such a case, where the water right is owned by the owner of the mine, it is deemed an appurtenance thereto so that the title will pass to the grantee in the sale and conveyance of the mine without mentioning the water right in the deed. As the transfer of a thing transfers all its incidents and appurtenances, unless specifically reserved,[2] in the transfer of mining property, one of the questions to be determined is, whether or not the water right and the ditches and other works used in conducting the water to the place of use are in fact incidents and appurtenances to the mine or mining ground. This is a question of fact to be determined from all the circumstances surrounding each particular case.[3] But, in general,

21 Senior v. Anderson, 138 Cal. 716, 72 Pac. Rep. 349; Bloom v. West, 3 Colo. App. 212, 32 Pac. Rep. 846.

22 For the appropriation of water, see Secs. 706-732.

For the consummation of the right, see Secs. 725-728.

23 Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

1 See Sec. 1011.

2 See Secs. 1005-1010.

3 The term "mining ground," as used in the California statute, includes a ditch and water right, by the means of which a mine is operated, as an appurtenance thereof. McShane v. Carter, 80 Cal. 310, 22 Pac. Rep. 178.

See, also, Hungarian M. Co. v. Moses, 58 Cal. 168; Ginocchio v. Amador etc. Co., 67 Cal. 493, 8 Pac. Rep. 29; McDonald v. Bear River etc. M. Co., 13 Cal. 235; Beatty v. Murray Placer M. Co., 15 Mont. 314, 39 Pac. Rep. 82; Quirk v. Falk, 47 Cal. 453,

the relation of a mine to the water by which it is operated is analogous to the relation between an ordinary mill and the water upon which its use depends.[4] And it is held that, upon the one who asserts that a ditch and water right are appurtenant to a mine is cast the burden of proving that such is the fact.[5]

It was held in a recent case in Montana,[6] that water rights viewed as independent property were taxable as was other property but where they were appurtenant merely to lands they were not separately taxable from such lands.

**§ 1013. Water rights—When in fact appurtenances—Water used by mills.**—Upon the question of a water right being appurtenant to a mill, the authorities hold that if a mill be granted, reserved, or devised, either with or without the term "with appurtenances," that it includes all property which is in fact mere appurtenances and owned by the grantor at the time of the conveyance; these also include all water rights, ditches, or other works essential to the running of the mill. This has been the general rule under the common law of riparian ownership from a very early period,[1] as well as where the water right was originally acquired

2 Morr. Min. Rep. 19; Mattis v. Hosmer, 37 Ore. 523, 62 Pac. Rep. 17, 632.

4 McShane v. Carter, 80 Cal. 310, 22 Pac. Rep. 178.

For rights appurtenant to mills, see Sec. 1013.

5 See Quirk v. Falk, 47 Cal. 453, 2 Morr. Min. Rep. 19, where it is held that the purchase of a water right and ditch by a mining company does not necessarily constitute said ditch and water rights appurtenant to a mining claim.

6 Hale v. Jefferson County, 39 Mont. 137, 101 Pac. Rep. 973.

1 In Touchstone it is laid down that, "by the grant of mills, the waters, flood gates, and the like, that are of necessary use to the mills, do pass." Shep. Touch. 89; Sheets v. Selden, 69 U. S. 2 Wall. 177, 17 L. Ed. 822; McShane v. Carter, 80 Cal. 310, 22 Pac. Rep. 178.

"It is a well settled rule of law that the grant of a mill carries with it by necessary implication the right to the use of the water coming to the mill and furnishing power for working it, and also to the canal or raceway which carries the water from the mill, to the full extent of the grantor's right and power so to grant them." Richardson v. Biglow, 15 Gray 146, 154.

See, also, Blake v. Clark, 6 Greenl. 436; Maddox v. Goddard, 15 Me. 218; Baker v. Bessey, 73 Me. 472, 40 Am. Rep. 377; Miller v. Miller, 15 Pick. 57 (Mass.); Hapgood v. Brown, 102 Mass. 451; Frink v. Branch, 16 Conn. 260; Perrin v. Garfield, 37 Vt. 304; Morgan v. Mason, 20 Ohio 401, 55 Am. Dec. 464; Wickersham v. Bills, 8 Ind. 387; Neaderhouser v. State, 28 Ind. 257; Curtis v. Norton, 58 Mich. 411, 25 N. W. Rep. 327; Bank of

under the Arid Region Doctrine of appropriation.[2] And, in the Western States, it is well settled with reference to the ordinary mills, or plants for the generation of power, that the water rights essential to their operation, and the necessary ditches and other works used therewith, are appurtenant to the mill or plant when owned at the time of the sale and transfer by the same party, and will pass by a conveyance of the mill or plant either with or without the express mention of the term "with appurtenances," provided that they are not expressly reserved in the deed.[3] But whether the water right will so pass depends upon the question of fact as to whether or not the use is such that it will make it an appurtenance, and is also the property of the owner of the mill at the time of the transfer.[4]

North America v. Miller, 7 Sawy. 163, 170, 6 Fed. Rep. 545; Hadden v. Shutz, 15 Ill. 581; Cox v. Howell, 108 Tenn. 130, 65 S. W. Rep. 686, 58 L. R. A. 487, and note.

2 For the appropriation of water for mill purposes, see Sec. 695.

For appropriation for the generation of power, etc., see Sec. 695.

McDonald v. Bear River etc. Co., 13 Cal. 220, where it is held that, if the right to the use of the water was acquired by appropriation for the purpose of operating a mill, such right would pass by a transfer of the mill to the grantee as an appurtenance thereto.

3 McDonald v. Bear River etc. Co., 13 Cal. 220, 15 Cal. 145, 1 Morr. Min. Rep. 626; McShane v. Carter, 80 Cal. 310, 22 Pac. Rep. 178; Bruger v. Butler, 6 Ore. 459; Jackson v. Trullinger, 9 Ore. 393; Tucker v. Jones, 8 Mont. 225, 19 Pac. Rep. 571; North American etc. Co. v. Adams, 104 Fed. Rep. 404, 45 C. C. A. 185, 21 Morr. Min. Rep. 65, where it is said: "A deed of a mill site and mill upon which a right to divert water from a stream and to use it to operate the mill has been exercised conveys the water right as an appurtenance to the mill, in the absence of any reservation of it, of any conveyance of it to another, and of any other evidence that the grantor did not intend to convey it."

See, also, Bank of British N. A. v. Miller, 6 Fed. Rep. 545, 7 Sawy. 163.

Briggs v. Murray, 29 Wash. 245, 69 Pac. Rep. 765, where it was held that a water right and canal were appurtenant to a mill, and to pass by a sheriff's deed without special mention, the Court in the opinion saying: "It is next contended that the canal and water right are not appurtenant to the mill property. We think it is clearly appurtenant. It was constructed by the owners of the mill property, and has always been used, since its construction, for the benefit of the mill. The mill property, as the principal thing, is dependent on it, and, as a thing principal to the principal thing, the canal passes with it."

4 "The water supply of a mill will ordinarily pass with a conveyance of the mill, but, in order to do so, it must belong to the mill—must be the property of the owner thereof, and

**§ 1014. Appurtenances—Rule where the land is subdivided.**—Subject to the limitations as discussed in the preceding sections upon the subject of appurtenances,[1] upon the sale of a part of a tract to which a water right is appurtenant, and where the rights granted or reserved are not specifically set forth in a deed of conveyance, it is the settled law upon the subject that the grantee to such a part takes with his land such a proportion of the whole water right as the acreage of his tract bears to the entire tract, to which the whole of the water right was appurtenant.[2] Of course, if the rights conveyed are specifically defined in the deed instead of taking in proportion the grantee takes only the rights granted.[3]

**§ 1015. A water right is not an inseparable appurtenance to land.**—By the statutes of some of the States of this Western country, it is provided that a water right where the appropriation is made for irrigation must become appurtenant or fixed to some specific tract of land, from which it can be separated only in the manner provided by the statute. An attempt has been made by some of these statutes to make the water right an inseparable appurtenance to the land, so that it can not be sold or transferred therefrom. But, as we have seen in previous sections of this discussion, a water right is a separate and distinct property right, and, under the authorities, it may be sold and transferred separate from any land or any interest in land.[1] Again, there is nothing in the nature and character of a water right which makes it an inseparable appurtenance to any particular tract of land. It is true that, under certain conditions, already discussed, a water right may be an appurtenance to a tract of land, so that it will pass to the grantee in the transfer of the land, but it is also true that this "does not

not of another." Ginocchio v. Amador etc. Co., 67 Cal. 493, 8 Pac. Rep. 29.

1 See Secs. 1005-1013.

2 Booth v. Trager, 44 Colo. 409, 99 Pac. Rep. 60; Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568; Buhnke v. Aubert, 58 Ore. 6, 113 Pac. Rep. 38; Davis v. Randall, 44 Colo. 488, 99 Pac. Rep. 323; Oliver v. Burnett, 10 Cal. App. 403, 102 Pac. Rep. 223; Tarpey v. Lynch, 155 Cal. 407, 101 Pac. Rep. 10; Cave v. Crafts, 53 Cal. 135.

3 See, for rights specified in the deed, Secs. 1007, 1009.

1 See Sec. 995.

mean, and never meant, inseparable,"[2] from the land, by sale or otherwise, at the will of the owner, provided there always continues the application of the water to some beneficial use or purpose, and that other vested rights are not injured by the change.[3] We are of the further opinion that, even by legislative enactment, a water right, constituting as it does a property right of the highest order, can not be made an inseparable appurtenance to the particular tract of land for which it was first appropriated, so that the owner thereof can not sell or dispose of the same, or use the water claimed under the right upon some other tract of land. And, to treat such a sale as an abandonment of the water right would be to disregard the rights of man under the bill of rights guaranteed under our constitutions to own and hold property and not to be deprived thereof except by due process of law and then upon just compensation. I make this statement with the full knowledge that several State legislatures have attempted to do this very thing, and to treat such a sale by the original appropriator as an abandonment of the water right and as vesting no title in the grantee to the same. I am also familiar as to just how these laws came to be enacted. They sprang from the theories of certain State engineers, capable in their way to run a level or a transit, to construct irrigation works, and to measure the exact amount of water which is required under certain conditions to successfully irrigate a crop of potatoes or alfalfa. But, when it comes to determining the questions involving the principles governing the fundamental rights of man under our constitutions and laws, these engineers are "not reliable." These State engineers having the control of the administering of the laws of their respec-

[2] Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

Where, in a certain deed conveying a definite tract of land and also a definite water right, there was evidently an intention upon the part of the grantor to make the water right an inseparable appurtenance to the land conveyed, it was held that the grantee might sell or dispose of any part of the water right, separate from the land. Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094.

"Natural justice, therefore, is subserved by recognizing the right of a water right holder to change his appropriation, under such circumstances, to lands capable of profitable cultivation, or to sell his right to another, to be used by the latter for a beneficial use recognized by the statute." Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332.

[3] For the change of use of the water, see Secs. 869, 872.

That a water right is a property right, see Secs. 768-771.

tive States relative to irrigation and water rights, have gone before the legislatures of their States, with their theories, some of them most excellent, but others vague and impracticable; and, as the result, certain Acts have been passed which the courts have declared and are declaring unconstitutional and which it would have been better not to have enacted. Among these Acts are to be found those which attempt to provide that a water right shall be and always remain an inseparable appurtenance to any particular tract of land. And, in this respect, the Act of the legislature of Wyoming was framed with this exact end in view, and, following the theory of the then State engineer upon the subject attempted to provide in effect that any attempted sale of a water right by the owner thereof separate and apart from the land for which it was appropriated worked an abandonment of the water right and the grantee took no title to the same. When the question first reached the Supreme Court of Wyoming it was held against the Act and that a right to the use of water for the purposes of irrigation, together with the ditch or other conduit for the water may be conveyed separate from the land upon which the water is used.[4] This point was decided without any special stress being laid upon it, and it was not until 1904, in the case of Johnston v. Little Horse Creek Irrigating Co.,[5] where the question arose relative to the right of a corporation to sell one-half of its water right acquired under the Act in question to another company, that the question in all its phases was fully discussed. The judgment of the lower court upheld the right to sell. On appeal to the Supreme Court, it was strenuously urged by the plaintiffs in error that the sale of the water right was invalid and conferred no right or title upon the grantee, and that it amounted to an abandonment on the part of the selling company of one-half of the original appropriation. In the brief of counsel for the plaintiffs in error much was said with reference to the policy of the rule permitting a sale of a water right separate from the land; and to strengthen their case counsel submitted with such brief the views of a former State engineer of

[4] McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025.

In the first of above cases the water rights accrued after the Act in question, Rev. Stat. Wyo., 1899, Secs. 873, 917, 918, 924, and in the latter case they accrued before.

[5] 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

the State, "who worthily occupies an eminent position as an irrigation engineer, and whose ability is unquestioned (as an engineer) and for whose opinions the members of this court entertain a high regard." And what is novel in a court of law, it was argued that the views of the engineer should be taken in preference to the views of the Court for the reason of his practical knowledge, and the lack of knowledge of such matters upon the part of the Court. It was also strenuously asserted that the doctrine of the sale of a water right separate from the land was the doctrine of the courts and not of the irrigators and that it created a source of litigation. Mr. Justice Potter in rendering the opinion of the Court in affirming the judgment below, said: "We can not agree that the doctrine has resulted from ignorance concerning irrigation matters. Nor can we agree with the notion that men not necessarily or usually trained in the law are more competent than the courts to determine legal principles controlling the use of water by prior appropriation, notwithstanding that the judges may not, as a rule, be practical irrigators. . . . It may be accepted as true that the rule permitting the sale of a water right separate from the land has been the source of litigation. But that affords no sufficient reason for destroying property rights. We can not agree that, in order to discourage litigation or render it impossible, the courts should devest the citizen of his property. . . . To adopt the view contended for against the validity of the conveyance in question would, in our judgment, require us to deny the element of property in the water right itself. Nothing in the decisions on the subject or in the statute authorizes that.[6] Moreover, forfeitures have never been favored in law. But is it not a conclusive answer to the proposition for the new theory that there is no principle of law upon which it can be logically or reasonably based?"

But the Supreme Court of Wyoming is not the only court which has had this identical question before it. The legislature of the State of Idaho, in 1901,[7] attempted to make the water right an in-

[6] That a water right is a property right, see Secs. 768-771.

[7] See Sess. Laws of Idaho, 1901, p. 200, Sec. 9b. "All waters of the State, when flowing in their natural channels, including the waters of all natural springs and lakes within the boundaries of the State, are declared to be the property of the State, whose duty it shall be to supervise their appropriation and allotment to those diverting the same therefrom for any beneficial purpose, and the rights to the use of any of the waters of the

separable appurtenance. The question of the construction of this statute first arose in the case of Hard v. Boise City Irrigation and Land Company,[8] and was decided against the statute, and that users of water from a ditch or canal acquire such a property right as they may transfer to other lands under such ditch and canal. It was also held that they may sell and transfer the right to use such waters, and the purchaser may transfer it to other lands under the ditch or canal, so long as the change of the place does not interfere with the rights of others, and that the canal companies do not acquire any greater rights, than are granted to the individual citizens of the State. And, Mr. Justice Alshie, in the concurring opinion, said: "If a thing really is property, the legislature, by saying it shall not be considered such, can not in fact deprive it of the character and quality which constitute it property. . . . I do not conceive of any well founded reason or principle of law that forbids the owner of a tract of land from separating and segregating an appurtenance therefrom, and disposing of it with the same freedom of sale or *jus disponendi* as he may enjoy with reference to any other property right. . . . It is a fundamental principle that every citizen has the inherent right to dispose of all his acquisitions."[9] He further held that the argument that under Section 4, Article 15,[10] of the State Constitution, the appurtenance can only attach to "the land so settled upon or improved," and that any attempt to separate the right from the specific piece of land to which it was originally applied works an immediate forfeiture or abandonment, is illogical and faulty. In a very recent case decided by the Supreme Court of Idaho,[11] it was held that a clause in the contract, which is as follows, "but in no case will water rights or shares be dedicated to any of the lands aforementioned," was valid;

State for useful or beneficial purposes are recognized and confirmed; and the right to the use of any of the public waters which have heretofore been or may hereafter be allotted or beneficially applied shall not be considered *as being a property right in itself, but such right shall become the complement of*, or one of the appurtenances of, the land or other thing to which, through necessity, said water is being applied," etc.

10 For Idaho State constitution, see Chap. 89.

11 State v. Twin Falls Canal Co., —— Idaho ——, 121 Pac. Rep. 1039.

and the Court further held that it permitted the rotation of the water which tended towards the economical use of the same. In a still later case,[12] it was said: "This Court held that the owner of a water right, by purchase, or original appropriation, had a right to dispose of the same and sell the water separate and apart from the land. . . . If this be a correct statement of the law, then the trial court erred in its conclusion of law, to the effect that the water applied to the desert entry became appurtenant to the land and inseparable therefrom." [13]

Other States have passed Acts similar in nature to those of Wyoming and Idaho discussed above, attempting to make water rights within their respective jurisdictions inseparable appurtenances to the specific tracts of land to which the water was first applied. Some of these Acts provide that the water right can only be separated from this land after approval by the State engineer and publication of notice.[14]

We consider these statutes as faulty as those of Wyoming and Idaho discussed above, for the reason that there is nothing in the nature and character of a water right acquired under the Arid Region Doctrine of appropriation which makes it, upon any principle of law which can be conceived, an inseparable appurtenance to any particular tract of land, so that a sale or transfer of the right would work an abandonment, and vest no right in the grantee. Upon the other hand, the inherent rights guaranteed under our constitutions and laws to own, hold, and dispose of all or any portion of our property, either as a whole or in parts, permits the sale and transfer of a water right separate from the land. This principle was undoubtedly recognized by Congress in passing the National Reclamation Act,[15] where, in Section 8, it is provided that the Secretary of the Interior, in carrying out the provisions of the Act, shall proceed in conformity with the laws of the respective States

14 For the statutes of the various States upon the subject, see Part XIV.

15 See Act of June 17, 1902, Chap. 1093, 32 Stat. L., p. 390, Sec. 8; 7 Fed. Stat. Ann., 1905, p. 1100; Supp. U. S. Comp. Stat., 1905, p. 349.

For copy of Act, see Sec. 1214.

and Territories; and, in the same section is the proviso, "That the right to the use of water acquired under the provisions of this Act shall be appurtenant to the land irrigated," etc. As will be noticed the proviso does not state what "land irrigated," nor does it attempt to make the water an inseparable appurtenance to any land. It certainly can not be contended in the face of the whole of this section, that a person in either the States of Wyoming or Idaho, who had fully paid for a water right under the provisions of the Act, and where the laws of those States recognize the validity of a sale and transfer of a water right separate and apart from the land to which it was first applied, can not so sell his right, or transfer the water claimed thereunder to some other tract of land. The same may be said relative to the water rights acquired under the Act in other States under the principles stated above.[16]

We will now discuss some of the physical reasons why a water right should not be deemed an inseparable appurtenance to a particular tract of land.[17]

**§ 1016. A water right should not be an inseparable appurtenance to land.**—In the previous section we discussed from a legal standpoint that a water right is not an inseparable appurtenance to a particular tract of land.[1] In this section we will discuss why it should not be considered such an appurtenance from the physical standpoint; and as the law is based upon reason and common sense, the physical reason as to why the right should not be so considered, undoubtedly led to the rule of law that it is not so considered.

We will suppose, for example, that a settler upon the public land has taken up 180 acres and has lawfully appropriated two second feet of water for the irrigation of 80 acres; that this was accomplished after years of hard work in constructing his dam and ditches and in clearing the land and getting it ready for cultivation. His appropriation is entirely consummated and the title to the use of the two second feet of water is perfect in himself so long as he continues to apply the water for the irrigation of this particular tract of land. It has cost him a lot of money and is a property right. After using the water for the first 80 acres for a number of years, and in the meantime he has also broken up the

16 For the sale and transfer of water rights, see Secs. 955-1000.

17 See Sec. 1016.

1 See Sec. 1015.

other 80 acres of his claim and it is ready for cultivation, we will suppose that he desires the first 80 to rest for a few years, or, that he can put it to some use for which it needs no irrigation. But the second 80 requires the water, and, owing to other rights coming after his appropriation all of the waters of the stream are appropriated and he can secure no water for it except that claimed under his old appropriation. Is there any reason in law, common sense, or justice why the water right must remain a fixed and inseparable appurtenance to the first 80 acres, or that he can not apply the water claimed thereunder to the irrigation of the second 80 acres? Again, we will suppose that he for some reason does not wish to irrigate any of his land, is there any reason in law or otherwise why he may not sell all or a portion of his right to a neighbor who has the use for it and desires to purchase the right? We concede the rules that surplus waters can not be sold, and also that the failure to use the water for a certain period works an abandonment, and what we are speaking of are absolutely valid water rights.[2]

Again, it frequently happens, that through no fault of the owner of a water right, and by the operation of natural laws, land to which water rights have been attached becomes unsuitable for cultivation. In the mountainous regions, floods frequently wash away and destroy farming lands, or leave deposits of coarse gravel and boulders upon them; and other natural causes often render such lands not only unprofitable, but impossible of irrigation and cultivation. Other illustrations might be given, but they are unnecessary and space will not permit, where lands previously irrigated have been changed so that irrigation is not only impracticable but would further injure the lands to which the water had been formerly applied.[3]

There is, however, another reason why a water right should not be considered an inseparable appurtenance to a certain tract of land, and that is from the standpoint of the economical use and the suppression of the waste of the water, discussed in another chapter.[4]

Owing to the great scarcity of water throughout the arid West, a given supply should be made to go as far as it can successfully

2 That surplus water can not be sold, see Sec. 1027.

For abandonment, see Secs. 1099-1117.

3 For the injury to lands by the application of too much water, see Sec. 914.

4 See Chap. 49, Secs. 874-916.

go, when economically used and without waste. From investigations made by the United States Department of Agriculture, it has been determined that, where a water right is considered an inseparable appurtenance to a certain tract of land, and rights are allowed for such specified tracts with a maximum limit on the quantity of water which may be used, or a minimum duty of water,[5] a much larger percentage of water is used per acre, than where a certain quantity of water is allowed for the use on any lands that the owner may see fit. In the first case the owner will use as much water as possible for the given tract, and, in the latter, he will make a given amount of water irrigate as many acres as possible.[6]

There is also an important legal reason why a water right should not be considered an inseparable appurtenance to a certain tract of land. As we have seen, a water right is a property right of the highest character.[7] Therefore, the right of the alienation of a water right is one which is based upon the general rights of property, and arises oftentimes out of necessity, in order that injustice might not be done to the owner. The alienation of a water right should not work an abandonment or forfeiture of the right, which is a valid property right and oftentimes of great value, the loss of which would incur great financial loss to the owner. As was held in an Arizona case, natural justice, therefore, is subserved by recognizing the right of a water-right holder to change his appropriation to lands capable of profitable cultivation, or to sell his right to another, to be used by the latter for a beneficial use. To adopt a rule prohibiting the alienation of a water right would be to adopt a more stringent rule than that under the common law, as riparian rights to the use of the water may be sold or conveyed.[8]

Another physical reason why water should not be an inseparable appurtenance to a certain tract of land is upon the side of the question of economical use of the water and suppression of waste. If the use of water could not be transferred from one tract of land to another, it would do away with the question of the rotation of

[5] For duty of water, see Secs. 902-908.

[8] See Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332.

water, which as we have discussed in previous sections, tends toward its more economical use.[9]

**§ 1017. Appurtenances—Ditches and canals when appurtenant to land.**—Where a ditch, canal, or other works are used to divert and conduct the water appropriated to the place of use, and where they are constructed over a permanent easement, or right of way, acquired originally in some lawful manner,[1] a sale of the land where the water is used and for which the appropriation was made, will, in the absence of an express reservation to the contrary, pass to the grantee, under the principles discussed in the previous sections,[2] the title of the grantor in and to such ditch, or other works, at the time of the transfer; and that, too, regardless of the fact whether or not the term "with appurtenances" is used in the deed; provided, however, that the ditch, or other works, were in fact an appurtenance to the specific tract of land transferred. The rule of law in this respect is practically the same as the transfer of water rights as appurtenances discussed in previous sections.[3] There are, however, some points which need special mention. As is the case with water rights, where the term "with appurtenances" or one of similar purport is used in the deed, where the grantor possesses the right to conduct water to the land granted over the land of another, such right passes to the grantee under the *habendum* clause as an "appurtenance thereunto belonging," without specifically mentioning such right.[4] So also an easement over the lands of another, and the ditches constructed thereon, may pass as appurtenances to

the dominant estate, without the word "appurtenances" being mentioned in the deed, conveying such estate, provided that it was the intention of the grantor that they should pass with the transfer of the land. This is upon the theory that "he who grants a thing is supposed to and does grant that without which the grant is worthless." The deed being silent, the intention of the grantor is to be gathered from the presumptions arising from the circumstances surrounding each particular transaction.[5] The perpetual right of a party and his heirs and assigns to have the water for his land carried through a certain ditch is an easement appurtenant to the land in whosesoever hands it might be.[6] However, the ditch or canal is an entirely distinct property right from the water right and may be conveyed separately from each other if the intention to do so is apparent in the deed.[7] It therefore follows that, where one of these rights has been disposed of before the sale of the land, or is reserved in the deed to the land, only the remaining right will pass to the grantee as an appurtenance. It is held that a water ditch can not be appurtenant to another ditch so as to pass as such under a grant of the latter. But an upper ditch which is a part of a system of ditches and necessary to furnish the water supply to the lower ditches, and without which they would be worthless, is covered by the words of a deed conveying the entire interest of the grantor in the system without specifying the different ditches, and therefore passes by the deed as a part and parcel of the system.[8]

Ditches and canals constructed for the irrigation of land occupied as a homestead, without which the land would be of little value, and the water flowing through them, are treated as appur-

tenances to the land, as a part of the homestead and are exempt from execution for debts contracted prior to the issuing of the patent.[9]

§ 1018. **Appurtenances—Water right appurtenant to ditch, or ditch to water right.**—A water right, although a distinct property right from that in the ditch or canal, or other works, may under certain conditions be an appurtenance to a ditch, so where the ditch is sold that the water right will pass to the grantee, without special mention.[1] But this does not mean that the water right is an inseparable appurtenance to a certain ditch, as the water may be used through any ditch.[2]

In one California case,[3] it was held that, as the water right was the principal thing, and, if either is appurtenant to the other, the ditch is appurtenant to the water right.

There can be no right to the current of the stream as appurtenant to a diversion of the flowing water of the stream.[4]

§ 1019. **Mortgages—The alienation of water rights, ditches, and other works by means of.**—As we have seen in the preceding sections, the water rights acquired by appropriation, the ditches, and canals, and the land for the benefit of which the appropriation was made, are all separate and distinct property rights, and may be sold and transferred either together or separate and apart from each other.[1] Another method for the alienation by the owner of all

of these property rights, either separate and apart from each other, all together, or by a combination of any two or more, is by a mortgage or deed of trust. The mortgagor may pay off the mortgage debt and the property will then be released from the mortgage lien and will then revert to the mortgagor. But, as it often happens, the mortgage has to be foreclosed and the property sold under execution or has to be sold by the trustee under the power of sale. In these cases upon the execution and delivery of the sheriff's or the trustee's deed, the title to the property passes to the purchaser at the sale or to his assignee.[2]

In general, it may be said that the conveyance of water rights, or the works necessary for their utilization, by a mortgage or deed of trust is governed by the same rules of law as those which govern the mortgaging of other real property. Also, we will add, that the rules, as to what are or are not treated as appurtenances and pass to the mortgagee or to the purchaser at the foreclosure sale, are, in general, the same as the rules which govern the subject of appurtenances in the case of the ordinary sale and transfer of these rights and which we have fully discussed in preceding sections of this chapter.[3] In the transfer of land, as to what rights, other than the bare land itself, pass to the mortgagee, depend upon the terms expressed in the mortgage; and, when this is silent or ambiguous, from the presumption which arises from the facts and circumstances of each particular case.[4]

§ 1020. **Mortgages—After acquired water rights as affected by.**—There are, however, some questions relative to the alienation of property rights of this nature which require particular attention. One of these questions is, the status of water rights, ditches, and

2 See Hewitt v. Great Western Beet Sugar Co., 20 Idaho 235, 118 Pac. Rep. 296; Farm Investment Co. v. Alta etc. Co., 28 Colo. 408, 65 Pac. Rep. 22; Stanislaus Water Co. v. For rights passing without word "appurtenances," see Sec. 1010.

other works, as affected by a mortgage, where the same was acquired after its execution by the mortgagor and used for the benefit of the land covered. As can be readily seen, this question can seldom arise except in the case of foreclosure of the mortgage, or in case of a subsequent mechanic's lien claiming precedence.[1] The general rule upon this subject is that fixtures and improvements attached to the mortgaged land after the execution of the mortgage pass to the purchaser at foreclosure sale, although not mentioned or referred to in the mortgage.[2] Therefore, it is held that a water right, when so acquired by the mortgagor and when it becomes an appurtenance to the land, passes with the land, upon the foreclosure sale in the same manner as any other appurtenance or fixture passes with the title and possession of the land, and that, too, without any express mention and without any reference thereto, such as by the use of the word "appurtenances" or otherwise.[3]

A mortgage upon a flume or ditch not completed, but in process of construction, covers the whole work when completed, if apt terms expressing that intent are used in the instrument.[4] And in such cases where apt words are used in the mortgage, the question may be regarded as settled that property acquired subsequently to its execution may become subject to the lien thereof.[5] Therefore, in

[1] For subsequent liens taking precedence to mortgage, see Sec. 1022.

But an irrigating ditch, which was

construing a mortgage, and the sheriff's deed upon foreclosure, to ascertain what interest in a ditch passed thereby, it is held that the instruments should be examined in the light of the facts regarding the use of the ditch and water right before and after their execution.[6] It was held in Colorado that an irrigation ditch, which was not commenced at the time a deed of trust was executed, and not specifically mentioned in such deed, was not conveyed thereby, and that the purchaser under a foreclosure sale of the land acquired no title to such ditch.[7] It was therefore held by the Supreme Court of the United States that a clause in a mortgage which subjects subsequently acquired property to the lien thereof is a valid clause.[8] And where the Court said: "Such a mortgage, as against the mortgagor and subsequent incumbrancers, attaches itself to the after-acquired property as fast as it comes into existence, or as fast as the canal or railroad is built." But the property claimed as after-acquired property must be owned by the mortgagor, or he must have a legal or equitable interest therein.[9] Also, the land to which

not commenced at the time a deed of trust of land was executed, and was not specifically mentioned in such deed, is not conveyed thereby. Crippen v. Comstock, 17 Colo. App. 89, 66 Pac. Rep. 1074.

But see Mitchell v. Amador etc. Co., 75 Cal. 464, 483, 17 Pac. Rep. 246, where it was held that a mortgage did not cover a new canal, where the description in the mortgage, *lis pendens*, decree of foreclosure, and deed described only the old canal and appurtenances.

6 Farm Inv. Co. v. Gallup, 13 Wyo. 20, 76 Pac. Rep. 917, where it was held that the mortgage and sheriff's deed passed so much only of the interest in the ditch as was used for and necessary to the irrigation of the land described therein.

For after-acquired property as affected by a mortgage, see Sec. 1020.

For the question of mortgages on the property of irrigation districts, see Chap. 70.

8 Bear Lake etc. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7; affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 386.

9 Farm Inv. Co. v. Alta etc. Co., 28 Colo. 408, 65 Pac. Rep. 22, where it is said: "But no case has been cited to us which holds that property standing in the name of some person other

it is claimed that the after-acquired right is appurtenant must be owned by the mortgagor. Therefore, where one in possession of a tract of land, simply under a contract from the owner, appropriates and uses water upon the land, such a water right does not become appurtenant to such lands, without a conveyance in writing to the owner of the lands, there being no unity of title. Therefore, where a mortgage was given by the possessor of the land, which included the water right, it was held that the mortgage, although void as to the land because the mortgagor had no title, was good as to the ditches and water rights, and upon foreclosure and sale the purchaser was entitled to possession.[10]

Another subject requiring special mention, is the liability of a purchaser, under the foreclosure sale of a mortgage on the ditch system and water rights of an irrigation company, as to the contracts to furnish water to consumers by the mortgaging company. Upon this subject the courts generally hold that the purchaser of the mortgaged property is liable on and bound by such contracts. This subject, however, will be discussed in another part of this work.[11]

Another question is the precedence which may be given to a mechanic's lien, in certain instances, as against a mortgage prior in time. We will discuss this in a succeeding section in this chapter.[12]

§ 1021. **Mechanics' liens—To what property they attach.**—The title to a water right, the ditches, and canals, or other works, used in connection therewith, may be subject to mechanics' liens for the labor and the material furnished in the construction of the works; and if such liens are not released and satisfied in some other method they may be foreclosed and the property which they cover may be sold at sheriff's sale to satisfy such liens, and the purchaser

than the mortgagor becomes subject to the lien of the mortgage, unless the mortgagor has some legal or equitable interest therein."

10 Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 741, 81 Am. St. Rep. 408; reversing *Id.*, 23 Mont. 65, 57 Pac. Rep. 557.

Bachman, 152 Cal. 719, 93 Pac. Rep. 858, 15 L. R. A., N. S., 359; Almeria etc. Co. v. Tzschuck, 67 Neb. 290, 93 N. W. Rep. 174.

12 See Sec. 1022.

at such sale will acquire title to all of the rights to the property so covered by the lien. In fact, this is the history of the present title to the works and water rights of one of the large irrigation enterprises of the country, as is set forth in the reports of the case as decided by the Supreme Court of Utah and also that of the United States.[1] And in case of the foreclosure and sale under a mechanic's lien, the water right for the benefit of which the ditch was constructed may be deemed an appurtenance to the ditch and pass with it at the sale to the purchaser.[2] Again, mechanics' liens may attach to the land for the irrigation of which the ditches, canals and other works are being constructed; and, upon a foreclosure of the lien and a sale of the property thereunder, the title to the land as well as that to the ditches, canals, and water rights will pass to the purchaser. As held by the Supreme Court of the United States, a lien for an irrigation ditch extends to the tract of land necessary to the convenient use of the improvement for the purposes contemplated in its construction and benefited thereby. And, in a case where the land benefited was a tract of 22,000 acres, the Court held that it attached to the whole tract, saying: "To limit the land upon which the lien was given to the strip of land 60 feet in width and 26 miles long, which was actually occupied by the ditch, and exclude the tract which the ditch was constructed to benefit by its continuous operation, would, it seems to us, be to

1 Bear Lake etc. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7, affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 386.

See, also, as to the enforcement of mechanics' liens covering property of this nature, Atlantic Trust Co. v. Woodbridge etc. Co., 79 Fed. Rep. 39, 501, 86 Fed. Rep. 975; Nelson v. Clerf, 4 Wash. 405, 30 Pac. Rep. 716; Creer v. Cache Val. C. Co., —— Idaho ——, 38 Pac. Rep. 653; Jarvis v. State Bank, 22 Colo. 309, 45 Pac. Rep. 505, 55 Am. St. Rep. 129; Ada County etc. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485.

A special lien is one which the holder can enforce only as security for the performance of a particular act, and of such obligations as may be incidental thereto. Stone v. Harris, 146 Cal. 555, 80 Pac. Rep. 711.

2 Reynolds v. Hosmer, 51 Cal. 205, 5 Morr. Min. Rep. 6, where the ditch was built in two sections and were separately sold on foreclosure of a mechanic's lien; it was held that the water right passed as an appurtenance to the upper part, and that the owner of the lower part had no water right.

See, also, Jarvis v. State Bank, 22 Colo. 309, 45 Pac. Rep. 505, 55 Am. St. Rep. 129.

unreasonably circumscribe the meaning of the statute."[3] But in order to entitle a judgment for the plaintiff in an action to foreclose a mechanic's lien against an irrigation ditch, for the construction thereof, he must show an ownership or an interest in defendant in the land over which the ditch was constructed; and the mere fact that the defendant owns the ditch and has possession of the land upon which it was constructed "without objection from the owners" is not sufficient.[4] However, it was held by the Supreme Court of the United States that a person for whom the work was done on land under a contract may be the "owner" within the Utah mechanic's lien law, although without any legal or equitable title until the work was done, as was the case where the canal was constructed on the public lands of the United States, if he became the owner when the work was completed by virtue of its performance.[5] In order to enforce a mechanic's lien, an action must be brought to foreclose the same; and where an ordinary action for debt is brought, the right to foreclose the lien is waived.[6]

§ 1022. **Precedence of mechanics' liens over mortgages.**—There is another subject which needs attention, relative to the subject of liens and mortgages, and that is when the rights acquired under these two clash and are hostile to each other. We have seen in a preceding section that a clause in a mortgage subjects subsequently acquired property of the mortgagor to the lien of the mortgage is

[3] Springer Land Assn. v. Ford, 168 U. S. 513, 42 L. Ed. 562, 18 Sup. Ct. Rep. 170, affirming 8 N. M. 37, 41 Pac. Rep. 541.

Where well drillers were allowed to drill a well and after they had informed the owners that they would not do the work upon the condition that drilling was not to be paid for unless water in sufficient quantity was obtained, it was held that there was no warranty that water would be obtained so as to preclude them from asserting their lien on the premises for drilling actually done. Behne v. Stapish, —— Wash. ——, 122 Pac. Rep. 1002.

[4] Nelson v. Clerf, 4 Wash. 405, 30 Pac. Rep. 716.

[6] Garland v. Bear Lake etc. Co., 9 Utah 350, 34 Pac. Rep. 368.

The same rule also applies to vendors' liens. Fitzell v. Leaky, 72 Cal. 477, 14 Pac. Rep. 198.

Also in the case of contracts, where a lien is given upon the land. Fresno etc. Co. v. Dunbar, 80 Cal. 530, 34 Pac. Rep. 275.

a valid clause.[1] And such a mortgage, as against the mortgagor and subsequent encumbrancers, ordinarily attaches itself to the after-acquired property as fast as it comes into existence.[2] There is, however, one exception to this rule, and that is that even under the after-acquired property clause in a mortgage, if the after-acquired property be burdened with a mechanic's lien at the very time of coming into possession or ownership of the mortgagor, such encumbrance remains prior and superior to the lien of the mortgage, although it is actually subsequent thereto in point of time.[3] This rule is especially true, where the mortgagee takes the mortgage with notice that a canal, or railway, or other works, was not constructed, and that it would be, when constructed, subject to mechanics' liens.[4] Therefore, in a case of this nature, where a canal was constructed largely over the public lands of the United States, and there could therefore be no title to a permanent right of way running with the land until it was completed and the appropriation finally consummated by its use in conducting the water,[5] and the canal and other works necessary to attain this end were finally completed only through the work and labor of the contractor, and, thereby, the property was not only brought into legal and physical existence, but was also brought under the mortgage as after-acquired prop-

5 For the consummation of an appropriation, see Secs. 725-728.

erty, it was held by the Supreme Court of the United States, that the mechanic's lien of the contractor was superior to that of a mortgage although prior in time to the mechanic's lien.[6] The Colorado Supreme Court followed the rule as laid down in the Bear Lake case and went one step further in holding that, even in the face of a provision in the contract where it was provided that the contractor waived all rights to mechanics' liens, that this provision did not bind the subcontractors where by law they were entitled to liens.[7]

**§ 1023. Vendors' liens—Liens for furnishing water supply.**—There are other classes of liens recognized in the Western States, whereby the title to both the lands and waters may be alienated. Among these are vendors' liens allowed in some of the States, where lands and waters are sold and transferred, the vendor taking a vendor's lien for part of the purchase price.[1] The laws of the Western States also recognize another class of liens upon land, not strictly connected with the subject-matter of this chapter. This class includes those liens allowed a ditch or canal company for furnishing water to the consumers, especially for irrigation. Statutes of the various States provide, in effect, that, where water is furnished by a ditch or canal company under a contract, the company may have a lien for the water furnished, and that such lien will run with the land, even where sold, provided the purchaser has notice of the lien.[2] We will discuss this subject more thoroughly when we come to the subject of contracts with ditch and canal companies.[3] But the remedy in both the case of a vendor's lien and one for furnishing water for land of consumers is by a fore-

closure of the lien and the sale of the property covered thereby and not by a direct action.[4]

§ 1024. **Executions—Sale of water rights, ditches, and other works by means of.**—Water rights, ditches, and other works used to utilize the same, may be sold either separate and apart from each other, or separate from the land for which they are used, or all together, on an execution issued under an ordinary money judgment against the owner.[1] But as such a sale is an involuntary one, where there is the sale of the land for which the water was used, in order for the sheriff's deed to pass title to the water right, there must be a direct levy upon such water right. So, it is held in Colorado that where a sheriff's deed did not purport to convey the water right, although he had the right to levy on the same, but did not do so, neither the sheriff's nor the purchaser's intention can control, and where there is no act of the judgment defendant from which an intention to convey can be inferred, the water right was not conveyed.[2] In this case the Court held that the water rights would not pass with the sheriff's deed as an appurtenance to the land sold. But in a Montana case, the Court intimates that it would so pass. But in the statement of that case it seems that the levy was made upon the lands "and property" described, and in the description of the property there were included the lands, mill, water rights, and canals.[3] But, as such a sale is always an involuntary one, and whether a water right passes even at a voluntary sale of land, as an appurtenance thereto, depends largely upon the intention of the grantor,[4] the better rule is, where property is sold upon execution, that the water rights, or the works by the means of which they are used, do not pass with the sheriff's deed unless direct levy and sale are made of them.

4 Fitzell v. Leaky, 72 Cal. 477, 14 Pac. Rep. 198; Fresno etc. Co. v. Dunbar, 80 Cal. 530, 34 Pac. Rep. 275.

1 Gleason v. Hill, 65 Cal. 17, 2 Pac. Rep. 413; *Id.*, 64 Cal. 18; Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95; Briggs v. Murray, 29 Wash. 245, 69 Pac. Rep. 765; Pogue v. Collins, 46 Cal. 435, 80 Pac. Rep. 623; Struby-Esterbrook Mer. Co. v. Davis, 18 Colo. 93, 31 Pac. Rep. 495, 36 Am. St. Rep. 266.

2 Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95.

3 Briggs v. Murray, 29 Wash. 245, 69 Pac. Rep. 765.

4 For intention of the grantor, see Secs. 1007, 1009.

But water rights can not be levied upon and sold at sheriff's sale where they are exempt from execution. Therefore, where a certain tract of land owned by the judgment debtor is exempt from execution upon the ground that it is his homestead, the necessary water rights used for the irrigation of the land and the ditches and canals through which the water is conducted to the land, become a part and parcel of the homestead and are also exempt from execution.[5] But where the land is not exempt from execution the water right used therewith, although represented by shares of stock, may be levied upon and sold under an execution.[6]

§ 1025. **Leasing water rights with land.**—Under certain circumstances, water rights may be alienated other than by giving an absolute title to the same,[1] as for periods of time. Water rights used for the irrigation of a tract of land, the working of a mine, a mill, or an electrical plant, may be leased with these properties; and in that case, the lessee will have the same rights to the use of the water as would their owner. The lessee of land may also appropriate water for the irrigation of the land he has leased;[2] but a tenant can not, as against his landlord, acquire water rights by adverse use.[3] The leasing of a water right with the property from which it is used is of most common practice in the Western States. Land here can not be cultivated by the tenant without water any more than it can be cultivated by the landlord, and hence it follows that both are leased together.[4] And where the land and water

5 Payne v. Cummings, 146 Cal. 426, 80 Pac. Rep. 620, 106 Am. St. Rep. 47; Fitzell v. Leaky, 72 Cal. 477, 14 Pac. Rep. 198.

But that a water right is not such an inseparable appurtenance to a homestead entry so that it can not be sold apart from the land, see Mt. Carmel Fruit Co. v. Webster, 140 Cal. 183, 73 Pac. Rep. 826.

As to who may appropriate water, see Secs. 678-689.

3 Gill v. Malan, 29 Utah 431, 82 Pac. Rep. 471; Talbott v. Butte etc. Co., 29 Mont. 17, 73 Pac. Rep. 1111; Hecla Ag. Co. v. Henry, 8 Hawn. 447.

For the acquisition of water rights by prescription, see Secs. 1033-1058.

4 See Seaweard v. Pacific etc. Co., 49 Ore. 157, 88 Pac. Rep. 963; Oneto v. Restano, 78 Cal. 374, 20 Pac. Rep. 743; *Id.*, 89 Cal. 63, 26 Pac. Rep. 788; Hayden v. Consolidated Min. & D. Co., 3 Cal. App. 136, 84 Pac. Rep. 422; Gill v. Malan, 29 Utah 431, 82 Pac. Rep. 471; Crook v. Hewitt, 4

rights are sold, upon which there is a valid existing lease, the sale can only be made subject to the lease.[5] Where a definite water right is leased with a tract of land and the lessee is dispossessed, as to the use of the water or a certain portion of the water, by third parties who have the title to the same, the lessee is entitled to damages for the loss.[6]

It was also so held where the lease was for the water right alone, no question being raised as to the validity of such a lease.[7] But where the lessor was not the owner of the water claimed by the lessee to have been leased to him with a tract of land upon the ground that the water was an appurtenance to the land, although the water was not mentioned in the lease, the maxim of *caveat emptor* applies, and the lessee, at his peril, must therefore ascertain the sufficiency of the lessor's title to the premises, including the appurtenances. And in such contracts property affected by the rights of appropriation will not only be governed by the terms of the contract itself but by the physical conditions of the property itself at the time the contract was entered into.[8] A limit may be made by the terms of the lease as to the amount of damages which may be assessed should the water supply fail.[9]

In a recent New Mexico case [10] where the evidence showed that

10 Smith v. Hicks, 14 N. M. 560, 98 Pac. Rep. 138.

a lease had been given to a certain tract of land wherein the lessor bound himself to furnish sufficient water for irrigation of the same but where the situation was that to obtain the water the plaintiff must do an act of violence, such as breaking the lock to take the water, thereby incurring personal damage and possibly criminal prosecution or bring legal proceedings to obtain the use of the water he had a right to be peaceably furnished with by the defendant, it was held that it was such a breach of the covenant of lease that the plaintiff could recover damages.

§ 1026. **Leasing or renting water rights without land by consumers.**—The question has arisen as to whether or not one who has acquired a water right by appropriation or by some other method and is a consumer of the water claimed under such right, can lease his water right or a portion thereof to another separate and apart from the land, mine, mill, or other property, for which the water is used by him, and still retain his priority. It is uniformly held by the authorities that a water right is such a distinct species of property right that it may be sold separate and apart from the land for which it was used, or from any interest in land.[1] Therefore, the question naturally arises, if he can make a complete alienation of the title to the right by such a sale, why may he not alienate the use of the water for a period of time by leasing it? Take, for example, a farmer with 160 acres of land and all under cultivation, with a water right just sufficient for his needs, and all of the water he has used to irrigate his land. Let us further suppose that for a certain year he does not wish to cultivate and irrigate but 80 acres, letting the remaining 80 acres lie fallow. For that year he does not want to use the water for the 80 acres uncultivated. He can sell the water right for this 80 acres separate and apart from the land. But he does not wish to do this, as the following year he will want to use all of it. The only answer to this proposition is that he could lease the right if he was the owner of the *corpus* or body of the water, or had the same title to the water itself as he has to his land.[2] But, as under the law of appropriation, he does not own the very body of the water while it is flowing in the natural stream, and is only entitled to so much of the water that he claims

1 See Sec. 995.

2 That an appropriator does not own the water itself, see Sec. 772.

under his appropriation as he actually applies to some beneficial use or purpose,[3] he can not disregard the rights of subsequent appropriators by leasing the water for a period when he does not need it. The general rule under the Arid Region Doctrine of appropriation is that when an appropriator has no present need of the water which he claims under his prior appropriation, he must not divert it from the natural stream, but it is his duty to let it flow down the natural channel, to be enjoyed by the other appropriators as their numerical priorities entitle them. If a senior appropriator who has not such need of the water for his own land might disregard the general rule and pass over one or more appropriators who are junior to him, and confer upon others who either have no water right at all or whose rights are junior to the rights of those ignored, it would be subversive of the underlying principles of the doctrine of appropriation.[4]

As will be noticed from our note, the courts of Arizona, Colorado, Idaho, and Oregon sustain the above proposition. But a recent decision in the Supreme Court of California seems to intimate the converse of the rule as laid down by the other courts.[5] In that case the grantor of a water right attempted to limit the use of the

[3] See Sec. 877.

[4] For the relative rights of prior and subsequent appropriators, see Secs. 776-786.

See Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332, where the Court held that a consumer of water had the right to sell his water right, but not to lease it when he did not need it.

See, also, Ft. Lyon C. Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37, where it was held that an appropriator could not loan the water to another and thereby ignore the rights of subsequent appropriators.

Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154, where the Court said: "But some years ago—the time does not appear—they leased all their interests to Anderson for a term of 99 years, which was an abandonment of their irrigation rights."

Gerber v. Nampa etc. Irr. Dist., 16 Idaho 1, 100 Pac. Rep. 80; *Id.*, 19 Idaho 765, 116 Pac. Rep. 104, where it is held that, when prior appropriators are not using all of the water to which they are entitled, the canal company may supply such water to any other applicant therefor, but in so doing such applicant does not become vested with a right which can in any manner interfere with the rights of the prior appropriators.

But see Tilton v. Sterling Coal & C. Co., 28 Utah 173, 77 Pac. Rep. 758, 107 Am. St. Rep. 689, where no question was raised as to the right to lease certain water developed in a mine and the lessee recovered damages for the failure to furnish the full supply of water leased.

[5] Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094.

water in the deed to the land of his grantee, and thereby make it an inseparable appurtenance thereto, and the Court held that this could not be done,[6] that the grantee could dispose of the water which he did not see fit to use on his own land to others. Thus far, upon the facts in the case, the ruling of the Court was correct. But in the opinion the Court used the language, "Having purchased the use of a given quantity, if he can not use it all himself we see no reason why he can not sell the right to a *temporary use* of it to his neighbors, as wanted, for a beneficial purpose." If this language was intended as a general ruling that an appropriator and user of water, when for any reason he does not wish to use all of the water himself, can lease or "license" the temporary use of the water to others and still retain his priority to the right, as against the subsequent appropriators from the same stream, we believe that the decision of the Court was decidedly wrong and against the great weight of authority, and the general principles of the law of appropriation governing the rights of the prior and subsequent appropriators of water from the same stream.[7] We believe, however, that the expression used by the Court and quoted above will be treated as *dictum* as regards the rights of subsequent appropriators, for the courts of California have always strenuously upheld their rights. Of course, the rule set forth above applies only to the appropriators who are the actual users and consumers of the water, and does not apply to ditch and canal companies, whose business it is to appropriate, sell, lease, or rent water to consumers. The rights of these companies will be treated in a subsequent portion of this work.[8]

§ 1027. **Sale of part of right—Surplus water can not be sold.**—As we have seen in previous sections, the owner of a water right does not own the water while it is flowing in the natural stream.[1] He only owns the right to the use of a certain amount of the water for some specific purpose, and the extent of his right is measured

[6] That a water right can not be made an inseparable appurtenance to a certain tract of land, see Secs. 1015, 1016.

[7] For the rights of prior and subsequent appropriators, see Secs. 776-786.

[8] For the rights of ditch and canal companies, see Chaps. 72-77.

For the right to appropriate water for sale, see Sec. 703.

[1] See Sec. 772.

by the amount necessary and actually applied to that or an equivalent purpose. "It is, unquestionably, the law that more than is required for such purpose can not be taken."[2] And it is the general rule of law that the owner of a water right may sell and convey, and give a good title to the purchaser by such a transfer, all of his valid right to the use of the water,[3] and that he may sell any portion of his valid right.[4] It may also be considered a settled rule of law that an appropriator can not sell or in any manner dispose of surplus water or water in excess of his needs and at the same time retain all the water that he needs for his own use.[5] The right to the use of the surplus water flowing in a natural stream over and above the necessities of the prior appropriator belongs to the subse-

See, also, as to extent of rights, Secs. 877-879.

For change of purpose, see Secs. 870-872.

3 For right to sell, see Secs. 995, 996.

4 Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541, where it was held that one who had appropriated no more water than was necessary for the irrigation of his land may sell a portion of his right to use such water to a railroad company for supplying its needs; and that the mere fact of a sale by the plaintiffs of a part of the water claimed did not show that they attempted to appropriate more than was needed, where it appeared that all of the water of the stream was not sufficient to irrigate their land.

Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094; Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19; Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Frank v. Hicks, 4 Wyo. 502, 35 Pac. Rep. 475, 1025; Middle Creek D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Ft. Morgan etc. Co. v. South Platte D. Co., 18 Colo. 1, 30 Pac. Rep. 1032, 36 Am. St. Rep. 259.

That a part of a water right may be sold, see Cantrall v. Sterling Min. Co., —— Ore. ——, 122 Pac. Rep. 42; Senior v. Anderson, 138 Cal. 716, 72 Pac. Rep. 349; McDonald v. Askew, 29 Cal. 200, 1 Morr. Min. Rep. 660; Larimer etc. Co. v. Cache La Poudre etc. Co., 8 Colo. App. 237, 45 Pac. Rep. 525, 24 Colo. 144, 53 Pac. Rep. 318; Rose v. Mesmer, 142 Cal. 322, 75 Pac. Rep. 905.

5 "As an appropriator of water obtains by his appropriation that only of which he makes a beneficial use, it necessarily follows that he can not sell surplus water which he does not need." Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

He can not sell the surplus because he has no right to it. Mann v. Parker, 48 Ore. 321, 86 Pac. Rep. 598; Windsor Res. etc. Co. v. Hoffman Milling Co., 48 Colo. 82, 109 Pac. Rep. 422.

See, also, Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111.

quent appropriators in the order of their priorities. Therefore, the prior appropriator "can not give away or dispose of any surplus water to the injury of the subsequent appropriators."[6] As was said in a recent Wyoming case: "An individual appropriator of water for irrigation secures no surplus water, hence has no surplus which he can either sell or give to another as against subsequent appropriators."[7] To adhere to a rule to the contrary would be to permit speculation and fraud in that most inestimable benefit of Nature—the use of water in this arid region.[8] However, it must be understood that the mere fact of a sale of part of a water right does not of itself show that the beneficial use of the whole right had not been theretofore made or that the water covered by such right conveyed was surplus water.[9]

§ 1028. **Licensing or loaning the use of water without land by consumers—"Doubling up"—Rotation.**—What we have said in the preceding section [1] relative to leasing or renting the use of water by consumers applies with equal force to the licensing or loaning of the use of water without a consideration being paid for it. If the owner of a right to the use of a certain amount of water has no present need for the water which his right covers, and which in

6 Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111, citing Kinney on Irr., 1st Ed., Sec. 231; Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Barnes v. Sabron, 10 Nev. 217, 4 Morr. Min. Rep. 673; Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634.

But see Bryan v. Idaho etc. Co., 73 Cal. 249, 14 Pac. Rep. 859.

"By such an appropriation the first appropriator does not acquire a pre-emption of the whole creek, so that he or his successors may, after enjoying the use of it for some beneficial purpose, convey the creek away, and cut off subsequent appropriators." Creek v. Bozeman Water Works Co., 15 Mont. 121, 38 Pac. Rep. 459; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Kirman v. Hunnewill, 93 Cal. 519, 29 Pac. Rep. 124.

But see Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094, where the Court held that a person having purchased a definite quantity of water might sell the surplus to his neighbors.

7 Johnston v. Little Horse Cr. Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

See, however, the right to appropriate water for sale, Sec. 703.

8 That water can not be appropriated for mere speculation, see Sec. 705.

9 Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541; Calkins v. Sorosis etc. Co., 150 Cal. 426, 88 Pac. Rep. 1094.

1 See Sec. 1027.

order to hold must be applied by him to some beneficial use or purpose,[2] under the general law of appropriation he has no right to divert it from the natural stream and thereby ignore the rights of the subsequent appropriators, as it belongs to them in the numerical order of their respective priorities.[3]

There is, however, an exception to the rule as above stated, due to a custom which is in common practice in this Western country, and that is, in times of great scarcity of water and when there is danger of crops burning up for the lack of it, owners of definite water rights during the dry season of the year are permitted, under certain circumstances, to forbear their right to the use of their water for certain periods of time in order that the size of the irrigating stream to others in similar circumstances may be increased, and, in turn, that they may receive the increased flow of the water for a similar period for their own use. This custom grew out of the well-known physical fact that a large irrigating stream can be used more economically and with better results than a small stream, the most of which seeps away in the ditch oftentimes before it reaches the place of use. The custom is due to the great necessities of the case, and in some localities is termed the "loaning of water," in others, the "exchange of water," and in still others, the "doubling up of water." But the more generally accepted term is that of "rotation of water," discussed in previous sections.[4] But whatever it may be called, the right is allowed, provided always that the rights of others to the use of the water are in no way injured or impaired. In Colorado there is a statute upon the subject which in effect provides that it shall be lawful for the owners of ditches and water rights taking water from the same stream "to exchange with and loan to each other, for a limited time, the water to which each may be entitled for the purpose of saving crops or of using the water in a more economical manner." When the construction of the law came before the Supreme Court of the State, that Court seemed loth to uphold it; but, while holding the law constitutional, it held that the fact as to

2 That all the water must be so applied, see Secs. 727, 877.

3 Ft. Lyon C. Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37; Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

For the rights of prior and subsequent appropriators, see Secs. 776-786.

4 For the rotation of water, see Secs. 790, 909, 910.

whether these loans were made under conditions and circumstances which under the Act permitted the exchanges and loans of water, "it was only right and proper that the burden of establishing the same be put upon the parties thereto." And in the two cases where the question was before the Court, the right was denied because that fact had not been established.[5] The Court further held that these loans or exchanges could not be made where the vested rights of others were injured thereby, and that the burden of establishing the same was upon the parties to the transaction, and the Court further held that it must be proven "that the alleged qualified right has been exercised in such a way and at such times and in such circumstances that the vested rights of others are not injured."[6]

**§ 1029. Sale and transfer of riparian rights—As between the parties to the grant.**—As we have seen in previous sections of this work, the right of a riparian proprietor to the use of the waters of a stream which flows through or by his land under the common law of riparian rights is entirely different from the right of an appropriator to the use of the water.[1] The nature of the right is also different.[2] The right of a riparian proprietor to the flow of a stream undiminished in quantity and undeteriorated in quality over his lands is annexed to the soil and is considered as a part and parcel of it, or an incident thereto. Furthermore, the rights of all of the riparian proprietors upon the same stream are equal or correlative, and the use by one can not interfere with the equal or correlative use by all of the others.[3] However, it is held that riparian rights may be severed from the land to which they are a part by grant, condemnation, or by prescription.[4] Therefore a riparian proprietor can

[5] Ft. Lyon C. Co. v. Chew, 33 Colo. 392, 81 Pac. Rep. 37; Bowman v. Virdin, 40 Colo. 247, 90 Pac. Rep. 506.

For irrigation as a riparian right, see Secs. 498-525.

See, also, for grants and contracts relating to riparian rights, Chap. 27, Secs. 526-535.

[2] For the nature and character of riparian rights, see Secs. 450-456.

For the nature of the right by appropriation, see Secs. 757-774.

[3] See Secs. 489-492, 511-513.

[4] For the condemnation of riparian rights, see Secs. 1090, 1091.

For the acquisition of riparian rights by prescription, see Secs. 1039-1041.

A riparian right is one which may

convey any portion of his estate, or any one or all of his riparian rights in and to the use of the waters of the stream flowing by or through his land, either together with the land or separate and apart from it, or from each other. In fact, as far as the different portions of his property are concerned, there is no part which can not be granted separate and apart from another, and such a grant is binding upon the parties to it.[5] Therefore, as between the parties to such a conveyance, a grant by a riparian owner to another for the use of the water on non-riparian land is binding.[6] But the right of

be segregated from the land "by grant or condemnation, or extinguished by prescription, but could not be defeated by simple appropriation." Alta Land & W. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

See, also, Gould v. Stafford, 91 Cal. 146, 27 Pac. Rep. 543; *Id.*, 77 Cal. 66, 18 Pac. Rep. 879; *Id.*, 101 Cal. 32, 35 Pac. Rep. 429; Alhambra W. Co. v. Mayberry, 88 Cal. 68, 25 Pac. Rep. 1101.

New England etc. Co., 100 Mich. 230, 59 N. W. Rep. 155; Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107; Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181, 111 Cal. 639, 44 Pac. Rep. 319, 52 Am. St. Rep. 201; Rianda v. Watsonville etc. Co., 152 Cal. 523, 93 Pac. Rep. 79; Kimball v. Gearhart, 12 Cal. 27, 1 Morr. Min. Rep. 615; Fuller v. Azusa etc. Co., 138 Cal. 204, 71 Pac. Rep. 98; Rose v. Mesmer, 142 Cal. 322, 75 Pac. Rep. 905; Painter v. Pasadena etc. Co., 91 Cal. 74, 27 Pac. Rep. 539; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748; Outhouse v. Berry, 42 Ore. 593, 72 Pac. Rep. 584; City of Salem v. Salem etc. Co., 12 Ore. 374, 7 Pac. Rep. 497; Churchill v. Bauman, 104 Cal. 369, 36 Pac. Rep. 93, 38 Pac. Rep. 43.

6 The right of a riparian proprietor to the flow of a stream of water over his land may be severed from the land by grant, and where such right has been conveyed without reservation the grantor can not maintain an action to enjoin a diversion of water from the stream. Gould v. Stafford, 91 Cal. 146, 27 Pac. Rep.

the purchaser to change the use of water owned as a riparian right to non-riparian lands as against the rights of the other riparian owners on the same stream and not parties to the transfer involves another proposition, which will be treated in our next section.[7]

Riparian owners may also, in a grant of riparian land, reserve a right to the use of all or a part of riparian water. And reservations of this character will be construed in favor of the grantor.[8] One riparian proprietor may also sell his riparian rights to another proprietor for use upon riparian lands for a period of time. But it was held in California that the relation of landlord and tenant could not be created between the parties, the Court holding that the riparian rights were incorporeal hereditaments, and that contracts with respect to incorporeal hereditaments may be good as contracts, but they do not create the relation of landlord and tenant.[9]

§ 1030. **Sale of riparian rights—When grantee may transfer use to non-riparian lands.**—We have seen in previous sections that the use of water by riparian proprietors as such is confined to riparian lands.[1] No greater right can be granted by a riparian proprietor of his use to the water than he himself has. It therefore follows, under the strict construction of the common law, that as against the rights of other riparian owners on a certain stream, one

Rep. 521; Lindeman v. Lindsay, 69 Pa. 93, 8 Am. Rep. 219; Wholey v. Caldwell, 108 Cal. 95, 41 Pac. Rep. 31, 30 L. R. A. 820, 46 Am. St. Rep. 64; Watkins L. Co. v. Clements, 98 Tex. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 673; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

9 Swift v. Goodrich, 70 Cal. 103, 11 Pac. Rep. 561.

1 For the use of water as a riparian right, see Secs. 498-525.

riparian proprietor can not grant his riparian rights to the use of the water, confined as it is to his lands abutting on the stream, to another for the use of the water on non-riparian lands. This is the English rule, and also the rule as laid down in most of the Eastern States upon the subject. In general, this rule is also followed in those Western States which still adhere to the common law of riparian rights.[2] Such a sale and transfer, although it may be valid as between the parties thereto,[3] is void as against others whose riparian rights are, or would be, injuriously affected by a diversion of the water to non-riparian lands by the purchaser.[4] In recent years, however, some

2 For these States, see Secs. 507, 621.

3 "There is nothing unlawful or improper in such an agreement." Alhambra etc. Co. v. Mayberry, 88 Cal. 68, 25 Pac. Rep. 1101.

See, also, Gould v. Stafford, 91 Cal. 146, 27 Pac. Rep. 543; *Id.*, 77 Cal. 66, 18 Pac. Rep. 879; *Id.*, 101 Cal. 32, 35 Pac. Rep. 429; Yocco v. Conroy, 104 Cal. 468, 38 Pac. Rep. 107.

See, also, grants and contracts relating to riparian rights, Chap. 27, Secs. 526-537.

4 A riparian proprietor can not confer upon another person the right to divert water from the stream to use on non-riparian lands to the injury of a lower proprietor, since the riparian owner himself has a right to divert waters to riparian lands only. "As against himself or his grantee, he may contract for the diversion of water to non-riparian lands. But the rights of the inferior proprietor will not be affected by such contract." Gould v. Eaton, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181.

In a late case, the Supreme Court of California, in defining the right of a riparian proprietor to sell the use of the water, said: "Furthermore, his riparian right is limited to his riparian land. It gave no right to use any of the water of the stream for any purpose, upon land not riparian, nor upon any riparian land other than his own. No one can sell or convey to another that which he does not himself own. Grimmer could not, by a transfer of his riparian rights, sell to the plaintiff, as against third persons having interests in the water, the right to use the water upon any land, riparian or non-riparian, except his own, to which it originally attached. His deed operated to prevent him from complaining of a diversion, but it did not affect other parties." Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927.

A riparian owner can not sell water for the irrigation of non-riparian land. Watkins Land Co. v. Clements, 98 Tex. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 673.

See, also, Stockport etc. Co. v. Potter, 3 Hurlst. & C. 300; Ormerod v. Todmorden etc. Co., L. R. 11 Q. B. Div. 155, 52 L. J. Q. B., N. S., 445, 31 Week. Rep. 759, 47 J. P. 532; Swinton etc. Co. v. Proprietors of Wilts & B. etc. Co., L. R. 7 H. L. 697; Anaheim W. Co. v. Semi-Tropic etc. Co., 64 Cal. 185, 30 Pac. Rep. 623; Heilbron v. Fowler Switch C. Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183; Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep.

of the American cases, Eastern as well as Western, have held that where the place of the use of the water was changed by the purchaser from riparian to non-riparian land, and no possible injury had or would accrue to the other riparian owners on the same stream, that such a change could be made. As we have seen in a previous portion of this work, especially in the Western portion of this country, and in the States where the common law of riparian rights and the Arid Region Doctrine of appropration are both in force, many modifications have been made in the common law rules of riparian rights as they were originally interpreted in England and in the Eastern States.[5] And the rule so often stated in the books that the riparian proprietor is entitled to the undiminished flow of the stream as it was wont to flow by Nature by or through his lands is held subject to the important limitation that an upper riparian proprietor may make such use of the waters of the stream as does not work "any actual, material, and substantial damage to the common right which each proprietor has."[6] It has therefore been held in a number of cases that the purchaser of riparian rights might change the place of the use of the water from riparian to non-riparian lands where the rights of the other owners on the stream were in no way injured thereby, and that such a use of the water was *damnum absque injuria* as to the technical rights of the other riparian owners.[7] The authorities upon this subject are, however, by no means harmonious. The better rule, in view

781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Broadmoor etc. Co. v. Brookside etc. Co., 24 Colo. 541, 52 Pac. Rep. 792.

Where a large tract of land had riparian rights, a subsequent conveyance of a part of the tract not abutting upon the stream cuts off such tract from riparian rights. Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

[7] "We think it was properly left to the jury to find whether the defendants, claiming in the right of Clark (the grantor) had, by their diversion of the water for a valuable and highly beneficial use, caused any actual or perceptible damage, and, if not, to find for the defendants." Elliott v. Fitchburg etc. R. Co., 10 Cush. 191, 57 Am. Dec. 85.

See, also, Fifield v. Spring Valley Water Works, 130 Cal. 552, 62 Pac.

of the conditions in the arid West and the great need for the diversion of water for its application in irrigating lands both riparian and non-riparian is that where the rights of the riparian proprietors on a certain stream are in no way injured, or are slightly injured, the grantee of riparian rights should be permitted to change the use of the water to non-riparian lands. And in such cases a court of equity should not interfere by granting an injunction, but the question should be left to the law side of the Court to determine whether there was any injury to the rights of the riparian proprietor, and if so, to determine the amount of damages as the result.[8]

§ 1031. **Changes which the purchaser may make, where the right is by appropriation.**—We have treated in a separate chapter the changes which an owner of a water right acquired by appropriation may make.[1] Upon the sale of such a water right, the purchaser may make such changes as he sees fit, in the point of diversion, the place of use, the manner of use, the use itself, provided that the vested rights of others are not materially injured by the change. In fact, in general the purchaser of such a right may make the same changes which the original appropriator may make. Therefore, the purchaser may change the entire use of the water from one beneficial use to another.[2] But the amount of the water consumed must not be greater for the new use than for the old one, if the rights of others are injured thereby. A city may purchase for municipal purposes the rights of an appropriator for irrigation or some other right where an equivalent amount of the water is consumed.[3] But a sale of a water right where the new use by a city would injure the vested rights of the subsequent appropriators is invalid as against their rights.[4] Again, upon the sale and conveyance of such a right acquired by appropriation to the use of waters,

Rep. 1054; Gillis v. Chase, 67 N. H. 161, 31 Atl. Rep. 18, 68 Am. St. Rep. 645; Ulbricht v. Eufalia Water Co., 86 Ala. 587, 6 So. Rep. 78, 4 L. R. A. 572, 11 Am. St. Rep. 72.

8 For injunctions by riparian proprietors, see Chap. 81.

For damages to riparian proprietors for diversion, see Chap. 83.

1 See Chap. 48, Secs. 856-873.

2 For the right to the change of use, see Secs. 869-872.

3 Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; City of Springville v. Fulmer, 7 Utah 450, 27 Pac. Rep. 577.

4 Creek v. Bozeman Waterworks Co., 15 Mont. 121, 38 Pac. Rep. 459.

contrary to the rule at common law where the riparian rights of owners are involved, the purchaser may transfer the use of the water to other lands, even in the face of a statute attempting to prohibit it, so long as the change does not materially injure the rights of others.[5] In fact, it may be said that the right of a purchaser of a water right, which has been acquired as the result of an appropriation, is one of the incidents of ownership of that distinct property right,[6] and the only limitation upon it is that the rights of others shall not be injured.

§ 1032. **Sale of water after diversion.**—As we have seen in the preceding sections, the exclusive right to divert and use the water of a natural stream acquired by appropriation is the subject of property, and may be sold and transferred separate and apart from any land or interest in land by the original appropriator to other persons.[1] In fact, one of the objects of an appropriation may be for the sale of the right to use the water or for the sale of the water itself. There is a distinction, however, between the right to sell the use of the water or a water right and the right to sell the water itself after it has been appropriated and diverted from the natural stream and taken into the ditch, canal, or reservoir, as the case may be, of the appropriator.[2] Water, when it has been diverted from the natural stream into ditches, canals, pipes, or reservoirs, is personal property, and may be sold as other personal property.[3]

In an early California case Mr. Justice Field said: "Water, when collected in reservoirs or pipes and thus separated from the original source of supply, is personal property, and is as much the subject of sale—an article of commerce—as ordinary goods and merchandise. Engaging in the business of furnishing it to the in-

[5] That a water right acquired by appropriation can not be made an inseparable appurtenance to a particular tract of land, see Secs. 1015, 1016.

# CHAPTER 54.

## RIGHTS ACQUIRED BY PRESCRIPTION.

§ 1033. Scope of chapter.
§ 1034. Prescription—In general.
§ 1035. Prescription in the arid West—Statute of limitations.
§ 1036. Water rights by prescription.
§ 1037. Distinction between acquisition of rights by prescription and by appropriation—Can be no prescription against United States.
§ 1038. Water rights—Prescription as against rights of appropriators.
§ 1039. Water rights—Prescription as against riparian rights.
§ 1040. Water rights—Special rights acquired by one proprietor as against the others.
§ 1041. Riparian rights—Right to receive the flow of the stream.
§ 1042. Rights acquired by prescription may be lost by prescription—Extinguishment of rights.
§ 1043. Water rights—Prescription as against any other right.
§ 1044. Easements—Rights acquired to, by prescription.
§ 1045. Rights of way for ditches and canals.
§ 1046. Prescriptive rights as between landlord and tenant.
§ 1047. Prescriptive rights as between tenants in common.
§ 1048. Elements essential to adverse user amounting to prescription.
§ 1049. Elements necessary—The possession must be actual, open, notorious, and exclusive.
§ 1050. Elements necessary—The use must be hostile to the owner and there must be an invasion of his rights.
§ 1051. Elements necessary—The use must be under a claim of right or color of title.
§ 1052. Elements necessary—The adverse user must be continuous for the full prescriptive period.
§ 1053. Elements necessary—The adverse user must be continuous—Interruption of user.
§ 1054. Elements necessary—The taxes must be paid by adverse claimant.
§ 1055. Pleading and proof to establish a claim by prescription.
§ 1056. Extent of right acquired where prescriptive right is complete.
§ 1057. Effect of adverse user amounting to prescription.
§ 1058. The question of priority.

**§ 1033. Scope of chapter.**—Where the title to water rights, rights of way, ditches, and canals already constructed, together with their rights of way, has once vested in any person or corporation, they may all, or any one may be acquired by another person as against the rights of the owner, by the adverse user of the right, or

rights amounting to prescription. It therefore must follow that where such right is acquired by one person as against another, the latter person loses the right.

In this chapter we will take up the subject of all rights which may be acquired by adverse user amounting to prescription with some exceptions here stated. The subject of actions basing their right upon prescription will be discussed in another chapter.[1] The question of prescription involving percolating and subterranean waters will also be treated in another part of this work.[2]

§ 1034. **Prescription—In general.**—It is laid down by the earlier English authorities that all incorporeal hereditaments might be acquired by the immemorial or long-continued enjoyment of the same by a person other than the original owner thereof. It follows, therefore, that one originally owning these rights may lose them by the same method. This method of the acquisition of this character of property was designated by the common law writers as "prescription." And a fiction was indulged in by the authorities in this, that every right by prescription presupposes a grant.[1] Under the early rule of the common law an enjoyment to confer a title by prescription must have continued, in legal phrase, "during the time whereof the memory of man runneth not to the contrary." But the modern common law rule, both in England and in this country, has been limited, without statute, to the period of twenty years, because of the extreme difficulty of giving proof of the enjoyment for so long a period as that laid down by the early English law writers.[2] In all of the Western States the time for the acquirement of a right by prescription is governed by a continuance of the right during the period fixed by the statute of the jurisdiction wherein the right is claimed for the recovery of real property. As

1 See Chap. 78.

2 See Secs. 1182, 1209.

1 1 Blackstone Comm. 75; 2 *Id.*, 263; Gould on Waters, Chap. 11; Angell on Water Courses, Chap. 6.

That prescription always presupposes a grant, see Hammond v. Zehner, 23 Barb. (N. Y.) 473; affirmed in 21 N. Y. 118; Williams v. Nelson, 23 Pick. 141, 34 Am. Dec. 45; Faulkner v. Rondoni, 104 Cal. 140, 37 Pac. Rep. 883; State v. Quantic, 37 Mont. 32, 94 Pac. Rep. 491.

2 "By our laws, upon principles of public convenience, the term of twenty years' exclusive uninterrupted enjoyment has been held a conclusive presumption of a grant or right." Judge Story in Tyler v. Wilkinson, 4 Mason 397, Fed. Cas. No. 14,312.

was said in a recent Oregon case:[3] "The acquirement of a prescriptive right has come to be measured by the statute of limitations for the recovery of real property, and such is the rule in this State."

In the subsequent sections of this chapter we will see that rights to the use of water may be acquired by adverse possession and use for the same period as is prescribed by the statutes for the acquisition of title to land.[4]

So, also, may easements be acquired by this method over the lands of others for the purpose of ditches and canals to be used in conducting the water to the place of use.[5]

**§ 1035. Prescription in the arid West—Statute of limitations.**—We have seen in a previous portion of this work that the principles of riparian rights in those Western States which still adhere to the common law of riparian rights have been greatly modified by statutory enactments and decisions of the courts from the strict construction of those principles by the authorities of England and the Eastern States, so as to be more in harmony with the great necessities of this Western country.[1] The same can be said upon the subject of acquiring a right to the use of water, or a water right, by adverse user amounting to prescription. This old common law principle has also been modified to meet the needs of this Western country. The principal modification is in the period of time during which the adverse possession and user must run in order to acquire title by this means. As we have seen in the previous section, the modern common law rule was twenty years during which the adverse possession must run. By still the more modern statutes of the various States, especially in the West, the period of time has been still further reduced; but it greatly varies in these jurisdictions. In general, the period of adverse possession must be continuous for the period of time prescribed by the respective statutes of limitations governing actions for the recovery of real property. This period varies in the respective States from

3 Oregon Construction Co. v. Allen Ditch Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701, citing Kinney on Irrigation, 1st Ed., Sec. 295.

1 For the modification of the common law of riparian rights, see Secs. 508-513.

that of three years in Arizona, five years in California, fifteen years in Kansas, to twenty years in South Dakota.[2]

The statute of limitations, after which the respective statutes of the States have been based, has been in existence for nearly three centuries. "Experience has demonstrated the necessity of placing a limit upon the time within which certain specified actions could be brought. The peace and good order of society, the opportunities for the commission of frauds, and the difficulty of defending against actions which had accrued many years before they were brought, prompted a policy which resulted in the enactment of a statute of limitations which is now universally held to be one of repose, prescribing a limit of time within which actions must be brought; otherwise they can not be maintained against parties who see fit to avail themselves of the privilege of the statute."[3]

§ 1036. **Water rights by prescription.**—In general, it may be said that a permanent right to the use of water, or a water right, may be acquired in the Western States by one who has complied with the essential elements, for the statutory period, which constitute the adverse user of the water amounting to prescription.[1] This right may be acquired as against one who formerly claimed the water by virtue of a prior appropriation,[2] as a riparian owner,[3] as a purchaser, or as against one who originally claimed the right to the water by prescription itself,[4] or as against one who had acquired the right to the water by any other method. The law is so generally settled upon this proposition that there is no need to cite all of the authorities here, therefore, under this section, we will cite but a few of the leading cases, reserving the rest for the various phases of the question discussed in the succeeding sections.[5] The

5 Union M. & M. Co. v. Dangberg (Nev.), 81 Fed. Rep. 73, 116; Anderson v. Bassman (Cal.), 140 Fed. Rep. 14, both citing Kinney on Irr., 1st Ed., Secs. 293, 294, 297; Oregon Const. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 709; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 594, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935; Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604; Union Water Co. v. Crary, 25 Cal. 504, 85

converse of the proposition is that the right to the use of the water which is acquired by prescription by one party as against another is correspondingly lost by the latter.[6] A water right may be acquired by or against a corporation by this means.[7] In certain jurisdictions the adverse right will run against a State.[8] Two or more may acquire separate rights by prescription at the same time against a common owner.[9] Not only may a right to the use of water be

9 Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60; Collins v. Gray, 3 Cal. App. 723, 86 Pac. Rep. 983.

In a recent case decided by the Supreme Court of Oregon, it was held that to entitle the parties or privies to an agreement relinquishing and apportioning water rights, to afterwards

acquired by prescription, but under certain circumstances and to a certain extent it is held that the right to pollute the waters of a stream may be so acquired. This subject, however, we will discuss in another portion of this work.[10]

A water right and ditch right are independent rights, and may be acquired separate and apart from each other. Therefore, it is held that even if the one claiming the prescriptive right to a ditch does not own a water right, his claim may be maintained.[11]

**§ 1037. Distinction between acquisition of rights by prescription and by appropriation—Can be no prescription against United States.**—There is a decided distinction between the acquisition of rights to the use of water and rights of way for ditches and canals for the utilization of the same by appropriation under the Arid Region Doctrine and the acquisition of the same rights by prescription. In the first place, a prescriptive right can not be acquired against the United States, no matter how long the possession and user,[1] while, upon the other hand, a right by appropriation may be acquired against the United States.[2] Hence, if the title to the water, or to other property claimed, was in the Government any part of the period of time prescribed by the statute of limitations of the State wherein the rights are claimed, no prescriptive right can be acquired.[3] It therefore follows that before

claim such rights by adverse user, each "must show some affirmative act on his part under claim of right, open, notorious, and exclusive in its character, amounting to such an invasion of the other's title as would furnish a cause of action in favor of the latter." Cantrall v. Sterling Min. Co., —— Ore. ——, 122 Pac. Rep. 42.

11 McDonnell v. Huffine, —— Mont. ——, 120 Pac. Rep. 792.

1 Morris v. U. S., 174 U. S. 196, 43 L. Ed. 946, 19 Sup. Ct. Rep. 649; Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Wattier v. Miller, 11 Ore. 329, 8 Pac. Rep. 354; Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453; Mathews v. Ferrea, 45 Cal. 51; Jatunn v. Smith, 95 Cal. 154, 30 Pac. Rep. 200; Wilkins v. McCue, 46 Cal. 656.

2 For the Arid Region Doctrine of appropriation, see Chap. 31, Secs. 585-594.

3 "Prescription or adverse user will not mature into a title as against the United States, and that it will not avail as a defense unless the user has been adverse for the requisite period after the title has passed from the United States." Mathews v. Ferrea, 45 Cal. 51.

See, also, Jatunn v. Smith, 95 Cal. 154, 30 Pac. Rep. 200; Smith v. Haw-

such a right can be acquired by prescription, and even before the statute of limitations can begin to run against the right, the title to the property thus claimed must have previously passed from the United States, and have vested in some individual, or corporation, or in some State,[4] county, or municipality. Again, in order to finally consummate a right by appropriation, no specific time is required. After the first steps have been legally taken, what is known as a reasonable time is allowed for the final consummation of the right. What is a reasonable time is dependent upon the particular circumstances of each case. It may be a month, a year, or, in some cases, a number of years, depending upon the magnitude of the enterprise and the difficulties encountered.[5] Upon the other hand, the adverse possession and use of a right acquired by prescription must be at least for the period of time prescribed by the statute within which actions may be commenced for the recovery of real property in the jurisdiction where the right is claimed.[6] Where,

kins, 110 Cal. 122, 42 Pac. Rep. 453; Wilkins v. McCue, 46 Cal. 656; State v. Quantic, 37 Mont. 32, 94 Pac. Rep. 491; Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Wood v. Etiwanda W. Co., 122 Cal. 152, 54 Pac. Rep. 726; Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Wattier v. Miller, 11 Ore. 329, 8 Pac. Rep. 354, where it was held that the owner of a mill dam could not acquire a right by prescription to overflow adjoining lands while they belong to the United States.

Where lands and waters are owned by the Government in trust for public purposes, and are withheld from sale by the Land Department, without any renunciation of, or failure to exercise, jurisdiction or control over them, an adverse possession, however long continued, will not create title. Morris v. United States, 174 U. S. 196, 43 L. Ed. 946, 19 Sup. Ct. Rep. 649.

4 That a right by prescription may be acquired against a State, see State v. Quantic, 37 Mont. 32, 94 Pac. Rep. 491.

5 For the consummation of a water right by appropriation, see Secs. 725-728.

As to what constitutes a reasonable time for the consummation, see Secs. 735-741.

6 As stated by the Supreme Court of California: "The differences are twofold. A prescriptive right could not be acquired against the United States, and can be acquired only by one claimant against another private individual. Again, such an appropriation does not necessitate use for any given length of time, while time and adverse use are essential elements to the perfection of a prescriptive right. One who claims a right by prescription must use the water continuously, uninterruptedly, and adversely for a period of at least five years, after which time the law will conclusively presume an antecedent grant to him of his asserted right." Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453.

however, the legal title to the land is granted by Act of Congress, the title of the land is as effectively divested as it would be by the issuance of patent therefor by the executive department, under authority of law, and such land then becomes subject to the limitation laws of the State in which it is situate, and adverse possession thereof after the date of such grant for the requisite period will ripen into a legal title in favor of the adverse claimant, and the effect of such possession is not interrupted or defeated by the subsequent issuance of a patent therefor in pursuance of such Act of Congress.[7]

The theory of this rule is that the title to the land in question has passed from the United States to the grantee, although the patent for the same had not been issued. The same rule should also be applied to the lands of settlers who have fully complied with the law, as far as their entries are concerned, and their title is ready for patent, but which has not been issued.

**§ 1038. Water rights—Prescription as against rights of appropriators.**—By the law of prescription there may be acquired a permanent water right as against the rights of an appropriator who originally acquired the same by an appropriation under the Arid Region Doctrine of appropriation.[1] It consequently follows that the rights of an appropriator may be lost in whole, or in part, by the adverse possession and the user of the water by another amounting to prescription.[2] And when such a person has complied with all of the essentials necessary, and has had the continued, open, notorious, exclusive, uninterrupted, and adverse use and enjoyment of the waters, and under a claim of right, for at least the period of time prescribed by the statute of the State where the right is claimed for the commencement of actions for the re-

"We think the Attorney General overlooks the fact that there is a distinction between the acquisition of a water right by appropriation and the acquisition of such right by prescription." State v. Quantic, 37 Mont. 32, 94 Pac. Rep. 491.

Rep. 326; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Hubbs etc. Co. v. Pioneer W. Co., 148 Cal. 407, 83 Pac. Rep. 253; Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588, citing Kinney on Irr., 1st Ed., Sec. 256; Palolo Imp. Co. v. Wong Quai, 15 Hawn. 555; Chessman v. Hale, 31 Mont. 577, 79

to the use of water is concerned, it is immaterial whether the party claiming the right took the steps necessary to acquire the right under the general law of appropriation or in accordance with the provisions of the statute, as the right runs against the party who has already appropriated the water, or has acquired the right to its use in some other manner. The actual adverse user for the prescribed time is sufficient to acquire the right, regardless of the steps taken by the claimant.[4] However, the claim of the rights to the use of water acquired by prior appropriation and adverse possession are not inconsistent.[5] During the period necessary for the statute to run the water must be applied to some beneficial use or purpose by the one claiming the adverse title. Otherwise there is no right to it which can become the basis of an adverse claim.[6] The right to the use of subterranean waters may also be acquired by prescription.

Pac. Rep. 254, 68 L. R. A. 410; City of Santa Cruz v. Enright, 95 Cal. 105, 30 Pac. Rep. 197; Jatunn v. Smith, 95 Cal. 154, 30 Pac. Rep. 200; Talbott v. Butte City W. Co., 29 Mont. 17, 73 Pac. Rep. 1111; Brosard v. Morgan, 7 Idaho 215, 61 Pac. Rep. 1031; Fogarty v. Fogarty, 129 Cal. 46, 61 Pac. Rep. 570; Santa Paula Waterworks v. Peralta, 113 Cal. 38, 45 Pac. Rep. 168; Faulkner v. [4] "So far as the defenses founded upon the statute of limitations and equitable estoppel are concerned, it is immaterial whether defendant or his grantors made an appropriation of the waters of Clear Creek in compliance with the code requirements as to posting notices, etc., or not." Coonradt v. Hill, 79 Cal. 593, 21 Pac. Rep. 1099.

"Statutory appropriation, therefore, is not necessary to prescription, but it gives to one who seeks to acquire a right by prescription this advantage, that it gives to prior claimants notice that his user is adverse, and under a claim of right, and sets the statute in motion against such prior claimant." Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

[5] Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Gardner v. Wright, 49 Ore. 609, 632, 91 Pac. Rep. 286; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154.

For the distinction between the acquisition of a water right by appropriation and prescription, see Sec. 1037.

[6] Where one relies on adverse user as the basis of a right to use water for irrigation, the burden is on him to show conclusively beneficial use for the required period. Lavery v. Arnold, 36 Ore. 84, 57 Pac. Rep. 906, 58 Pac. Rep. 524.

So, where a party sunk several wells in the bed of a stream and continued to use the water adversely for more than the statutory period, it was recently held that he acquired a permanent right, although the water from the wells caused a decrease in the flow of the surface stream below and of the waters formerly used by appropriators below.[7] This, however, is under the new rule as to percolating waters first adopted in the case of Katz v. Walkinshaw,[8] and fully discussed in another chapter of this work.[9] Under the old rule no prescriptive right could be acquired to subterranean waters where they flowed in undefined and unknown channels.[10] But where they flow in defined and known channels, a prescriptive right may be acquired to subterranean waters under exactly the same rules as it may be acquired to the waters of surface streams.

**§ 1039. Water rights—Prescription as against riparian rights.**—In those States which adhere to the common law of riparian rights to the use of the waters of the natural streams, by the owners of riparian lands,[1] such rights can not be lost by simply the failure to use the water;[2] neither can they be lost by the mere appropriation of the water by another.[3] However, the right to the use of the water, either on riparian or non-riparian lands, may be acquired by one person, and to the same extent the riparian rights of others may

For the common law right to the use of waters of streams, see Secs. 483-497.

For irrigation as a riparian right, see Secs. 498-525.

2 None of the rights of a riparian proprietor to put water of a stream flowing through or along his land to a legitimate use is lost by mere non-user. Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158; Vernon Irr. Co. v. Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762; Heilbron v. 76 etc. Co., 80 Cal. 189, 22 Pac. Rep. 62; Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Stanford v. Felt, 71 Cal. 249, 16 Pac. Rep. 900; Whitney v. Wheeler, 121 Mass. 396, 24 N. E. Rep. 774, 7 L. R. A. 613.

3 For appropriation as against riparian rights, see Secs. 810-823.

be extinguished by adverse user amounting to prescription.[4] The rules of law governing the acquisition of a right by prescription, and the elements essential, in cases of this nature, are similar to those governing prescriptive rights as against prior appropriators.[5]

[4] As against riparian owners, one who diverts water may acquire title by prescription in the same time necessary to acquire title to land by adverse possession. Oregon Cons. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701; citing Kinney on Irr., 1st ed., Sec. 295.

"Actual and uninterrupted use, however, with or without the statutory appropriation, if adverse, for a useful purpose, and under a claim of right, continued for the period prescribed by the statute of limitations, gives a prescriptive right which will extinguish the rights of a riparian proprietor." Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

"It is the settled law of this State that the right to take water from a stream, as against riparian owners, may be acquired by prescription." Arroyo etc. Co. v. Baldwin, 155 Cal. 280, 100 Pac. Rep. 874.

See, also, Gallagher v. Montecito etc. Co., 101 Cal. 245, 35 Pac. Rep. 770; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158; Gardiner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Southern Cal. Inv. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767; Hall v. Carter, 33 Tex. Civ. App. 230, 77 S. W. Rep. 19; Dunn v. Thomas, 69 Neb. 683, 96 N. W. Rep. 142; Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697; Hildreth v. Montecito etc. Co., 139 Cal. 22, 72 Pac. Rep. 395; Farwell v. Brisson, —— Wash. ——, 119 Pac. Rep. 814; Mason v. Yearwood, 58 Wash. 276, 108 Pac. Rep. 608, 30 L. R. A., N. S., 1158; Alhambra etc. Co. v. Richardson, 72 Cal. 598, 14 Pac. Rep. 379; Coonradt v. Hill, 79 Cal. 593, 21 Pac. Rep. 1099; Baker v. Brown, 55 Tex. 377; Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588, citing Kinney on Irr., 1st Ed., Sec. 295; American etc. Co. v. Bradford, 27 Cal. 360, 15 Morr. Min. Rep. 190; Crandall v. Woods, 8 Cal. 136, 1 Morr. Min. Rep. 604; Thompson v. Felton, 54 Cal. 547; Boynton v. Longley, 19 Nev. 69, 6 Pac. Rep. 437, 3 Am. St. Rep. 781; Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Rice v. Meiners, 136 Cal. 292, 68 Pac. Rep. 817; Mud Cr. etc. Co. v. Vivian, 74 Tex. 170, 11 S. W. Rep. 1078, where it is held that the right can only be enforced against riparian proprietors on the stream below.

See, also, Jordan v. Long, 22 S. C. 159; Messenger's Appeal, 109 Pa. St. 285, 4 Atl. Rep. 162; Faulkner v. Rondoni, 104 Cal. 140, 37 Pac. Rep. 883; Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141; Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Whitehair v. Brown, 80 Kan. 297, 102 Pac. Rep. 783, where it is held that, where a dam across a stream has been maintained for 15 years—the period of limitations for actions to determine an interest in real property—the right to its continued maintenance can not ordinarily be assailed by upper riparian land owners.

[5] See previous section, No. 1038.

See, also, Oregon Const. Co. v. Allen

The riparian proprietor against whom adverse possession is held must have had knowledge, or means of knowledge, of such occupation and claim of right. The appropriator must have proof of possession for the statutory period with proof of an adverse claim against the proprietors, or his plea will not avail.[6] And in order to establish a right by prescription the acts by which it is sought to establish it must operate as an invasion of the rights of all of the riparian proprietors upon the stream having an interest in the natural flow of the water. As we have seen in previous sections,[7] the rights of all of the riparian proprietors upon a stream to the use of the water flowing therein are equal or correlative. Therefore, it necessarily follows that the invasion of the rights of one proprietor will not suffice where others are equally interested in the flow of the water. The enjoyment of the water relied upon by the claimant must afford ground for an action by each proprietor against whom the right is sought.[8] The appropriation of considerable quantities of water in seasons when that may be done, without sensible injury to the lower owners, does not give a prescriptive right to divert the whole stream in dry seasons.[9] If it was doubtful whether the use

Rep. 642; Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647, hold-

was adverse, or not known to the owner, or interrupted, the claim of prescription can not avail.[10]

§ 1040. **Water rights—Special rights acquired by one proprietor as against the others.**—By the means of adverse user of the waters of a stream by one riparian proprietor thereon, he may acquire as against all the other proprietors upon the same stream special rights to the use of the water other and greater than the law confers upon him simply as such riparian owner. The law may be considered as settled that the right to the use of water in a particular manner and in excess of his natural common law rights may be acquired by one owner as against all the other owners whose rights are infringed upon thereby by prescription. But as every riparian owner has an equal right to the use of the water as it flows by or through his property,[1] and as no rights to use an excess amount of the water is gained by the mere appropriation or prior use of the water as against the other riparian owners upon the same stream, in order to acquire the right by prescription all the elements must enter into the right necessary and essential for the acquisition of other classes of property by the same title.[2] As was said

ing: "Where it appears that defendant's use of the water of a stream for irrigation purposes was not so extensive as to render the water supply of plaintiff, a lower riparian owner, insufficient, such a use by defendant is not so adverse to plaintiff's right as to form a basis for a claim of title by adverse user."

In a recent case in California, the Court, in reaffirming the doctrine of riparian rights in that State, held that, in an action to enjoin the diversion of water from a stream from which plaintiffs irrigate, a finding that plaintiffs' land had been irrigated from the stream for 25 years was immaterial, since plaintiffs are entitled to have the stream continue in its customary flow, subject to the reasonable use by other riparian owners. Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424.

10 American etc. Co. v. Bradford, 27 Cal. 360, 15 Morr. Min. Rep. 190; Huston v. Bybee, 17 Ore. 140, 20 Pac. Rep. 51, 2 L. R. A. 568.

1 For rights of riparian owners to use the water, see Secs. 483-525.

H. 255, 9 Am. Dec. 55; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971; Watkins L. Co. v. Clements, 98 Tex. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 673; Hall v. Carter, 33 Tex. Civ. App. 230, 77 S. W. Rep. 19.

in a recent Nebraska case:[3] A riparian proprietor "may, by prescription, acquire a right beyond that which the common law would give him, but he gets this right only by adverse user."[4] This was true also under the Mexican and Spanish law, and a private right to the exclusive use of the waters of a stream could be acquired by prescription or by the compliance with established conditions.[5] And, in general, it may be said that one riparian proprietor may acquire such rights by remaining in the peaceable, continuous, uninterrupted, actual, open, notorious, and exclusive use of the water for the period required by the statutes as against the rights of all the other riparian owners whose rights are injuriously affected by such use, even to the extent of acquiring the right to consume the entire waters of the stream. And where such rights have once been acquired by prescription, the riparian owners along such stream, who have improved their property with reference to the change in conditions, acquire a reciprocal right to have the artificial conditions remain undisturbed.[6]

The effect of the acquisition of title by prescription against riparian rights is an extinguishment of the riparian rights.[7]

**§ 1041. Riparian rights—Right to receive the flow of the stream.**—A prescriptive right may be acquired against lower riparian owners by complying with the requisite essentials for acquiring such rights.[1] Upon the other hand, owing to the equal rights of

[1] Montecito Water Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935; Heilbron v. Last Chance Water Co., 75 Cal. 117, 17 Pac. Rep. 65; Arroyo Ditch Co. v. Baldwin, 155 Cal. 280, 100 Pac. Rep. 874; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141.

riparian owners to the use of the waters of a certain stream,[2] and that under the common law their rights are not lost by the non-use of the water, it is held that a lower riparian owner can not acquire by prescription the right to receive the water of the stream for some extraordinary use of the water in excess of his natural rights as against the upper riparian owners, since a lower use in no way interferes with the natural flow above, and, therefore, there is no invasion of the rights above. In other words, it is held that there is no such thing as a prescriptive right of a lower riparian proprietor to receive the waters of the stream as against the upper owners.[3] The theory upon which the authorities hold to this rule

2 See Secs. 483-497, 513.

3 There is no such thing as a prescriptive right of a lower riparian owner to receive water as against upper owners. Receiving the full flow of a stream for more than 10 years does not give a prescriptive right that will prevent reasonable use of its waters by an upper owner. Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

Where a lower riparian proprietor takes water out of the stream at a point on his own land, and uses such water only as the upper riparian proprietor permits to pass down, he can acquire no right to the water by prescription, as such use is not adverse in the sense required to give a right by prescription. Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158.

No use of water by a riparian owner can give him rights by adverse user as against an upper owner. Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282; Harrington v. Demaris, 46 Ore. 111, 77 Pac. Rep. 603, 82 Pac. Rep. 14, 1 L. R. A., N. S., 756; Cave v. Tyler, 133 Cal. 566, 65 Pac. Rep. 1089; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390; Mud Cr. etc. Co. v. Vivian, 74 Tex. 170, 11 S. W. Rep. 1078; Dunn v. Thomas, 69 Neb. 683, 96 N. W. Rep. 142; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971; Beers v. Sharpe, 44 Ore. 386, 75 Pac. Rep. 717; Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546; Perry v. Calkins, 159 Cal. 175, 113 Pac. Rep. 136; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748; Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282.

"And in case the party against whom such adverse user is asserted is an upper riparian owner, it is difficult to conceive of a case where the use of the water by a lower diversion can be adverse." Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154; Chasemore v. Richards, 7 H. L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; affirming 2 Hurlst. & N. 168; Stockport Waterworks v. Potter, 3 Hurlst. & C. 600, 10 Jur. N. S. 1005, 10 L. T. N. S. 748; affirmed in 7 Hurlst. & N. 106, 31 L. J. Exch. N. S. 9, 7 Jur. N. S. 880; Hoy v. Steritt, 2 Watts 327, 27 Am. Dec. 313; Pollitt v. Long, 58 Barb. 20; Thurber v. Martin, 2 Gray 394, 61 Am. Dec. 468; Hinckley v. Nickerson, 117 Mass. 213; Gould v. Boston Duck Co., 13 Gray 442.

is that if a riparian owner diverts water which otherwise would flow down to a still lower owner, that use is adverse. But, upon the other hand, the water which comes to him would come in any case, and there is nothing adverse to any one in merely receiving it that could be said to give a prescriptive right enabling him to prevent the reasonable use of the water by an upper owner.[4] In other words, if no wrong is done, no prescriptive right can be acquired.[5]

But we have seen in previous sections a riparian proprietor may also acquire a right to the use of water by appropriation under the Arid Region Doctrine.[6] An appropriator may also acquire a right by prescription, and the rights to the use of water acquired by prior appropriation and by prescription are not inconsistent.[7] It is also settled in the Western States and Territories that the right to the use of water may be acquired by a subsequent appropriator as against the rights of the prior appropriator of the waters of the same stream, and that, too, whether or not he diverted the water from the stream either above or below the points where the prior appropriator took out his water. In other words, all water which is not appropriated and used for some beneficial use or purpose by prior appropriators is subject to appropriation by later comers.[8] We have also seen in another portion of this work that the common law rules of riparian rights, as the same are strictly construed in England and the Eastern States, have been modified in the Western States in many particulars, owing to the peculiar arid conditions existing in these States which have both rules of law governing waters—the common law of riparian rights and the Arid Region Doctrine of appropriation.[9] These modifications have been

[4] Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

[5] See, also, Smith v. Duff, 39 Mont. 381, 102 Pac. Rep. 984, 133 Am. St. Rep. 587; Egan v. Estrada, 6 Ariz. 248, 56 Pac. Rep. 721; Meng v. Coffey, 67 Neb. 500, 93 N. W. Rep. 713, 60 L. R. A. 910, 108 Am. St. Rep. 697.

[6] See Sec. 519.

[7] Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728, where the Court said: "Rights to the use of water acquired by prior appropriation and adverse possession are not inconsistent."

See, also, Gardiner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154.

[8] For the rights of subsequent appropriators, see Secs. 783-786.

[9] For these States, see Secs. 507, 621.

For the modifications of the com-

made with the view of making the small amount of water which we have here go as far as possible, and doing the greatest good to the greatest number. Now, then, while fully conceding that the Western authorities in the States which have both rules governing waters hold to the proposition that no prescriptive right to the use of water can be gained by a lower riparian owner as against the rights of an upper owner, even if the upper owner does not use the water, or can not use it, except incidentally by letting it flow by his lands, we believe the law to be wrong, especially as against appropriators of the water below, or as against riparian owners who are also appropriators. Yet the California cases have even gone to this extent.[10]

These cases illustrate in a vivid manner the everlasting and irrepressible conflict between the common law rules and those of the Arid Region Doctrine of appropriation in those States which have both rules governing the subject of waters. In the States where they have only the doctrine of appropriation, the question does not arise. There, where a person has made a valid prior appropriation of a definite amount of water for any beneficial use or purpose, he can hold his right as against all later comers, either above or below him upon the stream who attempt to infringe upon it. If he has continued the user of the water adversely as against the rights of others upon the stream for the period of time prescribed by the statute of limitations, he may also claim the right as against the appropriators above him, by prescription, and whether or not their lands happen to touch upon the stream itself, and that, too, without

mon law of riparian rights, see Secs. 509-517.

For irrigation as a riparian right, see Secs. 498-525.

10 In the case of Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158, the lower riparian owner was also an appropriator, and had filed his notice of appropriation before the full prescriptive period had run, it was held that a prescriptive right was not acquired.

In Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282, it is said: "It is impossible for the Court to see how, any acts of appropriation by appellant's predecessors at a lower point upon the stream can defeat respondent's riparian rights, for respondent's rights have not been invaded by any act of the lower appropriator. As riparian owner, he is not bound to use the water, or, in case of non-user, lose his right to its use.'"

See, also, Cave v. Tyler, 133 Cal. 566, 65 Pac. Rep. 1089; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18; 30 L. R. A. 390; Rogers v. Overacker, 4 Cal. App. 333, 87 Pac. Rep. 1107.

some ancient saurian lying upon the bank of the stream invoking the rule of the common law that, "as a riparian owner, he is not bound to use the water, or, in case of non-user, lose his right to its use." [11]

§ 1042. **Rights acquired by prescription may be lost by prescription—Extinguishment of rights.**—It makes no difference how the rights were originally acquired by the owner, they may be lost by prescription. Therefore, rights originally acquired by prescription to the use of waters, as well as rights of way for ditches and canals, or the use of such property, may also be lost by prescription. And, therefore, the same rule which operates in favor of an adverse claim for a water right, or right of way for a ditch or canal, will also operate to the destruction of the right. So where adverse possession of the right of way is maintained by the owner of the land, with a denial of the right in the ditch owner, the right to maintain the ditch may be lost.[1]

An easement for a right of way for a ditch or canal may also be extinguished by a conveyance back from the owner thereof to the owner of the land through which the ditch runs.[2] Again, it may be extinguished by a purchase and conveyance of the land through which the right of way runs by the owner of the easement. The vesting of the right to the servitude and to the servient tenement in the same person extinguishes the servitude, as the two estates are

11 Walker v. Lillingston, 137 Cal. 401, 70 Pac. Rep. 282.

"Even if these plaintiffs had never made any use of the water flowing past their land, they had the right to have it continue in its customary flow, subject to such diminution as might result from reasonable use by other riparian proprietors." Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424; Perry v. Calkins, 159 Cal. 175, 113 Pac. Rep. 136.

1 Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141; Cannon v. Stockmon, 36 Cal. 535, 95 Am. Dec. 205; School Dist. etc. v. Benson, 31 Me. 381, 52 Am. Dec. 618.

See, also, Secs. 1048-1054.

But where a person had acquired a prescriptive right to maintain a flume across an irrigation ditch so as to obstruct the flow of water of the ditch, a promise by him to change the construction of the flume so as not to obstruct the flow of the water does not destroy his right, and make him a mere licensee. Centerville etc. Co. v. Sanger Lum. Co., 140 Cal. 385, 73 Pac. Rep. 1079.

2 For the sale of easements, see Secs. 1003, 1004.

then merged in the same person.[3] Again, it may be lost by foreclosure and sale under a mortgage.[4]

**§ 1043. Water rights—Prescription as against any other right.**—It makes no difference as to how the right to water was originally acquired, or in what capacity it was originally held, rights to all or a part of the water may be acquired by prescription. Hence it follows that a right acquired by prescription may be lost by prescription.[1] It is also important to note in this connection that a water course, although artificial, may have been so long used as to become a natural water course prescriptively.[2] But when an artificial water course is made solely for drainage, from mines or otherwise, the flow of the water through that channel is, from the nature of the case, of a

But see Green v. Carrota, 72 Cal. 267, 13 Pac. Rep. 685.

temporary character, and a use of the water by others, although it may be adverse for the statutory period, affords no presumption of a grant of any right to the water in perpetuity; and, therefore, a prescriptive right to have the water continue its flow can not be successfully claimed.[3]

No prescriptive right can be acquired as against mere waste water.[4] In fact, no right can be acquired to have the discharge of waste water continued either by appropriation,[5] prescription, or estoppel, regardless of the time that such waste water has been used by those claiming the right.

A prescriptive right may be had by one person to flood the lands of another.[6] This subject, however, will be discussed when we come to the discussion of injuries to lands.[7] But while no right can thus be acquired by prescription against the originator of an artificial stream of a temporary character, yet so long as he continues to use the canal for the purpose of drainage, a prescriptive right may be acquired against others, including those through whose lands the canal runs.[8] So, also, the right to the use of water flowing through an aqueduct or pipes for domestic purposes may be acquired by prescription.[9]

3 "It makes no material difference if such a state of things were kept up for a long number of years. In such case time would raise no presumption of a grant, and A. could at any time stop the production of such artificial and temporary stream; and he could at any time, if he continued the production of such stream, put the waters thereof to his own use." 9 Dority v. Dunning, 78 Me. 381, 6 Atl. Rep. 6.

No prescriptive right can be acquired to be negligent; and although an easement may be acquired over the lands of others for ditches and canals by prescription,[10] the ditch owner can acquire no right by prescription to injure the servient estate through negligence.[11]

But injuries to land from water seeping from an irrigation ditch, which was properly and carefully constructed, and is intended to be permanent, constitutes a single cause of action and as affected by the statute of limitations accrues at the beginning of the injury and from that time the statute begins to run.[12] Again, the right to maintain a public nuisance can not be maintained under a claim of prescription.[13] As was said in a recent California case:[14] "It is not claimed, nor can it be, that the plaintiff has acquired by prescription any right to divert from her land water which would naturally flow there, and to discharge it upon the public road. Indeed, no such right can be acquired in property set apart for public use."[15]

Rights of way, or easements, for ditches and canals over the lands of others may be acquired by prescription, which will give a permanent right; also ditches and canals, after construction, may be so acquired together with their rights of way; again, rights of way through ditches and canals of others may be so acquired for the purpose of conducting water. In the succeeding sections of this chapter we will discuss these rights.[16]

10 See for rights of way by prescription, Secs. 986, 1044, 1045.

11 "If the defendants, during the time alleged in the complaint, had injured and damaged plaintiff's property by the negligent use and operation of their canal, the fact that they had negligently used and operated it in the same negligent way and manner for a period of seven years, or any number of years, furnished no defense to plaintiff's claim." § 1044. **Easements—Rights acquired to, by prescription.**—The doctrine that easements of every sort may be acquired by an adverse user for the period of time prescribed by the statute of limitations of the respective State where the right is claimed, is a most commonly accepted doctrine, and has been adopted and very frequently applied by the Supreme Court of the United States. In order to acquire title by prescription, the enjoyment and exercise of the use must be continuous,[1] notorious, and under a claim of right[2] with knowledge of the owner[3] and adverse, for the whole statutory period, in the exact sense that the possession of land must be so as to warrant the application of the statute of limitations in an action of ejectment.[4] Where the wording of the statute is not such that it covers easements, the period that the adverse possession must run is the old common law period of twenty years.[5] But without discussing any further the subject of prescription in general, we will proceed to discuss the subject as directly applicable to the subject in hand.[6]

§ 1045. **Rights of way for ditches and canals.**—As we have seen in previous sections, rights of way for ditches, canals, or other works may be acquired over private lands by grant from the owner thereof.[1] So, also, such a right of way may be acquired over the private lands of another by adverse possession amounting to prescription, from which a grant, of course, is presumed. Also ditches

Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607; Coleman v. Hines, 24 Utah 360, 67 Pac. Rep. 1122.

6 For rights of way acquired by prescription, see Secs. 986, 1045.

For the right to the use of water acquired by prescription, see Secs. 1038-1043.

1 For sale of rights of way, see Secs. 1003, 1004.

and canals after their construction, together with their rights of way, may be acquired by prescription.[2] Again, rights of way through ditches and canals of others may be so acquired for the purpose of conducting water to the place of use.[3] These subjects will be treated together.

As has been said before, as far as acquiring title is concerned, water rights and ditch rights are entirely independent. It therefore follows that a prescriptive right to one does not necessarily involve a right to the other. As was said in a recent Montana case:[4] "If these ditches were actually used for the prescribed period, and the use was characterized by all the attendant circumstances which constituted it adverse, open, exclusive, and under claim or right, title by prescription resulted even though the claimants to the easements never owned water rights, but had to depend for their use of the ditches upon water leased or otherwise acquired from year to year."[5] Such a right of way being a permanent

2 McEwen v. Preece, 45 Wash. 612, 88 Pac. Rep. 1031.

3 One may acquire a prescriptive right to use an irrigation ditch to convey a limited quantity of water to his land, while another retains the right also to use the ditch for his own purposes to the extent of the remaining capacity. Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Smith v. Hampshire, 4 Cal. App. 8, 87 Pac. Rep. 224; Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60.

4 McDonnell v. Huffine, —— Mont. ——, 120 Pac. Rep. 792.

5 Open, visible, continuous, and unmolested use of a way for more than 30 years is sufficient to raise a presumption that the use was under an adverse claim of right. Fleming v. Howard, 150 Cal. 28, 87 Pac. Rep. 908.

See, also, Franz v. Mendonca, 131 Cal. 205, 63 Pac. Rep. 362, where it was held that, where a land owner claimed a right of way over the lands of another, the fact that the lessee of the dominant estate was at the same time the lessee of the servient estate did not interrupt the running of the statute of limitations in favor of the dominant estate.

"If there has been the use of an easement for 20 years, unexplained, it will be presumed to be under a claim of right, and adverse, and be sufficient to establish a title by prescription, and to authorize the presumption of a grant, unless contradicted or explained." Washb. on Easements, 4th Ed., p. 156.

Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Coventon v. Seufert, 23 Ore. 548, 32 Pac. Rep. 508; Knight v. Cohen, 7 Cal. App. 43, 93 Pac. Rep. 396; Fleming v. Howard, 150 Cal. 28, 87 Pac. Rep. 908; Tyler v. Wilkinson, 4 Mason 397, Fed. Cas. No. 14,312; Coonradt v. Hill, 79 Cal. 593, 21 Pac. Rep. 1099; Hesperia etc. Co. v. Rogers, 83 Cal. 10, 23 Pac. Rep.

interest in land, the requisite character of the possession and the duration of the same for the acquisition of such a prescriptive right is provided for in the most of the respective States by statute.[6] And in order to acquire a right by this means to a permanent easement for a ditch, canal, reservoir, or other works, over the lands of another, the party claiming the right must have had the peaceable, open, notorious, exclusive, and uninterrupted adverse possession of the land in question for this purpose and use under a claim of right for the whole statutory period of limitations provided in the respective States for acquiring other interests in land by adverse possession amounting to prescription.[7] Or if there is no statute which in direct terms or by analogy applies to easements, the period for the acquisition of such a right is the common law one of twenty years.[8]

196, 17 Am. St. Rep. 209; Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484; Kripp v. Curtis, 71 Cal. 66, 11 Pac. Rep. 879; Smith v. Hampshire, 4 Cal. App. 8, 87 Pac. Rep. 224; Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Anaheim W. Co. v. Ashcroft, 153 Cal. 152, 94 Pac. Rep. 613; Centerville etc. Co. v. Sanger Lum. Co., 140 Cal. 385, 73 Pac. Rep. 1079.

See Brattain v. Conn, 50 Ore. 156, 91 Pac. Rep. 458, where it was held that a prescriptive right to maintain a dam might be acquired, notwithstanding defendants clandestinely and without complainant's knowledge at various times forcibly destroyed the works so maintained.

"A title so acquired is as effectual and complete as one obtained by a conveyance." Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141.

[6] For the statutes of the States, see Part XIV.

"No principle of law is better established than that, when title is once acquired by adverse possession for the statutory period, such title remains in the person so acquiring it as completely as if conveyed to him by deed from the owner." Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Joy v. Stump, 14 Ore. 361, 12 Pac. Rep. 929.

[7] See, also, for the prescriptive right to the use of water, Secs. 1038-1044.

One who seeks to acquire an easement, maintaining a ditch over another's land, by adverse user, must maintain it without material change of location for the whole statutory period; and that he may have had a ditch somewhere on the land for 10 years does not give him a right to maintain it in a new location or to use an extension thereof made within the period. Dunn v. Thomas, 69 Neb. 683, 96 N. W. Rep. 142.

[8] See Harkness v. Woodmansee, 7 Utah 227, 26 Pac. Rep. 291; Clawson v. Wallace, 16 Utah 300, 52 Pac. Rep. 9; Funk v. Anderson, 22 Utah 238, 61 Pac. Rep. 1006; North Point etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607; Coleman v. Hines, 24 Utah 360, 67 Pac. Rep. 1122.

The right may have had its inception by permission or license, but in order to constitute adverse possession of a right to use a ditch or canal across the land of another, originally given by permission or license, the licensee must have repudiated the license and have brought the knowledge of the repudiation home to the owner of the land, and thereafterward must have held adversely for the statutory period. The statute of limitations, however, does not begin to run until notice of such repudiation.[9] The statute of limitations does not begin to run as against the land over which the right of way is claimed until the issuance of patent therefor.[10]

In an action to establish a right of way by adverse possession, and where the whole theory of plaintiff's complaint was that his rights were acquired by adverse use of a ditch or canal, the recovery must be had on that theory, and the findings and a decree which expressly state that the use of the ditch by the plaintiff was had with the consent of the owners thereof, and under an oral license or agreement therefor, will be reversed upon appeal.[11]

**§ 1046. Prescriptive rights as between landlord and tenant.**—A tenant can not, as against his landlord, acquire water rights by prescription. This proposition is so elementary that it is hardly necessary to cite authorities. The use in this case being permis-

[9] That an adverse right can not be based on permission, see Secs. 985, 1050-1053.

See, also, Weidensteiner v. Mally, 55 Wash. 79, 104 Pac. Rep. 143; 22 Am. & Eng. Encyc. Law 1196.

"If the right so given was and remained merely permissive so as to be revocable at any time by the landowner, it would not ripen into a title by prescription, no matter how long continued, for then the possession or use would not be hostile or adverse. But if the parol consent was given to use the land as if legally conveyed, the use would then be as of right, which, if continued for the requisite period, might develop into a prescriptive right." Gustin v. Harting, —— Wyo. ——, 121 Pac. Rep. 522.

[10] Reed v. Spicer, 27 Cal. 58, 4 Morr. Min. Rep. 330; Wood v. Etiwanda W. Co., 122 Cal. 152, 54 Pac. Rep. 726, where it is said: "The statute of limitations can only have application to acts of the appropriator performed after the plaintiff's title was acquired, whether from the State or the United States." Jatunn v. Smith, 95 Cal. 154, 30 Pac. Rep. 200.

[11] Schirmer v. Drexler, 134 Cal. 134, 66 Pac. Rep. 180, where judgment was reversed and a new trial granted with leave to amend pleadings.

See, also, remedies and procedure, Chaps. 78-83.

For the discussion of the right to the use of water acquired by adverse possession, see Secs. 1036-1043.

sive, and when so it can not be adverse, in the sense that a right by prescription can be acquired.[1] So, also, where the statute is already running in favor of an adverse claimant against the rights of another, and where there are all of the essential elements necessary to acquire the right by prescription,[2] except that of time, where the claimant offers to lease the right, there is a recognition of the rights of the original owner, and it stops the running of the statute.[3] But it was held in California that where the lease provided for the use of one-half of the water right owned by the landlord, and the tenant used all of it, the second half adversely, it left him free to claim this half adversely.[4] Again, after the tenant delivers up the possession of the leased property, he can acquire title to the water right formerly used by him under the lease by adverse user, for the prescriptive period.[5] A water right may be acquired by prescription against the owner of the right where he had leased it to a tenant who had failed to protect the right. In this case the right runs against both the landlord and the tenant.[6]

But in order to constitute a title by prescription it is necessary that during the prescriptive period an action could have been maintained by the party against whom the claim is made.[7]

1 "The rule is elementary that a tenant can not acquire title to property occupied by him as such tenant by adverse possession. This doctrine is so well settled that we deem it unnecessary to cite authorities in support of it." Butler v. Lamson, 29 Utah 439, 82 Pac. Rep. 473.

"A tenant may have from his landlord an undisputed right to use water belonging to the latter, and may do so by his license, in an undisputed manner for 10 years, but this possession of the use is not necessarily adverse, because undisputed." Heintzen v. Binniger, 79 Cal. 5, 21 Pac. Rep. 377; Everett W. Co. v. Powers, 37 Wash. 143, 79 Pac. Rep. 617.

2 For the elements necessary, see Secs. 1048-1054.

3 Jensen v. Hunter, 108 Cal. 17, 41 Pac. Rep. 17.

4 Oneto v. Restano, 78 Cal. 374, 20 Pac. Rep. 743; *Id.*, 89 Cal. 63, 26 Pac. Rep. 788.

5 Talbott v. Butte City W. Co., 29 Mont. 17, 73 Pac. Rep. 1111.

6 Heilbron v. Last Chance etc. Co., 75 Cal. 117, 17 Pac. Rep. 65.

7 Chessman v. Hale, 31 Mont. 577, 79 Pac. Rep. 254, 68 L. R. A. 410, 3 Am. & Eng. Ann. Cas. 1038; Anderson v. Bassman, 140 Fed. Rep. 10; Perry v. Calkins, 159 Cal. 175, 113 Pac. Rep. 136; Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587; North Powder etc. Co. v. Coughanour, 34 Ore. 9, 54 Pac. Rep. 223; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685; Boyce v. Cupper, 37 Ore. 256, 61 Pac. Rep. 642.

**§ 1047. Prescriptive rights as between tenants in common.**—Water rights, ditches, canals, and other works may be owned by different parties as tenants in common. Where this is the case the possession of one tenant in common is generally deemed the possession of all.[1] However, under certain conditions one tenant in common may acquire by prescription the rights formerly owned by the others. But in order to do this there must be some actual notice given by the adverse claimant against the owner of such adverse holding, which will operate as an ouster, and set the statute of limitations running. So where two tenants in common are the owners of certain rights, the mere possession and user of one cotenant can not be considered adverse as against the rights of the other where there is no evidence of an actual ouster or some equivalent act showing an intent to exclude him.[2] It therefore follows that constructive notice by the adverse use of the rights will not be sufficient, even if all of the other elements necessary in other cases are fully complied with for the full prescriptive period.[3] And not only this, but the burden of proving an ouster of a tenant in common and proving adverse possession for the full period of the statute of limitations, devolves upon the cotenant who asserts it.[4]

**§ 1048. Elements essential to adverse user amounting to prescription.**—We have discussed in the preceding sections of this chapter what rights might be acquired by prescription and against whom they might be so acquired.[1] But the terms "adverse possession" or "adverse user," amounting to prescription, as used in legal phraseology, are general terms and need further discussion.

1 For rights of tenants in common, see Chap. 73.

2 An adverse holding will not operate as an ouster, and set the statute of limitations running, until the tenant out of possession has some notice of such adverse holding. Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283; Mattis v. Hosmer, 37 Ore. 523, 62 Pac. Rep. 17, 632; Unger v. Mooney, 63 Cal. 586, 49 Am. St. Rep. 100; Colman v. Clements, 23 Cal. 245; Beers v. Sharpe, 44 Ore. 386, 75 Pac. Rep. 717; Moss v. Rose, 27 Ore. ——, 41 Pac. Rep. 666, 50 Am. St. Rep. 743; Oliver v. Burnett, 10 Cal. App. 403, 102 Pac. Rep. 223; Freeman on Co-Ten., Secs. 221, 222.

3 For elements necessary, see Secs. 1048-1054.

4 Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283; Beers v. Sharpe, 44 Ore. 386, 75 Pac. Rep. 717.

For burden of proof in adverse possession, see Sec. 1055.

1 See Secs. 1036-1044.

There are certain essential elements which enter into their composition, and which must be present before a right can be acquired by prescription. And as a prescriptive right, acquired by one person, is a corresponding loss or forfeiture of right by another, and, further, as the law does not favor forfeitures, it is absolutely essential that all the elements prescribed by law as necessary to constitute a permanent valid claim by adverse possession amounting to prescriptive right should be present.

There are five principal elements necessary for the acquisition of a permanent title by prescription, namely: First, the possession must be actual occupation or use, open and notorious, and exclusive;[2] second, it must be hostile against the rights of the party against whom the right is claimed;[3] third, it must be held under a claim of right, as the property of the claimant;[4] fourth, it must be continuous and uninterrupted for the full period prescribed by the statute of limitations;[5] fifth, during all of this period taxes, if any, are assessed against the property claimed, and must be paid by the claimant.[6]

"There are five elements required to make out an adverse possession sufficient to constitute a defense under the statute of limitations: (1) The possession must be actual occupation, open and notorious, not clandestine. (2) It must be hostile to the plaintiff's title. (3) It must be held under a claim of title, exclusive of any other right, as one's own. (4) It must be continuous and uninterrupted for a period of five years prior to the commencement of the action, not, however, necessarily next before the commencement of the action. (5) Since the passage of the proviso to Section 325 of the Code of Civil Procedure in 1878, payment of taxes."[7]

2 See Sec. 1049.

3 See Sec. 1050.

4 See Sec. 1051.

5 See Secs. 1052, 1053.

6 See Sec. 1054.

7 Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; quoted with approval in Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Montecito W. Co. v. City of Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 96 Pac. Rep. 935.

"An adverse possession that will bar a legal title must be (1) hostile, under a claim of right; (2) actual; (3) open and notorious; (4) continuous." Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045; Silva v. Hawn, 10 Cal. App. 544, 102 Pac. Rep. 952; Alta Land & Water Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217; Evans Ditch Co. v. Lakeside Ditch Co., 15 Cal. App. 119, 108 Pac. Rep. 1027; Malmstron v. People's Ditch Co., 32 Nev. 246, 107 Pac. Rep. 98; Davis v. Angelo, 8 Cal. App. 305,

We will now take these elements up and discuss them in the order named.[8]

**§ 1049. Elements necessary—The possession must be actual, open, notorious, and exclusive.**—In order to successfully claim a right by prescription against the rights of another the adverse claimant must have actual possession or occupation of the property claimed. If it is a water right so claimed, he must have had the actual use of the water under the right, and have applied the water to some beneficial use or purpose during the full period prescribed by the statute of limitations.[1] Otherwise there is no right to the water which can become the basis of an adverse claim. If the right claimed is a right of way for a ditch or canal over the lands of another, or the ditch or canal itself with its right of way, or the right through a ditch or canal of another for the conducting of water, there must be also actual possession, occupation, and use of the property claimed for the required period.[2] The mere construction of ditches without the actual use thereof is not sufficient to set the statute in motion.[3]

8 See Secs. 1049-1054.

1 For the necessary period, see Sec. 1052.

See, also, Lavery v. Arnold, 36 Ore. 84, 57 Pac. Rep. 906, 58 Pac. Rep. 524, where on rehearing it was said: "Defendant having alleged an adverse user, the burden was upon him to show when the water was applied to a beneficial use, and, he having failed in this respect, the petition is denied."

See, also, Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454; Cox v. Clough, 70 Cal. 345, 11 Pac. Rep. 732; Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

The possession must be actual. Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045.

"There must have been an actual occupation by the diversion and use of the water." Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 92, citing Kinney on Irr., 1st Ed., Secs. 293, 294, 297; Oregon etc. Co. v. Allen etc. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701; Senior v. Anderson, 130 Cal. 290, 62 Pac. Rep. 563; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935.

2 Fleming v. Howard, 150 Cal. 28, 87 Pac. Rep. 908, where it was shown that for 27 years the ditch was kept in repair by the adverse claimant.

"A presumption that the use was under a claim of right arises from the undisputed use of the easement." Franz v. Mendonca, 131 Cal. 205, 63 Pac. Rep. 362.

See, also, Kripp v. Curtis, 71 Cal. 66, 11 Pac. Rep. 879.

3 Senior v. Anderson, 115 Cal. 496, 47 Pac. Rep. 454.

"If there has been the use of an

In order that the actual user shall ripen into adverse title amounting to a prescriptive right, it must be open and notorious, and with the knowledge of the one against whom the right is claimed; or the use must have been of such a character that it will be presumed that the original owner had such knowledge.[4] But the terms "open" and "notorious" do not mean that the general public must have knowledge of the use, or that any person must have knowledge of such use other than the one against whom the right is claimed. If he has knowledge that the use is being made of his property, under a claim of right, it is sufficient to bring the case within the rule, and the right by prescription may be acquired without the knowledge of others not interested in the right.[5] The words "open" and "notorious," used in this connection, mean the same thing, and all that they mean to imply in this connection is that the use was with the knowledge of the original owner of the right, and not secret, clandestine, or hidden, or concealed from him.[6]

easement for 20 years, unexplained, it will be presumed to be under a claim of right." Washb. on Easements, 4th Ed., p. 156; Lavery v. Arnold, 36 Ore. 84, 57 Pac. Rep. 906, 58 Pac. Rep. 524.

See, also, for rights of way for ditches and canals, Secs. 972-993.

[4] Bell v. Sausalito etc. Co., 98 Cal. 17, 33 Pac. Rep. 449; Union M. & M. Co. v. Dangberg, 2 Sawy. 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217; Irving v. Media, 194 Pa. 648, 45 Atl. Rep. 482.

That knowledge will be presumed under certain circumstances, see Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935; Montgomery v. Keppel, 75 Cal. 128, 19 Pac. Rep. 178, 7 Am. St. Rep. 125; Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100.

[5] "But as all that is necessary to make a use adverse is a claim of right in the party using it, and knowledge of the claim in the adverse party, the use of the water might be adverse without being open or notorious." Fogarty v. Fogarty, 129 Cal. 46, 61 Pac. Rep. 570.

See, also, Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588, citing Kinney on Irr., 1st Ed., Sec. 295, holding that the party against whom the right is claimed must have had notice, or means of knowledge of the adverse claim.

See, also, Churchill v. Louie, 135 Cal. 608, 67 Pac. Rep. 1052; Britt v. Reed, 42 Ore. 76, 70 Pac. Rep. 1029, where it was held that, though the defendant had used the water for more than 10 years, such use had not come to the knowledge of plaintiffs, or interfered with their prior rights, until a year before the suit was begun, and hence defendant had acquired no right by prescription.

[6] Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60; Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep.

As was said in a late Montana case:[7] "While the authorities use both the words 'open' and 'notorious,' the use of either would seem to be sufficient, as they are practically synonymous when used in this connection, as inspection of the dictionaries will show." In other words, the user, to be adverse, must be attended by actual notice or by such circumstances of notoriety as would reasonably impart notice to the person to be affected.[8]

The use must not be secret, clandestine, hidden, or concealed from the owner.[9] And when the use is not secret or clandestine, but open and visible, the presumption of knowledge of the original owner follows.[10] Again, as a corporation can only have knowledge through

808, 25 Pac. Rep. 378, 10 L. R. A. 484; Hume v. Rogue River etc. Co., 51 Ore. 237, 92 Pac. Rep. 1065, 83 Pac. Rep. 391, 92 Pac. Rep. 1072, 96 Pac. Rep. 865, 131 Am. St. Rep. 732; Anaheim Union W. Co. v. Ashcroft, 153 Cal. 152, 94 Pac. Rep. 613, where the Court said that "it was not necessary to declare such right any further than their conduct indicated it."

"The possession must be actual occupation, open and notorious, and not clandestine." Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935.

7 Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

8 See Salem Flouring M. Co. v. Lord, 42 Ore. 82, 69 Pac. Rep. 1033, 70 Pac. Rep. 832, where the water was pumped, and the means of supplying the pumps were totally concealed from ordinary observation; held, that no prescriptive right was acquired.

See, also, Gray v. Cambridge, 189 Mass. 405, 76 N. E. Rep. 195, 2 L. R. A., N. S., 976.

As to the value of evidence of posting a notice of appropriation of the water, see Santa Cruz v. Enright, 95 Cal. 105, 30 Pac. Rep. 197; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158.

See, also, Swank v. Sweetwater etc. Co., 15 Idaho 583, 98 Pac. Rep. 297; Churchill v. Louie, 135 Cal. 608, 67 Pac. Rep. 1052; Clark v. Ashley, 34 Colo. 285, 85 Pac. Rep. 588; Wiedensteiner v. Mally, 55 Wash. 79, 104 Pac. Rep. 143; Britt v. Reed, 42 Ore. 76, 70 Pac. Rep. 1029.

9 Salem Flouring M. Co. v. Lord, 42 Ore. 82, 69 Pac. Rep. 1033, 70 Pac. Rep. 832; Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60; Anaheim Water Co. v. Ashcroft, 153 Cal. 152, 94 Pac. Rep. 613; Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484; Hume v. Rogue River etc. Co., 51 Ore. 237, 83 Pac. Rep. 391, 92 Pac. Rep. 1072, 96 Pac. Rep. 865, 131 Am. St. Rep. 732, 92 Pac. Rep. 1065; Gurnsey v. Antelope etc. Co., 6 Cal. App. 387, 92 Pac. Rep. 326; Evans Ditch Co. v. Lakeside Ditch Co., 15 Cal. App. 119, 108 Pac. Rep. 1027; Silva v. Hawn, 10 Cal. App. 544, 102 Pac. Rep. 952.

10 "It is next urged by the appellant that the possession of defendants was clandestine, and not brought to its knowledge. . . . The work was openly carried on during this time, and it could not be reasonably urged that

the information of its officers and agents, the knowledge of such officers, within the scope of their duties and employment, becomes the knowledge of the corporation.[11] In the case of tenants in common, the possession of one tenant being the possession of all his cotenants, there can be no element of hostility in such possession. And it therefore follows that an adverse holding will not operate as an ouster, and set the statute of limitations running until the tenant out of possession has had some actual notice of such adverse holding. "Such possession can not be considered adverse until there has been an actual ouster or some equivalent act showing the intent or act of exclusive." [12]

The use and occupation must be exclusive in the sense that it must not at any time while the statute is running have been shared with the former owner, against whom the adverse possession ran. In other words, the user must be uninterrupted, and will be discussed when we come to that feature.[13]

**§ 1050. Elements necessary—The use must be hostile to the owner and there must be an invasion of his rights.**—The mere use of water, a right of way, or a ditch, or canal, in any particular

such work—running a tunnel for 600 feet in the side of a canyon, at a point only 500 feet distant from the plaintiff's place of diversion—could be carried on clandestinely. From the moment when the tunnel began to take water, it would seem that plaintiff was charged with notice. The means of knowledge was certainly open to it." Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

"When the use is not secret or clandestine, but open, visible, and notorious, the presumption of knowledge follows:" Gurnsey v. Antelope etc. Co., 6 Cal. App. 387, 92 Pac. Rep. 326; Evans Ditch Co. v. Lakeside D. Co., 15 Cal. App. 119, 108 Pac. Rep. 1027.

See, also, Thompson v. Pioche, 44 Cal. 508; Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Barnes v. Light, 116 N. Y. 34, 22 N. E. Rep. 441; Fleming v. Howard, 150 Cal. 28, 87 Pac. Rep. 908; Silva v. Hawn, 10 Cal. App. 544, 102 Pac. Rep. 952.

See, also, for burden of proof, Sec. 1055.

11 Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935; Balfour v. Fresno etc. Co., 123 Cal. 395, 55 Pac. Rep. 1062; Gurnsey v. Antelope etc. Co., 6 Cal. App. 387, 92 Pac. Rep. 326.

13 See Secs. 1052, 1053.

manner for however long a period of time, will not ripen prescriptively into a permanent right.[1] There must be something more. The use during the full period of time necessary to acquire the right[2] must have been hostile to the owner. Without a hostile holding against the owner, both in the inception and the continuance of a claimed right, no prescriptive right can be acquired.[3] It therefore follows that no prescriptive right can be acquired where the use is by permission, sufferance, or license from the owner, who continues to exercise ownership and dominion over the right claimed, and that, too, regardless of the length of time that the use continued.[4] As was held in a recent California case,[5] that one could not base a prescriptive right upon a permissive use where the same extended for a period of fifty years.[6]

1 Winter v. Winter, 8 Nev. 129; Delhi v. Youmans, 45 N. Y. 362, 6 Am. Dec. 100; affirming *Id.*, 50 Barb. 316.

2 For the period of time necessary, see Sec. 1952.

3 Without a hostile holding, both in the inception and the continuance of a claimed right to water, there would be no prescription. Rhodes v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884.

At no time did plaintiffs assert a user hostile to the corporation, therefore no prescriptive right was acquired to take water from a certain ditch. Fuller v. Azusa Irr. Co., 138 Cal. 204, 71 Pac. Rep. 98.

An adverse possession that will bar a legal title must be hostile under a claim of right. Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045; Francoeur v. Newhouse, 43 Fed. Rep. 236, 14 Sawy. 600; Hayes v. Martin, 45 Cal. 559.

See, also, Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881; McManus v. O'Sullivan, 48 Cal. 7; Egan v. Estrada, 6 Ariz. 248, 56 Pac. Rep. 721; Oneto v. Restano, 78 Cal. 347, 20 Pac. Rep. 743; *Id.*, 89 Cal. 63, 26 Pac. Rep. 788; Manning v. Smith, 6 Conn. 289; Odiorne v. Lyford, 9 N. H. 502, 32 Am. Dec. 387; Parker v. Foote, 19 Wend. 309.

4 That a license can not be the basis of a prescriptive right, see Sec. 985.

User of water for irrigation purposes, by permission, whenever not needed in the operation of a mill, gives no prescriptive right to have the use continue. Ball v. Kehl, 95 Cal. 606, 30 Pac. Rep. 780.

The permissive use of a ditch across the land of another or the water therein, no matter how long continued, could not give title by prescription. Weidensteiner v. Mally, 55 Wash. 79, 104 Pac. Rep. 143.

5 Davis v. Martin, 157 Cal. 657, 108 Pac. Rep. 866.

6 See, also, Anderson v. Bassman, 140 Fed. Rep. 10; Rhodes v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884; Edson & Foulke Co. v. Winsell, 160 Cal. 783, 118 Pac. Rep. 243; Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484; Hall v. Blackman, 8 Idaho 272, 68 Pac. Rep. 19; Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39; Knight v. Cohen, 7 Cal. App. 43, 93 Pac. Rep.

And not only must the user be hostile against the rights of the owner, but, in order to establish a right by prescription, the acts by which such right is sought to be established must for the full period of time operate as an actual, substantial invasion of the property rights of the party against whom the right is claimed. The enjoyment relied upon by the claimant must be of such a character as to afford a ground for action by the other party.[7]

"To acquire a right by prescription in the lands of another upon the presumption of a grant, the possession must be adverse, continuous, uninterrupted, and by the acquiescence of the owner of the land upon which the easement is claimed. If its inception is permissive or under a license from the owner, it can not avail to work an ouster. To effect that result the possession taken must be open, hostile, and continuous—'he must unfurl his flag on the land and must keep it flying, so that the owner may see, if he will, that an enemy has invaded his domains and planted the standard of conquest.'"[8]

396; Crawford v. Minnesota etc. Co., 15 Mont. 153, 38 Pac. Rep. 713; Egan v. Estrada, 6 Ariz. 248, 56 Pac. Rep. 721; Bathgate v. Irvine, 126 Cal. 135, 58 Pac. Rep. 442, 77 Am. St. Rep. 158; Jensen v. Hunter, 108 Cal. 17, 41 Pac. Rep. 14; Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045; Jobling v. Tuttle, 75 Kan. 351, 89 Pac. Rep. 699, 9 L. R. A., N. S., 960; Hunter v. Emerson, 75 Vt. 173, 53 Atl. Rep. 1070; Coalter v. Hunter, 4 Rand. (Va.) 58, 15 Am. Dec. 726; Polly v. McCall, 37 Ala. 20; Gray's Case, 5 Coke 79.

7 "No adverse user can be initiated until the persons possessing the superior use are deprived of its benefit in such a substantial manner as to notify them that their rights are being invaded." Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546.

"The law is well established that no right to the use of water can be acquired by prescription unless there has been such an invasion of the rights of the parties against whom it is asserted as would have given them a cause of action therefor." Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814, citing Kinney on Irr., 1st Ed., Sec. 294.

No use of water by a subsequent appropriator can be said to be adverse to the right of a prior appropriator unless such use deprives the prior appropriator of it when he has actual need of it. Talbott v. Butte City W. Co., 29 Mont. 17, 73 Pac. Rep. 1111.

8 Curtis v. La Grande etc. Co., 20 Ore. 34, 23 Pac. Rep. 808, 25 Pac. Rep. 378, 10 L. R. A. 484, citing Springer v. Young, 14 Ore. 285, 12 Pac. Rep. 400.

See, also, Union M. & M. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Grigsby v. Clear Lake W. Co., 40 Cal. 396; Anaheim W. Co. v. Semi-Tropic W. Co., 64 Cal. 185, 30 Pac. Rep. 623; Dick v. Bird, 14 Nev. 161; Dick v. Caldwell, 14 Nev. 167; Boynton v.

Therefore, where there is sufficient water in the stream for all parties, its use by one can not be an invasion of the rights of another so as to start the statute of limitations running. It is only when the water becomes so scarce that all the parties can not be supplied, and when one appropriator takes water which by priority belongs to another then there is an adverse use.[9] Again, the appropriation of considerable quantities of water in seasons of high

water, when it may be done without sensible injury to the prior claimants or to the lower owners on the stream, does not give a prescriptive right to divert the whole stream in dry seasons, and at a time when the rights would be injuriously affected.[10] Nor at any time is the use of a surplus, over and above the rights of the prior appropriators, adverse to them, since there is no invasion of their rights so long as they get all the water claimed by them.[11]

Under the later, and, we will add, better considered, decisions, it is held that in order for a prescriptive right to be acquired, there must be actual damage to the use of the owner. As was said in a recent Montana case:[12] "But use of water does not begin to be adverse as against a prior appropriator unless it results in a deprivation to such appropriator, or amounts to such an invasion of his rights as will enable him at any time during the statutory period to maintain an action against the adverse user."[13]

We have also seen in a previous section that there can be no pre-

But see Moore v. Clear Lake W. Works, 68 Cal. 146, 147, 8 Pac. Rep. 816, where it is said: "The interposition of a court of equity was required to prevent defendant's wrongful acts from ripening into a right, and on that ground alone the interference of a court of equity was properly asked and granted."

See, also, Spargur v. Heard, 90 Cal. 221, 27 Pac. Rep. 198; Mott v. Ewing, 90 Cal. 231, 27 Pac. Rep. 194; Conklin Imp. Co. v. Pac. etc. Co., 87 Cal. 296, 25 Pac. Rep. 399; Creighton v.

scriptive right acquired by a user below of the water as against the rights of those above on the stream.[14]

As to the extent of the invasion of the right necessary before the adverse claimant can acquire a title by prescription, we have seen above that the enjoyment by the claimant of the right must be sufficient to afford a ground for action against him by the owner.[15]

**§ 1051. Elements necessary—The use must be under a claim of right or color of title.**—The third essential element under our classification,[1] in order to acquire a title to a water right by prescription, is that the user must be held under a claim of right as the property of the claimant, or, as it is sometimes termed, under color of title.[2] The same is true where the right claimed is a right of

Evans, 53 Cal. 55; Heilbron v. Fowler etc. Canal Co., 75 Cal. 426, 17 Pac. Rep. 535, 7 Am. St. Rep. 183; Walker v. Emerson, 89 Cal. 456, 26 Pac. Rep. 968.

As to when a right of action for an injunction will lie, see Chap. 81.

14 For prescriptive right to receive the flow of a stream, see Sec. 1041.

Rep. 299; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935.

See, however, Alhambra etc. Co. v. Richardson, 72 Cal. 598, 14 Pac. Rep. 379; Fogarty v. Fogarty, 129 Cal. 46, 61 Pac. Rep. 570.

That a suit interrupts the continuity of use, see Sec. 1053.

1 See Sec. 1048.

2 A right to the use and possession of the water of a stream may be acquired by prescription only when accompanied by claim of title. Brossard v. Morgan, 7 Idaho 215, 61 Pac. Rep. 1031.

It must have been asserted under claim of title, exclusive of any other right. Center Cr. etc. Co. v. Lindsay, 21 Utah 192, 60 Pac. Rep. 559.

See, also, Smith v. North Canyon etc. Co., 16 Utah 194, 52 Pac. Rep. 283; American etc. Co. v. Bradford, 27 Cal. 360, 15 Morr. Min. Rep. 190; Davies v. Angel, 8 Cal. App. 305, 96 Pac. Rep. 909; Heintzen v. Binninger, 79 Cal. 5, 21 Pac. Rep. 377; Cox v. Clough, 70 Cal. 345, 11 Pac. Rep. 732; Postlethwaite v. Payne, 8 Ind. 104; Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 51 Cal. 377, 90 Pac. Rep. 935; Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045; Winter v. Winter, 8 Nev. 129.

The use of squatters of a part of the waters of a stream, without any claim of right to divert and use it elsewhere, is not adverse to the owners of the tract. Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

way for a ditch or canal over the land of another, or the right to conduct water through the ditch or canal of another. But where there has been an open, visible, continuous, and unmolested use of a right of way for more than the time required by the statute of limitations, it is sufficient to raise a presumption that it was under a claim of right.[3]

The claim of right may be made in a number of ways. It may be made by the continued assertion verbally of the right in such a manner that it is brought home to the owner of the right, and, therefore, notice to him.[4] It may be made by the posting and recording of a notice of appropriation, and the continued use of the water, although this is not necessary, except as evidence of the claim.[5] But, assuming that there is no express declaration of right, or any posting of notice declaring the same, where there is satisfactory proof of a continuous, open, notorious, and uninterrupted use of the waters on the lands of the claimant for the statutory period, and of such a character as to unquestionably indicate that the use was being exercised in hostility to the right of any person to interfere with its exercise, there is sufficient proof that it was made under a claim of right.[6] And in this connection it may be said that when the

use is not secret or clandestine, but open, visible, and notorious, the presumption of knowledge of the owner follows, and that the claim is made under a claim of right of ownership.[7]

A prescriptive right once properly begun may be terminated by the recognition of the title of the owner. Therefore, where the adverse claimant offers to purchase or rent the property from the owner, it amounts to a waiver of his own claim of right and an unequivocal recognition of the right of the party against whom the adverse right was formerly running.[8] So, also, will any act upon the part of the claimant which changes the nature of the claim from one being adverse to one based upon permission.[9]

**§ 1052. Elements necessary—The adverse user must be continuous for the full prescriptive period.**—Under our classification [1] the fourth element necessary is that the use must be continuous and uninterrupted for the full prescriptive period required by the statute of the State where the right is claimed.[2] And since adverse user is necessary, the time prescribed by the statute does not begin to run until the one against whom the right is claimed

4 Iowa 18; Barnes v. Light, 116 N. Y. 34, 22 N. E. Rep. 441; Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217; Southern California etc. Co. v. 9 Conceding that a diversion of water from a dam initiated a prescriptive right thereto, it is disturbed by obtaining permission to lay pipes across the land in question, and take from the dam at a point 300 feet from the first diversion. Rhoades v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884.

That a prescriptive right can not be based on permission of license, see Sec. 985.

1 See Sec. 1048.

2 For the statute of limitations, see Part XIV.

has had notice, either actual or constructive. In other words, the notice may be actual or it may be attended by such circumstances of notoriety as will reasonably impart notice to the person affected that the user is being made under a claim of right.[3] As against a water right the statute will begin to run at the time the unlawful diversion of the water is made by the claimant, and not at the time the works are begun with which it is intended to use the water.[4] As against a right of way for a ditch, canal, or other works across the lands of others, the statute will begin to run from the time of the actual adverse possession of the land in question.[5]

From the exact date of the actual notice of the party against whom the right is claimed, or from the date when such notice to him may be reasonably presumed, the claimant must have used the water, or the ditch, canal, or other works continuously and uninterruptedly for at least the full prescriptive period required by the statute.[6] And in this connection it is held that the word

tion" and "limitation" are convertible terms, and therefore a plea of the proper statute of limitations is a good plea of a prescriptive right.[10]

As to what constitutes a continuity of user of a water right, ditch, or canal, or other works depends upon the nature and character of the right claimed. The adverse user only during the season when the water is needed constitutes a sufficient continuous user of either the water or the easement used in connection therewith, as the omission to use the water when it is not needed by the claimant does not break the continuity of the user as far as acquiring a right by prescription is concerned. Water for irrigation, for example, is not needed at all seasons of the year; and, again, it may not be needed every day of the irrigating season. In general, it may be said that the right to its use may be acquired adversely, as it may be acquired by appropriation by periods of time.[11] If whenever the claimant needs the water from time to time, he makes use of it, whether the use be every day, or once every week, or twice a month, or whenever his needs require it, this is a continuous use.[12] But where the interruption in the continuity of the use

Rep. 559; Crawford etc. Co. v. Hathaway, 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587; Talbott v. 10 Alhambra etc. Co. v. Richardson, 72 Cal. 598, 14 Pac. Rep. 379; Churchill v. Louie, 135 Cal. 608, 67 Pac. Rep. 1052; Campbell v. West, 44 Cal. 646; Frederick v. Dickey, 91 Cal. 360, 27 Pac. Rep. 742.

11 For appropriation by periods of time, see Sec. 786.

12 "The correct rule as to continuity of user to give a presumptive right to an easement, and what shall constitute such a continuity, can be stated only with reference to the nature and character of the right claimed. The right is not abandoned to the use of a ditch to convey water for purposes of irrigation because the water does not flow in it every day in the year. The party claimant does not need the ditch every day in the year, and the law does not require him, to constitute continuity of use, to use the water when he does not need it. If he has used the ditch at such times as he needed it, it is regarded by the law as continuous use." Hesperia etc. Co. v. Rogers, 83 Cal. 10, 23 Pac. Rep. 196, 17 Am. St. Rep. 209, citing Bodfish v. Bodfish, 105 Mass. 317.

In California, a finding that for more than five years plaintiff and others used a pipe line as often as required by them for irrigating pur-

is caused by the acts of the party against whom the adverse user is running, and not from the claimant's own free will, no right can be acquired by prescription.[13] Again, a mere "scrambling possession" of the water first by one claimant and then by another gives no right by prescription to any party, for the reason that the continuity of the use is broken.[14]

**§ 1053. Elements necessary—The adverse user must be continuous—Interruption of user.**—An interruption of an adverse user by the owner of the right may be made in several ways, and thus prevent a permanent right from being acquired by prescription. It may be made by the shutting off of the water at the time the claimant needs it.[1] This is true even though the claimant immediately thereafter turned the water back into his own ditch.[2]

poses, constituted a sufficient finding of continuity of user. Collins v. Gray, 3 Cal. App. 723, 86 Pac. Rep. 983.

See, also, Abbott v. Pond, 142 Cal. 393, 76 Pac. Rep. 60; McDougal v. Lame, 39 Ore. 212, 64 Pac. Rep. 864; Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141; Jordan v. Lang, 22 S. C. 159; Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678.

13 Bree v. Wheeler, 4 Cal. App. 109, 87 Pac. Rep. 255; Wasatch Irr. Co. v. Fulton, 23 Utah 466, 65 Pac. Rep. 205.

14 "A mere scrambling possession of the water, or the obtaining of it by force or fraud, gives no prescriptive right." Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 91.

See, also, Morris v. Bean, 146 Fed. Rep. 432; *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed in 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; Bullerdick v. Hermsmeyer, 32 Mont. 541, 81 Pac. Rep. 334; Faull v. Cooke, 19 Ore. 455, 26 Pac. Rep. 662, 20 Am. St. Rep. 836, where the water was used first by one claimant and then by the other, "but the possession of none of the claimants was continuous, or of such a character as to constitute adverse possession against the others."

See, also, cases cited in the following notes.

1 No title to water rights accrued by adverse possession, where the plaintiff annually interrupted defendant's use. Bree v. Wheeler, 4 Cal. App. 109, 87 Pac. Rep. 255; Wasatch Irr. Co. v. Fulton, 23 Utah 466, 65 Pac. Rep. 205; Cave v. Crafts, 53 Cal. 135; Baker v. Brown, 55 Tex. 377; Last Chance etc. Co. v. Heilbron, 86 Cal. 1, 26 Pac. Rep. 523.

2 Authers v. Bryant, 22 Nev. 242, 38 Pac. Rep. 439.

"Among the defenses set up in the several answers were pleas of the statute of limitations and rights by prescription. Under such pleadings any evidence which tended to show an interruption of possession was proper and competent." Wasatch Irr. Co. v. Fulton, 23 Utah 466, 65 Pac. Rep. 205.

See, also, Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73.

But the authorities hold that there must be some open act of the owner to prevent the statute from running, and that the mere verbal disputing of the right of the claimant by the owner is not sufficient.[3] In a recent action in Oregon, where the owner clandestinely and without the knowledge of the adverse claimant forcibly destroyed the works conducting the water, it was held not to break the continuity of the user.[4] Of course, an action brought by the owner against the adverse claimant, seeking to enjoin him from diverting the water, or in ejectment, or seeking to adjudicate the rights of the parties to the water or other property in question, is such an interruption that it will prevent the running of the statute. This may be regarded as the safest and best proceeding for the protection of his rights.[5] But a suit by a stranger against the adverse claimant does not affect or interrupt his adverse use of the water or other property as against the real owner not a party to the suit.[6]

Of course, any acknowledgment of the owner's superior right by the adverse claimant during the statutory period breaks the continuity of the adverse possession, as far as acquiring a right by prescription is concerned.[7]

3 Cox v. Clough, 70 Cal. 345, 11 Pac. Rep. 732; Higuera v. Del Ponte, 4 Cal. App. 13, 88 Pac. Rep. 808; McGeorge v. Hoffman, 133 Pa. 381, 19 Atl. Rep. 413.

Continuity of holding by persons who divert water is not interrupted by objection being made thereto, no attention being paid to the objection. Oregon etc. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701, where the Court said: "The objection amounted to nothing more than the mere denial of the defendant's right, and this was insufficient."

4 Brattain v. Conn, 50 Ore. 156, 91 Pac. Rep. 458, where the Court said: "It was a clandestine and secret invasion of their rights, and we do not understand that an entry by stealth and without the knowledge of the party in possession is sufficient to break the continuity necessary to constitute or establish a right by prescription."

5 "Just before the expiration of the five years the use was 'interrupted' by the bringing of the action in ejectment, and this interruption, though it did not break the continuity of use until final judgment and writ of possession, stopped the running of the statute." Alta etc. Co. v. Hancock, 85 Cal. 219, 24 Pac. Rep. 645, 20 Am. St. Rep. 217.

6 Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

See, also, actions for the protection of the right, Secs. 1596-1659.

**§ 1054. Elements necessary—The taxes must be paid by adverse claimant.**—The fifth and last essential necessary, under our classification, to acquire the rights under discussion by prescription is that during all of the prescriptive period, if any taxes are assessed against the property claimed by adverse user, they must have been paid by the adverse claimant. This rule applies to water rights as well as to ditches, canals, or other works used in utilizing the water, and of which there has been an adverse possession for the prescriptive period with all of the other essentials discussed in the preceding sections.[1] So where the water rights are assessed separate and apart from the lands upon which the water is applied, in order to acquire title by prescription the taxes must be paid by the claimant.[2] But it has been the policy in a number of the States and Territories not to assess water rights or the works used in connection therewith, in certain cases, for the reason that the use of the water when used upon the land so materially increases its value that the land only is assessed. Therefore in jurisdictions where this is the case, water rights and the works necessary therefor the element of the payment of taxes may be considered as eliminated from the essentials necessary to acquire title by prescription. But in jurisdictions where they may be assessed, the payment of taxes by the adverse claimant is an essential to the acquisition of the right in this manner. Where, however, the water rights and works are not assessed, the payment of taxes need not be shown,

v. Barnes, 54 Wash. 145, 102 Pac. Rep. 884.

See, also, that adverse possession can not be based upon permission or license, Sec. 985.

1 See Secs. 1048-1053.

In California it is held that since the passage of the proviso to Section 325 of the Code of Civil Procedure in 1878, the payment of taxes must be made. "Section 325 of the same code makes the additional requirement of the payment of all levied and assessed taxes." Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

See, also, Unger v. Mooney, 63 Cal. 586, 49 Am. Rep. 100; Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; McNoble v. Justiniano, 70 Cal. 395, 11 Pac. Rep. 742; Lux v. Haggin, 69 Cal. 255, 451, 4 Pac. Rep. 919, 10 Pac. Rep. 674; St. Helena W. Co. v. Forbes, 62 Cal. 182, 45 Am. Dec. 659.

2 Swank v. Sweetwater Irr. Co., 15 Idaho 583, 98 Pac. Rep. 297; Frederick v. Dickey, 91 Cal. 360, 27 Pac Rep. 742.

and may be considered as eliminated from the special cases of this nature as an essential element.[3]

The acquisition of a right of way for a ditch or canal by prescription is not defeated by the failure of the claimant to pay taxes assessed against the land, if no taxes were separately assessed against the right of way.[4] And, again, where there is no separate assessment of these property rights, but they are assessed with the land which they benefit, and whose value is enhanced by the use of the water, the payment of the taxes during the prescriptive period of the land benefited is sufficient to answer the requirement.[5]

**§ 1055. Pleading and proof to establish a claim by prescription.**—Upon the question of pleading in cases where one of the parties to a suit relies upon adverse possession amounting to prescription, the authorities are almost unanimous to the effect that it must be specially pleaded by a defendant;[1] but it is held that a general allegation of ownership is sufficient as far as the pleading of the plaintiff is concerned.[2] This question, however, will be more thoroughly discussed in another portion of this work when we come to the question of pleadings.[3]

In the chapter upon the subject of the adjudication of water rights we will discuss the question of the proof necessary to establish a claim by prescription.[4] Suffice it to say here that where one claims a water right or an easement by adverse possession and user amounting to prescription, he has the burden of proving that there

[4] See Chap. 78.

has been present all of the essential elements for the full period of time required by the law of the State or Territory where the claim is made,[5] including the proof of its hostile character, and his evidence must be clear and convincing.

§ 1056. **Extent of right acquired where prescriptive right is complete.**—The right acquired by prescription is only commensurate to the rights enjoyed during the full prescriptive period; and the extent of enjoyment measures the permanent right. The rule declared by the authorities is that the rights of the party who has acquired a prescriptive title, either to a water right or to an easement for the same over the lands of others, "and the rights of the one against whom the title is acquired are mutual, and each is entitled to demand that the prescriptive right be exercised in the same manner that it was exercised while it was being acquired."[1] The claimant can not, on the one hand, gain a right which is in excess of his actual possession and user during the period of time that the statute was running. Therefore, a right acquired for watering stock or for domestic purposes must be confined to the

[5] For the essentials of a prescriptive right, see Secs. 1048-1054.

Edwards, 121 Cal. 662, 54 Pac. Rep. 69; Colegrove W. Co. v. Hollywood, 151 Cal. 425, 90 Pac. Rep. 1153, 13 L. R. A., N. S., 904; Smith v. Hampshire, 4 Cal. App. 8, 87 Pac. Rep. 224; McDougal v. Lame, 39 Ore. 212, 64 Pac. Rep. 864; Chessman v. Hale, 31 Mont. 577, 79 Pac. Rep. 254, 68 L. R. A. 410; Norman v. Corbley, 32 Mont. 195, 79 Pac. Rep. 1059; Hoyt v. Hart, 149 Cal 722, 87 Pac. Rep. 569; Oliver v Agasse, 132 Cal. 297, 64 Pac. Rep. 410; Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678; Church v. Stillwell, 12 Colo. App. 43, 54 Pac. Rep. 395; Hayes v. Silver Cr. etc. Co., 113 Cal. 142, 45 Pac. Rep. 191; Centerville etc. Co. v. Sanger Lum. Co., 140 Cal. 385, 73 Pac. Rep. 1079; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Gregory v. Nelson, 41 Cal. 278; Miller v. Madera etc. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391.

amount of water actually consumed during the prescriptive period, and will not confer any right to use any additional water for any other purpose.[2]

Again, the mere right acquired to the use of an easement over the lands of another does not entitle the claimant to the use of water as against the rights of the owner; but there must also be a right to the use of the water acquired by the adverse possession and user.[3] But so long as the claimant keeps within the limits of the right which he has acquired, or is acquiring he may make such changes in the purpose or manner of his use as he sees fit.[4] But any further invasion of the rights of the former owner may be enjoined by him; or, if continued for the statutory period, accompanied with all the essential elements necessary, will of itself ripen into an independent prescriptive right.

Upon the other hand, the former owner can not restrict the right to the use acquired by the adverse claimant.[5] Therefore, when a prescriptive right has been once acquired, the former owner can not impose some condition to its future use in the manner and to the extent of the right acquired.

It is well settled that in the case of the acquisition of the right to easements by prescription, the owner of the servient estate may use his property in any manner which will not conflict with the enjoyment of the easement. As was said in a late California case:[6] "It is well settled, as a general proposition, that the owner of the servient estate may use his property in any manner

[2] Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Cooper v. Great Falls etc. Co., 94 Tenn. 588, 30 S. W. Rep. 353; Mastenbrook v. Alger, 110 Mich. 414, 68 N. W. Rep. 213; Bashore v. Mooney, 4 Cal. 276, 87 Pac. Rep. 553; Swank v. Sweetwater Irr. Co., 15 Idaho 583, 98 Pac. Rep. 297; Perry v. Calkins, 159 Cal. 175, 113 Pac. [6] Hoyt v. Hart, 149 Cal. 722, 87 Pac. Rep. 569.

and for any purpose consistent with the enjoyment of the easement."[7]

§ 1057. **Effect of adverse user amounting to prescription.**—The effect of a right acquired by prescription is to vest in the claimant the title to the same as completely as if conveyed to him by deed from the original owner. And, as stated in a previous section, there is a fiction of law indulged in that he acquired his title in this manner.[1] In other words, there is a presumption that the original owner granted the right to the claimant.[2] As laid down in a California case,[3] the adverse possession for a period of time prescribed by the statute of limitations not only bars the remedy of the former owner, but extinguishes his title and vests a perfect title in the adverse user.

One effect of acquiring a title either to a water right or an easement for the same is that the adverse claimant will be as fully

[7] See, also, Whitehair v. Brown, 80 Kan. 297, 102 Pac. Rep. 783; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Oliver v. Burnett, 10 Cal. App. 403, 102 Pac. Rep. 223.

[1] For prescription, in general, see Sec. 1034.

[2] "No principle of law is better established than that, when title is once acquired by adverse possession for the statutory period, such title remains in the person so acquiring it as completely as if conveyed to him by deed from the owner." Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Joy v. Stump, 14 Ore. 361, 12 Pac. Rep. 929.

The rule that adverse possession of land for a period of time prescribed by the statute of limitations not only bars the remedy, but extinguishes the right of the person holding the true written title and vests a perfect title in the adverse holder, applies to the prescriptive right to divert water. Wutchumna etc. Co. v. Ragle, 148 Cal. 759, 84 Pac. Rep. 162.

See, also, Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453; Smith v. Green, 109 Cal. 228, 41 Pac. Rep. 1022; Pearson v. Dryden, 28 Ore. 350, 43 Pac. Rep. 166; Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553; Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Woodward v. Brown, 109 Cal. 12; Yankee Jim's etc. Co. v. Crary, 25 Cal. 504, 85 Am. Dec. 145, 1 Morr. Min. Rep. 196; Alhambra etc. W. Co. v. Richardson, 72 Cal. 598, 14 Pac. Rep. 379; Evans v. Ross, 67 Cal. 19, 8 Pac. Rep. 88; Oregon Const. Co. v. Allen D. Co., 41 Ore. 209, 69 Pac. Rep. 455, 93 Am. St. Rep. 701; Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935; Woodward v. Farris, 109 Cal. 12, 41 Pac. Rep. 781; Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141.

[3] Wutchumna etc. Co. v. Ragle, 148 Cal. 759, 84 Pac. Rep. 162.

protected in his right as though his title to the same was acquired in some other manner. This is both the English and American rule.[4]

An action may be brought to quiet title by the claimant [5] or any other action will lie in his behalf necessary to protect his right.[6] Upon the other hand, no right of action for the continued user by the adverse claimant exists in favor of the original owner after the statute has run for the full prescriptive period, his right of action being then barred.[7]

After a right by prescription has once been acquired, the continuance of the use is held to be no longer a cause of action as a continuing trespass; but the title having once vested is as complete as any other.[8]

§ 1058. **The question of priority.**—There are very few decisions upon the question of the priority of rights which have been acquired by prescription. However, the following are our views upon the subject:

The title acquired by one by adverse user amounting to prescription is based upon the presumption of a grant of the right so acquired. As was said in a late Oregon case:[1] "No principle of law is better established than that, when title is once acquired by adverse possession for the statutory period, such title remains in the person so acquiring it as completely as if conveyed to him by deed from the owner."[2] Therefore, upon the question of the right ac-

4 Holker v. Porritt, L. R. 10 Exch. 59, 44 L. J. Exch. N. S. 52, 33 L. T. N. S. 125, 23 Week. Rep. 400; affirming *Id.*, L. R. 8 Exch. 107, 42 L. J. Exch. N. S. 85, 21 Week. Rep. 414.

5 Bashore v. Mooney, 4 Cal. App. 276, 87 Pac. Rep. 553.

6 For remedies, See Chaps. 78-83.

7 Wutchumna etc. Co. v. Ragle, 148 Cal. 759, 84 Pac. Rep. 162.

After the statute has once run, the continuance of the use is no longer a cause of action as a continuing trespass. Patterson v. Ft. Lyon etc. Co., 36 Colo. 175, 84 Pac. Rep. 807.

But see the case of Henshaw v. Salt River Valley C. Co., 9 Ariz. 418, 84 Pac. Rep. 908, holding to the contrary, and also contrary to all authority upon the subject.

8 See Patterson v. Fort Lyon etc. Co., 36 Colo. 175, 84 Pac. Rep. 807.

See, also, Greeley Irr. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985.

But see Henshaw v. Salt River etc. Co., 9 Ariz. 418, 84 Pac. Rep. 908.

1 Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286.

2 See, also, Joy v. Stump, 14 Ore. 361, 12 Pac. Rep. 929.

quired, it depends upon what the original owner had to grant. If he claimed as a riparian proprietor, there was no priority of right, for the reason that the common law recognizes no priority of rights as between riparian proprietors.[3] In such a case, therefore, the claimant by prescription can take only what the riparian owner had to grant; that is to say, the right to the use of the water regardless of any priority. The rule in such a case, as correctly laid down by the Oregon Court, is to the effect that the priority begins with the time when the claimant begins to divert the water, as is the case of an appropriator by actual diversion.[4] In other words, there is an extinguishment of the old riparian right and a substitution of the new prescriptive right, the priority of which begins at the time of the actual diversion.[5] Upon the other hand, if the original owner acquired his right by appropriation, having a certain fixed date of priority, and he grants to another by proper deed a portion of his rights, the grantee will take the right with the original priority.[6] So in the case of prescriptive right against the rights of an appropriator which prescriptive right vests in the grantee the title "as completely as if conveyed to him by deed from the owner,"[7] it must logically follow that the prescriptive owner takes all the title that the original owner had, including his priority of right, and in any future adjudication of such right the decree should award the original priority of right to the prescriptive owner. Such we believe to be the only logical and common-sense view of this subject.

# CHAPTER 55.

## RIGHTS ACQUIRED BY EMINENT DOMAIN.

§ 1059. Scope of chapter.
§ 1060. Power of the United States to exercise the right of eminent domain.
§ 1061. Power of the States to exercise the right of eminent domain.
§ 1062. Protection under State constitutions.
§ 1063. Rights of way—Public use—Effect of State statutes defining a use to be public.
§ 1064. Private property can not be taken for strictly private use.
§ 1065. What is a public use—Classification—Authorities.
§ 1066. What is a public use—Influence of locality.
§ 1067. Public use—Authorities holding that the use must be for the entire public.
§ 1068. Public use—Authorities holding that the use need not be for the entire public.
§ 1069. Public use—Exercise of right for irrigation by private parties, when a public use.
§ 1070. Public use—Exercise of right for mining by private parties, when a public use.
§ 1071. Public use—Exercise of right for manufacturing by private parties, when a public use.
§ 1072. Public use—Exercise of rights for development of electrical energy by private parties, when a public use.
§ 1073. Public use—Exercise of right for other industries by private parties, when a public use.
§ 1074. Public use—The necessity for the taking must exist in order to acquire the right.
§ 1075. Rights of way—Necessity for the taking—The existence of a water right.
§ 1076. Due process of law—In general.
§ 1077. Due process of law—Rights of way can not be acquired without.
§ 1078. Due process of law—Statutory provisions.
§ 1079. Compensation and damages—Right to.
§ 1080. Compensation and damages—By what body may be assessed.
§ 1081. Just compensation—Measure of.
§ 1082. Damages to other lands—Measure of.
§ 1083. Compensation and damages to land offset by benefits.
§ 1084. Multiplicity of ditches—Limitations to the right of condemnation.
§ 1085. Acquisition of right of way through existing ditches.
§ 1086. Acquisition of rights over lands of municipalities or public service corporations.
§ 1087. Water rights—Power to acquire.
§ 1088. Water rights—The condemnation of riparian rights.

§ 1089. Riparian rights—Parties defendant—Difficulties encountered in condemnation suits.
§ 1090. Riparian rights—Modern tendencies—Due process of law and just compensation in other than condemnation suits.
§ 1091. Riparian rights—Just compensation—Measure of damages.
§ 1092. Actions for condemnation—General procedure and practice.
§ 1093. Actions for condemnation—Parties.
§ 1094. Actions for condemnation—Pleadings.
§ 1095. Actions for condemnation—The hearing.
§ 1096. Actions for condemnation—Verdict—Judgment.
§ 1097. Actions for condemnation—Appeal and review of the judgment.
§ 1098. Nature of title acquired.

**§ 1059. Scope of chapter.**—As the right of acquiring property for public purposes has been more frequently exercised for the acquisition of rights of way for ditches, canals, and other works over the lands of others, we will divide this chapter into three parts: First, a short discussion of the general right to exercise the power of eminent domain; second, the acquisition of rights of way; and, third, the acquisition of water rights.

The right of eminent domain relative to the subterranean or underground waters, and also to underground reservoirs, will be discussed in a separate chapter.[1]

**§ 1060. Power of the United States to exercise the right of eminent domain.**—Eminent domain is the right which the Government retains over the estates of individuals to appropriate them to the public use. It is the superior right of property subsisting in the sovereignty, by which private property may, in certain cases, be taken, or its use controlled for the public benefit, without regard to the consent of the owner, and even against his wishes.[1] The right of eminent domain is an incident of sovereignty and requires no constitutional recognition.[2] This right of the State is univer-

1 For subterranean waters, see Chaps. 59-62, Secs. 1148-1211.

1 Bouvier, Law Dict., Sub., Eminent Domain; Angell on Water Courses, Sec. 457.

2 United States v. Jones, 109 U. S. 513, 27 L. Ed. 1015, 3 Sup. Ct. Rep. 346, where the Supreme Court held that: The power to take private property for public uses, generally termed the right of eminent domain, belongs to every independent government. It is an incident of sovereignty, and requires no constitutional recognition. The provision found in the Fifth Amendment to the Federal Constitution and in the Constitution of the several States for just compensa-

sally acknowledged, and to this power "men have impliedly yielded, though it has not been expressly reserved."[3] But it is a rule founded in equity and laid down by jurists, as also an acknowledged principle of universal law, that no estate can be condemned for this purpose without due process of law and just compensation to the owner thereof. And for the protection of the individual in his property rights the Fifth Article of the Amendments to the Constitution of the United States was added, which provides: "Nor shall any person . . . be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."[4] "Due process of law" in the first clause refers to the law of the land, which derives its authority from the legislative power conferred upon Congress by the Constitution of the United States, exercised within the limits therein prescribed, and interpreted according to the principles of the common law.[5]

The clause that private property shall not be taken for public use without just compensation contains an implied recognition of the right of eminent domain beyond what may justly be implied from the express grants of power. This amendment admits the principle that private property may be taken for public use if just compensation be made.[6] The clause is also a limitation upon the

tion for the property taken is merely a limitation upon the use of the power.

See, also, 1 Blackstone Comm. 139; Mississippi etc. Co. v. Patterson, 98 U. S. 403, 25 L. Ed. 206; Varick v. Smith, 9 Paige 547; Spring v. Russell, 7 Me. 273; Day v. Stetson, 8 Me. 365; Gould on Waters, Chap. 8; Vattel, Chap. 20, Sec. 244.

[3] Vattel, Chap. 20, Sec. 34.

[4] This amendment applies only to the powers of the United States through its Acts of Congress. Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948.

[5] Hurtado v. People of California, 110 U. S. 516, 28 L. Ed. 232, 4 Sup. Ct. Rep. 111.

See, also, for further discussion on the subject of due process of law, Secs. 1076-1078.

[6] The right of eminent domain exists in the Federal Government, and may be exercised within the States, so far as is necessary to the enjoyment of the powers conferred upon it by the Constitution. Kohl v. United States, 91 U. S. 367, 23 L. Ed. 449.

See, also, Chesapeake etc. Co. v. Key, 3 Cranch 599, 5 Fed. Cas. No. 2,649; Bonaparte v. Camden R. Co., Baldw. 205, 3 Fed. Cas. No. 1,617; 8 Op. Atty. Gen. 333; Smith v. United States, 32 Ct. Cl. 307; *In re* Rugheimer, 36 Fed. Rep. 369; Shoemaker v. United States, 147 U. S. 282, 37 L. Ed. 170, 13 Sup. Ct. Rep. 361.

That this amendment applies only

use of the power.[7] Such, in brief, are the rights of the United States to exercise the power of eminent domain. The right of the respective States to exercise the same power will be discussed in the following sections.[8]

**§ 1061. Power of the States to exercise the right of eminent domain.**—The respective States of the Union have the same general powers to exercise the right of eminent domain as have the United States.[1] That private property may be taken by a State under the powers of eminent domain, under due process of law, and with just compensation, is beyond all question. The exercise by the State of its sovereign right of eminent domain can not be interfered with by the United States.[2] But not only are the rights of the individual protected under the provisions of the Fifth Amendment of the Constitution of the United States, discussed in the previous section,[3] but Section 1 of the Fourteenth Amendment of the Constitution of the United States also adds a further protection by providing: "Nor shall any State deprive any person of life, liberty, or property without due process of law." This clause operates to extend to the citizens and residents of the several States the same protection against arbitrary legislation by the State affecting life, liberty, and property, as is offered by the Fifth Amendment against similar legislation by Congress.[4] However, the right

to Acts of Congress, see Fallbrook Irr. Co. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948.

7 United States v. Jones, 109 U. S. 513, 27 L. Ed. 1015, 3 Sup. Ct. Rep. 346; High Bridge Lum. Co. v. United States, 69 Fed. Rep. 320, 16 C. C. A. 460; *In re* Montgomery, 48 Fed. Rep. 896; Smith v. United States, 32 Ct. Cl. 307; Meriam v. United States, 29 Ct. Cl. 257.

8 See Secs. 1061-1063.

1 For powers of the United States, see Sec. 1060.

And even the Territories were given this power under the authority of their organic Acts.

The Territory of Arizona, though not possessing sovereignty, was clothed with authority to provide for the exercise of the power of eminent domain by the clause in the organic Act which says: "The legislative power of this Territory extends to all rightful subjects of legislation not inconsistent with the constitution and laws of the United States." Oury v. Goodwin, 3 Ariz. 255, 26 Pac. Rep. 376.

See, also, Guttierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357.

2 Mississippi etc. Co. v. Patterson, 98 U. S. 403, 25 L. Ed. 206.

3 See Sec. 1060.

4 Hibben v. Smith, 191 U. S. 310, 48 L. Ed. 195, 24 Sup. Ct. Rep. 88.

of eminent domain, that is, the right to take private property for public uses, appertains to every independent government, whether that government be the United States or one of the States of the Union. It requires no constitutional recognition; it is an attribute of sovereignty.[5] But, upon the other hand, for a State legislature to authorize the taking of private property, against the consent of the owner, either for a right of way for ditches and canals or for any other purpose, in no way public, and without due process of law, and without just compensation to the owner thereof, would be unconstitutional, as being contrary to the provisions of both the Fifth and the Fourteenth Amendments of the Constitution of the United States.[6]

In Texas it is held that the Act of the legislature of 1895,[7] authorizing the organization of irrigation corporations and giving them power of eminent domain, and providing that the Act shall apply to those portions of the State in which, by reason of insufficient or irregular rainfall, irrigation is beneficial for agricultural purposes, does not render the Act void for indefiniteness as to the territory to which it applies.[8]

**§ 1062. Protection under State constitutions.**—But the protection to the property rights of the individual in this respect does not rest solely with the Constitution of the United States. The declaration of rights in the constitutions of the respective States have provisions similar to those of the Fifth and Fourteenth Amendments of the Constitution of the United States.[1] For example, the

[8] Borden v. Trespalacios etc. Co., 98 Tex. 494, 82 S. W. Rep. 461, 86 S. W. Rep. 11, 107 Am. St. Rep. 640.

[1] See preceding sections, Nos. 1060, 1061.

Utah Constitution, Article I, Section 7, provides: "No person shall be deprived of life, liberty, or property without due process of law." And Section 22 of the same article provides: "Private property shall not be taken or damaged for public use without just compensation." In the California constitution, Article I, Section 13, is to be found the following: "No person shall be," etc., "nor be deprived of life, liberty, or property without due process of law."[2]

These constitutional provisions of the United States,[3] supplemented and reinforced by the provisions in the State constitutions, afford full and ample protection to the property rights of the individual in any jurisdiction; and should these rights be attacked in any manner against the constitutional provisions, relief may always be had by recourse to the courts. We will now discuss the elements which must necessarily be present in order to take private property for public use, having special reference to the subject in hand, the acquisition of rights of way amounting to a permanent easement by the power of eminent domain over the private lands of another and against his consent for ditches and canals for the purpose of conducting water to the place of use.[4]

**§ 1063. Rights of way—Public use—Effect of State statutes defining a use to be public.**—We come now to the important question as to what constitutes a public use for which private property, especially rights of way over the lands of another for ditches and canals, under the power of eminent domain, may be taken against the consent of the owner of the lands. And, incidentally, we will say in passing that the same principles as to the public use apply where the property is taken by some other means than that of eminent domain, such as by taxation, assessment, or other burden upon property.[1] In the statutes of all the States are to be found detailed

[2] These provisions of the various constitutions will be set out in Part XIV, the constitution and laws of the various States.

[3] See Sec. 1060.

[4] For the right to the use of water acquired by eminent domain, see Secs. 1087, 1088.

[1] Fallbrook Irr. Co. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948, where the question was the assessments levied under the Wright Act in support of an irrigation district.

The Fourteenth Amendment of the Federal Constitution protects the citizen against the taking of his property for any other than a public use,

provisions as to when and for what public uses the power of eminent domain may be exercised. And only such uses as are enumerated by the statute are public uses for which an action for condemnation will lie.[2] The procedure or method of exercising the right is also prescribed in detail.[3]

A State statute defining a certain use to be a public one, and, therefore, within the constitutional limitations,[4] is by no means conclusive upon the subject. We may also say the same thing respecting a State statute which has been construed by the Supreme Court of the State as being within the constitutional limitations as to the use defined to be a public one. The matter involving such a grave constitutional question may be taken to the Supreme Court of the United States, and its decision alone can be regarded as conclusive as to whether a certain use defined by a State statute as a public one, for which the right of eminent domain may be exercised, is in fact such a use. But in deciding this question the Supreme Court of the United States itself holds that the declaration of the people and the legislature of a State, in their constitutions and statutes, that a certain use is a public one, especially when so decided by the highest courts of the States that it is so, are to be treated with very great respect by the Supreme Court of the United States, but that they are not absolutely binding upon that Court as to what constitutes in fact a public use, but that it is for that Court to determine finally what use constitutes a public use within the constitutional limitations. The question in these cases also arises as to whether the Federal Constitution has been violated, and thus it is for the Supreme Court of the United States to

either under the guise of taxation, or by the assumption of the right of eminent domain. *In re* Tuthill, 163 N. Y. 133, 57 N. E. Rep. 303, 49 L. R. A. 781.

For the taking of the right to the use of water by the power of eminent domain, see Secs. 1087, 1088, 1098.

2 Hercules W. Co. v. Fernandez, 5 Cal. App. 726, 91 Pac. Rep. 401.

An Act authorizing the organization of irrigation corporations, and giving them the power of eminent domain, and providing that the Act shall apply to those portions of the State in which, by reason of insufficient or irregular rainfall irrigation is a necessity, does not render the Act void for indefiniteness as to the territory to which it applies. Borden v. Trespalacios etc. Co., 98 Tex. 494, 82 S. W. Rep. 461, 86 S. W. Rep. 11, 107 Am. St. Rep. 640.

3 For actions for condemnation, see Secs. 1092-1097.

4 For the constitutional limitations, see Sec. 1062.

make the final and conclusive decision in accordance with its views of constitutional law.[5] And, therefore, if the Act of a State legislature, as construed by its highest court, conflicts with the Federal Constitution, it is the duty of the Circuit Court and the Supreme Court of the United States to so decide, and thus enforce the provisions of the Federal Constitution.[6] Therefore, if an Act violates any provision, expressed or properly implied, of the Federal Constitution, it is the duty of the Supreme Court of the United States to so declare it; but if it does not there is no justification for the Federal Courts to run counter to the decisions of the highest court of the State upon questions involving the construction of the State statutes or constitution on any alleged ground that such decisions are in conflict with the sound principles of general constitutional law. And in exercising that jurisdiction by the Federal Courts it is their duty to be guided by the decisions of the highest State court upon the construction of the statute as to whether it was or was not in violation of the Federal Constitution, and also upon the question whether as construed the statute violated any provision of the State constitution.[7]

[5] Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948.

Under the Montana constitution, Article 3, Section 15, the flooding of land by a dam erected for the purpose of supplying electric power to mines and smelters and to the public generally, and for supplying water for irrigation purposes, is for a public use, authorizing condemnation of such land. And it is there held that every reasonable intendment is in favor of the constitutionality of a law, and before it can be pronounced invalid the invalidity must be made manifest beyond a reasonable doubt. Spratt v. Helena etc. Co., 37 Mont. 60, 94 Pac. Rep. 631; see, also, for same case, 35 Mont. 108, 88 Pac. Rep. 773, 8 L. R. A., N. S., 567, 10 Am. & Eng. Ann. Cas. 1055.

[6] Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948; Shelby v. Guy, 24 U. S. 11 Wheat. 361, 6 L. Ed. 495; Nesmith v. Sheldon, 48 U. S. 7 How. 812, 12 L. Ed. 945; Van Rensselaer v. Kearney, 52 U. S. 11 How. 297, 13 L. Ed. 703; Webster v. Cooper, 55 U. S. 14 How. 488, 14 L. Ed. 510; Leffingwell v. Warren, 67 U. S. 2 Black 599, 17 L. Ed. 261; Hagar v. Reclamation Dist. No. 108, 111 U. S. 701, 28 L. Ed. 569, 4 Sup. Ct. Rep. 663; *Id.*, 66 Cal. 54, 4 Pac. Rep. 945; Detroit v. Osborne, 135 U. S. 492, 34 L. Ed. 260, 10 Sup. Ct. Rep. 1012.

[7] Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Cal. 948.

"We are always, where it can be fairly done, strongly inclined to hold with the State Courts, when they uphold a statute providing for such condemnation." Clark v. Nash, 198 U.

**§ 1064. Private property can not be taken for strictly private use.**—The authorities are unanimous upon the proposition that private property of another can not be taken by a person under the power of eminent domain for a strictly private use by that person and without any benefit either to the general public at large or to a portion thereof, although full compensation may be made or tendered.[1]

The Fourteenth Amendment of the Federal Constitution, in prohibiting a State from depriving any person of life, liberty, or property without due process of law, protects the citizen against the taking of his property for any other than a public use, even for full compensation, by the assumption of the right of eminent domain.[2] Hence it must necessarily follow that a right of way for a ditch or canal can not be acquired in this manner over the lands

S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Ann. Cas. 1171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953.

"The construction by a State Court of law of the State as authorizing the Court to try and determine in a condemnation proceeding an adverse claim of the plaintiff therein to an interest in the property sought to be condemned is conclusive on the Supreme Court on writ of error to that Court." 2 Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948; *In re* Tuthill, 163 N. Y. 133, 57 N. E. Rep. 303, 49 L. R. A. 781.

For the powers of the State to exercise the right of eminent domain, see Secs. 1061, 1063.

of another where the use to which the water is put is purely private, and in which no portion of the public is interested or benefited thereby. It is upon this theory that some of the courts hold, under their constitutions, that the right of eminent domain can not be exercised to condemn lands for ditches and canals where the object is to use the water in working the mining claims of those seeking the right of way, and that, too, even although incidentally water is to be sold for general mining and irrigation purposes.[3] As held by a late case in California, the business of mining for the benefit of the mine owner is a private enterprise, and the right of eminent domain can not be invoked in the aid of it.[4]

**§ 1065. What is a public use—Classification—Authorities.**—Upon the question as to what constitutes a public use for which the power of eminent domain, within the constitutional limitations,[1] for the purpose of acquiring rights of way over the lands of others, the authorities, even in the arid States, are by no means harmonious. Again, there is no fixed rule of law by which this question can be determined. In other words, what is a public use can not always be determined by the application of purely legal principles. Upon an examination of the authorities upon this subject it will be found that there is a great diversity of opinion upon this most important question as to what constitutes a public use for which private property may be taken, either by the power of eminent domain or by taxation or assessments for some particular purpose. It is therefore impossible to reconcile these authorities and make them consistent with any definition of the term "public use," and no attempt will be made to do so. And neither does an appeal to the Supreme Court of the United States tend to reconcile the au-

3 Lorenz v. Jacobs, 65 Cal. 20, 3 Pac. Rep. 654; Consolidated etc. Co. v. Central Pac. R. Co., 51 Cal. 269; Dower v. Richards, 73 Cal. 477, 15 Pac. Rep. 105; Amador etc. Co. v. Dewitt, 73 Cal. 482, 15 Pac. Rep. 74.

4 Sutter County v. Nichols, 152 Cal. 688, 93 Pac. Rep. 872, 15 L. R. A., N. S., 616.

But a canal, if constructed for the sale and distribution of water for the general development of mining and agricultural interests along the line thereof, and not for the purpose merely of developing the mineral lands of the owners of such canal, is held to be a public use for which land may be condemned. Cummings v. Peters, 56 Cal. 593.

See, also, Spratt v. Helena etc. Co., 37 Mont. 60, 94 Pac. Rep. 631.

1 See Secs. 1067-1074.

thorities upon the subject as that Court, where there is no direct violation of the Constitution, as announced by it many times, will usually hold with the highest Court of the State as to whether a statute of the same as to what constitutes a public use for which the right of eminent domain may be exercised, is constitutional.[2] And it will be found upon examination that the decisions of the Supreme Court of the United States upon the subject as to what constitutes a "public use" are as irreconcilable with each other and any rule which may be formulated as are the decisions of the State courts which it follows.

But, although the authorities can not be reconciled upon the subject, they may be classified. And for this purpose they may be divided into three classes: First, those which hold that the use must be for all the public;[3] second, those which hold that the use is public when it promotes the interests of a certain portion of the community, although it may not directly benefit the public at large;[4] third, those which hold that a certain use by a private individual or corporation for his or its own private enterprise, when it indirectly benefits the public at large, constitutes such a use that it is a public use.[5]

**§ 1066. What is a public use—Influence of locality.**—It will also be noticed that in the decision of this question the courts have been largely influenced by the local conditions and necessities. And, therefore, what is deemed a public use in one State has been held by the courts of another State not to be such a use. As was said in a late Washington case:[1] "In determining the question of public use courts have always been influenced to a greater or

2 "Where the right of eminent domain is asserted under a State statute, we are always, where it can be fairly done, strongly inclined to hold with the State courts, when they uphold a statute providing for condemnation." less extent by legislative declarations and local customs and conditions and local necessities."[2]

In the East and the South the drainage of lands is one of the paramount questions, and thereby establishing the health of the community indirectly, while at the same time the lands drained are made productive and thereby directly benefiting the owners. The "Mill Acts" of this portion of the country have also been considered, and in the main upheld, and thereby great manufacturing enterprises were permitted to take private property for what was deemed by the courts to be a public use by the general upbuilding of that portion of the country through the establishment of these manufacturing enterprises. In the Western States the reclamation of lands has been declared a public use, in the aid of which the right of eminent domain may be exercised, upon the theory that, although it may benefit the individual directly, the indirect benefit to the general public is greater by permitting the upbuilding and settlement of the country. Therefore, in the main, as to what constitutes a public use is a question of the necessities of any particular region of the country and the general benefit to the public either directly or indirectly, and regardless of the fact that some particular individual or group of individuals are more directly benefited than the general public.[3]

**§ 1067. Public use—Authorities holding that the use must be for the entire public.**—Under our classification, as stated in a previous section,[1] there is a long line of authorities, which hold that the power of eminent domain can not be exercised for any use which does not appertain to the general public; that is, the public

Rep. 731, 1 L. R. A., N. S., 208), is based upon exceptional conditions, and is without application here." Shasta Pr. Co. v. Walker, 149 Fed. Rep. 568.

3 In the following sections, we will discuss the authorities under the above classification and in the order named.

See Secs. 1067-1069.

1 See Sec. 1065.

in general must have the right to the actual use in some way of the property appropriated. And it is also held that it is the right of individuals as a part of the public to use the property when the occasion requires. But it is not necessary that all of the public should have occasion for the use. These authorities also hold that the taking must be by the official representatives of the public, or by some one standing in the position of a public agent. In other words, this line of authorities holds that property is devoted to a public use when, and only when, the use is one which the public, in its organized capacity, to wit, the State, or some subordinate public or municipal organization, has the right to create and maintain, and therefore one which all the public has the right to demand and share in.[2] Hence, under this line of authorities it is held that the generation of electricity by a private corporation under no obligations to serve the public, and not organized to meet a public demand, is not a public use for which the power of eminent domain may be exercised, although the corporation is organized with the right to sell the generated power to the public.[3]

[2] Budd v. New York, 143 U. S. 517, 36 L. Ed. 247, 12 Sup. Ct. Rep. 468, 4 Inters. Com. Rep. 45; Munn v. Illinois, 94 U. S. 113, 24 L. Ed. 77; Ulmer v. Lime Rock R. Co., 98 Me. 579, 57 Atl. Rep. 1001, 66 L. R. A. 387; Borden v. Trespalacios etc. Co., 98 Tex. Civ. App. 494, 107 Am. St. Rep. 640, 82 S. W. Rep. 461, 86 S. W. Rep. 11; Board of Health v. Van Hoesen, 87 Mich. 533, 49 N. W. Rep. 894, 14 L. R. A. 114; Berrien Sprs. W. Co. v. Berrien Circuit Judge, 133 Mich. 48, 94 N. W. Rep. 397, 103 Am. St. Rep. 438; Varner v. Martin, 21 W. Va. 534; Pittsburg etc. R. Co. v. Benwood Iron Wks., 31 W. Va. 710, 8 S. E. Rep. 453, 2 L. R. A. 680; Southwest Mo. L. Co. v. Scheurich, 174 Mo. 235, 73 S. W. Rep. 496; *In re* Rhode Island etc. R. Co., 22 R. I. 457, 48 Atl. Rep. 591, 52 L. R. A. 879.

[3] The legislature can not make a private use public by calling it so, so as to justify an exercise of the power of eminent domain in its behalf; and neither a mere public convenience, nor the mere public welfare, will justify the exercise of the right. The mere creation and distribution of power for manufacturing enterprises are not a public use which will justify an exercise of the power of eminent domain. Brown v. Gerald, 100 Me. 351, 61 Atl. Rep. 785, 70 L. R. A. 472, 109 Am. St. Rep. 526.

See, also, State *ex rel.* Harris v. Superior Court Thurston Co., 42 Wash. 660, 85 Pac. Rep. 666, 5 L. R. A., N. S., 554, where the Court held that, however much public policy demands it, or whatever the public benefit therefrom may be, it must be a use by the public or by some agency that is *quasi* public.

See, also, Healy Lum. Co. v. Morris, 33 Wash. 490, 74 Pac. Rep. 681, 99 Am. St. Rep. 684, 63 L. R. A. 820; State *ex rel.* Tacoma etc. Co. v. White River Pr. Co., 39 Wash. 648,

As will be noticed by the authorities cited, and many more which are cited in the cases referred to in our notes, this view might be termed the strict construction of the term "public use" for which the power of eminent domain may be exercised. Under this construction of the term the use must be for all of the public or any members of the public who wish to avail themselves of it and are in a position to do so. The use must also be brought into being by the State or some public agency. It will also be noticed that there is a close analogy between the reclamation of land by irrigation and its reclamation by drainage, and under this rule it is held that the State has no power to authorize the construction of a drainage ditch under the power of eminent domain over the private land of another, except when it be for the betterment of the public health or welfare.[4]

Under this theory a corporation or company may represent the general public. But "whoever attempts to condemn the private right must be prepared to furnish (to the extent of the water he consumed and pays for) every individual of the community or communities, farming neighborhood, or farming neighborhoods, to which he conducts it."[5]

Dist. v. De Lappe, 79 Cal. 351, 21 Pac. Rep. 825; *In re* Madera Irr. Dist., 92 Cal. 296, 28 Pac. Rep. 272, 14 L. R. A. 755, 27 Am. St. Rep. 106, 5 Am. R. R. & Corp. Rep. 288; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

of eminent domain may exist even if no considerable portion of a community where the right is sought to be exercised should directly enjoy or participate in the improvement. As was said by Mr. Justice Peckham in rendering the opinion in the case of Fallbrook Irrigation District v. Bradley,[3] which case involved the same principle as to what constituted a public use for which private property might be taken either by eminent domain or by a tax or assessment, although in this case it involved the validity of an assessment under the Wright Irrigation District Act: "The fact that the use of the water is limited to the land owner is not, therefore, a fatal objection to this legislation. It is not essential that the entire community, or even any considerable portion thereof, should directly enjoy or participate in an improvement in order to constitute a public use. . . . It is not necessary, in order that the use should be public, that every resident in the district should have the right to the use of the water." And the Court further held that all the lands lying within the limits of the district were subject to the assessments for the objects for which the district was organized, even if the owner of the lands could not or would not use the water for their irrigation. In laying down this rule the Court followed the rule as laid down by the State Supreme Court, holding, in effect, that these decisions were to be treated with great respect by the Court; and where there was no direct violation of the Constitution the decisions of the highest State courts were to be followed as to what constituted a public use in any jurisdiction. And in the case of Tregea v. Modesto Irrigation District[4] the Supreme Court of the United States, by dismissing the appeal in that case, affirmed the decision of the Supreme Court of California,[5] wherein it was held that even small town lots covered by buildings

That the use of property sought to be condemned may bring about private profit, does not prevent the use from being a public one. Spratt v. Helena etc. Co., 37 Mont. 60, 94 Pac. Rep. 631.

The test of public use in acquiring water rights and rights of way for irrigation ditches and canals is not necessarily the service the owners may be compelled to render the public in connection therewith. State *ex rel.* Galbraith v. Superior Court, 59 Wash. 621, 110 Pac. Rep. 429, 140 Am. St. Rep. 893.

might be included in the assessments for the organization and maintenance of the irrigation district, upon the theory "that their value for other purposes may have been greatly enhanced.[6] And not only have the courts under this rule upheld the taking of land for rights of way by irrigation districts, but it has also upheld the taking under statutory provision allowing the taking for supplying water to "farming neighborhoods."[7]

**§ 1069. Public use—Exercise of right for irrigation by private parties, when a public use.**—Under our classification of the different lines of authorities as to what constitutes a public use[1] there is another line which holds to the effect that a private individual or corporation may exercise the right of eminent domain and condemn rights of way over the lands of others for ditches and canals, and that, too, where the sole use of the water is by the individual or corporation, and that the actual use by the public, or by any community or class thereof, is not necessary. This is upon the theory that the physical and climatic conditions of the State are such that the promotion of any great industry, such as irrigation, mining,[2] manufacturing,[3] the development of electrical energy,[4] or other great industries,[5] is of sufficient importance in the upbuilding of the country and the developing of its natural resources, that such a use is a public benefit to the community at

[5] See Sec. 1073.

large, and, therefore, it is a public use, even if the more direct benefit is to a private individual or corporation. Under this line of authorities, upon the subject that the use of the water for the irrigation of one farm is of such a benefit to the general public that the right of eminent domain may be exercised by the farmer to acquire a right of way over the lands of his neighbor for his ditch or canal, the case of Nash v. Clark, which arose in the State of Utah, is the leading case.[6] This was an action where the plaintiff sought to condemn a right of way through the ditch of the defendant and over another short strip of land in order to conduct the water to his own farm. The Supreme Court, in affirming the judgment of the Court below granting the right, held to the effect that in that State the reclamation of land by irrigation is such a public use that the legislature may rightfully authorize the condemnation of rights of way over the private lands of others, or through the ditches of private individuals, to convey water for that purpose onto land belonging to a private individual.[7]

Upon the subject of what constituted a public use in cases of this nature Mr. Justice McCartey, in rendering the opinion of the Utah Court, said: "In view of the physical and climatic conditions in this State, and in the light of the history of the arid West, which shows the marvelous results accomplished by irrigation, to hold that the use of water for irrigation is not in any sense a public use, and thereby place it within the power of a few individuals to place insurmountable barriers in the way of the future welfare and pros-

[6] Nash v. Clark, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953, 4 Ann. Cas. 1171; affirmed in Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676.

[7] The Compiled Laws of Utah of 1907 provide as follows: "1288x22. When any person, corporation, or association desires to convey water for irrigation or for any other beneficial purpose, and there is a canal or ditch already constructed that can be enlarged to convey the required quantity of water, then such person, corporation, or association, or the owner or owners of the land through which a new canal or ditch would have to be constructed to convey the quantity of water necessary, shall have the right to enlarge said canal or ditch already constructed, by compensating the owner of the canal or ditch to be enlarged, for the damage, if any, caused by said enlargement; provided, that said enlargement shall be done at any time from the 1st day of October to the 1st day of March, or at any other time that may be agreed upon with the owner of said canal or ditch." Rev. Stat. 1898, Sec. 1278; Laws 1903, p. 103; Laws 1905, p. 160.

perity of the State, would be giving to the term 'public use' altogether too strict and narrow interpretation, and one we do not think is contemplated by the constitution."

The case was then appealed by the defendant below to the Supreme Court of the United States, and jurisdiction in that Court had upon the ground that the use for which this condemnation was allowed was not a public use within the meaning of the Fourteenth Amendment of the Constitution of the United States.[8] And in the appeal to the Supreme Court of the United States, as will be seen from the record, the plaintiff in error was represented by very able counsel and a brief filed; while, on the other hand, the defendant in error relied only upon his constitutional right to represent himself in his own case, "no counsel for defendant in error" appearing and no brief being filed in his behalf, and yet that Court affirmed the decision of the State Court in the following language: "We are of the opinion, having reference to the above peculiarities which exist in the State of Utah, that the statute permitting the defendant in error, upon the facts appearing in this record, to enlarge the ditch and obtain water for his own land was within the legislative power of the State, *and the judgment of the State Court affirming the validity of the statute is therefore affirmed.*"

It is said of the decision in the case of Nash v. Clark that it "pushes the doctrine of the right to exercise the power of eminent domain for the benefit of a private individual further than it has ever before been pushed for the purpose of draining or irrigating private property."[9] But that the case settles the law as to this right as far as the State of Utah is concerned, and in any other State which has adopted or will adopt a similar statute to the one in question in that State there can be no doubt. We believe this to be the correct rule as far, at least, as the States of this Western part of the country are concerned, and where they have adopted similar statutes.[10] But the case, under our classification, representing a third class as to the public uses for which the power of eminent

[8] For the discussion of the Fourteenth Amendment, see Sec. 1060.

[9] See case note 1 L. R. A., N. S., 208.

[10] See, also, State *ex rel.* Galbraith v. Superior Court, 59 Wash. 621, 110 Pac. Rep. 429, 140 Am. St. Rep. 893; Portneuf Irr. Co. v. Budge, Judge, 16 Idaho 116, 100 Pac. Rep. 1046; Portneuf-Marsh Valley Irr. Co. v. Portneuf Irr. Co., 19 Idaho 48, 114 Pac. Rep. 19; Rasmussen v. Blust, 83 Neb. 678, 120 N. W. Rep. 184.

domain may be exercised, does not stand alone as to the particular use of the water for irrigation, or as to the principle involved where the use of the water is for other purposes.[11] Before the decision in the Nash v. Clark case the Supreme Court of Arizona in an elaborate and exhaustive opinion, in a case in which the facts were similar, held to the same rule.[12]

By the Act of the legislature approved February 19, 1877, irrigation corporations were given the power to acquire rights of way and to condemn property necessary to the construction of such canals in the same manner as railroad corporations might acquire property and right of way for railroad purposes; and the law applicable to an exercise of the right of eminent domain by rail-

Co. v. Webber, 108 Cal. 88, 40 Pac. Rep. 1061; Lindsay Irr. Co. v. Mehrtens, 97 Cal. 676, 32 Pac. Rep. 802; Cummings v. Peters, 56 Cal. 593; Wilmington etc. Co. v. Dominguez, 50 Cal. 505; Merrill v. Southside Irr. Co., 112 Cal. 433, 44 Pac. Rep. 720; Lake Keon etc. Co. v. Klein, 63 Kan. 884, 65 Pac. Rep. 684, where it is held that irrigation is a public use for which a private person may be authorized to exercise eminent domain; Tripp v. Overacker, 7 Colo. 72, 1 Pac. Rep. 695; Downing v. More, 12 Colo. 316, 20 Pac. Rep. 766; Patterson v. Brown etc. Co., 3 Colo. App. 511, 34 Pac. Rep. 769; Sand Creek etc. Co. v. Davis, 17 Colo. 326, 29 Pac. Rep. 742.

"The value of the land is enhanced by the use of water, and the public interests benefited, and it may be said that almost the unbroken current authority supports this view." Prescott Irr. Co. v. Flathers, 20 Wash. 454, 55 Pac. Rep. 635.

"The reclamation of one small field by means of artificial irrigation promotes the development and adds to the taxable wealth of the State as well as the reclamation by the same means of a number of fields. The only difference is the extent of the benefit." Ellinghouse v. Taylor, 19 Mont. 462, 48 Pac. Rep. 757.

road companies was made to apply to such irrigation companies. "The development of a system of irrigation and the appropriation and application of the waters of the streams of the State for the purpose, is obviously a work of internal improvement." And, citing the statutes, "Under these comprehensive provisions the legislature could have intended nothing less than that in the construction and operation of irrigation enterprises private property reasonably necessary for the conduct of the business could be taken and appropriated on due compensation by the exercise of the power and right of eminent domain." [13]

It will therefore be seen that the necessity for irrigation in the development of the agricultural resources of the States within the arid region of the country caused the broadening and enlarging of the power of eminent domain in those States to the extent that even a private individual or corporation might exercise the right and

thus acquire rights of way over the lands of others, even where the water was used solely for individual or corporate use.[14]

**§ 1070. Public use—Exercise of right for mining by private parties, when a public use.**—The rule discussed in the previous section,[1] that even the actual private use by an individual or corporation, in the promotion of a private enterprise, where that enterprise tends to the prosperity and industry of the State, and therefore in this sense constitutes a public use, whereby the right of eminent domain may be exercised, has also been applied to mining in some of the Western States and Territories, although the California rule is different.[2] One of the first cases holding to this

14 But see Logan v. Guichard, 159 Cal. 562, 114 Pac. Rep. 989, where the facts were that one land owner permitted defendant to construct a ditch across his land because he believed that the defendant could condemn a right of way over his land, but where it was held that such an act did not prevent defendant from subsequently acquiring the right to maintain the ditch over such land by prescription. The Court said: "We do not see how this mistaken view could in any way operate to preclude the subsequent acquirement of the right by prescription."

It is held in a recent case in California that water pumped from wells, from a subterranean catchment basin extending under adjacent lands, to fulfill private contractual obligations to deliver water to lands sold with a water right, is not taken for a public use, but is taken for a private use, and hence the right of eminent domain does not exist, the Court saying: "The water taken by the defendants to supply the needs of the interveners is not taken for public use. It is not offered to the public generally, or to all who may want it within a certain territory. It is taken solely to fulfill the private contractual obligations of the defendants to deliver water to certain lots which it has sold with a water right. This is a private use." Burr v. Maclay, 160 Cal. 268, 116 Pac. Rep. 715.

See, also, Hildreth v. Montecito, 139 Cal. 22, 72 Pac. Rep. 395; Barton v. Riverside, 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331; Gilmer v. Lime Point, 18 Cal. 229.

1 See Sec. 1069.

2 "The business of mining for the benefit of the mine owner is as much a private affair as that of the farm or factory, and the right of eminent domain can not be invoked in aid of it." Sutter County v. Nichols, 152 Cal. 688, 93 Pac. Rep. 872, 15 L. R. A., N. S., 616, 14 Am. & Eng. Ann. Cas. 900.

See, also, Consolidated etc. Co. v. Central Pac. R. Co., 51 Cal. 269, 5 Morr. Min. Rep. 438; Lorenz v. Jacob, 63 Cal. 20, 3 Pac. Rep. 654; Amador etc. Co. v. DeWitt, 73 Cal. 482, 15 Pac. Rep. 74; Dower v. Richards, 73 Cal. 477, 15 Pac. Rep. 105; Cummings v. Peters, 56 Cal. 593.

view, and one often cited, arose in Nevada [3] as early as 1876, where the Court, through Mr. Chief Justice Hawley rendering the opinion, held that a statute of the State was constitutional where it declared that mining, milling, smelting, or other reduction of ores, even by a private company, was a public use; and it was further held that any appropriation of private property for rights of way under the right of eminent domain for any purpose of great public benefit, interest or advantage to the community, was the taking of such property for a public use.[4]

The Federal Court also holds that under the Alaska Code,[5] under the peculiar local conditions in Alaska, private mining is a use for which a right of way for a ditch to aid in the operations of a mining claim might be condemned.[6] The principle laid down in the case of Nash v. Clark [7] was also reaffirmed by the Supreme Court of the United States in another case which also arose in the State of Utah,[8] where it was held that the condemnation of a right of way across a placer mining claim for the aerial bucket line of a mining corporation can not be said to be taking private property for a

private use contrary to the Fourteenth Amendment of the Constitution of the United States, if authorized by the construction by the State Court to the provisions of State legislation for the exercise of the right of eminent domain in behalf of certain uses declared to be public.[9]

§ 1071. **Public use—Exercise of right for manufacturing by private parties, when a public use.**—But the broader doctrine of the right of a private individual or corporation to exercise the power of eminent domain and to acquire private property reasonably necessary for the conduct of his or its enterprise upon the theory that the general public will be indirectly benefited therefrom, is not a doctrine peculiar to the Western States, neither is it a new doctrine, which has been evolved in the course of their development and progress. As a matter of fact, the doctrine was taken from some of the older Eastern States, especially those of New England, involving the constitutionality of the so-called General Mill Acts. As was said in a recent Montana case:[1] "The courts of the Western States have, as a rule, adopted a liberal view of the term 'public use,' and in the main have largely followed the so-called 'Mill Cases' of New England." And in the opinion in the early Nevada case,[2] Mr. Justice Hawley, in sustaining the decision of the Court, cites a number of these mill cases, and said: "But the cases more directly in point, where the decisions are solely based upon this ground, are to be found in the States where a construction is given to what are known as the 'mill-dam' or 'flowage' Acts."[3] In fact, it was held at an early day, in many cases of very high authority, that the power conferred by the General Mill Acts upon any owner of land upon a stream to erect and maintain a mill on his own land and to flow the land of others for manufacturing purposes, has been considered as resting on the

right of eminent domain, by reason of the advantages and benefits inuring to the public from the improvement of the water power and the promotion of manufactures.[4] But, as we have said before, there are other States which hold directly to the contrary, as to what constitutes a public use both for this particular purpose and other purposes, and the authorities upon the proposition are entirely irreconcilable.[5] In Colorado it is held that, under their constitution and laws, the authority to condemn land for agricultural and milling purposes is sufficient to cover its condemnation for power, manufacturing, and "other beneficial and useful purposes."[6]

§ 1072. **Public use—Exercise of rights for development of electrical energy by private parties, when a public use.**—The development, transmission, and use of electrical energy throughout the whole country for the purpose of heat, light, and power, is becoming of the utmost importance. As to whether such an industry is a public use so that the power of eminent domain may be exercised in aid thereof by private individuals and corporations is a question for the respective States to decide through their legislatures and the construction of their Acts by their highest courts. And upon this subject the States are in hopeless conflict; and even those in the Western portion of the country are in direct conflict with each other. This is not a subject peculiar to the Western portion of the country, but is common to all of the States of the Union. In the West, on account of the lack of railroad facilities

See, also, Lamborn v. Bell, 18 Colo. 346, 32 Pac. Rep. 989, 20 L. R. A. 241, where the word "milling," as used in the constitution, was held as synonymous with the word "manufacturing."

It was held by the Supreme Court of Washington that the furnishing of water by a water company, authorized to exercise the right of eminent domain, to private persons and corporations to be used in boilers to generate steam for saw and shingle mills was a private and not a public use. State *ex rel.* Shropshire v. Superior Court, 51 Wash. 386, 99 Pac. Rep. 3.

and other means of transportation the necessity for the development of this industry may be greater than in the Eastern States. As we have seen in another section of this work, the generation for electrical energy is such a beneficial purpose that water may be appropriated therefor under the Arid Region Doctrine of appropriation.[1] As an incident thereto rights of way over the lands of others must be acquired in order to conduct the water to the place of use and to distribute wires. And, upon principle, provided that in the State where the right is sought, the statute is broad enough, there are no constitutional reasons why the right of eminent domain should not be granted, even to a private individual or corporation, upon the same theory as was held in the case of Nash v. Clark,[2] that such a use is a benefit to the public at large, therefore it is a public use. And the highest courts of many of the States have held to that effect.[3] But there are other very

3 The right of way to carry water to operate an electric light plant may be acquired by eminent domain under the constitution of Colorado. Bell v. Lamborn, 18 Colo. 346, 32 Pac. Rep. 989, 20 L. R. A. 241.

The collection, storing, and distribution of electricity for the use of all who may have need of it upon equal and reasonable terms is a public use, so as to justify an exercise of the power of eminent domain by a private corporation, for the acquisition of a right of way for the distributing wires. Rockingham County etc. Co. v. Hobbs, 72 N. H. 531, 58 Atl. Rep. 46, 66 L. R. A. 581.

The right to use an existing canal for the conveyance of water for the purpose of generating electricity may be appropriated under the right of eminent domain. Salt Lake City v. Salt Lake City etc. Co., *supra*.

The flooding of land by a dam erected for the purposes of supplying electric power to mines and smelters, and to the public generally, is a public use authorizing the condemnation of such land. Helena v. Spratt, 35 Mont. 108, 88 Pac. Rep. 773, 8 L. R. A., N. S., 567, 10 Am. & Eng. Ann. Cas. 1055; *Id.*, 37 Mont. 60, 94 Pac. Rep. 631.

See, also, 1 Lewis on Eminent Domain, Secs. 172, 173; *Re* Municipal Fuel Plants, 182 Mass. 605, 66 N. E. Rep. 25, 60 L. R. A. 592, however, by a municipal corporation; Minnesota etc. Co. v. Koochiching etc. Co., 97 Minn. 444, 107 N. W. Rep. 410, 5 L. R. A., N. S., 638, 7 Am. & Eng. Ann. Cas. 1182; Brown v. Weaver, 140 N. C. 333, 52 S. E. Rep. 954, 3 L. R. A., N. S., 912; Hollister v. State, 9 Idaho 651, 71 Pac. Rep. 541, 77 Pac. Rep. 339; Denver Pr. etc. Co. v. Colorado etc. R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383; Tuolumne etc.

eminent authorities which hold to the exact contrary to the above rule, and that mere public welfare, or public convenience, will not justify the exercise of the right of eminent domain by private individuals or corporations.[4] This class of cases draws, it seems to the writer, too sharp a distinction between public use and public benefit, and guards the private rights of property against the assertion of the power of eminent domain for a public benefit as distinguished from public use. The other class of cases, of which the case of Nash v. Clark may be considered as the leading case, the doctrine of the Utah Court having been affirmed by the United States Supreme Court, takes a broader view of the subject, and holds that the general welfare and benefit of the public should prevail over the private property rights, and that the power of eminent domain may be exercised, even though the use for which it is asserted is not in a strict sense a public one.

Co. v. Frederick, 13 Cal. App. 498, 110 Pac. Rep. 134; Walker v. Shasta Power Co., 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725; Northern California etc. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896.

It was held in California, however, that the case of Nash v. Clark did not apply to uses for power purposes for the reason that the constitution only declares the use of water "for sale, rental, or distribution" to be for public use. Shasta Power Co. v. Walker, 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725; affirming *Id.*, 149 Fed. Rep. 568.

See, also, Logan v. Guichard, 159 Cal. 562, 114 Pac. Rep. 989.

[4] See Brown v. Gerald, 100 Me. 351, 61 Atl. Rep. 785, 70 L. R. A. 472, 109 Am. St. Rep. 526, where it is said: "We can not find any ground for sustaining the defendant's contention, except that of 'public benefit,' or general utility, and we think that is not sufficient."

See, also, Avery v. Vermont Elec. Co., 75 Vt. 235, 54 Atl. Rep. 179, 59 L. R. A. 817, 98 Am. St. Rep. 818; Southwest Missouri L. Co. v. Scheurich, 174 Mo. 235, 73 S. W. Rep. 496.

The generation of electrical power by a private corporation under no obligations to serve the public, and not organized to meet a public demand, is not a public use for which the power of eminent domain may be exercised, although the corporation has announced the intention to sell the generated power to the public. State of Washington *ex rel.* Tacoma Industrial Co. v. White River Pr. Co., 39 Wash. 648, 82 Pac. Rep. 150, 2 L. R. A., N. S., 842.

See, also, State *ex rel.* Harris v. Superior Court of Thurston Co., 42 Wash. 660, 85 Pac. Rep. 666, 5 L. R. A., N. S., 672; Shasta Pr. Co. v. Walker, 149 Fed. Rep. 568; affirmed, 160 Fed. Rep. 856, 87 C. C. A. 660.

**§ 1073. Public use—Exercise of right for other industries by private parties, when a public use.**—There are also other uses which are held to be of such a public benefit that they are declared by Acts of the legislatures of the respective States to be a public use, and are so construed by their highest courts, so that individuals and corporations are permitted the power of eminent domain in their aid. These cases follow the rule in the Nash v. Clark case [1] that, owing to the peculiar conditions of the country, there must be a pressing and universal demand by the general public for the exercise of the right, although the individual is more directly benefited by the use. In Idaho the right to exercise the power of eminent domain under the constitution of that State is held not to depend upon the narrow and restricted meaning of the phrase "public use" as defined by the courts of last resort of some of the States, but the general welfare and benefit of the public is taken into consideration, and if the taking is necessary to the complete development of the material resources of the State, such taking is for a public use. Therefore, the construction of a dam which causes the overflow of certain lands, but which tended to improve the navigability of a river used for the purpose of floating logs to a private mill, was decided to be a public use, under a statute providing for such improvements for navigation.[2] This was upon the theory that logging and the transporting of timber to market was of such great benefit to the public at large that the right of eminent domain might be exercised in its behalf.[3] The Supreme Court of Washington also held to the same rule and for a similar purpose in behalf of a private corporation, although, in the opinion, the Court indulged in a violent presumption that because there was such a large amount of timber up a certain river, in the absence of testimony affirmatively showing that such a large body of timber is all owned by one owner, it should not be presumed that it was so owned; and, that therefore, the driving company seeking the right must do so as a public servant.[4] The Court, in its opinion, neglected to distinguish or to cite a previous case, which was based

2 Potlatch Lum. Co. v. Peterson, 12 Idaho 769, 88 Pac. Rep. 426, —— Am. St. Rep. 233.

3 See, also, Powell v. Springston Lum. Co., 12 Idaho 723, 88 Pac. Rep. 97.

4 State *ex rel.* Wilson v. Superior Court of Chehalis County, 47 Wash. 397, 92 Pac. Rep. 269.

upon a similar state of facts, eliminating the presumption, and wherein the same Court held exactly to the contrary view.[5]

The question of the drainage of lands has, by some courts, been held of such universal importance and benefit to the community at large that, under the proper constitutions or statutes, the right of eminent domain might be exercised by private parties to drain their own lands,[6] although some of the cases uphold private drainage laws upon the ground that they are a proper exercise of the police power of the State.[7] But for this purpose, as we view the subject, there is no more difference in principle in the exercise of the right for the reclamation of either small or large tracts of land by drainage, than there is in its exercise for the reclamation of such lands by irrigation. The benefit accruing to the general public is probably as great, where a single tract is drained and reclaimed from too much moisture, as where such a tract is reclaimed from too great aridity. But, as to whether such a use is a public use within the constitutional limitations, for which the power of eminent domain may be exercised, the authorities as in the case for other uses are in hopeless conflict. And, strange as it may seem, in that part of the country, where there are more lands which need drainage for their reclamation, the great weight of authority holds that the right can not be exercised unless it involves such a benefit to the

5 Healy Lum. Co. v. Morris, 33 Wash. 490, 74 Pac. Rep. 681, 63 L. R. A. 820, 99 Am. St. Rep. 964, which case held to the effect that the acquisition of an easement over the land of another for the transportation of logs of a private owner to market was not a public use justifying the right of the exercise of eminent domain.

6 "It is not necessary that the public at large shall be benefited, but only that part of the public affected by the want of proper drainage or by the improvement to be made." Lewis County v. Gordon, 20 Wash. 80, 54 Pac. Rep. 779.

The mere fact that one or more individuals may derive from it pecuniary and particular benefits and advantages does not destroy the validity of an Act of the legislature. Winslow v. Winslow, 95 N. C. 24.

7 See last cases cited, *supra*.

general public that it comes within the strict construction of the term as to what is a "public use."[8]

The purpose of taking land by eminent domain by a railroad company has also been upheld where the taking was chiefly for the advantage of a private enterprise.[9]

In a well reasoned Oklahoma case it was held that even a convention hall to be owned, controlled, and used exclusively by a city to accommodate public gatherings of the people of the city and for such other public uses as might be designated by the Mayor and City Council, is a "public utility," and might be taken under the power of eminent domain.[10] There are many other uses declared by the legislatures of the various States to be such public uses that the right of eminent domain may be exercised relative thereto. In this work, however, further discussion is unnecessary.

**§ 1074. Public use—The necessity for the taking must exist in order to acquire the right.**—In order to acquire a right of way over the lands of others for ditches and canals, or through the ditches and canals of others, by the power of eminent domain, the necessity for the taking must always be shown to exist. And when the law says that private property may be taken for public use it

[8] Mr. Farnham, in his work on Waters and Water Rights, page 1066, after referring to some of the irrigation cases, where the right was allowed, says: "Similar reasoning would permit the exercise of the right of eminent domain to obtain a right of way over one farm for the drainage of an adjoining farm, which, by all the authorities, can not be done. The mere increase of the revenues of the State by increasing the value of a single farm is not within any of the accepted principles for which the State may exercise its governmental functions."

A. 111; State *ex rel.* Ami Co. v. Superior Court of Pierce Co., 42 Wash. 675, 85 Pac. Rep. 669.

[10] State *ex rel.* Manhattan Const. Co. v. Barnes, 22 Okla. 191, 97 Pac. Rep. 1000.

means it may be so taken only when it is necessary for such use; it means a reasonable, and not an absolute necessity.[1] And as to what constitutes such a reasonable necessity is a question of fact to be determined by the Court or jury from all the facts surrounding each particular case, and the burden of proving the necessity is on the plaintiff in an action to condemn.[2] A large discretion is given to those who are vested with the power, in determining what property and how much is necessary. As was said in a Utah case: "It may be said to be a general rule that, unless a corporation exercising the power of eminent domain acts in bad faith, or is guilty of oppression, its discretion in the selection of land will not be interfered with."[3] Again, in determining the necessity for the taking of the land sought to be condemned, it can not be considered whether the contemplated scheme is feasible or practicable, for such matters rest wholly in the discretion of the promoters.[4] As was said by the Federal Court in a recent case:[5] "The record discloses no circumstances or conditions taking the case out of the general rule that, in the absence of bad faith that the judgment of the party exercising the right of eminent domain as to what and how much land shall be taken is conclusive." But as to the extent

1 Spring Val. W. W. v. San Mateo W. W., 64 Cal. 123, 28 Pac. Rep. 447; Samish River Boom Co. v. Union River Boom Co., 32 Wash. 586, 73 Pac. Rep. 670; Portneuf Irr. Co. v. Budge, Judge, 16 Idaho 116, 100 Pac. Rep. 1046; necessity must be determined before damages are assessed; Northern Light & Power Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896.

2 Whether the land is reasonably required is a question of fact to be determined by the Court or jury, and the burden of proof is on the plaintiff. Spring Val. W. W. v. Drinkhouse, 92 Cal. 528, 28 Pac. Rep. 681; Sanford v. City of Tucson, 8 Ariz. 247, 71 Pac. Rep. 903; Santa Ana v. Gildmacher, 133 Cal. 395, 65 Pac. Rep. 883; Gibson v. Cann, 28 Colo. 499, 66 Pac. Rep. 879, where it was held that a law requiring that commissioners shall determine the necessity for the taking of the lands was held constitutional.

Where the statute provides that, before property can be taken for a public use, it must appear that the taking is necessary for such use, and the question as to the necessity is submitted to a jury, the Court can not disregard their verdict and find differently. Wilmington C. & R. Co. v. Dominguez, 50 Cal. 505.

3 Postal etc. Co. v. Oregon etc. R. Co., 23 Utah 474, 65 Pac. Rep. 735, 90 Am. St. Rep. 705.

4 Gibson v. Cann, 28 Colo. 499, 66 Pac. Rep. 879; Warner v. Town of Gunnison, 2 Colo. 430, 31 Pac. Rep. 238.

5 United States v. Burley, 172 Fed. Rep. 615; affirmed, 179 Fed. Rep. 1, 102 C. C. A. 429.

of the land which may be taken, many of the legislatures have limited the extent to the amount necessary for the purpose in question.[6]

But even where the statute is silent upon the subject as to the extent of the taking, under the constitutional limitations, the power to take is limited to such and so much property as is necessary for the use in question.

There are also statutes providing where there is already one ditch through a certain tract of land that, without the owner's written consent, the land shall not be subject to the burden of two or more irrigation or other ditches through it to lands beyond, when all the water necessary can be conveyed in one ditch.[7]

The right of condemnation for a right of way will not be denied from the fact that the water might be put upon the land by pumps.[8] Neither will the right of condemnation be denied upon the ground of want of necessity where it is shown that the land which it is proposed to irrigate is of some value without water rights.[9]

But in that line of decisions which hold that a public benefit is such a public use that the right of eminent domain may be exercised in its behalf, even by an individual or corporation, more directly benefited thereby, the question of the necessity of the taking enters into the subject in a much larger and broader sense. As was held by the Supreme Court of the United States in the leading case upon this particular subject,[10] where the use is asserted to be public, and the right of the individual to condemn land for the purpose of exercising such use, must be founded upon or be the result of

6 See statutes of various States, Part XIV.

7 See statutes, Part XIV.

See, also, Downing v. More, 12 Colo. 316, 20 Pac. Rep. 766, where it was held that even then a right of way could not be condemned through another's ditch, where there are other practical routes, and especially where such a ditch is not of a uniform grade, and its enlargement would greatly diminish its usefulness.

8 "It is clear that the constitution and this law both contemplate irrigation by gravity; and we do not think the right to condemn was intended to be withheld simply because water might be put upon the land by pumping." State *ex rel.* Galbraith v. Superior Court, 59 Wash. 621, 110 Pac. Rep. 429, 140 Am. St. Rep. 893.

9 State *ex rel.* Galbraith v. Superior Court, 59 Wash. 621, 110 Pac. Rep. 429, 140 Am. St. Rep. 893.

10 Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Ann. Cas. 1171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953.

See, also, for further discussion of this case, Sec. 1069.

some peculiar condition of the soil or climate, or other peculiarity of the State, where the right is sought to be exercised. And the Court expressly disclaimed approving of the broad proposition that private property may be taken in all cases where the taking may promote the public interest and tend to develop the natural resources of the State. The Court simply held in that particular case, having reference to the conditions above stated, that the use was a public one, although the taking of the right of way was for the purpose simply of thereby obtaining the water for an individual where it was *absolutely necessary* to enable him to make any use whatever of his land, and which would be valuable and fertile if the water was obtained. So, the Federal Court, in a case arising in California, referring to the Clark v. Nash case, held that it was based upon exceptional conditions, and without application in the case at bar.[11]

§ 1075. **Rights of way—Necessity for the taking—The existence of a water right.**—As to whether or not in order to authorize one to exercise the right of eminent domain for a right of way for a ditch or canal over the lands of others and to successfully prosecute an action in condemnation therefor, he must have had, at the time of bringing the action, a water right which he proposes to use in connection with the ditch or canal, the authorities disagree. As a general rule, if there is no necessity for the taking, the right will not be allowed; but the amount necessary for the use is left to the party seeking the right. But in this Western country, to hold that a right of way for a ditch or canal could not be acquired, until the party seeking the right had a vested right to the use of a certain amount of water, would, in many instances, be equivalent to holding that an easement for such purpose could not be acquired at all. And, not only this, but such a rule would prevent the appropriation of water, now running to waste in the natural streams. The right to the use of water can not become vested until it has been lawfully appropriated.[1] Under the general rule, the appropriation is not finally consummated, until the water has been ap-

11 Shasta Pr. Co. v. Walker, 149 Fed. Rep. 568; affirmed, 160 Fed. Rep. 856, 87 C. C. A. 660.

1 For the appropriation of water, see Secs. 706-731.

plied to a beneficial use.[2] Under the California rule, it is not complete until the works are finished and the water conducted to the place of use.[3] Under either rule, the procuring of the right of way and the construction of the ditch must necessarily precede the final consummation of the appropriation. Hence it is held by one line of authorities that in a proceeding to condemn land for a ditch or canal, the fact that the plaintiff has no vested right to the use of water, which the ditch is intended to carry, is no defense to the action. And as no land can be taken for this purpose, unless the land owner be paid just compensation, this seems to us to be the only correct rule, especially where the right to the use of the water is acquired by appropriation.[4] However, the contrary rule has been held to be the law in some jurisdictions.[5] In Oregon it is provided by statute,[6] that when a corporation shall have acquired the right to appropriate water in the manner provided it may proceed to condemn lands and premises necessary for right of way for its ditch or canal.[7] And in this connection we will state that the latter is the rule where one seeks to acquire a right of way over the public lands of the United States under the provisions of the Acts of Congress of 1866 and 1870. It is held that in order to acquire such a right of way, the person claiming the right must first secure the right to the use of the water.[8]

**§ 1076. Due process of law—In general.**—Where the question of "public use" is settled for which private property may be taken for rights of way for ditches and canals, there is another essential element which must enter into the taking, and that is that the property must be taken by due process of law, which right is guaranteed by the Fifth Amendment of the Constitution of the United States,[1] and, also, by the constitutions of the various States.[2] As far as the "due process of law" clause is concerned, as found in the Constitution of the United States, it is held that this only applies to the taking by the Government through its Acts of Congress.[3] "Due process of law" in this clause refers to the law of the land, which derives its authority from the legislative power conferred upon Congress by the Constitution of the United States, exercised within the limits therein prescribed, and interpreted according to the principles of the common law.[4] The same, or similar clauses, found in the constitutions of the various States, refer to the law of the State, which derives its authority from the legislative power conferred upon the legislature of a State by its constitution, and exercised within the limits prescribed therein.[5]

Therefore, by "the due process of law" is meant one, which, following the forms of the law either of the United States, or of a State, is appropriate to the case, and just to the parties affected. It must be pursued in the ordinary mode prescribed by law; it must be adapted to the end to be attained; and whenever it is necessary for the protection of the parties, it must give them an opportunity

934; Nippel v. Forker, 26 Colo. 74, 56 Pac. Rep. 577; affirming *Id.*, 9 Colo. App. 106, 47 Pac. Rep. 766; Clear Cr. etc. Co. v. Kilkenny, 5 Wyo. 38, 36 Pac. Rep. 819.

2 See Secs. 1061, 1062.

3 Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948.

4 Hurtado v. People of California, 110 U. S. 516, 28 L. Ed. 232, 4 Sup. Ct. Rep. 111.

5 "Due process of law in each particular case means such an exercise of the powers of the Government as the settled maxims of the law permit and sanction, and under such safeguards for the protection of individual rights as those maxims prescribe for the class of cases to which the one in question belongs." Cooley on Const. Lim., 6th Ed., p. 434.

See, also, Murray v. Hoboken etc. Co., 59 U. S. 18 How. 276, 15 L. Ed. 372; Bank of Columbia v. Okely, 17 U. S. 4 Wheat. 235, 4 L. Ed. 559; Burton v. Platter, 53 Fed. Rep. 904, 4 C. C. A. 95; *Ex Parte* McCluskey, 40 Fed. Rep. 71; Jaeger v. U. S., 27 Ct. Cl. 278, 285.

to be heard respecting the justice of the judgment to be sought.[6] An approved definition of "due process of law" is "law in its regular course of administration through the courts of justice."[7] It need not be a legal proceeding according to the course of the common law; neither must there be a personal notice to the party whose property is in question. It is sufficient if a kind of notice is provided by which it is reasonably probable that the party proceeded against will be apprised of the action brought against him, and an opportunity is afforded to defend.[8]

Therefore, whenever by the laws of a State, or by State authority, any burden is imposed upon property for a public use, whether it be for the whole State or of some more limited portion of the community, and those laws provide for a mode of confirming or contesting the charge thus imposed, in the ordinary courts of justice, with such notice to the person or such proceeding in regard to the property as is appropriate and just to the nature of the case, any judgment rendered in such proceedings can not be said to deprive the owner of his property without due process of law, however obnoxious it may be to other objections.[9]

**§ 1077. Due process of law—Rights of way can not be acquired without.**—As against the will of the land owner, rights of way over his lands for ditches and canals can not be acquired without due process of law.[1] In an early Colorado case [2] it was there held, upon the ground of necessity, that, in that Territory, lands were held in subordination to the dominant rights of others, who must necessarily pass over them to obtain a water supply to irrigate their own lands. And in a later Colorado case the same doctrine

6 Hagar v. Reclamation Dist. No. 108, 111 U. S. 701, 28 L. Ed. 569, 4 Sup. Ct. Rep. 663; *Id.*, 66 Cal. 54, 4 Pac. Rep. 945; Fallbrook Irr. Dist. v. Bradley, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; reversing *Id.*, 68 Fed. Rep. 948; Sweeney v. Montana Cent. R. Co., 25 Mont. 543, 65 Pac. 2 Yunker v. Nichols, 1 Colo. 551, 8 Morr. Min. Rep. 64.

was reaffirmed;[3] Mr. Chief Justice Thatcher, in the concurring opinion, said: "Primarily, where the climatic conditions are such as exist in Colorado, the right to convey water for irrigation purposes over land owned by another is founded on the imperious laws of Nature, with reference to which it must be presumed the Government parts with its title. . . . This right passes with the estate in the land as a necessary incident." But the rule as laid down in the Yunker v. Nichols case did not remain the rule in Colorado, for the reason as given in a later case that, since the first case was decided a constitution had been adopted, which prohibited the taking of private property for public use, without due process of law and upon just compensation;[4] and that the legislature had provided the proceedings by which private property might be subjected to such use.[5]

It may now be regarded as settled in all jurisdictions as the universal rule, even in the States whose constitutions or laws in terms grant such rights of way for ditches and canals, that such rights of way can only be acquired against the will of the land owner, by due process of law, and under the mode of procedure provided for by the respective statutes of the States. The constitutions and statutes do not, in and of themselves, grant the right of way, nor confer the power to enter upon the lands of another until the right to the use is ascertained [6] and established by the proper procedure in condemnation, and then only upon just compensation.[7] As was said by

[3] Schilling v. Rominger, 4 Colo. 100. But see Crisman v. Heiderer, 5 Colo. 589, where the doctrine was questioned, and it was held that the rule should be confined "to the narrowest limits."

For compensation for the exercise of the right, see Secs. 1079-1083.

For Colorado cases, see last note.

the Montana Court, after referring to the statute of that State, which conferred upon any person, corporation, or company owning or holding lands without available water facilities, an absolute right of way over the lands of others, for the purpose of constructing ditches to conduct the water to the place of use:[8] "Giving full force to said section, it can not be seriously contended that, by the mere force of said statute, one person could go upon the lands of another without his consent and dig a ditch. Before such right could have been exercised, it should have been definitely ascertained by proper proceeding in eminent domain."[9]

**§ 1078. Due process of law—Statutory provisions.**—The statutes of the various States of the arid and semi-arid West all provide for the acquisition of rights of way over the lands of others for ditches and canals to be used for the purpose of conducting the water to the place of use.[1] These statutes also provide for the procedure by which the right must be acquired in the respective jurisdictions, in condemnation cases for this purpose. This latter question we will discuss in another chapter.[2] In general, where the right to condemn is ascertained, there must be some notice to the land owners, and a hearing had before some body, either judicial or otherwise, at which the damages or compensation to the owners must be assessed,[3] which damages must be paid by the one seeking the right before the right to the easement is finally acquired.

Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Noteware v. Stearns, 1 Mont. 311, 4 Morr. Min. Rep. 650; Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408, 23 Mont. 65, 57 Pac. Rep. 557; Steritt v. Young, 14 Wyo. 146, 82 Pac. Rep. 946, 4 L. R. A., N. S., 169, 116 Am. St. Rep. 994; Toyaho etc. Co. v. Hutchins, 21 Tex. Civ. App. 274, 52 S. See, also, Toyaho Cr. Irr. Co. v. Hutchins, 21 Tex. Civ. App. 274, 52 S. W. Rep. 101.

One can not arbitrarily seize and use another's ditch for that purpose. McPhail v. Forney, 4 Wyo. 556, 35 Pac. Rep. 773.

For the procedure in condemnation cases, see Secs. 1092-1097.

[1] For statutes, see Part XIV.

[2] For procedure in condemnation, see Secs. 1092-1097.

[3] For just compensation, see Secs. 1079-1083.

The procedure designated by the statute authorizing the acquisition of the right of way in the State where the right is sought, must be strictly followed in acquiring the easement.[4] But the fact that a person constructed an irrigation ditch across the lands of another without first acquiring the right of way, through ignorance that it was necessary, will not preclude him from afterward condemning the right of way under the statutory proceedings.[5] It is not necessary to show that there is no other way than the one selected by which the water could be conducted to the place of use.[6] The legislature may provide for the appointment of a commission to ascertain the necessity for taking the land sought to be condemned.[7] But where a party is vested with the authority to exercise the power of eminent domain, he may exercise his discretion in determining what lands are necessary for his purposes, and this discretion can not be controlled by the courts.[8] It is solely within the province of the party seeking the right to determine whether the enterprise is practicable and can be made a success financially. "Courts can not say that a party shall not carry out an enterprise because it can not succeed. Such matters must be left entirely to the discretion and judgment of the promoters."[9]

The question of jurisdiction as to what constitutes due process of law is for the highest court of the State where the statute is in force and the right sought. And a decision of the highest court of the State in condemnation proceedings is not reviewable in the Supreme Court of the United States on the theory that due process of law was denied thereby.[10]

§ 1079. **Compensation and damages—Right to.**—One of the constitutional guaranties, found both in the Fifth Amendment of the Constitution of the United States, and in the constitutions of all of the States, is that private property shall not be taken without just

compensation; or, as is provided in some of the constitutions, it shall not "be taken or damaged" without just compensation.[1] It seems to be considered a settled principle of law, that the right to compensation is an incident to the exercise of the power of eminent domain; "that the one is so inseparably connected with the other that they may be said to exist not as separate and distinct principles, but as parts of one and the same principle."[2] But the constitutions of all the States, as now construed, settle the right as to compensation, or damages, by requiring that just compensation shall be made whenever private property is taken for a public use. The statutes enacted by the legislatures of the respective States, in providing for the right to exercise the power of eminent domain, must also provide for just compensation and as to how it may be assessed. And statutes which provide for the condemnation of private property, and fail to provide for the compensation therefor, would be unconstitutional as far as the right to condemn was concerned.[3]

The question of the just compensation is for the State court to decide, where no Federal question is involved. And a decision of the State court is not reviewable in the Supreme Court of the United States on the theory that property was taken without just compensation, where there is nothing in the record which adequately shows that the State Court was led to suppose that any claim was made under the Constitution of the United States.[4]

But, where the defendant has no title to the right for which he claims damages, no damages can be assessed. So, where a riparian owner claimed special damages by reason of the destruction of a natural reservoir site, in which the waters flowing in a river could

be impounded, and thereby increase the power capacity of the river, an instruction that the owner, before impounding the waters, must obtain the consent of the lower riparian proprietors, or acquire their rights, before he could recover damages, was proper.[5]

**§ 1080. Compensation and damages—By what body may be assessed.**—Congress and the respective legislatures of the States have the right to provide for the exercise of the power of eminent domain, and to declare, within the constitutional provisions, the purposes for which the right may be exercised.[1] But the question as to the measure of compensation or damages is judicial, not legislative.[2] Therefore, the legislature can not fix the compensation or prescribe the rules for its computation.[3] And a statute in so far as it undertakes to direct the compensation to be paid for the property is unconstitutional and void.[4] So, also, is a statute unconstitutional when there is no express provision therein for notice to the land owner of the time and place when he may be heard as to the amount of his damages, although he is required to be notified of the appointment of appraisers.[5] However, the compensation to be made may be ascertained by any appropriate tribunal capable of estimating the value of the property. This tribunal may be created either by Acts of Congress or by the legislatures of the States for this purpose. The assessment of the damages is not required to be made by a jury.[6] As held by a recent case in Idaho, it has been the uniform ruling of the American courts that the right of trial by jury in a proceeding for the condemnation of property does not exist as a constitutional right unless the constitution itself contains a specific grant and guaranty of such right.[7] Therefore, the legisla-

tures of the respective States have provided how the just compensation and damages in the special proceedings for condemnation shall be assessed, and the provisions of the statute where the right is sought must be strictly complied with in this respect.[8] In Colorado and some of the other States, the compensation must be determined by a jury or a board of commissioners.[9] And in that State the county court has concurrent jurisdiction with the district court in condemnation proceedings for the acquisition of a right of way, where the amount of the damages and the value of the land taken are within the money limit fixed for its jurisdiction.[10]

**§ 1081. Just compensation—Measure of.**—The just compensation, required by the clause in the constitutions, to be made to the land owner, is to be measured by the loss occasioned to him by the appropriation. Where the element of other damages to his property does not enter into the case, he is entitled to receive the value of the property he has been deprived of and no more.[1] But the market value of the land for its most important use may be considered.[2] However, the enhancement in the value of the lands, by the reason of having irrigation facilities afforded by the construction of works for that purpose by the condemner, can not be considered in deter-

mining the amount of compensation to an owner of land taken for those purposes.[3] Where a settler upon the public lands, without taking any steps to procure title to the lands, places improvements thereon, and another desires to construct his irrigation ditch over or across such land, if, by proper proceeding, full compensation is determined and is paid for all damages or injury to the improvements, caused by the construction of the ditch, the constitutional and statutory requirements are complied with.[4] And no compensation can be had where the ditch was completed before the inception of the settler's title.[5]

§ 1082. **Damages to other lands—Measure of.**—Where the right to exercise the power of eminent domain is determined, not only must just compensation be paid for the land actually taken,[1] but the party seeking the right is also liable for the resultant damages from any cause, to the remaining land of the owner. These damages are usually provided for by the statutes.[2] But in assessing damages taken by eminent domain for the construction of a ditch, canal, or reservoir, all damages present and prospective, that are the natural, necessary, or reasonable incidents of the improvement, must be assessed in the condemnation proceedings; and no subse-

Damages may be allowed for seepage. Clear Cr. etc. Co. v. Kilkenny, 5 Wyo. 38, 36 Pac. Rep. 819; Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795.

See, also, Weed v. Goodwin, 36 Wash. 31, 78 Pac. Rep. 36, where it was held that the word "damages," as used in the statute, includes damages to the whole tract, in addition to the land actually taken.

In condemnation proceedings by a town the admission in evidence of the valuation as made by the assessor was held not to be prejudicial error, where the assessor testified that the valuation was not made as to what the land was actually worth. Benninghoff v. Town of Palisade, 48 Colo. 64, 108 Pac. Rep. 983.

quent recovery for such injuries will be allowed, unless the injuries are due to negligence, the unskillful construction of the works, or the subsequent negligent use of such right of way.[3] In other words, there can be but a single recovery for the whole damage resulting from the act.[4] It is therefore held that damages from the permanent injury to land from future seepage may be recovered in a single action.[5]

§ 1083. **Compensation and damages to land offset by benefits.**—Upon the question as to whether or not the benefits arising from the proposed improvement, for which the right of way is sought, may be charged against the land owner, or, in other words, whether the just compensation or damages to be paid to the owner for the right of way may be reduced by the actual benefits which will accrue to the land of the owner by the construction of the ditch, canal, or other works, the authorities do not agree. Upon principle, we do not think that they should be so charged against him. At best, it is but a forced benefit. The very object of an action in condemnation is to secure a right of way against the will of the owner of the land. As was said in a leading Tennessee case upon the subject: "He can not be paid off in benefits and advantages, which are forced upon him against his consent. He may be compelled to submit to the encroachment upon his private rights, when they come thus in conflict with the public interest, but with the charter of his liberties in his hand, he can say to the powers that be, 'Thus far shalt thou come and no farther.'"[1] But in Montana, where there are no constitutional or statutory restrictions upon the subject, it seems to be

[3] Denver etc. Co. v. Middaugh, 12 Colo. 434, 21 Pac. Rep. 565, 13 Am. St. Rep. 234; Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795; Los Angeles v. [5] Middlekamp v. Bessemer etc. Co., *supra*.

[1] Woodfolk v. Nashville etc. R. Co. (2 Swan's Rep.), 32 Tenn. 422, 434. It can be readily seen that, if the owner was compelled to receive his compensation in benefits, he might often, when carried to the extreme but logical conclusion, be compelled to pay those seeking the right of way for the privilege of going through his land, for the reason that the benefits

the rule to charge the land owner with the benefits from the proposed improvements.[2] In Missouri, the rule is the same; and an instruction that no damages shall be assessed if it appears that the benefits accruing to the land by reason of the construction of an irrigation ditch through it equal the damages sustained thereby can not be complained of when such an instruction is supplemented by another allowing the jury to consider every conceivable element of damage in such case.[3]

**§ 1084. Multiplicity of ditches—Limitations to the right of condemnation.**—While in all of the Western States the absolute right to condemn land, for the purpose of securing a right of way for ditches and canals over the lands of others is given, the right must be exercised with due regard to the rights of the owners of the land thus burdened with the easement. And in a number of the States are to be found statutory enactments for the protection of the land owner, against the placing of unwarranted burdens upon his land in this respect, and especially against the construction of a number of ditches through the land where one will answer all purposes, and requiring the ones seeking the right to traverse the shortest possible route. In Colorado, it is provided that no tract of improved or occupied land shall, without the written

to the land exceeded the just compensation for and damages to the same. Therefore, in some of the States, the consideration of benefits to the land is prohibited by the constitution, and in others by statute.

*California.*—Payment must be made in money, "irrespective of any benefit from any improvement." Art. 1, Sec. 14.

*Iowa.*—Compensation to be assessed by a jury, "who shall not take into consideration any advantage that may result to said owner on account of the improvement for which it is taken." Art. 1, Sec. 18.

*Kansas.*—Payment must be made in money, "irrespective of any benefit from any improvement proposed." Art. 12, Sec. 4.

For the constitutions of the various States, see Part XIV.

See, also, for a full discussion upon the subject of benefits as a set-off for compensation and damages, Lewis on Em. Domain, 3d Ed., Secs. 687 *et seq.*

It has been a question with many courts whether the benefit arising from the proposed improvement is to be charged against the owner. San Francisco etc. R. Co. v. Caldwell, 31 Cal. 368.

2 "As a matter of course, evidence as to damages is competent, and evidence as to all benefits is competent." Gallatin C. Co. v. Lay, 10 Mont. 528, 26 Pac. Rep. 1001.

3 Lile v. Gibson, 91 Mo. App. 480.

consent of the owner, be burdened with two or more irrigating ditches, for the conveyance of water to other lands, where all the water necessary to be conveyed through such property can be conveyed in a single ditch.[1] In a number of the other States are to be found similar provisions,[2] and in all of the statutes upon the subject, provisions will be found to the effect that the right must be exercised so as not to unnecessarily injure any public or private property. Where there are constitutional provisions permitting such rights of way to be acquired by eminent domain, it is held that these statutory enactments do not conflict with the constitutional provisions granting the right of way for the construction of ditches; but, while recognizing the privilege, they simply undertake to regulate the exercise thereof so as to inflict the least possible inconvenience upon the owner of the servient estate.[3] The object of these provisions is to avoid the multiplicity of ditches and canals through any tract of land where one will answer all purposes.[4] It has been held in Colorado that the statute is for the protection of the land owner only, and that it does not apply to a canal company, which is seeking to prevent the taking of land for, and the construction of, another irrigating canal by a rival company through the same land already occupied by the former company.[5] As can be readily seen, where the law forbids the granting of rights of way for a multiplicity of ditches through any tract of land, where one will answer all purposes, that, where a tract of land is already burdened with a right of way for an existing ditch, a later comer desiring a right of way

The provision of Section 3, Article 1 of the irrigation law of 1889, viz.: "No tract of land shall be crossed by more than one ditch," etc., held in Nebraska to include lands owned by corporations as well as natural persons. Paxton etc. Co. v. Farmers' etc. Co., 45 Neb. 884, 64 N. W. Rep. 343, 29 L. R. A. 853, 50 Am. St. Rep. 585.

"Under the statute, two or more outside parties can not burden the servient estate with two or more ditches and two or more easements without the owner's consent, when it is practicable to accomplish the same object by imposing but one burden." Downing v. More, 12 Colo. 316, 20 Pac. Rep. 766.

5 San Luis etc. Co. v. Kenilworth C. Co., 3 Colo. App. 244, 32 Pac. Rep. 860.

over the same tract may be compelled to condemn a right of way through the ditch already existing. And, as will be noticed in the States thus regulating the right of eminent domain by statute, the right is also given to acquire a right of way through the ditch of another. However, we will more thoroughly discuss this subject in the following section.[6]

**§ 1085. Acquisition of right of way through existing ditches.**— In some of the States of the West are to be found statutes providing for the condemnation of rights of way through existing ditches and for the enlargement of the same where found necessary.[1] In the States where the right of eminent domain is regulated by forbidding the burdening of a tract of land with more than one ditch, where the one will answer all purposes, a later comer is often compelled to condemn a right of way through an existing ditch.[2] But, whether this specific right is provided for by statute or not, it is generally recognized that the right exists, under the general law of eminent domain, even in cases where the right of way for the existing ditch was originally acquired by condemnation proceedings. And, therefore, it may be laid down as the general rule that, where the right to exercise the power of eminent domain exists at all for any use deemed by the statute a public use,[3] the right also exists to condemn a right of way through an existing ditch, where there are no other obstacles in the way than the mere question of the right of eminent domain. The leading case, where the right was allowed by statute, is that of Nash v. Clark,[4] where the extreme right was allowed to a single person to condemn a right of way over the land and through the ditch of another for the purpose of conducting water to a small tract of his own land to be there used for irrigation. And it was held by the Supreme Court

4 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953; affirmed, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Ann. Cas. 1171.

See, also, for further discussion of this case, Sec. 1069.

of the United States that the legislatures may provide for the condemnation of such a right.[5] The proprietor of a ditch constructed for the conducting of water to be used for any purpose, whether upon his own premises or upon those of another, has a property ownership, both in the ditch and the right of way therefor,[6] and the using and enlarging of such a ditch without the owner's consent is as much the taking or damaging of private property, within the meaning of the constitutions, as would be the appropriating the right of way therefor in the first instance; and such a taking or damaging against the will of the owner will not be tolerated for any purpose except for what may be deemed a public use,[7] by due process of law,[8] and only then upon just compensation both to the land owner, through whose land the ditch is enlarged, and to the owner of the ditch or canal and the easement over which it runs.[9] Therefore it follows that for the acquisition

9 Tripp v. Overacker, 7 Colo. 72, 1 Pac. Rep. 695, where it was held that a statute which limits or directs the compensation to be paid for the property, instead of leaving this to be determined as provided by the State constitution was unconstitutional in this respect.

See, also, Sand Cr. etc. Co. v. Davis, 17 Colo. 326, 29 Pac. Rep. 742; Clark v. Nash, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676, 4 Ann. Cas. 1,171; affirming *Id.*, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953.

The right to construct a ditch across the land of another does not include

of such a right under the power of eminent domain, the statute of the State where the right is sought must be strictly followed as to the procedure provided for condemnation cases.[10] The question, however, arising in these cases, as to the nature of the right to be condemned, is not that of actually condemning a ditch or canal, but to condemn such of its right of way as is not being actually used for carrying water, so that the plaintiff may also use that right of way, by the construction of a larger canal, if necessary, through which he may conduct the water appropriated by him by mingling it with the water of the owner of the canal, and afterward taking out the proper amount.[11] Where the right of way is acquired through the ditch of another, and it is necessary that the ditch be enlarged in order to carry the additional water, the original owner of the ditch can not be required to perform any work or make any expenditures for the purpose of enlarging his ditch so that it may be used by another;[12] but it is held that the keeping of the headgate and the ditch to its original terminus in repair devolves upon both sets of owners, the expense to be adjusted upon an equitable basis.[13] However, where an irrigation company uses a ditch already in operation, and extends a new ditch beyond the terminus of the old one, the owners of the old ditch are not liable for the cost of maintaining the new portion.[14]

In the State of Idaho, where there is no specific statute authorizing the condemnation of a right of way through the ditch of another, in a recent case the right was upheld; and it was there held that where the necessity for the taking is shown, one canal company will be allowed to condemn a part of the right of way of another canal company for the purpose of enlarging the old canal to a sufficient capacity to carry such an additional volume of water as may be needed for the use of the latter company.[15] But in Colorado,

the right to subsequently enlarge the ditch, without the consent of the owner. Clear Cr. etc. Co. v. Kilkenny, 5 Wyo. 38, 36 Pac. Rep. 819.

where there is a statute which provides that no person having constructed a private irrigation ditch through the land of another shall prevent another person from enlarging or using such ditch in common with him on paying a reasonable compensation, it was held that the statute did not give a city the right to enlarge and use the ditch of a water company.[16] We consider this ruling an entirely too strict a construction of the statute, and entirely disregarding the power of a municipal corporation to exercise the right of the power of eminent domain. Where the purpose for which the right is attempted to be exercised is deemed a public use, as the right to the use of water under the Colorado constitution and statutes must be deemed, upon principle there is no difference whether the right sought to be condemned is for a way over the land of another for a ditch, or through an existing ditch or canal of another.

§ 1086. **Acquisition of rights over lands of municipalities or public service corporations.**—Rights of way may also be acquired by eminent domain over lands and other rights of way owned by municipal or public service corporations. The general rule, and one usually provided by the statutes, is, however, that the right sought must be for a more necessary public use. Therefore, it is held that land of a private person subject to an easement of a public highway may be taken by a water company for a dam and reservoir.[1] The rights of irrigators may be condemned for the more public use of furnishing to a city a water supply.[2] The bank or levee of a public reclamation district may be condemned for a railroad roadbed.[3] A right to use a canal owned by a city may be acquired by eminent domain for the conveyance of water by an electrical power company. But this is upon the theory that where two public uses can stand together without material impairment or impediment of one by the other, they must so stand.[4] Under the constitution and statutes of

See, also, Postal Tel. C. Co. v. Oregon Short Line R. Co., 23 Utah 474,

the State of Idaho, the use of land for irrigation canals is declared to be for a public use; and in that State where it is sought by condemnation proceedings to take property that is already devoted to a public use, it is held that the necessity will not be measured by the extent to which the use is actually applied, but rather to the public nature and character of the use to which it had been previously applied, and a right of way through the canal of a canal company was allowed to another canal company.[5]

It is held in the State of Washington that as between two rival public service corporations the one which first started may condemn the water rights of the later one in the case where only one is possible.[6]

**§ 1087. Water rights—Power to acquire.**—A permanent right to the use of water, or a vested water right, may, under certain conditions, be acquired under the power of eminent domain. But, as we have seen in preceding sections, a water right is a property right of the highest order;[1] and, therefore, under the constitutional guaranties, discussed in previous sections of this chapter, and the general authorities upon the subject of the right to exercise the power of eminent domain,[2] the same general conditions attach in order to acquire a water right in this manner as there discussed relative to the acquisition of rights of way over the lands of others. The taking can be made only for a public use; and, upon the question as to what constitutes a public use, for which water rights may be taken, the authorities are as much at variance as they are as to what constitutes a public use for which lands may be taken for rights of way, heretofore discussed in this chapter.[3] But it is generally

conceded in the Western States, that the irrigation of arid lands unproductive in their natural state constitutes such a public use, by way of public improvement, that the legislatures of these States may authorize the exercise of the power of eminent domain to secure the water necessary to carry out such improvement.[4] But water rights can only be condemned, if under the statute they can be condemned at all, by those corporations, either public or private, or others who will supply the water so acquired to the general public, or at least to some portion of the public. They can not be taken for the private use of a person or of a corporation, but the public must benefit by the taking. But it is held that the taking of water rights for the supplying of water for "farming neighborhoods" is a proper exercise of the power of eminent domain where it is so provided by the legislature.[5] And, upon the subject as to what constitutes a public use for which a water right may be condemned, we can conceive of no case where the taking of the water right of one person by another person for his own use would be justifiable under the statute of any State. In this respect, a distinction must be drawn between what constitutes a public use for which a right of way for a ditch or canal over the lands of another, or through a ditch or canal of another, may be condemned for the private use of one individual, as laid

down by the Supreme Court of the United States in the leading case upon the subject,[6] and the condemnation of a water right of one person for the exclusive use of another. In the right of way cases the taking is justified upon the ground that the right to take the water which the condemner already owned over the lands of others to his own lands where it was there to be used for the irrigation of his own lands, was such a general benefit to the public at large that the use was deemed a public one. While the transferring of a water right from one person to another would not be any additional public benefit, it would be the taking of private property for a private use and, therefore, strictly within the constitutional prohibition. However, it is held that a private person may condemn a water right of another for a public use, but that he must respond to all reasonable regulations in the matter of the administration of such public use as the legislature of the State may prescribe.[7] Under the Washington statute, it was held that the water rights of one public service corporation might be condemned by an earlier corporation organized for the same purpose, where only one was possible.[8] But in California it was held that after one corporation makes a *bona fide* effort to acquire the rights to the water of a stream, it obtains an equity which the court will protect against rivals.[9]

The right can only be acquired upon due process of law [10] and upon just compensation.[11]

See the case of Los Angeles v.

Whatever right exists to acquire water rights by the exercise of the power of eminent domain must be specially conferred by the statute of the State where the right is sought, or by an Act of Congress of the United States.[12] It therefore follows that, where the general right is given, any provisions fixing any limitation or restriction within which the right may be exercised are conclusive, and will be followed by the courts.[13] And, if the right to condemn water rights is granted, it can only be upon due process of law and just compensation. So, in Idaho, where a preference right is given by the constitution for domestic uses, as superior to appropriations for other uses, it is held that the water having been once appropriated for other uses, it can not arbitrarily and without compensation be taken for domestic purposes.[14] Under the same condition, they may be condemned for the use of cities and towns for domestic and municipal purposes.[15] The National Reclamation Act of June 17,

Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585; writ of error dismissed, 188 U. S. 314, 23 Sup. Ct. Rep. 395, 47 L. Ed. 487, 63 L. R. A. 471, where it was held that the value of percolating water could not be taken into consideration in estimating the value of property taken under the power of eminent domain. But on this subject, under what may be called the new theory of rights in percolating waters, see Secs. 1185-1211.

12 For the Acts of the various States permitting the condemnation of water rights, see Part XIV.

13 In Washington, the rights of riparian owners may be condemned with the exception of the right to the use of water for irrigation where in actual use. State *ex rel.* Liberty Lake Irr. Co. v. Superior Court, 47 Wash. 310, 91 Pac. Rep. 968.

See, also, for the condemnation of riparian rights, Secs. 1088-1091.

See, also, Albuquerque etc. Co. v. Gutierres, 10 N. M. 177, 61 Pac. Rep. 357; affirmed, 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338, where it was erroneously held that surplus water was subject to appropriation only. The title to surplus water is in the United States in the Territory of New Mexico. It is subject to appropriation, not to condemnation; and that was the extent of the statute being construed that corporations had the right to appropriate the surplus water, or water which had not already been appropriated.

14 Montpelier Milling Co. v. City of Montpelier, 19 Idaho 212, 113 Pac. Rep. 741; State *ex rel.* Kettle Falls etc. Co. v. Superior Court, 46 Wash. 500, 90 Pac. Rep. 650, holding that as between two rival corporations, the one prior in time may condemn the water rights of a later one, where only one is possible.

15 A city, though not authorized by its charter so to do, may condemn the waters of a creek for the use of its inhabitants. Santa Cruz v. Enright, 95 Cal. 105, 30 Pac. Rep. 197.

See, also, Strickler v. Colorado Sprs., 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; McCrary v. Beaudry, 67 Cal. 120, 7 Pac. Rep. 264; New Whatcom v. Fairhaven etc. Co., 24 Wash.

1902,[16] Section 7, provides for the condemnation of water rights or other property, where, in carrying out the provisions of the Act, it becomes necessary to acquire them. Water rights may also be condemned by irrigation districts where necessary and permitted by the statute of the State.[17]

§ 1088. **Water rights—The condemnation of riparian rights.**—A number of the States of the Western part of the country adhere to the doctrine of riparian rights as one of its systems of laws governing waters within their respective jurisdictions.[1] And in the majority of these States there are provisions of the statute which authorize the taking of the water rights of riparian proprietors, as such, under the power of eminent domain. As the right to the use of water, under the common law of riparian rights, heretofore discussed, is a property right,[2] it can not be taken, injured, or destroyed, except for a public purpose, upon due process of law, and for just compensation, and only then when specially authorized by the statute of the jurisdiction where the taking is sought to be had. And, we will say in passing that one of the redeeming features of the laws of these States which adhere to the dual and inconsistent systems of water laws, are the broad provisions of the most of their statutes permitting the condemnation of riparian rights especially when the purpose for which the right is sought is that of irrigation, which, as we have seen in previous sections,[3] is considered a public use of

For full text of Act, see Sec. 1244.

[17] Knowles v. New Sweden Irr. Dist., 16 Idaho 217, 101 Pac. Rep. 81.

For irrigation districts, see Secs. 1386 *et seq.*

[1] For the Western States adhering to the doctrine of riparian rights, see Sec. 507.

[2] That riparian rights are property rights, see Secs. 450-456.

[3] See Secs. 1068, 1069.

a very high order.[4] Were this not so, the development and cultivation of the arid lands in these States would be greatly retarded. It is therefore provided by the statutes of a number of these States, which are upheld by their courts, that the rights of riparian owners in the waters of a stream may be taken under the power of eminent domain by others for agricultural and other public uses.[5] As said by the Washington Court: "If such rights may be conveyed, we see no reason why they may not, under the right of eminent domain, be condemned when necessary for public use, without the appropriation of the land itself."[6]

[4] For the statutes of the various States providing for the condemnation of water rights, see Part XIV.

[5] In Nebraska it was held in the leading case upon the subject that corporations organized under the district irrigation law were expressly authorized to condemn "the riparian proprietor's right to the use of the water" of a natural stream, when found necessary, for irrigation purposes, the development of a system of irrigation being a work of internal improvement. Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647. The Court said: "Water for irrigation canals contemplated by the Act is absolutely indispensable for the successful prosecution of the enterprise. In fact, water to flow in the ditches to be constructed for the purpose of irrigating the soil for the production of crops was the overshadowing and all controlling factor, without which the law, so far as promoting the public welfare, would be but a hollow mockery, suggestive of a highly absurd situation—an anomalous condition of affairs."

See, also, Paxton etc. Irr. Co. v. Farmers' etc. Co., 45 Neb. 884, 64 N. W. Rep. 343, 29 L. R. A. 853, 50 Am. St. Rep. 585; Alfalfa Irr. Dist. v. Collins, 46 Neb. 411, 64 N. W. Rep. 1086; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Umatilla Irr. Co. v. Barnhart, 22 Ore. 389, 30 Pac. Rep. 37; McGhee Irr. D. Co. v. Hudson, 85 Tex. 587, 22 S. W. Rep. 398; *Id.*, 28 S. W. Rep. 967; St. Helena W. Co. v. Forbes, 62 Cal. 182, 45 Am. Rep. 659; Hercules W. Co. v. Fernandes, 5 Cal. App. 726, 91 Pac. Rep. 401; McCook etc. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249; Cline v. Stock, 71 Neb. 70, 102 N. W. Rep. 265, 98 N. W. Rep. 454; Long Island etc. Co. v. City of Brooklyn, 166 U. S. 685, 41 L. Ed. 1165, 17 Sup. Ct. Rep. 718; Northern Light & Pr. Co. v. A. 190; Emporia v. Soden, 25 Kan. 588, 37 Am. Rep. 265; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Bingham v. Port Arthur etc. Co., 100 Tex. 192, 97 S. W. Rep. 686, 13 L. R. A., N. S., 656; Spokane etc. Co. v. Arthur Jones Co., 53 Wash. 37, 101 Pac. Rep. 515.

[6] State *ex rel.* Burrows v. Superior Court, 48 Wash. 277, 93 Pac. Rep. 423, 17 L. R. A., N. S., 1005, 125 Am. St. Rep. 927.

As the power to exercise the right of eminent domain for the condemnation of riparian owners' right to the use of the water flowing by or through their lands is one granted by statute only, any limitation or restriction to the exercise of the right fixed by the legislature is conclusive and must be followed. This may be illustrated by the statute upon the subject in the State of Washington,[7] wherein it is provided that the right to condemn the use of water shall not extend further than to the riparian rights of persons to the natural flow of water through lands on streams, and is not intended to allow the taking of water from any person that is used by the person himself or that is needed for that purpose. It was held by the Court that the word "needed" as so used meant water necessary to irrigate his land which he has under cultivation at the time his rights are sought to be condemned, or which he intends to and will place under irrigation within a reasonable time and that as to such water no condemnation could be had.[8]

The riparian owner's right to the use of the water itself can be condemned separate and apart from any land, although an action for the condemnation of the water may be joined with an action to condemn land for a right of way.[9]

**§ 1089. Riparian rights—Parties defendant—Difficulties encountered in condemnation suits.**—The condemnation of a water right acquired by appropriation, where a certain appropriator has

9 For the condemnation of land for rights of way, see Secs. 1065-1085.

See, also, Bigelow v. Draper, 6 N. D. 152, 69 N. W. Rep. 570; St. Helena W. Co. v. Forbes, 62 Cal. 182, 45 Am. St. Rep. 659.

acquired the right to the use of a certain amount of the water of a stream, is a simple matter as far as the parties defendant are concerned, as compared with the condemnation of riparian rights. There the suit may be brought against the defendant, or defendants, who are the owners of definite water rights, which are sought to be acquired by the proceedings.[1] But, upon the other hand, as the rights of all the riparian proprietors upon a certain stream are equal or correlative,[2] and one riparian owner has only the right to the use of a reasonable amount of water naturally flowing in the stream for riparian lands, and then only when it does not materially injure the rights of the other proprietors, the question of parties defendant, in condemnation proceedings of riparian rights, becomes an important subject in this discussion. Under the common law rule, riparian rights are as much property rights as the soil adjoining the river, or other body of water, on which the rights are claimed.[3] Therefore, being property rights they can not be acquired against the will of their owners, under the constitutional guaranties heretofore discussed, except for a public use upon due process of law, and only then when just compensation is paid. Upon the smaller streams, which flow entirely within a certain jurisdiction, the matter is not a difficult one, as all the riparian owners upon the stream may be joined as parties defendant, and be served with process or other legal notice provided by the statute of the State wherein the suit is brought, and thus be all brought into court or the other tribunal provided for, their rights determined, and the damages for the tak-

1 For the procedure in eminent domain, see Secs. 1092-1097.

2 See Secs. 483-497.

3 "These riparian rights, founded on the common law, are property, and are valuable, and while they must be enjoyed in the due subjection to the rights of the public, they can not be abridged or capriciously destroyed or impaired. They are rights of which, when once vested, the owner can only be deprived in accordance with the law of the land, and, if necessary that they be taken for a public use, upon due compensation." Baltimore etc. R. Co. v. Chase, 43 Md. 23.

See, also, Gardner v. Newburg, 2 Johns. Ch. 162, 7 Am. Dec. 526, where Chancellor Kent said: "A right to a stream of water is as sacred as a right to the soil over which it flows. It is a part of the freehold, of which no man can be disseized but by a lawful judgment of his peers, or by due process of law."

See, also, for riparian rights, Chaps. 21-28, Secs. 450-551.

ing assessed. But, where the stream is large and the riparian proprietors are many and the stream flows through different jurisdictions, the question is, by no means, an easy one, as to how all those having property rights in the natural flow of the stream are to be brought into court and have their rights adjudicated, and the taking of the rights permitted, without a violation of the constitutional provisions. And, besides, if this can be done, it is a vastly expensive proceeding. As a general rule, all persons who have any proprietary interest in the property taken, or proposed to be taken, should be made parties defendant to the proceedings and also all other persons, if any, who are required to be made parties by statute. And by proprietary interest is meant any interest which is recognized as property by the laws of the State, where the taking is sought.[4] And not only must the owners of the record title to the property in question be made parties defendant, but, in some jurisdictions, the husband and wife must be made parties, also mortgagees, judgment creditors, and other lien holders, life tenants, lessees, and reversioners, tenants in common, and joint tenants, towns, cities, and other municipal corporations; infants should be brought in by their legally appointed guardians, or a guardian *ad litem* should be appointed by the Court; in fact, any person or corporation having a property interest in the rights sought to be condemned must be made parties defendant in the proceedings; and, not only this, they must be served by legal notice of the proceedings in accordance with the provisions of the statute. Otherwise there would be a taking of property without due process of law and in violation of the constitutional guaranties. All these questions which are liable to arise in actions to condemn riparian rights, on large streams with numerous riparian owners, by large enterprises, where the rights of the riparian owners would be materially injured by the taking, are practically prohibitive against the bringing of such actions, although the abstract right to condemn such property may be given by the statute.[5]

4 Lewis on Em. Domain, 3d Ed., Sec. 516.

5 "It would seem, however, that in instances where the stream system is of considerable size and the number of riparian proprietors who will be affected by diversion of water is large, the proceedings to condemn their respective rights and compensate each for his injury or loss would be of such magnitude and so expensive as to practically bar the appropriator from attempting it." Mills' Irr. Manual, 1907, p. 276.

Upon the question of jurisdiction referred to above, the constitution and statutes must be followed as to where the action may be brought.[6] But where the right sought to be acquired is in two or more counties of the same State, the rule generally is that the action may be brought in either county.[7] Where the works producing the injury are in one State, and the property damaged in another, it is held that an action for redress may be brought in either State.[8] But the courts of one State have no jurisdiction to try the rights of or to condemn property situated in another State.[9]

**§ 1090. Riparian rights—Modern tendencies—Due process of law and just compensation in other than condemnation suits.**—In the arid States of the West, adhering to the common law,[1] there is

See, also, Wiel on Water Rights in the Western States, 2d Ed., Sec. 339.

To secure the condemnation of all the riparian rights upon a certain stream, all riparian owners upon such stream must be made parties to the action, and not merely those above or below the point of diversion. *In re* Board of Water Supply, 58 Misc. Rep. 581, 109 N. Y. Supp. 1036.

6 For jurisdiction of courts, see Chaps. 78-83.

7 City of Helena v. Rogan, 26 Mont. 452, 68 Pac. Rep. 798, 27 Mont. 135, 69 Pac. Rep. 709; Deseret Irr. Co. v. McIntyre, 16 Utah 398, 52 Pac. Rep. 628; Postal Tel. Cable Co. v. Oregon etc. R. Co., 23 Utah 474, 65 Pac. Rep. 735, 90 Am. St. Rep. 705.

In California, under the Code of Civil Procedure, Section 392, subdivision 1, requiring actions for injuries to real property to be tried in the county where the real estate is situated, the suit may be brought in any county, although the property injured is situated in another county. The Court thus acquired jurisdiction to try the cause unless the defendant applied for its transfer for trial to the county where the real property is situated. Miller & Lux v. Madera etc. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391.

Again it is held in California that a ditch company incorporated in one county can not maintain an action to condemn lands in another county in connection with water rights claimed therein, where the ownership of such property is the issue in the case, without first filing a copy of its articles of incorporation in such county. Emigrant D. Co. v. Webber, 108 Cal. 88, 40 Pac. Rep. 1061.

9 Octoraro W. Co., 5 Pa. Dist. Ct. 767; Conant v. Deep Cr. Irr. Co., 23 Utah 627, 66 Pac. Rep. 188, 90 Am. St. Rep. 721; Carpenter v. Strange, 141 U. S. 87, 35 L. Ed. 640, 11 Sup. Ct. Rep. 960.

1 For these States, see Sec. 507.

a commendable modern tendency upon the part of the legislatures, and the courts as far as possible, owing to the peculiar arid conditions of this part of the country, to still further modify the old common law rule governing waters.[2] This is especially true as to the granting of rights for the irrigation of lands as against what may be called the "unused" rights of riparian proprietors, by not compelling those seeking the right to submit to the difficulties attendant upon an action to condemn riparian rights, by permitting the taking of the waters and then allowing those riparian proprietors whose rights are materially injured to rely upon their actions for damages, or if there has been "a more substantial injury," to maintain actions for injunction. In a previous portion of this work, we discussed the modern rule as to the rights of the riparian proprietors to the "undiminished flow," where a large portion of the waters of the natural streams was unused by the riparian proprietors, except as it might incidentally benefit their lands by flowing past them.[3]

We will still further discuss the question when we come to the subject of the granting of injunctions upon behalf of riparian proprietors as against the appropriators of the water for beneficial purposes.[4] Although, under the constitutional guaranties, private property can not be taken except for a public use upon due process of law and upon the payment of just compensation; and, as the right of riparian proprietors to the natural flow of the stream is a property right of which he can not be devested except under these conditions, still there are other methods by which this property of another may be taken, and these conditions met, than by the special proceedings in condemnation. That the taking of riparian rights to the natural flow of the water of a stream by persons or corporations for the irrigation of land, which otherwise would be barren, is a public use of the highest order, is unquestioned; therefore, that

2 For modifications of the common law, see Secs. 508-513.

For irrigation as a riparian right, see Secs. 498-525.

3 For undiminished flow, see Sec. 549.

4 For injunctions as against appropriators, see Chap. 81.

See Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

See, also, the exceedingly well reasoned opinion by King, J., in the case of Hough v. Porter, 51 Ore. 318, 98 Pac. Rep. 1083, 95 Pac. Rep. 732, 102 Pac. Rep. 728.

subject need not be further discussed here.[5] But the taking for this purpose may be by the actual diversion of the water of the stream, originating in trespass, if you will, and still the riparian owners whose rights were injured would be entitled to their remedies at law for damages, or in equity for an injunction, should the facts in any case warrant either remedy, and thus the other constitutional conditions would be complied with, both as to just compensation and due process of law. And so the courts of some of these common law States hold, especially in Nebraska and California, with Oregon leaning in that direction. In a leading case in Nebraska [6] it was held that, where an appropriator had acquired a valid right to the use of water, not theretofore actually used by the riparian proprietors, under the laws governing the taking and use of water for purposes of irrigation, equity will restrain an upper riparian owner from subsequently diverting water, without requiring the appropriator to institute proceedings to condemn the rights under the common law of all riparian owners to the reasonable use of water flowing in the stream. And, in a still earlier case,[7] it was held that where the appropriation was made in accordance with the statute, a riparian proprietor whose property rights are appropriated or impaired is entitled to compensation for the injuries actually sustained, to be recovered in a suitable action instituted for that purpose.[8]

The Supreme Court of California, in the more recent cases holds practically to the same rule that in order to acquire property rights of riparian owners to the natural flow of a stream, it is not necessary to bring condemnation proceedings, but that where the rights of the public are involved in a suit to enjoin the abstraction of the waters of a stream, or subterranean waters, for a beneficial use at a distance, the court can arrive in terms of money at the loss which the

5 See Secs. 1068, 1069.

6 McCook Irr. etc. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249.

7 Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

8 See, also, Cline v. Stock, 71 Neb. 70, 98 N. W. Rep. 454, 102 N. W. Rep. 265.

In a former hearing of the case of McCook Irr. Co. v. Crews, 70 Neb. 109, 96 N. W. Rep. 996, it was held that the plaintiff appropriator could properly bring an action in equity to determine the rights of all the claimants to the use of the water of the stream, and to quiet its title thereto, and in which damages to riparian rights might be ascertained, and due compensation awarded.

proprietors sustained, and an absolute injunction should not be granted, but the proceedings will be regarded as one to secure compensation to the land owners for their injury; but that an injunction might be granted conditional merely upon the failure of the defendant to make good the damage thus allowed. "Such an action, if successful, should be regarded in its nature as the reverse of an action in condemnation. The defendant in effect would be held to be damaging private property without just compensation first made to the owner, and, failing to make such compensation, should be enjoined from further damage."[9] The rights of those who had taken the water as against the rights of riparian proprietors were decided upon different principles of law in the cases referred to in Nebraska and the cases in California. In the Nebraska cases, it was held that the appropriator had acquired the right to the use of the water by complying with the statutory provisions, while in California it was held that they had acquired the right as against the owners by estoppel.[10] But the only point which we wish to make here, is that the rights between the different parties, where water is taken and claimed by riparian proprietors, may be adjudicated, and the damages assessed therefor, in suits other than by the special proceedings in condemnation. But in cases of this nature, it falls upon the party claiming to be injured to bring the action, but the ultimate results are the same as though the action had been brought by the party seeking to secure the right. As against the "unused" portion of the waters flowing by the lands of a riparian owner, that is to say, the portion of the water of a stream, which is not in fact at the time the claim is made being actually put to some beneficial use by the riparian owners, other than merely being permitted to flow in

9 Newport v. Temescal etc. Co., 149 Cal. 531, 87 Pac. Rep. 372, 6 L. R. A., N. S., 1098.

See, also, the case of Miller & Lux v. Madera etc. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391, where the Court, referring to the ruling in the above cases cited, said: "The principle contended for and sustained by the cases cited and others is unquestionably correct." But the Court held that the facts in the case at bar did not warrant their application.

See, also, Verdugo W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021; Miocene etc. Co. v. Jacobsen, 146 Fed. Rep. 680, 77 C. C. A. 106.

10 For the doctrine of estoppel, see Secs. 1121-1128.

the natural channel by their lands, where the constitution or statute of a State does not prohibit this mode of procedure, it is much more equitable to have these matters adjudicated in actions brought by those claiming to be injured by the diversion, than to compel the party seeking the right to bring an action to condemn the right against all those riparian owners who may have an interest by virtue of their common law rights to the flow of the waters of a stream, whether those waters were put to any beneficial use or not.

**§ 1091. Riparian rights—Just compensation—Measure of damages.**—If there is a taking of a riparian right to the natural flow of a stream, in those States where it is recognized by the authorities as a property right, just compensation must be paid therefor; otherwise there would be a violation of the constitutional guaranties. Therefore, no matter what the mode of procedure in acquiring the riparian rights of another by virtue of the power of eminent domain, whether it be by direct action in special condemnation proceedings against the riparian owners upon a certain stream, or, whether it be an action brought by the riparian owner against the party diverting the water for damages, or for any injunction protecting his right, and it should be decided by the Court that the condemner would be entitled to the water which was the property of another, upon the payment of just compensation, the damages for the taking must be assessed and the payment made by the claimant.[1]

The measure of the damages which should be allowed, where riparian rights are sought to be condemned, is the depreciation in the value of the whole riparian tract by reason of the taking. The estimate should be based upon the value of the property immediately before the taking and what it would be worth after the taking had been made. The difference, if any, is the loss actually sustained,

1 See previous section, No. 1090.

In making appropriations of water as contemplated by the Irrigation Act of 1895, a riparian owner whose property rights are appropriated or impaired is entitled to compensation for the injuries actually sustained to be recovered in a suitable action or proceedings instituted for that purpose. McCook Irr. etc. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249; *Id.*, 70 Neb. 109, 96 N. W. Rep. 996.

See, also, Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 647.

and therefore the proper measure of damages.[2] As a riparian right is a property right, whether it is used or not, the courts of the various jurisdictions differ somewhat as to the assessment of damages where the water is not being put to actual use by the riparian proprietors. The rule in California seems to be that the right to the future use of the water should be considered,[3] while in Nebraska, where the riparian proprietors were possessed of the naked right to a reasonable use of the waters of a stream, yet where such right was not coupled with an actual diversion or application of such waters to some beneficial use, the measure of damages for future use, defeated by the taking, can not be considered. And, also, in a recent case it was held that the riparian owner could not be permitted to enhance his damages and be entitled to greater compensation by reason of his added expenditures in the construction of ditches for irrigation of his riparian lands subsequently to the time of the taking.[4]

In view of the great need for water in this arid country none of

2 Lee v. Springfield W. Co., 176 Pa. 223, 35 Atl. Rep. 184; City of Syracuse v. Stacey, 169 N. Y. 231, 62 N. E. Rep. 354.

The measure of damages for condemnation of a riparian owner's water rights is the depreciation in the value of the whole tract of land adjacent to the stream, depending as well on the depth of the land as its frontage on the stream. Hercules W. Co. v. Fernandez, 5 Cal. App. 726, 91 Pac. Rep. 401.

3 Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674.

4 McCook Irr. etc. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249, where the Court said: "The defendants (the riparian owners) in the case at bar constructed their ditches with the full knowledge of the plaintiff's superior rights as an appropriator, and, in equity and good conscience, ought not to be permitted to add this increased expense to the compensation to which they might be found entitled, as riparian owners, for damages to their riparian estate. If this were a case where the riparian owner had actually diverted water to irrigate riparian lands before the rights of the appropriator had attached, the case presented would be entirely different; and it could hardly be doubted that the appropriator would, in equity, be compelled to make due compensation before a Court would restrain the further diversion and use of such water by such riparian owner."

In a previous hearing of the same case, 70 Neb. 109, 96 N. W. Rep. 996, the Court held that under the circumstances of the case the injury of the riparian owners by reason of the taking of the water by an irrigation enterprise "is nominal only."

See, also, Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647; Cline v. Stock, 71 Neb. 70, 98 N. W. Rep. 454, 102 N. W. Rep. 265.

it should be permitted to run to waste by riparian proprietors or others. Therefore, where a riparian proprietor claims his right to maintain the undiminished flow of the water of a natural stream, without other use, others should be permitted to acquire the right to the use of the water in order that the greatest good might be done to the greatest number. And in those States which adhere to the common law of riparian rights, it is true that in all jurisdictions these rights should be condemned for public uses, and the measure of damages should be based upon the present use that is being made by a riparian proprietor, and not upon some vague, uncertain scheme for the use of the water in the future.[5]

**§ 1092. Actions for condemnation—General procedure and practice.**—The form of procedure in actions to condemn rights discussed in the previous sections of this chapter differs in the various States, the same being largely regulated by statute. In the most of the States a special procedure for actions of this nature is provided, and the general code of civil procedure does not apply.[1] In most jurisdictions there are provisions that, after the complaint has been filed, the court or judge may, upon a proper showing that the necessity exists for the condemnation, upon motion, grant an order that the plaintiff take possession of the premises, upon filing a bond conditioned to pay the adjudged value of the premises and all damages in case the property is condemned and to pay all damages arising from the occupation before judgment, in case the property is not condemned, and all costs adjudged to the defendant in the action. The court or judge may also, pending the action, restrain the defendant from hindering or interfering with the occupation

5 For rights of riparian proprietors to the undiminished flow of the water, under the modified Western rule, see Sec. 549.

For when injunctions will be granted upon behalf of riparian proprietors, see Chap. 81.

1 "Proceedings of this nature are *sui generis;* they are purely statutory, and in many important particulars are wholly unlike our ordinary civil actions under the code." Knoth v. Barclay, 8 Colo. 300, 6 Pac. Rep. 924; Tripp v. Overacker, 7 Colo. 72, 1 Pac. Rep. 695; Sterritt v. Young, 14 Wyo. 146, 82 Pac. Rep. 946, 4 L. R. A., N. S., 169, 116 Am. St. Rep. 994, wherein it is said: "The proceeding to condemn property under the right of eminent domain is not a civil action, nor is it necessary that it should be considered in the ordinary course of legal proceedings."

For condemnation proceedings in California, see Chap. 86.

of the premises and the doing thereon of the work required.[2] In Nebraska, water companies are given the power to acquire rights of way, and to condemn property necessary for the construction of their canals, in the same manner as railroads may acquire property and rights of way for railroad purposes; and the procedure applicable to the exercise of the right of eminent domain by railroad companies is made to apply to such water companies.[3] In Washington it is provided by the Act of 1899 [4] that the money damages assessed must be paid to the clerk of the court before the work of construction can be commenced.[5]

In some States, before an action for condemnation will lie, there must have been a demand upon the part of the plaintiff for the land and an attempt upon its part to secure the property sought by contract or agreement.[6] But, in most jurisdictions, it is only necessary to show that the use to which the property is to be applied is authorized by law and that the taking is necessary to such use.

**§ 1093. Actions for condemnation—Parties.**—In actions for condemnation, the parties plaintiff must be a corporation, associa-

2 The right of the plaintiff to enter into possession of property in condemnation proceedings, upon filing sufficient bond, upheld by the Utah Court, and the provisions of the statute relative thereto declared not in conflict with Article 1, Section 22, of the Utah constitution. Salt Lake City etc. Co. v. Salt Lake City, 24 Utah 249, 67 Pac. Rep. 672, 61 L. R. A. 648, 25 Utah 441, 71 Pac. Rep. 1069.

See, also, Spratt v. Helena etc. Co., 37 Mont. 60, 94 Pac. Rep. 631.

3 Crawford v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

4 Laws Wash., 1899, p. 262, Sec. 6.

5 It was held that any informality in the decree not exactly conforming to the statute, requiring that the decree provide that the money be paid to the clerk of the court before work upon the ditch be commenced, was cured by a supplemental transcript on appeal showing that the money had been actually paid to the clerk for the benefit of the owners of the land condemned. Fulton v. Methow Trading Co., 45 Wash. 136, 88 Pac. Rep. 117.

6 Fulton v. Methow Trading Co., 45 Wash. 136, 88 Pac. Rep. 117; Grande etc. Co. v. Drake, 46 Ore. 243, 78 Pac. Rep. 1031; Weed v. Goodwin, 36 Wash. 31, 78 Pac. Rep. 36.

In Colorado, in such an action the condemner offered to prove that the parties were unable to agree, but the proof was excluded upon objection of the attorneys for the defendant, and it was held that all the parties were bound by the action of the attorneys conducting the trial, and, upon appeal, they could not complain. Warner v. Town of Gunnison, 2 Colo. App. 430, 31 Pac. Rep. 238.

tion, or person in charge of the public use for which the property is sought, or some other party designated by the statute of the State wherein the action is brought. Under the more modern statutes the right is given to foreign as well as domestic corporations. Therefore, it is generally held that a corporation, organized under the laws of any State that has complied with the laws of the State relative to the filing of its articles, accepting its constitution and laws, etc., has the power as party plaintiff to condemn lands and rights for the purposes prescribed in the statutes of the State where the action is brought, as well as domestic corporations.[1] And in jurisdictions where the statute does not permit this right, the tendency is for the legislatures to amend the statutes so that it will give the right. This is illustrated by a case in Montana, where the Supreme Court upon the first hearing of a case held that a foreign corporation authorized by the laws of its domicile to construct a dam and electric power plant on a river in Montana did not have the power of eminent domain, and reversed the judgment of the lower court granting the right.[2] But shortly afterward the statute was amended,[3] and the Supreme Court in a second action between the same parties upheld the amended statute extending the power to foreign corporations.[4] In Alaska it has been held that a foreign corporation can not exercise the power of eminent domain.[5]

The United States is given the power as party plaintiff to exercise the right of eminent domain for the Reclamation Service, but this must be done in accordance with the local laws of the State wherein the action is brought.[6]

The powers of a corporation are usually determined by the terms of its articles or charter.[7] Therefore, a corporation whose articles show that it is essentially a private corporation, and in no sense obligated to furnish the public with water, can not exercise the power of eminent domain.[8] Upon the other hand, when the cor-

7 See Chap. 74.

8 State *ex rel.* Tolt Power etc. Co. v. Superior Court, 50 Wash. 13, 96 Pac. Rep. 519.

poration articles show that primarily it was organized for the purpose of public service, it is given the right of condemnation. However, it is held in the State of Washington that this does not carry any sanction of private use, and such may be prevented in subsequent proceedings.[9]

As to parties defendant in such actions, all persons, or corporations having an interest in the property sought to be acquired should be made parties defendant, served with summons according to law, and their rights tried and their damages assessed.[10] Again, as in other cases, where persons other than those who are made parties defendant have an interest in the property sought to be condemned, they may intervene in the action.[11] But the rights of persons who are not made parties to the suit, but are strangers thereto, can not be considered in the trial of the action.[12] In order to have the rights of strangers to a suit determined, they must be

9 See State *ex rel.* Shropshire v. Superior Court, 51 Wash. 386, 99 Pac. Rep. 3; Walker v. Shasta Power Co., 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725; Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168.

10 Denver etc. Co. v. Denver etc. R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383; Weed v. Goodwin, 36 Wash. 31, 78 Pac. Rep. 36; Sterritt v. Young, 14 Wyo. 146, 82 Pac. Rep. 946, 4 L. R. A., N. S., 169, 116 Am. St. Rep. 994.

See, also, for the condemnation of riparian rights—parties defendant, Sec. 1089.

But, on appeal in such an action, where the transcript showed no service on certain defaulting defendants, objections to the trial Court's findings that they were duly served and their default entered, and to the act of the trial Court in not calling for a jury to determine damages as to them, were held to be immaterial, where such defaulting defendants did not appeal. Fulton v. Methow Trading Co., 45 Wash. 136, 88 Pac. Rep. 117.

11 One intervening is not entitled to a judgment of dismissal as to himself on a finding by the trial Court that he was not the owner in his own right of any of the lands sought, since he came into the action of his own initiative, and was not forced into Court by the plaintiff. Fulton v. Methow Trading Co., 45 Wash. 136, 88 Pac. Rep. 117.

But in a proceeding instituted by a power company to condemn a railroad right of way for a reservoir, the people, through the attorney general, have no right to intervene to determine whether the railroad company has forfeited its franchise to such right of way. Denver etc. Co. v. Denver etc. R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383.

12 Schneider v. Schneider, 36 Colo. 518, 86 Pac. Rep. 347; Denver etc. Co. v. Denver etc. R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383.

made parties to the action or must of their own accord intervene therein.[13]

§ 1094. **Actions for condemnation—Pleadings.**—The complaint or petition in actions to condemn rights must, in the first instance, set forth the statutory requirements, and then may include such other allegations as may be necessary. It must particularly describe the right sought to be condemned. If a right of way is sought, the complaint must show the location, general route, and termini, and, in some instances, must be accompanied with a map thereof, so far as the same is involved in the action.[1] If a tract of land is sought to be taken, each piece must be definitely described, and a statement as to whether the entire piece or only a portion thereof; if it is only the latter, the part sought must be definitely described.[2] Where the action is brought to condemn water rights, these rights must also be particularly described. If they are ri-

13 Denver Power & Irr. Co. v. Denver & R. G. R. Co., 30 Colo. 204, 69 Pac. Rep. 568, 60 L. R. A. 383; Walker v. Shasta Power Co., 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725.

1 A complaint which describes the definite route and the dimensions of a ditch, sufficiently describes the quantity of land, within the requirements of the statute, requiring the complaint to state the quantity of land required. Fulton v. Methow Trading Co., 45 Wash. 136, 88 Pac. Rep. 117.

See, also, Ellinghouse v. Taylor, 19 Mont. 462, 48 Pac. Rep. 757; State *ex rel.* Kettle Falls etc. Co. v. Superior Court, 46 Wash. 500, 90 Pac. Rep. 650; Shasta Power Co. v. Walker, 149 Fed. Rep. 568; Walker v. Shasta Power Co., 160 Fed. Rep. 856, 87 C. C. A. 660, 19 L. R. A., N. S., 725.

A complaint to condemn property must show that the use for which it is to be taken is a use declared by the legislature to be a public use. Northern Light etc. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896.

2 A complaint by a city showed that the property sought was all the estate and interest of defendants in certain land definitely described, and alleged that the interest of the defendants was in fee, subject only to the city's ownership of the exclusive right to the use of all the water flowing through it; it was held on demurrer that the complaint sufficiently described the property sought to be condemned. Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585. Appeal dismissed under name of Hooker v. Los Angeles, 188 U. S. 314, 47 L. Ed. 487, 23 Sup. Ct. Rep. 395, 63 L. R. A. 471.

Ordinarily, one seeking to condemn land should describe in his petition the property sought, but where an anticipated claim for damages is interposed the petitioner may lessen or obviate the claim by stipulation or waiver, whereby the damages claimed may be avoided and the rights of the owner fully protected. Tacoma Eastern R. Co. v. Smithgall, 58 Wash. 445, 108 Pac. Rep. 1091.

parian rights, the complaint should set forth a definite description of the defendants' lands which are riparian to the stream, a description of the stream itself, and the nature and character of the riparian rights connected with the land and sought to be condemned.[3]

If the property sought is a water right acquired by appropriation, the nature and extent of the right must be fully described, the stream from which the water is taken, and the beneficial use or purpose to which the water is being applied, and any further statements that are necessary to fully describe the right. But, in either case, the plaintiff must fully state the use or purpose to which he intends to apply the water, and for which he is seeking the right by condemnation, in such terms that the complaint will show upon its face that that use is a public one. And in this respect only the uses designated by the statute are deemed public uses for the purpose of condemnation. Therefore, it is not sufficient for the complaint to allege that the use for which the property is to be taken is a public use, but it must show specifically that the use is one of those enumerated by the statute, and the trial court can not obviate this requirement by finding the use to be a public use.[4] It is held that the facts showing the necessity for taking the property by condemnation must be proved, but that they need not be specifically pleaded.[5]

Where the absolute right is given by the statute for condemnation of property rights, and for the public use or purpose for which an action is brought, the defenses to such an action are few. In Washington it has been held that no answer is contemplated or

3 Northern Light & Pr. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896; Hercules W. Co. v. Fernandez, 5 Cal. App. 726, 91 Pac. Rep. 401; State *ex rel.* Liberty Lake Irr. Co. v. Superior Court, 47 Wash. 310, 91 Pac. Rep. 968.

4 Therefore, a complaint to condemn water rights to supply specified towns "and other places" "with water for domestic and other necessary purposes" is bad on demurrer, as the purpose for which the condemnation is sought would include other uses not public uses. Hercules W. Co. v. Fernandez, 5 Cal. App. 726, 91 Pac. Rep. 401.

See, also, Lindsay Irr. Co. v. Mehrtens, 97 Cal. 676, 32 Pac. Rep. 802; Northern Light & Pr. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896; Shasta Pr. Co. v. Walker, 149 Fed. Rep. 568; *Id.*, 160 Fed. Rep. 858, 87 C. C. A. 660, 19 L. R. A., N. S., 725.

5 Rialto Irr. Dist. v. Brandon, 103 Cal. 384, 37 Pac. Rep. 484; Northern Light & Pr. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896; Gibson v. Cann, 28 Colo. 499, 66 Pac. Rep. 879.

required in proceedings of this nature, and that it is not error to strike such an answer from the files.[6] About all that a defendant can do in such an action is to see that the proceedings are conducted in accordance with the law, and to put in evidence the full facts as to the amount that he will be damaged by the taking of his property. The necessity of the taking may, in certain instances, be a good defense, as where the condemner has ample water besides the rights sought for the public use to which he applies the water, or ample facilities to conduct the water to the place of use. But where in an action to condemn a right of way for a ditch and the riparian rights to the waters, it was held to be no defense that the water company appropriated and was capable of using a large supply of water through another source, where there was the actual necessity for the additional water for the public use to which the plaintiff intended to apply the water rights condemned.[7] Neither is it a defense, in an action to condemn land for a reservoir site, that the site is within the limits of a forest reserve of the United States, and that the Government's consent has not been obtained.[8] Nor is it a defense that the rights sought may conflict with rights of others who are not parties to the action.[9] Again, it is not a good defense, where the answer alleged that the property was sought for other and ulterior purposes, where the Court determined that the public interests required the taking.[10]

**§ 1095. Actions for condemnation—The hearing.**—In the matter of the hearing in actions for condemnation, the statute of the States where the action is brought must be strictly followed.[1] The

6 Seattle etc. R. Co. v. Murphine, 4 Wash. 448, 30 Pac. Rep. 720; State *ex rel.* Ami Co. v. Superior Court of Pierce Co., 42 Wash. 675, 85 Pac. Rep. 669.

9 Schneider v. Schneider, 36 Colo. 518, 86 Pac. Rep. 347.

10 Tacoma Eastern R. Co. v. Smithgall, 58 Wash. 445, 108 Pac. Rep. 1091; Fort St. Union Depot Co. v. Bacus, 92 Mich. 33, 52 N. W. Rep. 790.

1 Sand Creek etc. Co. v. Davis, 17 Colo. 326, 29 Pac. Rep. 742.

question of the necessity for the taking of the property for a public use, when the same is denied in the answer, is usually left to the Court alone to decide. But in Colorado, in all proceedings under the eminent domain Act, the question of necessity, or when the proceedings are to condemn a right of way for a ditch, the question of the feasibility and practicability of the undertaking must be tried, if at all, by a board of commissioners appointed by the Court.[2] But by demanding a jury and voluntarily trying the question of damages, the defendant is held to have waived his right to have the preliminary necessity for the taking submitted to a commission.[3] And where this question is not waived, the question as to the necessity of the taking should be determined, either by the Court or by the commission appointed for such purpose *in limine*, before the question of the damages is tried either by the jury or by the commission selected for this purpose.[4]

Upon the hearing of the question of damages, not only must the statute provide for such a hearing, but also it must provide for notice to the person whose property is sought in an action for condemnation of such hearing for fixing the damages.[5] The defendant must be given the opportunity to be heard, otherwise there is not due process of law in taking the property, in violation of the Federal and State Constitutions.[6]

In those jurisdictions where it is provided that the damages may be assessed by a jury after the evidence in the case is all in, the

2 Sand Creek etc. Co. v. Davis, 17 Colo. 326, 29 Pac. Rep. 742; Thompson v. De Weese-Dye etc. Co., 25 Colo. 243, 53 Pac. Rep. 507. —

"The jury determines only the question of damages." Weed v. Goodwin, 36 Wash. 31, 78 Pac. Rep. 36.

6 For due process of law, see Secs. 1076, 1078.

Court must instruct the jury upon the law as to the proper measure of damages.[7]

§ 1096. **Actions for condemnation—Verdict—Judgment.**—The verdict of the jury or the finding of the commission before whom the question of damages was tried having been adopted by the Court, the Court must then enter judgment in the case, in accordance with the statute, both as to the amount of damages to be paid the defendant for the taking of his property, and the nature and extent of the right to take the same. These judgments usually provide that the amount assessed as damages for the taking must be paid to the defendant within a certain time, as specified by the statute, and upon the payment of which the final order is made of condemnation. The judgment of final condemnation must describe the property condemned with great particularity and the purpose of such condemnation. And upon the rendition of such judgment, and usually filing the same in the office of the county recorder, thereupon the property described therein vests in the plaintiff for the purpose therein specified.[1]

Upon the question of costs, the statutes of the respective States specify how they shall be assessed. In some States costs may

7 An instruction "that the measure of damages of the defendant would be the amount in dollars and cents, if any, saved to the plaintiff in the construction or enlargement of the proposed canal by reason of the existence of the ditch of the defendant, as constructed at the time of the issuance of the summons, bearing in mind said defendant's continued future use of the proposed enlarged canal in common with that of the plaintiff corporation," was held not to correctly state the rule for estimating and fixing damages, and in direct conflict with the further instruction that: "The jury are instructed that they are not to measure the value of the right sought to be condemned from the defendant, by the necessity the plaintiff is under of obtaining that right, or the value it may be to the plaintiff alone, under the peculiar circumstances of the particular case. The reasonable market value of the property sought to be taken is the true measure of damages for the amount so taken." The latter instruction correctly states the law, and was a proper instruction for the jury. Portneuf-Marsh Valley Irr. Co. v. Portneuf Irr. Co., 19 Idaho 483, 114 Pac. Rep. 19.

1 Sand Creek etc. Co. v. Davis, 17 Colo. 326, 29 Pac. Rep. 742; San Luis etc. Co. v. Kenilworth Canal Co., 3 Colo. App. 244, 32 Pac. Rep. 860; Otero Canal Co. v. Fosdick, 20 Colo. 522, 39 Pac. Rep. 332; Denver etc. Co. v. Middaugh, 12 Colo. 434, 21 Pac. Rep. 565, 13 Am. St. Rep. 234; Fulton v. Methow etc. Co., 45 Wash. 136,

be allowed or not, in the discretion of the Court, and if allowed, may be apportioned between the parties on the same or adverse sides. In other States the costs must be assessed against the plaintiff, under the theory that the owner should receive his just compensation for the property taken, clear of any expense of the proceedings.[2] However, it was held in an action in eminent domain, where reversible error was committed in connection with the trial of a separate and independent cause of action injected into the case by the defendant, the appellee, he will be taxed with the costs in the Supreme Court of an appeal of a judgment reversed for such error.[3]

The effect of a judgment for a water company in condemnation proceedings is to estop it, in an action against it for failure to deliver water on demand to one over whose land a strip for a right of way for its canal was condemned.[4]

**§ 1097. Actions for condemnation—Appeal and review of the judgment.**—As in other actions, the right of appeal is given from final judgments in condemnation cases, and the Appellate Court has the power to affirm, reverse, or modify the judgment of the trial court. An erroneous instruction to the jury, if the exception to the same is taken in time and duly embodied in the abstract on appeal, may be ground for the reversal of the judgment.[1] But where instructions when all read together may be harmonized and reconciled, the Appellate Court will not reverse a judgment because some particular isolated instruction, when read alone, might be misleading or give the jury an improper understanding as to the law of the case. However, where the instructions are irreconcilable and conflict on a decisive or controlling question to be determined by the jury, they can not be construed together, and where no one can

1 Thompson v. De Weese-Dye etc. Co., 25 Colo. 243, 53 Pac. Rep. 507.

tell which instruction the jury followed, a reversal of the judgment must necessarily follow.[2]

Again, where it is claimed that the trial court has exceeded its jurisdiction, or that the procedure was not in accordance with the course provided by law, and there is no plain, speedy, or adequate remedy, the judgment of the trial court in condemnation cases may be reviewed by a Superior Court in an action for *certiorari*, and the proceedings of the trial court either quashed or affirmed.[3] Again, when it is claimed that the trial court has no jurisdiction, or in an action in which the Court has jurisdiction, the trial court attempts to proceed with the prosecution of an action for condemnation by rules differing from those which ought to be observed, an action in a superior court in prohibition will lie against the judge of the trial court, and the trial court may be prohibited from proceeding with the action, or the writ may be denied and the trial court permitted to proceed.[4] And, again, the entire question, including the constitutionality of the condemnation Act, may be reviewed by an appellate court in an action brought by the defendant in the condemnation proceedings seeking to enjoin the plaintiff from entering upon and taking possession of the property attempted to be condemned by the trial court.[5]

**§ 1098. Nature of title acquired.**—Where a strip of land has been condemned for a right of way for ditches and canals under

the power of eminent domain, the party who has acquired the right acquires merely an easement, and not an absolute fee to the land. The courts hold that this is the correct rule, even where the statutes in terms provide that the condemner "shall be seized in fee" of the land condemned, or language of similar purport.[1]

It therefore follows that no greater title passes to the owner of the right of way than the needs require, so that the residue remains in the former owner, and he can make such use of it as is not incompatible with the easement.[2]

1 Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148, where it was held that an easement, and not a fee, is acquired by a ditch company by a rule of court in compliance with its petition for a right of way under a statute providing that, upon the entry of such rule, the company shall become seized in fee, or shall have the exclusive right, title, and possession of such lands described in the rule as required to be taken.

# CHAPTER 56.

## ABANDONMENT AND FORFEITURE.

§ 1099. Scope of chapter.
§ 1100. Abandonment—Doctrine of—In general.
§ 1101. Abandonment defined—Intent.
§ 1102. Abandonment of rights—Inchoate rights.
§ 1103. Abandonment of rights—Express abandonment.
§ 1104. Abandonment of rights—When an abandonment will be implied.
§ 1105. Abandonment of rights—Implied abandonment—For non-user.
§ 1106. Abandonment of rights—Implied abandonment—For non-user by tenants in common.
§ 1107. Abandonment of rights—Effect of changes by the owner.
§ 1108. Abandonment of rights—Ditches, canals, and other works and easements for the same.
§ 1109. Abandonment of rights—By parol sale or defective deed.
§ 1110. Abandonment of rights—By lease.
§ 1111. Abandonment of rights—By wasting water.
§ 1112. Abandonment of rights—By the acquiescence in the adverse user of another.
§ 1113. The abandonment of water—Distinctions to be drawn.
§ 1114. Abandonment of water—Water discharged into a natural stream.
§ 1115. Abandonment of water—Discharged waste.
§ 1116. Proof of abandonment.
§ 1117. The effect of abandonment.
§ 1118. Forfeiture defined—Distinguished from abandonment.
§ 1119. Forfeiture by failure to comply with statute.
§ 1120. Construction of statutes providing for the forfeiture of rights.

**§ 1099. Scope of chapter.**—We have discussed in the preceding chapters how the right to the use of waters owned by one individual may be lost by him by the adverse user of another amounting to prescription.[1] We have also discussed how these rights may be taken away from him by virtue of the power of eminent domain, upon the payment of just compensation.[2] There are also other ways by which a person may lose a water right, or the right to the use of water. He may lose it by abandonment [3] or by forfeiture in failing to comply with some provision of the statute of the jurisdiction

1 For rights acquired by prescription, see Secs. 1033-1058.

2 For rights acquired by eminent domain, see Secs. 1059-1098.

3 See Secs. 1100-1117.

where the right originated.[4] In this chapter we will discuss these subjects in the order named.

§ 1100. **Abandonment—Doctrine of—In general.**—Although a water right has attained to the dignity of real property, it can not be said that it has attained to the dignity of an estate in fee or a freehold estate. It is still a possessory right, even after its consummation, and dependent on the continuous use of the water, and a failure to comply with this condition subjects the right to loss by abandonment or forfeiture.[1]

The prior or exclusive right to the use of water, or a water right, acquired under the Arid Region Doctrine of appropriation, may be lost by abandonment. An easement for a right of way for a ditch, canal, or other works, or the works themselves, may also be lost by abandonment.[2] As the whole theory of the doctrine of appropriation is based upon possession and the application of all of the water claimed to some beneficial use or purpose,[3] after the original acquisition of the right, in order to have the title to the right remain in the appropriator, there must be a continued possession and application of all of the water claimed to either the original or to some equivalent purpose;[4] and any failure upon the part of the appropriator to do this for an unreasonable time may work an abandonment of all or a part of the right originally claimed. And in this connection it must be noted that there is a decided distinction between the tenure of such right acquired by appropriation and the right to the use of the water flowing in the natural streams by riparian owners, under the common law. As we have stated in previous portions of this work, the right of a riparian proprietor to the use of the water of a stream flowing by or through his land is in no way dependent upon user, it being considered a part and parcel of the land itself, and, therefore, it can not be lost by nonuser or abandonment.[5] Upon the other hand, the continuance of the right acquired by appropriation depends upon the continuous user of the right, and the relinquishment of possession or

4 See Secs. 1118-1120.

2 For abandonment of ditches, canals, etc., see Sec. 1108.

3 For the doctrine of appropriation, see Chap. 31, Secs. 585-594.

4 For the right to change the use or purpose, see Secs. 869-873.

5 See Secs. 452-456.

non-user with intent to abandon, constitutes an abandonment of the right. The doctrine of abandonment will also apply where the rights of the parties have been adjudicated and a certain amount of the water of a stream awarded by decree to the party charged with abandoning the right or any portion of the same. However, it will only apply to the acts of the party subsequent to the decree awarding the right. As to all acts of the party prior thereto, the decree is *res judicata*, and none of the acts of the claimant upon which the award was made can thereafter be inquired into in a collateral proceeding.[6]

Again, an inchoate right, or a right not fully consummated, may be abandoned before its final consummation and before a perfect title has vested in the appropriator.[7]

In the most of the arid and semi-arid States there are statutes which define what constitutes an abandonment of a right, and specify the period of time during which the non-use may continue before it works an abandonment.[8]

§ 1101. **Abandonment Defined—Intent.**—The word "abandon" is held, in this connection, to mean "to desert or forsake."[1] It is the relinquishment of a right by the owner thereof without regard to any future possession by himself, or by any other person, but with the intention to forsake or desert the right.[2] Such being the

[6] The volume of the priority awarded an irrigation ditch in adjudication proceedings is *res judicata*, and the decree can not be disturbed in subsequent litigation on the question of abandonment of the priority, but evidence of abandonment in such a proceeding must be limited to acts of the owner subsequent to the decree. O'Brien v. King, 41 Colo. 487, 92 Pac. Rep. 945.

See, also, Platte Valley Irr. Co. v. Central Trust Co., 32 Colo. 102, 75 Pac. Rep. 391; New Mercer D. Co. v. Armstrong, 21 Colo. 357, 40 Pac. Rep. 989; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; Boulder etc. Co. v. Leggett, 36 Colo. 455, 86 Pac. Rep. 101; Boulder etc. Co. v. Lower Boulder D. Co., 22 Colo. 115, 43 Pac. Rep. 540, 60 Pac. Rep. 484.

[7] For abandonment of inchoate rights, see Sec. 1102.

[8] For the statutes upon the subject of abandonment and forfeiture, see Part XIV.

See, also, the question of the forfeiture of rights, Secs. 1118-1120.

[1] Dodge v. Marden, 7 Ore. 456.

[2] That a right can not be abandoned in favor of another, see Sec. 1117.

"Abandonment, as applied to the doctrine of appropriation of water to a beneficial use, may be defined to be an intentional relinquishment of a known right." Oviatt v. Big Four M. Co., 39 Ore. 118, 65 Pac. Rep. 811.

definition of the word "abandon," and as the intent of the party is a necessary element therein, it necessarily follows that there can be no abandonment of a right without some action of the will and an intent to abandon. Now, then, coming down to the subject under discussion, there can be no abandonment of a water right, right of way, ditch, or other works, unless there is a concurrence of the acts of the party charged, with his intent to desert, forsake, or to abandon the right.[3] But it is not necessary, as we shall see in the section upon the subject of proof of abandonment,[4] to rely solely upon the direct statements of one charged with having abandoned a right, that he did so abandon it. Such intention may be inferred from the other declarations, and especially by the acts of the party. It is oftentimes by such declarations only, taken in connection with the acts of the persons charged, that their true intention can be proven. However, the concurrence of the acts with the intent will work an abandonment. But the authorities are practically unanimous upon the proposition that, in order to work an abandonment, the element of the intent to abandon must be present and coupled with the yielding up of the possession or a cessation of the user. It therefore follows that abandonment is always a question of fact for the Court or jury to decide.[5] It will also be

4 See Secs. 1103, 1116.

5 "Abandonment must be made by the owner, without being pressed by any duty, necessity, or utility to himself, but simply because he desires no longer to possess the thing, and, further, it must be made without any desire that any other person shall acquire the same." Mr. Justice Field, concurring in Stephens v. Mansfield, 11 Cal. 363.

Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807, where the Court said: "To constitute such abandonment, there must be a concurrence of act and intent, viz.: the act of leaving the premises or property vacant, so that it may be appropriated by the next comer, and the intention of not returning. . . . The mere intention to abandon, if not coupled with yielding up possession or a cessation of user, is not sufficient; nor will non-

seen from the authorities cited that the courts are very loth to declare an abandonment of a right by a party where the title to

user alone, without an intention to abandon, be held to amount to an abandonment." Oviatt v. Big Four M. Co., 39 Ore. 118, 65 Pac. Rep. 811.

See, also, Gould v. Maricopa C. Co., 8 Ariz. 429, 76 Pac. Rep. 598, where it is held that abandonment of a right to appropriate water for irrigation is a matter of intent, evidenced by the declarations of the appropriator or by his acts. Brockman v. Grand C. Co., 8 Ariz. 451, 76 Pac. Rep. 602; Gould v. Maricopa etc. Co., 8 Ariz. 429, 76 Pac. Rep. 598; Marlar v. Maricopa etc. Co., —— Ariz. ——, 76 Pac. Rep. 1125; Wood v. Etiwanda W. Co., 147 Cal. 233, 81 Pac. Rep. 512, where it is held that the mere intention to abandon the right to divert and use water, if not coupled with an actual yielding up of the possession or cessation of the user, does not constitute an abandonment.

the same has once vested and accrued in him, and where he still lays claim to the right; but in certain cases this is done. The right can not be retained by a mere assertion of an intention not to abandon, if the acts of the party charged are such that an abandonment in fact has been made. The mere declarations of parties who have acquired rights to the use of water are insufficient to preserve those rights without any act or deed in vindication or maintenance of them.[6] But in general it may be said that an abandonment of the rights of one who has appropriated water will not be decreed for trivial matters, or upon insufficient evidence. So long as the appropriator in good faith intends to retain his rights, and manifests that intention by the use of the water, or by his prepara-

[6] Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 30 L. R. A. 265, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101.

tions to use it, his rights will remain unimpaired. But he will not be permitted to retain a right which he neither uses nor intends to use, merely for the purpose of preventing others from using it. As was said in a recent Washington case:[7] "But abandonment, like appropriation, is a question of intent, and to be determined with reference to the conduct of the parties. The intent to abandon and an actual relinquishment must concur, for courts will not lightly decree an abandonment of a property so valuable as that of water in an irrigated region." So, as was held in a recent California case,[8] so long as an appropriator was being conveniently supplied with the water to which he was entitled, he had no right to demand that it should come from one or another source of supply. And the Court said: "And as they could not have insisted upon this, so their failure to insist can not be construed as any waiver or abandonment of their right to a supply from another source covered by their grant should the source used for them prove inadequate."

**§ 1102. Abandonment of rights—Inchoate rights.**—An inchoate right, or a right which has been properly instituted but not finally consummated,[1] may be abandoned before its final consummation and before a perfect title to the same has vested in the party instituting it. So, where an appropriation is properly instituted, and the enterprise is given up and its owners desert it, with the intention of not resuming the work to complete the appropriation, it works an immediate and express abandonment of the incipient right.[2] It is true that the Supreme Court of Colorado, in a recent case, held that the term "abandonment," as applied to waters, is applicable only to completed appropriations of water, and not to a case where the claimant never acquired a fixed right because of

7 Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065.

8 Smith v. Cucamonga Water Co., 160 Cal. 611, 117 Pac. Rep. 764.

1 For the consummation of rights, see Secs. 725-729.

2 Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580, where the Court said: "It is unnecessary to determine in this case what a reasonable time for the construction of the contemplated canal would have been, as construction was absolutely abandoned without any evinced or declared intention of resuming. Hence, the incipient right lapsed, and reverted to the State," etc.

his failure to apply the appropriation to a beneficial use within a reasonable time.[3] The decision in the case upon the facts was undoubtedly correct, but the Court unhappily made use of an expression which might be implied to mean that no inchoate right could be abandoned, by stating that "abandonment, as that term when employed in our irrigation law applies only to completed appropriations, and there can be no abandonment of that which never existed." Now, under the law of all jurisdictions, including that of the United States, inchoate rights, properly instituted, either to lands or to water rights, will merge into a perfect title, provided that the settler or appropriator faithfully complies with all of the conditions of the law within the time allowed, or within a "reasonable time."[4] And if all of the necessary conditions are fully complied with, either within the statutory or a reasonable time, by the doctrine of relation, his title to the whole of the right actually consummated relates back as of the date when the claim was instituted.[5] But, upon the other hand, if the settler or appropriator absolutely deserts or gives up his claim or his incomplete right to appropriate before his title to the same is finally consummated, there is as much an abandonment of the inchoate right as though the title was perfect.

Where, however, the consummation of the right depends upon the question of "reasonable diligence," either in the construction of the works[6] or the actual application of the water to some beneficial use or purpose,[7] and upon the facts in any particular case it is found that an unreasonable time was consumed in its final consummation, the right is lost to the appropriator, and some of the authorities treat it as abandoned, and others as forfeited, or, as stated in the case of Conley v. Dyer,[8] "the inchoate right terminates, and the water goes to junior claimants who have complied with all the requirements of the law." The better rule, as it seems to us, is

[3] Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304.

[4] For a reasonable time to complete an appropriation, see Secs. 735-740.

For inchoate rights to lands, see Secs. 445, 755.

[5] For the doctrine of relation, as applied to water rights, see Secs. 742-756.

For the doctrine of relation as applied to lands, see Secs. 752-756.

[6] For reasonable diligence in construction of works, see Secs. 733-741.

[7] See Secs. 727, 877.

For the appropriation for future needs, see Sec. 740.

[8] *Supra.*

to treat such an inchoate right as abandoned where there has been an unreasonable time in the final consummation of the right, after the rights of others have intervened,[9] unless there should be a failure to comply with some specific statute upon the subject, in which case the right should be treated as forfeited.[10] It is true that if the works are finally completed, although it took an unreasonable time to complete them, before the rights of others intervene, the appropriator will take his right as by actual diversion and use and as of the same date.[11]

**§ 1103. Abandonment of rights — Express abandonment.**— Probably the more numerous cases of abandonment are those which may be termed express abandonment. That is to say, cases where there is an express intent upon the part of the owner of the right to desert or forsake the right, coupled with the acts deserting and forsaking the same, and no further claim being made by him, or one claiming under him, of the right. The former rights of the party abandoning the same may then be taken by others, as we will discuss when we come to the subject of the effect of an abandonment.[1] But, upon the other hand, it can be easily seen that fewer of the cases of this nature get into court, and especially into the appellate court, where a record is made of the decision, for the very reason that there is seldom, after an actual abandonment, any claim made for the right by the former owner. It is usually only when

9 Low v. Rizor, 25 Ore. 551, 37 Pac. Rep. 82, where it is held that a failure for 13 years to enlarge the acreage first put under cultivation, worked an abandonment of the right claimed for the portion of the land which was not reduced to cultivation, the Court saying: "We think Kitchen, during that time, should have enlarged the cultivated tract, and, failing to do so, he abandoned the right to increase the appropriation."

See, also, Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685, citing Kinney on Irr., 1st Ed., Sec. 253; Keeney v. Carillo, 2 N. M. 480; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111.

The case of Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583, holds that a mere suspension of work in construction of a ditch for a reasonable time would not necessarily be an abandonment of the appropriator's inchoate right.

10 For forfeiture of a right, see Secs. 1118-1120.

For the distinction between abandonment and forfeiture, see Sec. 1118.

11 See for reasonable time, Secs. 733-741.

1 For the effect of an abandonment, see Sec. 1117.

the party who is charged with abandoning the right, or one claiming under him, makes some future claim to the right that there is such a case that it gets into the courts. Therefore, where a settler or miner gives up his claim, and goes away with the intention of not returning or of repossessing it, an abandonment takes place instanter of the water right used in connection with the land. And in such a case the moment the intention to abandon and the relinquishment of the possession unite, the abandonment is complete, and time is not an essential element of such an abandonment.[2] The most common cases of express abandonment are the cases where the water was used to work mining claims, especially in placer mining. After the claims have been worked out they are usually abandoned, and if the water rights used in connection therewith are not otherwise disposed of, they are oftentimes abandoned and deserted with the mining claims. And even in those States where the statutes provide that for non-user alone an abandonment will not be declared unless the period of the non-user was for the time prescribed by the statute of limitations, it is held that non-user continued for a considerable time, coupled with other acts showing an intention to abandon on the part of the owner not to repossess himself of the right whose use he has relinquished, will,

2 "Abandonment is a matter of intention, and operates instanter." Derry v. Ross, 5 Colo. 295.

"The abandonment may be express and immediate, as by the intentional act of the owner and possessor of the right, or it may be implied from his neglect, failure of application to the purpose designed within a reasonable time, non-user, and the like." Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685, citing Kinney on Irr., 1st Ed., Sec. 253.

See, also Nichols v. Lantz, 9 Colo. App. 1, 47 Pac. Rep. 70; Dorr v. Hammond, 7 Colo. 79, 1 Pac. Rep. 693; Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Goon v. Proctor, 27 Mont. 526, 71 Pac. Rep. 1003; Ison v. Nelson M. Co., 47 Fed. Rep. 199; Noland v. Coon, 1 Alaska 36; Conkling v. Pacific Imp. Co., 87 Cal. 296, 25 Pac. Rep. 399; Ophir M. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640.

"An abandonment of property held by possessory title takes place instantly when the occupant deserts it without an intention of ever reclaiming it for himself, and careless of what may thereafter become of it. A single act may be of such character, and done in such manner, and under such circumstances, that an intention to abandon may be inferred from it." Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Black. Pomeroy on Water Rights, Secs. 96, 97.

in certain cases, constitute an abandonment.[3] However, the temporary shut-down of a mine with no intent on the part of the owners to abandon any rights does not work an abandonment.[4]

It is also held that the abandonment of agricultural land for which water is appropriated, without any further disposition of the right, works an abandonment of the water right.[5] So, again, where a company bored wells in the search for oil, and after producing two artesian wells of water, deserted them, it was held that an immediate and express abandonment was worked when the company ceased its operations, and as against the appropriation of the water by others a deed to the wells and water passed no title.[6] So, also, the fact that a municipal appropriator of water for the purpose of sale to outside owners for extra municipal purposes is subsequently restricted by the legislature to the use of water for municipal purposes only, amounts to the abandonment by it of the appropriation.[7]

3 Alamosa Cr. C. Co. v. Nelson, 42 Colo. 140, 93 Pac. Rep. 1112, where the Court held that abandonment as applied to property rights consists of non-user and intention.

See, also, Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168; Land v. Johnson, 156 Cal. 449, 104 Pac. Rep. 499.

4 Smith v. Hope etc. Co., 18 Mont. 432, 45 Pac. Rep. 632; Featherman v. Hennessy, 42 Mont. 535, 113 Pac. Rep. 751.

Where an appropriator of water from a stream for use in the development of mining claims owned by him at once commenced work necessary to take out and utilize the water, which works he continued for four years, and until he sold his property and rights to the defendant corporation, and during the next four years the defendant continued the work in good faith, expending upwards of $500,000 in developing the mine and completing the works by which the water was utilized to run the mill and supply the works, it was held that there was not at any time such an abandonment of the water right as would authorize an adverse appropriation of the water by another at the end of that time under the rules of the mining district which required a diligent and continuous prosecution of the work to completion. Thorndyke v. Alaska Perseverance Min. Co., 164 Fed. Rep. 657, 90 C. C. A. 473.

5 Rutherford v. Lucerne etc. Co., 12 Wyo. 299, 75 Pac. Rep. 445.

See, also, Brockman v. Grand C. Co., 8 Ariz. 451, 76 Pac. Rep. 602; Nichols v. Lantz, 9 Colo. App. 1, 47 Pac. Rep. 70.

6 De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001, the Court saying: "Its rights, if it had any, to the land, wells, or water flowing therefrom, terminated when it ceased work thereon and abandoned its efforts to discover oil."

7 Vernon Irr. Co. v. Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762.

**§ 1104. Abandonment of rights—When an abandonment will be implied.**—Although, as we have seen in a previous section, the intent of the party charged with abandoning a water right, ditch, or other works, is a necessary element to work an actual abandonment upon his part,[1] the intent to abandon will be implied, and an actual abandonment decreed by the Court from the acts of the appropriator or owner, or from his failure to act; and that, too, in the absence of any direct statement by him that he has abandoned the right. Even in the face of declarations of the party charged, that he still owns the right and has not abandoned it, without any act of possession or user of the right by him, the Court will declare the right to be abandoned, should the facts and circumstances in the case show that there was an actual abandonment.[2] The whole theory of the continuation of a right acquired by appropriation is that it must be in the continual possession and user of the claimant; and if it is not so possessed and used, it may be treated as abandoned, and others may successfully lay claim to the right.[3] Therefore, if the acts of the party charged with abandoning a right are sufficient in and of themselves to show that he had actually abandoned and deserted a right, for a sufficient period of time, the intent to abandon will be implied from such acts, and the courts will presume that an actual abandonment of the right had been made by him, and that, too, regardless of the verbal claims of the party to the effect that he did not abandon the right, or the subsequent attempt to use or sell the right, especially in the face of the

1 See Sec. 1101.

2 Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 30 L. R. A. 265, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101, where Judge Story said: "Such declarations by word of mouth, unaccompanied by any act or deed in vindication and maintenance of them within the period prescribed by the statute of limitations, are wholly insufficient to keep alive the rights they had previously acquired."

Water is not abandoned by the execution of a mortgage thereof by the owner in connection with one upon the land upon which the water was used, although the mortgage was void as to the land because the mortgagor had no title to it. Smith v. Denniff, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408.

3 "The continuance of the right depends upon the continuous user of the water, and hence may be abandoned by non-user." Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275.

adverse claims of others.[4] In other words, where there is a failure to use the right for an unreasonable period, it creates a presumption to abandon it; but this presumption is not conclusive, but may be overcome by other sufficient evidence.[5] However, it must be stated that there is a material difference in one respect in cases of implied abandonment and cases of express abandonment, discussed in the previous section.[6] In cases of express abandonment time is not an essential element, and, therefore, whenever the intent and the act of the party charged concur, it may work an immediate abandonment of the right.[7] Upon the other hand, where the abandonment may be implied from neglect, failure of application to the purpose designed, non-user, and the like, time is an element, and the relinquishment of possession and the failure to use the right must continue for an unreasonable time; and usually for the period of time provided by the statute as a bar to an action for the recovery of real property, or to the length of time when title to the right by adverse possession amounting to prescription may be acquired.[8]

4 For rights acquired by prescription, see Chap. 54, Secs. 1033-1058.

See, also, Rutherford v. Lucerne Canal etc. Co., 12 Wyo. 299, 75 Pac. Rep. 445; Brockman v. Grand Canal Co., 8 Ariz. 451, 76 Pac. Rep. 602; Smith v. Green, 109 Cal. 228, 41 Pac. Rep. 1022; Platte Water Co. v. Northern Colorado etc. Co., 12 Colo. 525, 21 Pac. Rep. 711; Nichols v. Lantz, 9 Colo. App. 1, 47 Pac. Rep. 70; Oviatt v. Big Four etc. Co., 39 Ore. 118, 65 Pac. Rep. 811; Lamborne v. Bell, 18 Colo. 346, 32 Pac. Rep. 989, 20 L. R. A. 241; Ophir Min. Co. v. Carpenter, 6 Nev. 534, 97 Am. Dec. 550, 4 Morr. Min. Rep. 640; Kirman v. Hunnewill, 93 Cal. 519, 29 Pac. Rep. 124; Dorr v. Hammond, 7 Colo. 79, 1 Pac. Rep. 693.

5 "A failure to use for a time is competent evidence on the question of abandonment; and, if such non-user continued for an unreasonable period, it may fairly create a presumption of intention to abandon; but this presumption is not conclusive, and may be overcome by other satisfactory proofs." Sieber v. Frink, 7 Colo. 79, 2 Pac. Rep. 901.

The abandonment of an appropriation of water for irrigation is a question of intention to be evidenced by overt acts; but when such overt acts appear the right to appropriate water ceases and can not be resumed as against the intervening rights of others. Anderson etc. Co. v. McConnell, 133 Fed. Rep. 581.

6 For express abandonment, see Sec. 1103.

7 Derry v. Ross, 5 Colo. 295; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685.

8 For the time fixed by the statute for non-user which will work an abandonment, see the statutes of the States, Part XIV.

For time when a right by prescription may be acquired, see Secs. 1052, 1053.

**§ 1105. Abandonment of rights—Implied abandonment—For non-user.**—The mere non-user of the water, unless it continues for an unreasonable time, is not of itself sufficient to work an abandonment of the right to use. An appropriator having senior water rights by the non-use of all the water at first that he is entitled to, where he has no intention to waive any right, in and of itself will not work an abandonment; but, while he is not using the water, he may sell a portion of it to another and allow the purchaser to divert it to other lands.[1] This rule is applied to cases where there is an appropriation of a certain amount of water for present and for future needs. The appropriator, although he may not use all of the water claimed by him, is given a reasonable time within which to put his land in cultivation and in shape to use all of the water claimed; and so long as he does not continue the non-user for what is deemed an unreasonable time, he may still hold the full right, although he may not at first have used it all.[2] So, again, the mere non-user of the water lawfully appropriated, or the works constructed to utilize the same, for short periods of time, even where there is a manifest intent not to make use of them during these periods, while it may be an abandonment of the unused water during these periods,[3] will not work an abandonment of the right, and the owner will have the right to resume the use of the water at any time.[4] But the length of time during which this non-use may continue is a question of fact dependent upon all the circumstances

1 Cache La Poudre Irr. Co. v. Larimer etc. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525.

2 For the appropriation for future needs, see Sec. 740.

3 For the abandonment of water, see Secs. 1113-1115.

4 A right is not abandoned by the mere non-user of the water for one irrigating season; nor is it abandoned during the administration of a decedent owner's estate. Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972.

Mere temporary non-use of the water during one year, some time subsequent to the appropriation, without any intent to abandon the right, is not sufficient to establish an abandonment of the acquired right. Land v. Johnston, 156 Cal. 253, 104 Pac. Rep. 449; Arnold v. Passavant, 19 Mont. 575, 49 Pac. Rep. 400.

"It is well settled that lapse of time does not itself constitute an abandonment, and that it is only a circumstance for the jury to consider in determining whether there has been an abandonment. In other words, the question is one of intent." Valcalda etc. Co. v. Silver etc. Co., 86 Fed. Rep. 90, 29 C. C. A. 591, 19 Morr. Min. Rep. 233.

surrounding each particular case; and where the time is not fixed by the statutes, the question depends as to whether those circumstances show that the non-user was for a reasonable or unreasonable time. And where it is shown that the non-user was for a reasonable time, and the owner still lays claim to the right, no intent to abandon will be presumed, and, therefore, no abandonment will be implied.[5]

[5] See cases cited under Sec. 1101, Abandonment Defined—Intent.

"Non-user of an appropriation of water is not of itself sufficient to establish abandonment. The intention to abandon must also be present." White v. Nuckolls, 49 Colo. 170, 112 Pac. Rep. 329.

See, also, New Mercer Ditch Co. v. Armstrong, 21 Colo. 357, 40 Pac. Rep. 989.

The failure to use the water for the purpose for which it was appropriated will not constitute an abandonment if during the years in which it was not used there was not a sufficient quantity to supply the requisite amount for that purpose. McCauley v. McKeig, 8 Mont. 389, 21 Pac. Rep. 22, 16 Morr. Min. Rep. 1.

See, also, Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424; Santa Barbara v. Gould, 143 Cal. 421, 77 Pac. Rep. 151; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Wood v. Etiwanda W. Co., 147 Cal. 233, 81 Pac. Rep. 512; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685; North American etc. Co. v. Adams, 104 Fed. Rep. 404, 45 C. C. A. 185, 21 Morr. Min. Rep. 65; Smith v. Hope M. Co., 18 Mont. 432, 45 Pac. Rep. 632; Dodge v. Marden, 7 Ore. 456, 1 Morr. Min. Rep. 63; Partridge v. McKinney, 10 Cal. 181, 1 Morr. Min. Rep. 185; Senior v. Rep. 571; Sloan v. Glancy, 19 Mont. 70, 47 Pac. Rep. 334; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Gassert v. Noyes, 18 Mont. 216, 44 Pac. Rep. 959; Lower Latham D. Co. v. Louden etc. Co., 27 Colo. 267, 60 Pac. Rep. 629, 83 Am. St. Rep. 80; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Dorr v. Hammond, 7 Colo. 79, 1 Pac. Rep. 693; People v. Farmers' etc. Co., 25 Colo. 202, 54 Pac. Rep. 626; Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047; Gill v. Malan, 29 Utah 431, 82 Pac. Rep. 471; Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Integral etc. Co. v. Altoona etc. Co., 75 Fed. Rep. 379, 21 C. C. A. 409, 44 U. S. App. 566; Arnold v. Passavant, 19 Mont. 575, 49 Pac. Rep. 400; Ada County etc. Co. v. Farmers' etc. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485; Welch v. Garrett, 5 Idaho 639, 51 Pac. Rep. 405, 19 Morr. Min. Rep. 196; Lowden v. Frey, 67 Cal. 474, 8 Pac. Rep. 31; People v. Farmers' etc. Co., 25 Colo. 202, 54 Pac. Rep. 626; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678; Hector M. Co. v. Valley View M. Co., 28 Colo. 315, 64 Pac. Rep. 205; Hayes v. Buzard, 31 Mont. 74, 77 Pac. Rep. 423; Greer v. Heiser, 16 Colo. 306, 26 Pac. Rep. 770; Promontory

But, upon the other hand, it is held that a failure to use the water is evidence of an intention to abandon; and if the non-use is continued for an unreasonable period, it creates a presumption that the owner intended to abandon the right, and from which an actual abandonment will be implied. And if this presumption is not overcome by other sufficient proof to the contrary, it will be permitted to stand, and the Court will declare the right abandoned.[6] "The right thus obtained may be lost by abandonment or non-user for an unreasonable time."[7] Therefore, a corporation having the exclusive right to all the waters of a stream, and the exclusive privilege of using and controlling the same, can not allow such right to remain in abeyance for a long series of years, and thereafter assert the right to the same to the exclusion of those who have, in the meantime, acquired rights to the use of the waters of the stream by actual appropriation and use.[8]

Non-user continued for a considerable time, coupled with other acts showing an intention on the part of the owner not to repossess himself of the right whose use he has relinquished, may constitute an abandonment.[9] Even where the rights of the parties have been settled by judicial decree, if they are not used for an unreasonable period, they will be treated as abandoned.[10] But the adjudication

proceedings awarding priorities to water are *res judicata* of the volume awarded to the parties, so that the question of abandonment thereof is limited, in subsequent litigation, to the acts subsequently done.[11] The period of time during which non-user of the water will constitute an abandonment of the right in the majority of the States is prescribed by statute. In some of the States special statutes are enacted, while in others it is held that the period of time sufficient to bar a right of action for the possession of real property is the proper limitation—the period for obtaining prescriptive title or losing a right by non-user.[12]

**§ 1106. Abandonment of rights—Implied abandonment—For non-user by tenants in common.**—Water rights, ditches, canals, and other works may be owned by tenants in common. Where this is the case, without an express abandonment,[1] the mere fact that

Frink, 7 Colo. 148, 2 Pac. Rep. 901; Farmers' etc. Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 767; Farmers' Irr. Dist. v. Frank, 72 Neb. 136, 100 N. W. Rep. 286.

1 For express abandonment, see Sec. 1103.

one tenant in common does not use his full share of the water can not imply an abandonment of his right or any portion thereof.[2] Where the water of one tenant in common is used by his cotenants, it preserves the common right for the benefit of all.[3] This is under the rule of law governing tenancy in common that "the possession of one tenant in common is the possession of all his cotenants."[4]

**§ 1107. Abandonment of rights—Effect of changes by the owner.**—As we have discussed in a previous portion of this work, an appropriator may make any changes in the point of diversion, the location of his works, the place of use, or even the use itself, and so long as he does not materially impair the vested rights of others, his own rights will in no way be impaired by the change.[1] In general it may be said that no abandonment of the water right is worked by any attempted change in the ditch, or other works, or in the place, manner, or the use of the water itself.[2] The ditch may be abandoned without abandoning the water right, where the use of the water is continuous through some other ditch.[3] Again, no abandonment is worked by the mere change of use of the water.[4]

2 For rights of tenants in common, see Chaps. 73, 75.

For prescription as between tenants in common, see Sec. 1047.

3 Where the owner of a water right did not use the full quantity of water to which he was entitled, but his cotenants and lessees did, it was held that there was no abandonment of his rights. Cache La Poudre Irr. Co. v. Larimer etc. Co., 25 Colo. 144, 53 Pac. Rep. 318, 71 Am. St. Rep. 123; affirming *Id.*, 8 Colo. App. 237, 45 Pac. Rep. 525.

See, also, Meagher v. Hardenbrook, 11 Mont. 385, 28 Pac. Rep. 451; Moss v. Rose, 27 Ore. 595, 41 Pac. Rep. 666, 50 Am. St. Rep. 743.

4 Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283.

1 See Chap. 48, Secs. 856-873, for changes which may be made.

2 The abandonment of one ditch does not work an abandonment of the water right, so long as the water continues to be diverted through another ditch. Kleinschmidt v. Greiser, 14 Mont. 484, 37 Pac. Rep. 5, 43 Am. St. Rep. 652.

See, also, Greer v. Heiser, 16 Colo. 306, 26 Pac. Rep. 770; McDonald v. Askew, 29 Cal. 200, 1 Morr. Min. Rep. 660; Frey v. Lowden, 70 Cal. 550, 11 Pac. Rep. 838; Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Hector M. Co. v. Valley View M. Co., 28 Colo. 315, 64 Pac. Rep. 205; Cache La Poudre Res. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131.

3 Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278.

For abandonment of ditch and other works, see Sec. 1108.

4 Schwab v. Beam, 86 Fed. Rep. 41, 19 Morr. Min. Rep. 279.

So, a tenant in common in certain water rights used for a certain purpose, may, when the original use is abandoned, and the flow of the water turned into the stream, recapture and use his proportion of the water for some other purpose.[5]

The posting of a second notice of appropriation, while diligently prosecuting the work to complete the appropriation under the first notice, does not work an abandonment of the first claim.[6] However, the assertion of inconsistent rights will work an abandonment. Therefore, a party can not claim as an original appropriator where he has turned in his right to a corporation and has taken stock for his interest and has sold the stock to others.[7]

In Colorado it is held that the question of abandonment can not be determined in the statutory action to change the point of diversion.[8]

**§ 1108. Abandonment of rights—Ditches, canals, and other works and easements for the same.**—The ditches, canals, and other works used to utilize a water right, and the easements over the lands of others upon which these works are constructed, may be abandoned. This abandonment may be immediate as where the intent of the owner is express and is coupled with his acts in yielding up the possession and ceasing to use the works.[1] But, as is the case with the abandonment of a water right, the intent of the owner must govern.[2] However, the intent may be implied from the acts themselves of the owner, and from these acts an abandonment of the right to use the works will be presumed; and if the works are not used for an unreasonable time, connected with other acts showing that the owner has no intention to use the works in the future, an abandonment of them will be presumed.[3]

7 Oppenlander v. Left Hand D. Co., 18 Colo. 142, 31 Pac. Rep. 854.

See, also, Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 29 U. S. App. 155, 30 L. R. A. 265; *Id.*, 51 Fed. Rep. 101.

8 Wadsworth Ditch Co. v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060; Lower Latham etc. Co. v. Bijou etc. Co., 41 Colo. 212, 93 Pac. Rep. 483.

1 For express abandonment, see Sec. 1103.

2 For the intent to abandon, see Secs. 1101, 1116.

3 The fact that a quartz mill has gone to decay so that it can not be

The most common cases of express abandonment of ditches, canals, and other works, are where the owner, in order to better or more economically use the water, constructs new works or combines with others in the construction of new works, after which the old works are abandoned. It is the history of the use of water acquired by appropriation that, in the early days the ditches and canals were oftentimes poorly constructed and many times not in the right locality to obtain the best results. Then, again, the waste from small, individual ditches poorly constructed is much greater in proportion to that from the larger and better constructed ditches. So the tendency in the West has been by a combination of the water users, either by way of a corporation, or otherwise, to construct larger and better ditches and thereby to make a great saving of the water, after which the old ditches were abandoned. An abandonment of this nature, the intent being in conjunction with the acts yielding up the possession and use of the old ditches, will work an immediate and express abandonment. But the authorities upon this question are few, for the reason that such an abandonment is seldom questioned. However, there are a few cases of this nature, where a claim was afterward made to the old ditch.[4] In cases of this nature, however, there is no abandonment of the water right.[5]

As is the case with the right to the use of the water, so it is the case with the right to use ditches and canals over the lands of others, and the statutes of many of the States provide that a failure to use for a specified time will work an abandonment. And where there are not express statutes upon the subject, by analogy it is

operated may be shown as evidence tending to prove an abandonment of a flume and easement for the same. Richard v. Hupp, 104 Cal. 18, 37 Pac. Rep. 920.

See Conley v. Deyer, 43 Colo. 22, 95 Pac. Rep. 304, where it is held that the term "abandonment" applies only to completed appropriations.

4 Where defendant claimed an easement in a ditch crossing the lands of another, but declared his intention of not using the ditch, whereupon the owner of the land filled the ditch, and sowed it over with grass, with the knowledge of the defendant, who made no objection, it was held that there was an express abandonment. Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686.

See, also, Dorr v. Hammond, 7 Colo. 79, 1 Pac. Rep. 693.

A member of a corporation has no right to assert rights which have been abandoned by the corporation. Stewart v. Stevens, 10 Colo. 440, 15 Pac. Rep. 786.

5 Stoner v. Mau, 11 Wyo. 366, 72 Pac. Rep. 193, 73 Pac. Rep. 548.

held that a failure to use during the period prescribed by the statute as a bar for the recovery of real property will work the abandonment.[6] As the ditch and the easement over which it is constructed is real property, in the absence of a statute specifically limiting the right, we consider this the proper rule. But, as is also the case with the water right, the mere failure to use the ditch for a period of time which can not under the circumstances of the case be considered unreasonable, will not work an abandonment of the right to resume the use.[7] And, therefore, the mere fact that a land owner having an easement in a ditch which entitled him to be supplied with water therefrom, uses some other method of conveying the water for a time, and where adverse possession has not continued for the prescriptive period, does not constitute an abandonment thereof, or of the easement over which it ran.[8] In certain

6 For the statutes of the various States upon the subject, see Part XIV.

Where a ditch was filled up by a landslide, and it was not used for over nine years thereafter, it was held to destroy all claim of the owner thereto, under a statute of the State providing that, when a ditch is abandoned, and thereafter the owner shall cease to exercise acts of ownership over the same for one year, he shall be deemed to have lost all rights thereto. Ison v. Nelson M. Co. (Ore.), 47 Fed. Rep. 199; Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686; People *ex rel.* Standart v. Farmers' etc. Co., 25 Colo. 202, 54 Pac. Rep. 626; reversing 8 Colo. App. 246, 45 Pac. Rep. 543; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Cate v. Sanford, 54 Cal. 24.

An easement for a ditch and dam is lost and extinguished, under California Civil Code, Section 811, subdivision 4, by complete disuse for the period prescribed for acquiring title by enjoyment. Los Angeles v. Pomeroy, 125 Cal. 420, 58 Pac. Rep. 69.

7 For the abandonment of a water right by the failure to use, see Secs. 1105, 1106.

The owner of a ditch on the public lands of the United States does not forfeit the same by merely non-user. Ada County etc. Co. v. Farmers' C. Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485.

See, also, Welch v. Garrett, 5 Idaho 639, 51 Pac. Rep. 405, 19 Morr. Min. Rep. 193; Stufflebeem v. Adelsbach, 135 Cal. 221, 67 Pac. Rep. 140; Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807.

The failure to contribute for the maintenance of a ditch, or to contribute expenses in a suit to determine the rights therein, held not to work an abandonment. Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056.

See, also, Butterfield v. O'Neil, 19 Colo. App. 7, 72 Pac. Rep. 807.

8 Farmers' etc. Co. v. New Hampshire etc. Co., 40 Colo. 467, 92 Pac. Rep. 290, where it is said: "But no showing is made, nor is there any effort to show, that he ever deeded or in any manner conveyed this easement, nor that the same was acquired by

cases the same acts of the owner will work an abandonment of both the ditch and the water right utilized thereby. This is the case where the entire purpose is given up and the enterprise deserted, without any attempt of the owners to use either for any other purpose, or at any other place. So, after a ditch by which water was diverted for mining purposes has fallen into disuse and has been abandoned, the water right, if not otherwise disposed of at the time, and not used for many years, is also held to be abandoned and destroyed.[9] However, owing to the fact that a water right and the ditch, canal, or other works are separate and distinct species of property,[10] and are not inseparably connected with each other, it does not necessarily follow that the abandonment of the works is an abandonment of the water right. Therefore, old ditches may be abandoned and new ditches substituted therefor for the utilization of the same water right, and so long as the owner continues the use of the water through other ditches, he does not lose his right.[11] But the right to a ditch is not lost if the use of the same is stopped under an agreement, so long as the agreement continues

adverse possession for the prescriptive period, nor does any intention to abandon appear by the record. He had the right to use as many ditches or methods of conveying his water to his lands as he might see fit, so far as the question of abandonment is concerned."

9 Kirman v. Hunnewill, 93 Cal. 519, 29 Pac. Rep. 124; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Goon v. Proctor, 27 Mont. 526, 71 Pac. Rep. 1003; Ison v. Nelson M. Co., 47 Fed. Rep. 199; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Dorr v. Hammond, 7 Colo. 79, 1 Pac. Rep. 693.

Two years' delay in constructing a ditch and the fact that the water is not at present needed for irrigation show a virtual abandonment of the right to the water. Lamborn v. Bell, 18 Colo. 346, 32 Pac. Rep. 989, 20 L. R. A. 241.

10 See Secs. 764, 768-771.

11 Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278, where it is held that a person may abandon an irrigating ditch without abandoning his water rights.

Rep. 598; Marlar v. Maricopa etc. Co., 76 Pac. Rep. 1125; Salt River etc. Co. v. Van Fossen, 76 Pac. Rep. 1126.

The abandonment of an old or dilapidated flume is not an abandonment of the right to divert and use the water conveyed through the flume. Wood v. Etiwanda W. Co., 147 Cal. 233, 81 Pac. Rep. 512.

in force.[12] As held in California: "An easement acquired by deed is not lost by mere non-user." [13] So, again, the non-user of a ditch, brought about by circumstances over which the owner has no control, does not work an abandonment of a ditch, as the intent to abandon is lacking.[14] An injunction was granted restraining the majority owners in a community ditch from abandoning its ancient location and thereby injuring the property right of the minority owners.[15] It is held by the authorities that old and abandoned ditches may be used in making new appropriations.[16] But it is further held that where one made such use of an abandoned ditch his right does not succeed to the old water right used in connection with such ditch, but stands alone upon the merits of its own individual appropriation.[17] In other words, the right of the later appropriator can not be tacked to the rights of the earlier.[18]

**§ 1109. Abandonment of rights—By parol sale or defective deed.**—In our discussion of the sale and transfer of water rights, ditches, canals, and other works, we discussed the effect of attempted sale by parol, and by defective deeds.[1] Very little upon that subject need be added in discussing the subject of abandonment. The great weight of authority holds that an attempted parol sale of a water right is an abandonment of the priority of the right, and that the grantee, when he takes possession under such a sale or attempted transfer, takes the right on the date of such transfer and possession as by an appropriation by actual diversion.[2] This, as can be readily seen, in the face of the rights of claimants having valid appropriations subsequent to the date of the appropriation in question, being an abandonment of the original priority, is, in effect, an abandonment of the right. The purchaser,

2 For an appropriation by diversion, see Sec. 730.

taking as he does by actual diversion, takes by virtue of the institution of a new right. In other words, the priority being thus lost, the whole original right is treated as abandoned, and the grantee takes his place as the last of the subsequent appropriators upon the date of his actual possession and use of the right.[3] However, in a recent case in Oregon,[4] contrary to the general rule, as announced above, the Court held that a parol sale of land and an appurtenant water right for a consideration, and a surrender of the possession thereof to the purchaser, create an equitable estate in the water rights, which a court of equity is bound to protect. This decision, however, was upon the theory that it was an executed parol contract, sufficient to enable the purchaser to enforce specific performance against the grantor and "all who claim title under him with notice of the plaintiff's rights."[5] And the Court made no distinction between the land and ditch, and the water right, saying: "But it may be contended that it does not apply to the use and possession of the water; but we can not make such distinction. The right to the use of the water goes with the right to the land." Also, in the more recent decisions in Montana, the Court criticises the early decision in the case of Barkley v. Tieleke,[6] in which an attempt to transfer a water right by an imperfect conveyance was held to operate as an abandonment of the right, and that the right of the purchaser related only to the date of his taking possession, as though it was an original appropriation made by him, the Court in one case

3 A verbal sale and transfer of the water rights of a prior appropriator operates *ipso facto* as an abandonment thereof. Griseza v. Terwilliger, 144 Cal. 456, 77 Pac. Rep. 1034; Smith v. O'Hara, 43 Cal. 371, 1 Morr. Min. Rep. 671; Hill v. Newman, 5 Cal. 445, 63 Am. Dec. 140, 4 Morr. Min. Rep. 513; Lower Kings River etc. Co. v. Kings River etc. Co., 60 Cal. 408; Dodge v. Marden, 7 Ore. 456; Clark v. Willett, 35 Cal. 534; Lobdell v. Hall, 3 Nev. 507; Chiatovich v. Davis, 17 Nev. 133, 28 Pac. Rep. 239; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 2 Sawyer 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113; Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678.

"If it be true that the respondent has failed to connect itself with the title of all the appropriators, except by verbal sale, its appropriation does not antedate its own possession," etc. Salina Cr. Irr. Co. v. Salina Stock Co., 7 Utah 456, 27 Pac. Rep. 578.

4 Watts v. Spencer, 51 Ore. 262, 94 Pac. Rep. 39.

See, also, Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13.

6 2 Mont. 59, 4 Morr. Min. Rep. 666.

saying: "We can not comprehend the logic of the language in Barkley v. Tieleke, etc. But a mere failure to execute a deed in nowise justifies the inference that he intends to throw away his honest buyer's rights as well as his own."[7] It will be noticed in both the Oregon and Montana cases that with the attempted transfer of the water right there was also a transfer of land, and the question of the water being an appurtenance to the land so transferred had its influence with the Court.

Our own view as to the correct rule is that, owing to the fact that during the more recent years a water right has attained to the dignity of real property, and by the courts is so considered,[8] and the necessity of a record of at least the claims of those owning these rights, a sale and transfer should be consummated with all the formalities necessary for the transfer of other real property. And, therefore, an attempted parol sale of an independent water right should be treated as an abandonment of the priority of the right, and the purchaser taking such right subject to all rights which have vested subsequently to the date of the inception of this particular right so sold, and prior to the actual possession and use by the purchaser.

§ 1110. **Abandonment of rights—By lease.**—The attempt to lease a water right independent of land is held to be an abandonment of the right.[1] As was said in an Arizona case: "To recognize the right of a prior appropriator to lease his water right independent of his land would, as we conceive, be subversive of the underlying principles of our water right law."[2] So, where the owners of a mining ditch took water therefrom for irrigation, by leasing their right for a term of 99 years, it was held by the Court that they had abandoned their irrigation rights in the ditch.[3]

7 McDonald v. Lannan, 19 Mont. 78, 47 Pac. Rep. 648.

See, also, Wood v. Lowney, 20 Mont. 273, 50 Pac. Rep. 794.

The grant of a ditch and a water right to an alien is not an abandonment by the owner, but the alien may hold the same until forfeited by "office found," and, in the absence of any such forfeiture, may convey title. Quigley v. Birdseye, 11 Mont. 439, 28 Pac. Rep. 741.

8 That a water right is real property, see Secs. 768-771.

1 For the leasing of water rights, see Secs. 1025, 1026.

2 Slosser v. Salt River Valley C. Co., 7 Ariz. 376, 65 Pac. Rep. 332.

3 Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154.

**§ 1111. Abandonment of rights—By wasting water.**—As the basis of the continuance of the right to the use of water claimed under a valid appropriation is the continuous application of all of the water appropriated to some beneficial use or purpose without any unnecessary waste,[1] no title can be retained to that portion of a right the water of which is unnecessarily wasted. Therefore, where an appropriator continually permits a certain amount of water claimed by him to be wasted, there is an abandonment of so much of his right as is represented by the wasted water, which others may lawfully claim.[2] And, although no valid appropriation can be made of discharged waste as such, where the water simply flows from one field to another,[3] it is the duty of all appropriators, if they have no present or immediate need of the full quantity of water included within their claim, to allow such portion not needed to remain in the stream, so that it may be used by others.[4] However, the writer of this has found, from a somewhat extended experience in practical irrigation matters, and also the trial of irrigation cases, that this is one of the hardest things to get the farmers to do. Many, like "the dog in the manger,"[5] would rather raise tules and other swamp grasses upon their own lands, to the great

For the sale and alienation of water rights, see Secs. 994-1032.

1 For the economical use and prevention of waste, see Chap. 49, Secs. 874-916.

That all of the water appropriated must be used for a beneficial purpose, see Secs. 727, 877.

2 Where the appropriation was for domestic purposes, and the appropriator permitted the excess to incidentally flow over his land without any intent to utilize it for a beneficial purpose, it was held that there was an abandonment of the excess water. Power v. Switzer, 21 Mont. 523, 55 Pac. Rep. 32, the Court saying: "A man may divert more water than is necessary for domestic and culinary purposes, and permit the excess to flow down on his lands; but if he has no intention of using such excess to irrigate the land upon which the excess so runs, and his purpose is not to raise a crop or run machinery, or to mine, or to otherwise apply it to a useful purpose, he acquires no valid right to such excess by the mere fact of a diffusion of waste water upon the grounds, even though they be susceptible of cultivation."

See, also, Doherty v. Pratt, —— Nev. ——, 124 Pac. Rep. 574.

3 For abandonment of water, discharged waste, see Secs. 1113-1115.

4 Burkart v. Meiberg, 37 Colo. 187, 86 Pac. Rep. 98, 6 L. R. A., N. S., 1104, 91 Am. St. Rep. 279; La Jara etc. Co. v. Hansen, 35 Colo. 105, 83 Pac. Rep. 644.

5 Nevada etc. Co. v. Kidd, 37 Cal. 282; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73, 2 Sawy. 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113.

injury of both the crops and the land itself, than to permit any of the water claimed by them to flow to the lands of others, or to leave the portion actually wasted by them in the stream to be appropriated by others. But, as has been said, "water is too precious in this arid climate to permit its being unnecessarily wasted"; and, therefore, where an upper subsequent appropriator appropriated and diverted only so much of the water as a lower and prior appropriator actually wasted, it was held that the prior appropriator could not recover damages for the diversion.[6] Also, a lower subsequent appropriator may acquire a right to the water wasted by an upper prior appropriator, and through the courts compel him to leave the water abandoned by waste to remain in the stream for his use. Their rights may be determined by an action to enjoin the upper appropriators from diverting from the stream the excess quantity of water, or in an action to determine the rights of the parties, and by proper decree or orders these rights may be enforced.[7]

Also, in those jurisdictions which adhere to the common law of riparian rights, a lower riparian owner may enjoin an appropriator from diverting water from a stream which the latter does not apply to some beneficial use, but allows to run to waste.[8] As we deem

[6] Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867.

[7] Whited v. Cavin, 55 Ore. 98, 105 Pac. Rep. 396, where it is said: "A flow of 17 inches therefore would cover an area, equal to one acre, to a depth of 25½ feet each month, or 102 feet (102 acre feet), during the irrigation period of three months. The absurdity of such a quantity, being essential to the proper irrigation of lands, is manifest. Four hundred inches of constant flow would cover an area equal to 440 acres, during a like period, 5½ feet in depth. The quantity allowed by the Government for an irrigation season in similar localities and altitudes, with like soil, is usually about 1½ acre feet. In Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728, the quantity allowed under the evidence was from one-third to two-thirds inches per acre, which is less than here allowed. It is clear, therefore, that 10 second feet, or 400 inches, are ample for the irrigation of plaintiff's lands under the ditch, and it is probable that this is not required at all times during the irrigation seasons. When not so required, however, it becomes subject to use by others on the stream, in the order of their rights." Citing Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286; Williams v. Altnow, 51 Ore. 275, 303, 95 Pac. Rep. 200, 97 Pac. Rep. 539.

the law upon the subject, the correct rule should be and is that where an appropriator continually permits a certain amount of the water which he claims under his appropriation to unnecessarily run to waste, there is an abandonment of so much of his right to use the water as is represented by the amount of the water so wasted, and the right so abandoned may be taken by the subsequent appropriators in the order of their priorities.[9]

**§ 1112. Abandonment of rights—By the acquiescence in the adverse user of another.**—In a preceding chapter we have treated at considerable length how permanent rights to the use of water may be acquired by one person and correspondingly lost by another by adverse possession and user amounting to prescription.[1] And, as we there discussed, one of the elements essential to the acquisition of title to a water right by this method is that a use of the water is not adverse until it becomes hostile to another's rights and interferes with such rights so as to give the person injured a right of action for the interference.[2] While, as we will show in another section, a water right can not be abandoned in favor of any particular person,[3] it may be abandoned and thereby lost by the acquiescence of the appropriator, or owner, in the adverse user thereof by another, continued uninterruptedly and notoriously for the statutory period. This, however, does not apply to any portion of the water which the prior appropriator, within said period, resumed the use and retained the possession thereof.[4] An adverse user of

2 See Sec. 1050; Davis v. Chamberlain, 51 Ore. 304, 98 Pac. Rep. 154; Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283.

3 See Sec. 1117.

4 Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588, citing Kinney on Irr., 1st Ed., Sec. 256; Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283, citing *Id.*

A party may acquire a prescriptive right to the waters of a stream by adverse user, and an acquiescence in such user may cause the grantee of adjoining lands to lose the right of appropriation previously acquired by his grantors. Smith v. Logan, 18 Nev. 149, 1 Pac. Rep. 678.

See, also, Alhambra etc. Co. v. Richardson, 72 Cal. 593, 14 Pac. Rep. 379; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Woolman v. Garringer, 1 Mont. 535, 1 Morr.

the property and rights of another may be hostile to the latter's rights, and give him a right of action against such interference, and still he may not take advantage of his right of action, and may even passively acquiesce to the use by the adverse claimant, and by such a use the statute of limitations will run against the rights of the owner. But such an acquiescence does not work an immediate abandonment, but both the use and the acquiescence must run at least the full time prescribed by the statute of limitations as a bar to an action for the recovery of real property.[5] A distinction, however, must be made between the abandonment of a right by acquiescence and the right to the use of the water granted by contract or license, which subjects have already been discussed.[6]

**§ 1113. The abandonment of water—Distinctions to be drawn.**—Water, after it has been diverted from the natural stream into the ditches, canals, or other works of the appropriator, becomes personal property,[1] while the water right, or the right to divert and use the water, is real property.[2] Therefore, a distinction must be made between the abandonment of a water right, as treated in the preceding sections,[3] and the abandonment of the water itself, or the very body or *corpus* of the water. Water, after it has been used for the purpose for which it was appropriated, may be allowed to escape from under the control of the appropriator, without any intent upon his part to recapture it. In the first instance it is the abandonment of real property, and in the other it is the abandonment of personal property. Again, water developed incidental to some other enterprise, such as mining, while ordinarily it belongs to the party developing the same, may also be discharged without any use having been made by him of it, and this is, in effect, an abandonment of water and not a water right.[4] There is another distinction between the abandonment of a water right and the aban-

Min. Rep. 675; Los Angeles v. Baldwin, 53 Cal. 469; Cave v. Crafts, 53 Cal. 135.

5 A water right is not barred by acquiescence in an impairment thereof for less time than is required by adverse user. Mayberry v. Alhambra etc. Co., 125 Cal. 444, 54 Pac. Rep. 530, 58 Pac. Rep. 68.

4 For rights to developed water, see Secs. 1205, 1206.

donment of water in the property rights which may be acquired to their use by others. We will discuss this in the following sections.[5] Again, a distinction must be made in the abandonment of the water itself, especially as to whether or not the abandoned water increases below the point of discharge, the flow of a natural stream, or whether it is simply discharged waste. This subject will also be discussed hereafter.[6]

**§ 1114. Abandonment of water—Water discharged into a natural stream.**—Where, after use by a prior appropriator, water is discharged into a stream for the purpose of drainage or as a convenient method of disposing of it, and without any intent upon the part of the owner of the right to reserve or recapture it, it works an abandonment of such water,[1] and the water thus discharged becomes a part of the natural stream, and is subject to reappropriation and to the same rights as the water naturally flowing therein, and can not afterward be taken out by the original appropriator to the injury of other rights which have attached and vested to it. The authorities hold that in all cases where water formerly appropriated, or which has been under the control of any person, is permitted to flow down the natural channel of a stream below the point of diversion of the appropriator, without any intent upon his part, it works an immediate and express abandonment of all the water permitted so to escape; and subsequent appropriators can not be deprived of their rights in and to this water appropriated by them by an attempt upon the part of the first appropriator to shut off their supply by enlarging the amount diverted by him, or by any changes in the place or manner of use,[2] which would injure the rights of such subsequent appropriators to the continuous flow of the stream as it was at the time that they made their appropria-

Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Dougherty v. Creary, 30 Cal. 290, 89 Am. Dec. 116; Barkley v. Tieleke, 2 Mont. 59, 4 Morr. Min. Rep. 666; Lobdell v. Simpson, 2 Nev. 274, 90 Am. Dec. 537; Ortman v. Dixon, 13 Cal. 33; Last Chance M. Co. v. Butter Hill etc. Co., 49 Fed. Rep. 430; Hewitt v. Story, 64 Fed. Rep. 510, 12 C. C. A. 250, 30 L. R. A. 265, 29 U. S. App. 155; *Id.*, 51 Fed. Rep. 101; Butte Canal Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769, 4 Morr. Min. Rep. 352; Farmers' Union D. Co. v. Rio Grande C. Co., 37 Colo. 512, 86 Pac. Rep. 1042; Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588; Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580.

4 Brown v. Mullin, 65 Cal. 89, 3 Pac. Rep. 99.

Where water from a tunnel is discharged into a stream previously appropriated, it would be inequitable to deprive the first appropriator of his original rights, by allowing the diversion of water which would naturally flow into the stream, but which, on account of the tunnel, is discharged into the stream at a point different from the natural flow. Herriman Irr. Co. v. Butterfield M. Co., 19 Utah 453, 57 Pac. Rep. 537, 51 L. R. A. 930.

5 For these States, see Sec. 507.

channel so as to prevent a lower riparian owner from enjoying its use.[6]

But, as has been seen in a previous portion of this work, a natural channel of a stream may be used as a part of the ditch system of an appropriator, and water turned into the same by the appropriator, with no intent to abandon the same, but, upon the contrary, with the express purpose of conducting it to some point below and of recapturing it at that point.[7] Therefore, where water from an artificial ditch is turned into a natural water course and mingled with the natural waters of the stream for the purpose of conducting it to a point where it is to be used, it is not thereby abandoned, but may be "recaptured," or rather an equivalent amount taken out of the stream, by the person so conducting it, provided that in so doing he does not diminish the quantity of the natural flow of the stream to the injury of those who have previously appropriated it.[8] As we have shown in a previous section, the question of

6 Willcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Schultz v. Sweeney, 19 Nev. 359, 11 Pac. Rep. 255, 3 Am. St. Rep. 888.

A riparian owner may restrain the diversion of any water from the stream by one who has conducted water into it from a foreign source, unless the latter shows that he is not taking from the stream more water than he turned into it. Paige v. Rocky Ford etc. Co., 83 Cal. 84, 21 Pac. Rep. 1102, 23 Pac. Rep. 875; Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337; Wood v. Waud, 3 Exch. 748, 18 L. J. Exch. N. S. 305, 13 Jur. 742; Adams v. Slater, 8 Ill. App. 72.

7 For the use of the natural channel as a ditch or canal, see Sec. 832.

For the right to recapture water turned into a natural channel, see Secs. 798-800.

8 Butte Canal Co. v. Vaughn, 11 Cal. 143, 70 Am. Dec. 769, 4 Morr. Min. Rep. 552; Burnett v. Whitesides, 15 Cal. 35; Hoffman v. Stone, 7 Cal. 46; Richardson v. Kier, 34 Cal. 63, 91 Am. Dec. 681, 4 Morr. Min. Rep. 612; Weaver v. Eureka etc. Co., 15 Cal. 271, 1 Morr. Min. Rep. 642; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Churchill v. Rose, 136 Cal. 576, 69 Pac. Rep. 416; Platte Valley etc. Co. v. Buckers, 25 Colo. 77, 53 Pac. Rep. 334; Parke v. Boulware, 7 Idaho 490, 63 Pac. Rep. 1045; Beaverhead etc. Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880; Simmons v. Winters, 21 Ore. 35, 27 Pac. Rep. 7, 28 Am. St. Rep. 727; Fuller v. Sharpe, 33 Utah 431, 94 Pac. Rep. 817; Spring Valley W. Co. v. Schottler, 110 U. S. 347, 28 L. Ed. 173, 4 Sup. Ct. Rep. 48.

One who by his own efforts increases the flow of a stream is entitled to the benefit of it to the extent of the increase. Platte Valley Irr. Co. v. Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334; Herriman Irr. Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719, holding that the mere turning water into

abandonment of a water right or of the water itself is a question of the intent of the parties. Therefore, it follows that where the water is turned into a stream for the convenience in conducting it to the place of use, with the express intention of recapturing it, there can be no intention to abandon the water.[9] But the intent to recapture the water must be present at the time it is discharged into the stream.[10] Water which is developed in mining operations may be discharged into a natural stream, and where the intent to recapture was present at the time of such discharge, it may be taken out by the party developing the same at some point below and used for any beneficial purpose. The date of such an appropriation relates back to the time when the party sought to utilize the water.[11]

§ 1115. **Abandonment of water—Discharged waste.**—In the preceding sections we have discussed the effect of an abandonment of water rights,[1] and of the water itself,[2] where the water either remains in the natural stream or is discharged into it and thereby augments its natural flow, and the rights which may be acquired to this water by others. To this water so abandoned permanent rights may be acquired, where, in fact, there has been an actual

a natural stream is not an abandonment of it.

See, also, Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881, holding that the appropriator can not successfully claim any excess of water over the amount to which he is entitled, regardless as to how it was produced.

See, also, Butte etc. Co. v. Vaughn, 11 Cal. 143, 70 Am. St. Rep. 769, 4 Morr. Min. Rep. 532; Creighton v. Kaweah Irr. Co., 67 Cal. 221, 7 Pac. Rep. 658; Merriman Irr. Co. v. Butterfield M. Co., 19 Utah 453, 57 Pac. Rep. 537, 51 L. R. A. 930; Platte Valley Irr. Co. v. Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334; Wiggins v. Muscupiabe etc. Co., 113 Cal. 182, 45 Pac. Rep. 160, 32 L. R. A. 667, 54 Am. St. Rep. 337.

Also, for right of recapture, see Secs. 799, 800.

In Southern California Inv. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767, the right to recapture seepage as against the rights of a riparian owner was denied.

9 For intent to abandon, see Sec. 1101.

10 Schulz v. Sweeney, 19 Nev. 359, 11 Pac. Rep. 253, 3 Am. St. Rep. 888; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Farmers' Union D. Co. v. Rio Grande C. Co., 37 Colo. 512, 86 Pac. Rep. 1042.

See, also, cases cited *supra*.

11 Ripley v. Park etc. Co., 40 Colo. 129, 90 Pac. Rep. 75; Herriman Irr. Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719.

1 For effect of abandonment of a water right, see Sec. 1117.

2 For the abandonment of water, see Secs. 1113-1115.

abandonment either of the right or of the water which has been discharged into a natural stream.

There is another method whereby the water is lost, which although it may work an abandonment upon the part of the appropriator, must be distinguished from the abandonment of the other rights discussed, and that is the question of the necessary discharged waste. This is where the water is lost from the ditches, canals, or other works, of the appropriator by seepage, leakage, or, after use by him, flows from the ends of his ditches, canals, or laterals to the lower lands, without immediately finding its way into a natural stream. The loss of this water is a matter of necessity, and not merely the question of a convenient method of disposing of it or drainage. In a previous chapter upon the subject of the economic use and the suppression of waste [3] we endeavored to show that in all enterprises for the use of water there is more or less of the water lost to the appropriators from what is called necessary waste. This is the water which escapes from the ditches, canals, or other works, and which can not be avoided by the ordinary precautions commonly used in the construction of the works. And while it is the duty of the appropriator to use ordinary methods to prevent this waste, he is not compelled under the law to use extraordinary methods. However, as "water is a movable, wandering thing," [4] under the best methods known to man, some of the water will escape. To this necessarily lost water, while a temporary use may be made of it by any one who may capture it, no permanent right can be acquired so as to compel the continuance of the discharge or loss.[5]

[3] See Chap. 49, Secs. 874-916.

[4] 2 Black. Comm. 18.

[5] In the now famous case upon the subject of the right to intercept percolating waters of Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35, Mr. Justice Shaw, in reviewing the cases cited, said: "In Hanson v. McCue, 42 Cal. 303, 10 Am. Rep. 299, . . . McCue's predecessor had made a ditch leading from a spring on his land, across a tract of land belonging to Hanson's predecessor, and terminating upon another tract, also owned by McCue's predecessor, through which he conducted water from the spring across the Hanson tract to his other land. This ditch, in its course over Hanson's land, leaked water in such quantities that it collected in a stream, which Hanson used for irrigation. This was the only foundation for the right which Hanson had or claimed to the water. The Court properly held that he had no right to the waste water, and that McCue was not bound to continue to maintain the artificial stream for Han-

The authorities hold upon this subject to the effect that, where water has been once lawfully appropriated, a use by another of the water necessarily lost from the works of the appropriator, or owner, can not give rise to a permanent right by appropriation,[6] prescription, or estoppel so as to compel the loss of such water permanently kept up, even though the parties claiming and using it constructed expensive works for the utilization of such water. Therefore, the owner of a water right for irrigation purposes, by permitting the water to flow onto adjoining property, does not lose the right to use all of the water under his right by the fact that the owner of the adjoining land collected it into a ditch for many years and applied it to the irrigation of his land. But he may at any time use all of the water under his lawful claim so that all waste is cut off.[7]

So, when the owner of the right for temporary periods does not wish to use the water, there is no abandonment of any right, and there can be no valid appropriation of the water by the mere passive acceptance of it as it flows into the ditch of another.[8] So, again, where the appropriator uses the water for mining purposes, the

son's benefit, but could, by any means he chose, change the use of the spring and the course of the ditch."

6 For the appropriation of waste water, see Sec. 661.

7 Burkhart v. Meinberg, 37 Colo. 187, 86 Pac. Rep. 98, 6 L. R. A., N. S., 1104, 91 Am. St. Rep. 279, where it is held that no valid appropriation can be made by gathering surplus water as it flows over the surface from adjoining property upon which it has been spread for irrigation purposes, so as to entitle the user to contest the right of the owner of the water right, after he has sold the land on which the water was used, to gather this surplus for use on other property belonging to him.

8 Smith Canal etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148; Hanson v. McCue, 42 Cal. 303, 10 Am. Rep. 299; Stockman v. Riverside etc. Co., 64 Cal. 57, 28 Pac. Rep. 116; Anaheim W. Co. v. Semi Tropic etc. Co., 64 Cal. 185, 30 Pac. Rep. 623; Greer v. Heiser, 16 Colo. 306, 26 Pac. Rep. 770; Parke v. Kilham, 8 Cal. 77, 68 Am. Dec. 310, 4 Morr. Min. Rep. 522; Lakeside D. Co. v. Crane, 80 Cal. 181, 22 Pac Rep. 76; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685; Ball v. Kehl, 95 Cal. 606, 30 Pac. Rep. 780; Lillis v. Emigrant D. Co., 95 Cal. 553, 30 Pac. Rep. 1108.

The overflow or waste, after use on defendants' land, of waters which they appropriated and brought there, was not abandoned, so as to be subject to the use of others, unless there was a concurrence of intent to abandon and an actual relinquishment. Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065; Mabee v. Platte L. Co., 17 Colo. App. 476, 68 Pac. Rep. 1058.

mere fact that he abandons the water and tailings from his flume for a portion of the time does not render it obligatory upon him to continue to do so, but he may sell the water to third persons or divert it in another direction, though the persons who have been accustomed to use them will thereby be deprived of its use.[9]

§ 1116. **Proof of abandonment.**—As to whether or not a water right, the water itself, the ditch, canal, or other works have actually been abandoned or not, depends upon the facts and circumstances surrounding each particular case, tending to prove the essential elements of an abandonment, namely, the intent and the acts of the party charged with abandoning such a right. In other words, it is a question of fact, to be determined by the jury, or by the Court, sitting as such.[1] Abandonment is most usually proved by evidence of the failure of the party charged to use the right, or the water,[2] or to keep the works necessary for the utilization of the water in repair; and if such non-usage or neglect is continued for an unreasonable period, it may fairly create the presumption of the intention to abandon; but this presumption is not conclusive, and may be overcome by other satisfactory evidence introduced by the party charged to rebut the presumption.[3] And where the preponderance

[9] Dougherty v. Creary, 30 Cal. 290, 89 Am. Dec. 116; Correa v. Frietas, 42 Cal. 339; Fairplay etc. Co. v. Weston, 29 Colo. 125, 67 Pac. Rep. 160, 21 Morr. Min. Rep. 725; Cardelli v. Comstock Tunnel Co., 26 Nev. 284, 66 Pac. Rep. 950; Crescent etc. Co. v. Silver King etc. Co., 17 Utah 444, 54 Pac. Rep. 244, 70 Am. St. Rep. 810; see *Id.*, 14 Utah 57, 45 Pac. Rep. 1093; Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675.

[1] "Abandonment is a question of fact to be determined by a jury or the Court sitting as such. Yielding up possession and non-user is evidence of abandonment, and, under many circumstances, sufficient to warrant the deduction of the ultimate fact of abandonment." Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807.

"As abandonment is a matter of intention, it is peculiarly within the province of the trial Court to determine from all the facts and circumstances of each particular case whether abandonment has or has not taken place." Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95.

See, also, authorities cited under the section abandonment defined—intent, Sec. 1101.

[2] For abandonment of water, see Secs. 1113-1115.

[3] Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Beaver Brook Res. Co. v. St. Vrain Res. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Cole v. Logan, 24 Ore. 304, 33 Pac. Rep. 568; Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283, where it is said:

of all the evidence introduced in any particular case shows that the appropriator continued in the use of his rights, without any unreasonable voluntary cessation or neglect, no abandonment will be decreed against him by the Court.[4] The evidence in any particular case where an abandonment is decreed by the Court must be clear and satisfactory that such, in fact, was the case. The old rule that forfeitures are not favored in law applies with especial force in cases of this nature; and an appropriator, or owner, will not be held lightly by the Court to have abandoned his rights, and only when the preponderance of the evidence in the case shows that there was actually such a desertion of the right, or such actual neglect and failure to use the right for an unreasonable time as to warrant the presumption, from all the evidence in the case, that the party charged intended to abandon the right.[5]

"These acts of ownership and use not only preclude the presumption of any abandonment of the water on the part of the plaintiff, but also preclude the statutory bar of his rights," etc.

There must be a manifest intention upon the part of the party charged to abandon his right; this intention to be determined from his declarations and acts in relation thereto. Hindman v. Rizor, 21 Ore. 112, 27 Pac. Rep. 13; Low v. Schaffer, 24 Ore. 239, 33 Pac. Rep. 678.

The failure to repair and use a ditch destroyed by a landslide for over nine years is an abandonment of the ditch. Ison v. Nelson, 47 Fed. Rep. 199; Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686.

However, evidence that parties did not, when water was scarce, enforce their right to all the water they might justly claim, and that, if more water had been used, better and larger crops could have been raised, is insufficient to raise the presumption that they intended to abandon their rights in whole or in part. Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047.

See, also, American etc. Co. v. Bradford, 27 Cal. 360, 15 Morr. Min. Rep. 190; Cave v. Crafts, 53 Cal. 135.

4 Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278; Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047.

5 "The intention of the party who made the appropriation must govern in determining whether he has abandoned his rights, such intention to be ascertained from his conduct and declarations in respect thereto." Oviatt v. Big Four M. Co., 39 Ore. 118, 65 Pac. Rep. 811.

"A single act may be of such character, and done in such manner, and under such circumstances, that an intention to abandon may be inferred from it." Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056.

"Abandonment is a question of intention, and forfeitures are not favored, and must be clearly established." Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485.

See, also, Rominger v. Squires, 9 Colo. 327, 12 Pac. Rep. 213; Hall v. Lincoln, 10 Colo. App. 360, 50 Pac.

The burden of proving that an abandonment of a right of this nature actually took place is upon the party asserting it, and it must be proven by a preponderance of all the evidence admitted in the case.[6] Any evidence, however, which is admissible under the ordinary rules of evidence, is admissible to prove or disprove the allegation that a right was or was not abandoned. So, also, the declarations of the party charged with abandoning a right is admissible as tending to prove his intentions.[7] The party charged with abandonment may also testify as to what his intentions were, since the question rests largely upon that of intention.[8] Therefore, while mere non-user will not prove an abandonment, it is competent evidence upon the question of abandonment. The failure to use the right for an unreasonable time is evidence of the intention to abandon it. In other words, where the non-user is, under all the facts and circumstances of the case, for an unreasonable time, it is an abandonment of the right; if, upon the other hand, under the evidence in the case, it appears that but a reasonable time elapsed there is not an abandonment.[9] In other words, what is or is not a reasonable or unreasonable time which will or will not work an abandonment is a question of fact for the jury or for the Court to determine from all the facts and circumstances surround-

Rep. 1047; Beaver Brook etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Wood v. Etiwanda W. Co., 147 Cal. 233, 81 Pac. Rep. 512; *Id.*, 122 Cal. 152, 54 Pac. Rep. 726; Utt v. Frey, 106 Cal. 392, 39 Pac. Rep. 807; Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Valcalda v. Silver etc. Co., 86 Fed. Rep. 90, 29 C. C. A. 591, 19 Morr. Min. Rep. 233.

6 O'Brien v. King, 41 Colo. 487, 92 Pac. Rep. 945; Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Beaver Brook etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Platte Valley Irr. Co. v. Central Trust Co., 32 Colo. 102, 75 Pac. Rep. 391; Alamosa etc. Co. v. Nelson, 42 Colo. 140, 93 Pac. Rep. 1112; Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065; McFarland v. Alaska etc. Co., 3 Alaska 308; White v. Nuckolls, 49 Colo. 170, 112 Pac. Rep. 329.

7 Central Trust Co. v. Culver, 35 Colo. 93, 83 Pac. Rep. 1064; Dodge v. Marden, 7 Ore. 456, 1 Morr. Min. Rep. 63; Boulder etc. Co. v. Leggett, 36 Colo. 455, 86 Pac. Rep. 101.

An administrator, however, is without power or authority to relinquish or abandon a water right appurtenant to the estate, by a simple disclaimer of title. Turner v. Cole, 31 Ore. 154, 49 Pac. Rep. 972.

8 Boulder etc. Co. v. Leggett etc. Co., 36 Colo. 455, 86 Pac. Rep. 101.

9 See implied abandonment for non-user, Secs. 1105, 1106.

ing any particular case.[10] The non-user of the water for a period of seven years and a failure during that time to keep in repair the ditch is held in Utah to be an abandonment.[11] And since the intent of the party charged is the principal issue in the case, he himself may testify as to what his intentions were in respect to abandoning the right.[12] The abandonment of a right may be proven by statements of the party charged asserting inconsistent rights.[13] A sale of land, and in the deed ignoring a water right which was used on the land, is evidence of the abandonment of the right, but it is not conclusive. The water right may have passed to the grantee as an appurtenance,[14] or it may have been retained by the grantor for use on other lands.[15] Again, the posting of a second notice of appropriation is evidence which may be introduced as tending to prove the abandonment of the rights claimed under a first notice. But this evidence is not conclusive and may be rebutted.[16] Evidence that certain wells were sunk for oil, but the owners failing in striking oil struck a flow of water, after which they pulled up and deserted the wells, was held to work an immediate abandonment.[17] But the evidence of the abandonment of worked out mining claims is not necessarily proof of the abandonment of the water rights used in connection therewith. There is an absolutely inde-

pendent property right in a water right separate and apart from the land upon which it is used.[18] Therefore, the mining claims may be abandoned, but the water right may be either sold to others for their use or transferred to other lands for use there by the original owners of the mining claims.[19]

There are other questions of evidence tending to prove or disprove the charge of abandonment which have been discussed under the substantive law upon the subject in the preceding sections. But, in general, any evidence which is admissible under the general rules of evidence as tending to prove or disprove the allegation that a right was abandoned, is admissible in evidence for what it is worth.

**§ 1117. The effect of abandonment.**—The effect of the abandonment of water rights, water itself, ditches, canals, or other works, or easements or rights of way for the same depends largely upon the nature of the right abandoned. In the case of the abandonment of water rights, and water discharged into a natural stream for the purpose of drainage, or as a matter of convenience, without any intent to recapture it,[1] the effect is the same: First, the former appropriator, or owner, loses absolutely all title to the water right, or the portion thereof abandoned, and all right to the use of the water so discharged into a natural stream;[2] and, second, the water formerly claimed under the right becomes a part of the volume of the stream and *publici juris*, and, therefore, subject to the appropriation of the first comers;[3] or, if there are already subsequent appro-

Rep. 828; Kirman v. Hunnewill, 93 Cal. 519, 29 Pac. Rep. 124; Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580; Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408.

3 "After it had been used and answered the purpose of the first appropriator without any intention of recapture, and thereby became *publici juris* and subject to appropriation by any one." Woolman v. Garringer, 1 Mont. 535, 1 Morr. Min. Rep. 675; Davis v. Gale, 32 Cal. 26, 91 Am. Dec. 554, 4 Morr. Min. Rep. 604; Dodge v. Marden, 7 Ore. 546; Platte W. Co. v. Northern Colo. Irr. Co., 12 Colo. 525, 21 Pac. Rep. 711; McCauley v. Mc-

priators upon the stream, the water inures to the benefit of such subsequent appropriators, to be enjoyed by them in the order of their respective priorities.[4]

An abandonment need not necessarily be the whole of a right claimed by a party. A portion only of that right may be abandoned.[5] As was well said in a late Washington case:[6] "Upon the principle that the law of appropriation as applied to the arid regions will not tolerate a waste of water, it has been held that water that is allowed to run to waste after use on the land of the appro-

Keig, 8 Mont. 389, 21 Pac. Rep. 22, 16 Morr. Min. Rep. 1; Smith v. Green, 109 Cal. 228, 41 Pac. Rep. 1022.

When water leaves the possession of a party, without any intention upon his part to recapture it, all his right and interest in it is gone, and the water becomes a part of the stream and is subject to appropriation by another. Eddy v. Simpson, 3 Cal. 249, 58 Am. Dec. 408.

4 "The plaintiff, though junior to the milling company, in so far as the use of the water for power purposes is concerned, is a senior appropriator to the milling company as to the water which the former appropriated after it left the mill race. That right was as valid as was the prior right of the milling company for power purposes, and each becomes a vested right." Cache La Poudre Res. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 131, citing Kinney on Irr., 1st Ed., Secs. 234, 253, 254, 259; see, also, *Id.*, 27 Colo. 532, 62 Pac. Rep. 420.

"A party who locates on a stream and diverts and applies the water has title so long as he continues to use it, either for the purpose for which it was originally diverted, or for any legitimate purpose. Yet no one would dispute the proposition that if the appropriator abandons the use, whether it be the original or any subsequent one, he would thereby lose all right, and the right to the water would revert to the people, and belong to whomsoever might thereafter appropriate it, and would likewise inure to the benefit of any subsequent locator on the stream who by reason of the abandonment might become both prior in time and prior in right. This demonstrates very conclusively that the title is not absolute, and that the appropriator's rights are relative." Suffolk etc. Co. v. San Miguel etc. Co., 9 Colo. App. 407, 48 Pac. Rep. 828.

See, also, Water Supply etc. Co. v. Larimer etc. Co., 25 Colo. 87, 53 Pac. Rep. 386; reversing 7 Colo. App. 225, 42 Pac. Rep. 1020, citing Kinney on Irr., 1st Ed., Secs. 159, 183; La Jara etc. Co. v. Hansen, 35 Colo. 105, 83 Pac. Rep. 644, citing Kinney on Irr., 1st Ed., 159, 183; Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588; McClellan v. Hurdle, 2 Colo. App. 434, 33 Pac. Rep. 280; Middle Cr. D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Last Chance M. Co. v. Bunker Hill etc. Co., 49 Fed. Rep. 430.

5 Alamosa etc. Co. v. Nelson, 42 Colo. 140, 93 Pac. Rep. 1112.

6 Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065.

priator is abandoned, and that lower appropriators are entitled to the surplus."[7] Therefore, one can not, after he has abandoned all or a certain portion of his water right by any of the methods discussed in the previous sections,[8] reassert his original right to the same extent as against subsequent claimants who, in the meantime, have taken the proper and legal steps to effect an appropriation of the water covered by the original right so abandoned.[9] Again, if several persons have their respective priorities from the same stream and water is abandoned by one having early rights, and if the ones subsequent have not the full quantity of water covered by their claim, the water thus abandoned inures to the benefit of the subsequent appropriators in the order of their respective priorities—the first taking the abandoned water to the full extent of his original appropriation, the next to the extent of his, and so on until all of such water is appropriated.[10] The benefit accrues to those who have already legally made subsequent appropriations, and whose claims are not fully supplied, in preference to any other person attempting to claim the water abandoned by the prior appropriator. But the right inures to the subsequent appropriators already upon the stream, "to be enjoyed in accordance with their numerical priorities."[11] Again, as abandonment is a matter of intention and consists in the giving up of the right absolutely without reference to any particular person or purpose, as was said in a late Oregon case:[12] "There is no such thing as an abandonment to particular persons or for a consideration."[13] Again, one who has abandoned

his prior right to the use of water can not, by afterward making a sale of the same, revive his abandoned right in favor of his grantee, even if the sale is made in good faith. Such a sale passes no title.[14]

If, however, there has been no subsequent appropriation of the rights or the water itself thus abandoned by some other party, the original appropriator may regain his former right; but this can only be done by instituting and consummating a new appropriation and taking all the requisite steps which were required of him in the first instance. He is in exactly the same situation as though he had hitherto made no attempt to appropriate the waters at all.[15] However, if the rights of others have intervened, the prior appropriator having abandoned his original right, must take his chances as the last of the subsequent appropriators.[16]

Again, as there may be an abandonment of a part or all of the water right for a part of the time,[17] another may appropriate the water for the period that it is permitted to run down the natural channel, and acquire a good title to its use for the period of time that the first was not accustomed to use it.[18] There is, however,

in this case no abandonment of the right for the periods of time that it was used by the prior appropriator.

The effect of the abandonment of discharged waste from leakage or seepage is that, while the water is lost to the party abandoning the same, and while it may be captured and used by any person who may be in a position to use the same, as discussed in a previous section, no permanent rights can be acquired in such waters so as to compel the party losing it to keep up the discharge.[19] The effect of an abandonment of a ditch, canal, or other works over the lands of others, or easements for the same is that all rights of the former owner, upon abandonment, revert to the owner of the fee to the land over which they pass.[20]

**§ 1118. Forfeiture defined—Distinguished from abandonment.** —Water rights, ditches, and canals, and other works, together with the easements over the lands of others for the same, may be lost by forfeiture. Although the terms "abandonment" and "forfeiture" are oftentimes used interchangeably, even by the courts, upon the subject of the loss of water rights, and other rights used in connection therewith, there is a decided distinction in their legal significance, and one which, in view of the forfeiture clauses enacted by recent legislation, should be observed. While, upon the one hand, abandonment is the relinquishment of the right by the owner with the intention to forsake and desert it,[1] forfeiture, upon the other hand, is the involuntary or forced loss of the right, caused by the failure of the appropriator or owner to do or perform some act required by the statute. Forfeiture is a "punishment annexed by law to some illegal act or negligence in the owner of lands, tenements, or hereditaments, whereby he loses all his interests therein."[2]

The element of intent, therefore, so necessary in the case of an abandonment,[3] is not a necessary element in the case of forfeiture. In fact, a forfeiture may be worked directly against the intent of the owner of the right to continue in the possession and the use

19 For right to discharged waste, see Secs. 661, 1115.

20 Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686.

For rights to easements for ditches and canals, etc., see Secs. 990-993.

1 For abandonment defined, see Sec. 1101.

2 Bouvier, Law Dict., Sub., Forfeiture.

3 For intent to abandon, see Secs. 1101, 1116.

of the right. Therefore forfeiture as applied to water rights and other rights in this connection is the penalty fixed by statute for the failure to do, or the unnecessary delay in doing, certain acts tending toward the consummation of a right within a specified time; or, after the consummation of the right, the failure to use the same for the period specified by the statute. In a California case there was recognized the distinction between abandonment, which is a matter of intention, and forfeiture by non-user, which is a matter of the failure to use the right for the period of time prescribed by the statute.[4]

Although the general rule is that forfeitures are not favored in law, and even in cases of abandonment, the evidence must be clear and convincing that it was the intent of the owner to abandon the right before the Court will decree that the right was actually abandoned,[5] it has been the policy of the legislatures of the various States and Territories to pass enactments providing for the forfeiture of these rights for the failure or neglect to use them for a beneficial purpose. The very life of this arid country depends largely upon the use of all of the available water supply. Therefore, by the forfeiture of the rights which are claimed by certain parties, but who fail to use them, the ends of justice are met, and the water is made to do the greatest good to the greatest number. This is upon the correct theory that the continuance of the title to a water right is based only upon continuous user; and where a person claims a certain right which he does not use for a certain period of time, the statute declares that the right to the unused portion is forfeited

[4] Smith v. Hawkins, 110 Cal. 122, 42 Pac. Rep. 453; *Id.*, 120 Cal. 86, 52 Pac. Rep. 139, 19 Morr. Min. Rep. 243.

[5] For intent to abandon, see Sec. 1101.

For evidence of abandonment, see Sec. 1116.

"Abandonment is a question of intention, and forfeitures are not favored, and must be clearly established." Ada County etc. Co. v. Farmers' Canal Co., 5 Idaho 793, 51 Pac. Rep. 990, 40 L. R. A. 485.

and available for the appropriation of others. Where these provisions are enforced, it practically disposes of the "dog in the manger" or the "water hog."[6]

**§ 1119. Forfeiture by failure to comply with statute.**—As stated in a previous section,[1] in many of the States of the arid and semi-arid West, and especially in those jurisdictions which have passed recent irrigation codes, providing for the State control[2] of the waters within their respective jurisdictions, are to be found provisions declaring to the effect that a failure to comply with the specific provisions of the Acts in question within the times specified works a forfeiture of all rights of the claimant to the uncompleted portions, or to the unused water claimed.[3] Under these provisions a forfeiture of the rights of the claimant is worked by the failure to commence the work of construction, for the failure to prosecute the work with reasonable diligence, for the failure to finally complete the works, and, finally, for the failure to apply all of the water claimed to some beneficial use or purpose, within the time specified by the statute. Also, after the works have been finally completed and the appropriation finally consummated by the application of all of the water claimed thereunder to some useful purpose, the failure thereafter to use all of the water so claimed for a specified time provided by the statute works a forfeiture either to all of the rights or to the portion so unused, and that, too, regardless of the intent not to abandon. The State of Wyoming led off with these laws of State control, and in 1888 it was provided by statute that "The failure to use the water for a period of two years should be deemed an abandonment."[4] This law was in effect until 1905, when the time was extended to five years.[5] In Idaho the period is also five years.[6] It is four years in New Mexico,[7] three

[6] See Union M. & M. Co. v. Dangberg, 2 Sawy. 450, 81 Fed. Rep. 73, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113.

For the statutes of the various States, see Part XIV.

[5] Laws Wyoming, 1905, Chap. 49, p. 36; see, also, Chap. 104.

[6] Laws Idaho, 1905, p. 27; see, also, Chap. 89, providing, however, that the section shall not apply to appropriations for "future needs."

[7] Laws New Mexico, 1905, p. 270; see, also, Chap. 94.

years in North Dakota [8] and South Dakota,[9] and two years in Oklahoma.[10] In Utah the statute provides, upon the question of non-user, that where the owner ceases to use the water for a period of seven years the right ceases; but mingling the question of abandonment with that of forfeiture, the statute further provides: "But questions of abandonment shall be questions of fact, and shall be determined as are other questions of fact." [11] But a recent statute of Utah provides that all the necessary works must be constructed within the period of time to be fixed by the State engineer, who may extend the time to the maximum period of five years, should the facts warrant it. But the construction of the works must be diligently prosecuted to completion, and if one-fifth of the work is not completed within one-half the period allowed, or the whole construction not completed within five years from the date of the approval of the application, the right to the use of the water shall be forfeited. Nine years are also given for the beneficial use of the water after the date of the approval of the application.[12]

Also, in some of the States which have not adopted the law of State control, as that term is understood,[13] are to be found provisions of the statutes to the effect that the rights are forfeited if the conditions of the law relative to the appropriation of the right and to the use are not complied with. This is true in California, the statute of which State, after providing how an appropriation shall be made, in Section 1419 of the Civil Code provides as follows: "*Forfeiture.* A failure to comply with such rules deprives the claimants of the right to the use of the water as against a subse-

8 Rev. Codes North Dakota, 1905, Sec. 7605; see, also, Chap. 95.

Prior to this Act, the period was four years.

9 Laws South Dakota, 1907, p. 373, Sec. 46; see, also, Chap. 100.

This was changed from two years.

10 Laws Oklahoma, 1905, Chap. 21, p. 274, Sec. 28.

11 Comp. Laws of Utah, 1907, Sec. 1288x23.

See, also, Promontory Ranch Co. v. Argile, 28 Utah 398, 79 Pac. Rep. 47, where it was held that no forfeiture was worked for the reason that the non-user was for less than the period of seven years, and that there was no abandonment, as there was no intention to abandon.

See, also, Becker v. Marble Cr. Irr. Co., 15 Utah 225, 49 Pac. Rep. 892; Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686; Gill v. Malan, 29 Utah 431, 82 Pac. Rep. 471.

12 Laws Utah, 1909, Chap. 62, p. 86, Sec. 1288x13.

13 For State control, see Chap. 68, Secs. 1337-1367.

quent claimant who complies therewith."[14] This section is held to apply only to the acts of the appropriator in the steps taken in the acquisition of his right, and not to a completed appropriation, and not to the non-user of the right after it has been finally consummated.[15]

Upon the question of the non-user of the water right after the same has been once lawfully acquired, Section 1411 of the Civil Code provides: "The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such a purpose the right ceases."[16] This section has been construed to work a forfeiture of the right where the non-user was continuous for five years, the period of time fixed by the statute as a bar for the recovery of real property, and this, too, regardless of the intent of the owner to use the right, the Court holding that such a case was not one of abandonment, but of forfeiture for non-user during that period.[17]

In other States are to be found similar provisions, and although the term "abandonment" may be used in some cases, it means involuntary abandonment, or "statutory abandonment," or a forfeiture of the right for the failure to comply with the statute as to the use of the right for the time prescribed. An early Oregon statute provided that "whenever the owner of any 'ditch, flume, or water right' shall abandon the same, and who shall for one year thereafter cease to exercise ownership" over the same, "shall be deemed to have lost all title, claim, or interest therein."[18] This Act was construed to mean that in order to work a forfeiture there must have first been an abandonment, and thereafter one year of non-user, or the failure to exercise any acts of ownership over it.[19]

[19] Dodge v. Marden, 7 Ore. 486, 1 Morr. Min. Rep. 63.

But see Noland v. Coon, 1 Alaska

Under the rule in Colorado that an appropriation is not complete or finally consummated until the water is applied to a beneficial purpose,[20] the courts hold that where there is a failure upon the part of the appropriator to apply the water within a reasonable time to such a use or purpose, there is in effect a forfeiture of the inchoate right. "Unless such beneficial use follows, the interest thus acquired does not ripen into an appropriation, the inchoate right terminates, and the water goes to the junior claimants who have complied with all of the requirements of the law."[21] The Court held in effect that no valid appropriation had been made for the reason that the inchoate rights, for failure to comply with the conditions of the law governing appropriations, had terminated or had been forfeited.[22] There is no statute in Colorado providing that for the continuous non-user for a prescribed period it works a forfeiture to a vested or perfected right. The courts hold that non-user alone, at least short of the statutory period, is not sufficient to prove an abandonment, and, therefore, the courts rely upon the law of abandonment, discussed in previous sections,[23] rather than upon any law of forfeiture for perfected rights.

36, and Ison v. Nelson (Ore.), 47 Fed. Rep. 199, where it was held that the intent to abandon was shown to co-exist with the acts of non-user, and, therefore, the rights were forfeited under the statute.

In a late case, however, it was held that the right to the use of water by non-user alone can not be deemed forfeited short of the period prescribed by the statute of limitations for actions for the recovery of real estate. Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

20 "No principle in connection with the law of water rights in this State is more firmly established than that the application of water to a beneficial use is essential to a completed appropriation." Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304.

21 Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304.

22 See, also, Farmers' Pawnee C. Co. v. Pawnee etc. Co., 47 Colo. 239, 107 Pac. Rep. 286, where the Court held that under a contract whereby defendant granted water rights, such rights to be forfeited upon the failure of the plaintiff to complete certain work within five years, where such work was not completed within the time, it was held that the rights were forfeited.

The mere failure of the owner of a water right to pay a company each season for carrying his water, is not a forfeiture of the right. Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95.

23 See Secs. 1100-1117.

See Alamosa Cr. C. Co. v. Nelson, 42 Colo. 140, 93 Pac. Rep. 1112.

§ 1120. **Construction of statutes providing for the forfeiture of rights.**—The fixing of a definite time to declare a forfeiture for the failure to comply with some condition imposed by the law is usually for the legislature and not for the courts. It is the duty of the courts to construe the Acts of the legislature as they are enacted.[1] But it is not beyond the power of the courts to fix such a limitation, as was in the case of Missouri v. Illinois,[2] where Mr. Justice Holmes, in rendering the opinion of the Court, said: "The courts did fix a time in the rule against perpetuities, but the usual course, as in the instances of statutes of limitation, the duration of patents, the age of majority, etc., is to depend upon the lawmaking power." In the case of Smith v. Hawkins,[3] the leading case in California upon the question of forfeiture for the non-user of a right, the Court unquestionably exercised legislative power, from the fact that there was no specific statute in that State fixing the time for the forfeiture of a water right for non-user, and the Court, by analogy, fixed the time at five years, that being the period of time "fixed by law for the ripening of an adverse possession into prescriptive title." Yet the Court had the power to do this, and this decision will undoubtedly stand as a precedent upon the subject.

These statutes fixing the maximum time limit for the non-user of a water right, where free from ambiguity, should be strictly construed by the courts. Such an act should be strictly construed, and a case clearly made out before any relief should be extended to the delinquent thereunder. "When a statute gives a new and unusual remedy, and directs how the right to the remedy is to be acquired or enjoyed, and how it is to be enforced, the Act should be strictly construed; and the validity of all acts done under the authority of such an Act will depend upon the compliance with its terms. In respect to such Acts, the steps pointed out for the acquisition, preservation, and enforcement of the remedies provided should be construed as mandatory, rather than optional."[4] So, also, in construing a particular section of an Act, all the provisions of the Act, as

1 Missouri v. Illinois, 200 U. S. 496, 50 L. Ed. 572, 26 Sup. Ct. Rep. 268; *Id.*, 180 U. S. 208, 45 L. Ed. 497, 21 Sup. Ct. Rep. 331.

2 *Supra.*

3 110 Cal. 122, 42 Pac. Rep. 453, 19 Morr. Min. Rep. 243; *Id.*, 120 Cal. 86, 52 Pac. Rep. 139, 19 Morr. Min. Rep. 243.

4 Campbellsville Lumber Co. v. Hubbert, 112 Fed. Rep. 718, 50 C. C. A. 435.

well as its object, must be considered, but if the language is unambiguous, it must ordinarily be given full force and effect. But, as stated by Mr. Justice Frick, in a very recent case decided by the Utah Supreme Court,[5] "When, therefore, a forfeiture of a preexisting right is claimed by reason that a particular clause or section of an entire Act has not been literally complied with, and when the statute does not in terms or by unavoidable implication declare that a failure of a strict compliance shall work a forfeiture, the courts may well pause before declaring a forfeiture by reason that all the provisions of the Act have not been literally complied with." And the Court held that in the acquisition of a water right, where application for an appropriation of water was made to the State engineer, under the provisions of the statute,[6] which statute gave him large discretionary powers with authority to extend the time that he had fixed to completing the works required to perfect the appropriation, and the work was commenced within the statutory time and prosecuted in good faith and with due diligence, he might extend the time, if not beyond the final limit fixed by the statute, although the application therefor was made after the time first fixed by him had expired. But the opinion adds: "We do not wish to be understood as holding that the State engineer may arbitrarily extend the time limits fixed by him at any time and under all circumstances. It may well be that, if an applicant had ceased work, so that it may be deemed a virtual abandonment, the engineer may not in effect reinstate the application after a second applicant's rights under his application have attached, and in that way defeat the rights of the second applicant."

# CHAPTER 57.

## THE DOCTRINE OF ESTOPPEL.

§ 1121. Scope of chapter.
§ 1122. Estoppel defined.
§ 1123. Estoppel by deed.
§ 1124. Estoppel by matter of record.
§ 1125. Estoppel by matter in pais—Definition and essentials.
§ 1126. Estoppel by matter in pais as applied to water rights.
§ 1127. Estoppel by matter in pais—Silence not amounting to consent, will not work as estoppel.
§ 1128. Estoppel by matter in pais—Riparian owners estopped when.

§ 1121. **Scope of chapter.**—The owners of water rights acquired by appropriation, and other rights kindred thereto, such as their necessary ditches, canals, or other works,[1] and the owners of riparian rights,[2] may lose such rights by their conduct, amounting to an estoppel. Any representations or conduct upon the part of the owner of such a right, which will lead others to change their position and act upon the faith thereof, will, under the doctrine of estoppel, prevent him from thereafter asserting rights inconsistent with such representations.[3] And, correspondingly, the right lost in this manner by one party may be gained by others with its respective priority.

In this chapter we will discuss the various phases of estoppel as applied to the subject in hand.

§ 1122. **Estoppel defined.**—Estoppel has been defined as the preclusion of a person from asserting a fact by previous conduct inconsistent therewith on his own part or the part of those under whom he claims, or by an adjudication upon his rights which he can not be allowed to call in question.[1] Upon the question of water rights, and the rights kindred thereto, here under discussion, estoppel may

[1] For the loss of appropriators by estoppel, see Secs. 1125-1127.

For loss of ditches, canals, etc., by estoppel, see Sec. 1126.

[2] For the loss of riparian owners by estoppel, see Sec. 1128.

[3] See authorities cited in the following sections.

[1] Bouvier, Law Dict., Sub., Estoppel.

"The doctrine of estoppel is intended to preclude fraud, and to that

be subdivided under the usual heads, that is to say: By deed,[2] by matter of record,[3] and by matter *in pais*.[4] We will discuss the subject in the order of the subdivisions named in the following sections.

§ 1123. **Estoppel by deed.**—Estoppel by deed is such as arises from the provisions of a deed. It is a general rule that a party is estopped to deny anything stated therein which has operated upon the other party as the inducement to accept and act under the deed.[1] Where, therefore, there is a direct grant of a water right, or other right, in definite and unambiguous language, and the deed has been accepted by the grantee, and possession taken of the property granted, the grantor is estopped from thereafterwards denying the rights of the grantee to the property definitely and particularly described in the deed.[2] But it is only as to the particular and definite recitals in the deed that such an estoppel is worked. The courts are not permitted to indulge in suppositions, or to draw inferences from ambiguous language employed in such deeds.[3] So,

end imposes silence on a party, when in conscience and honesty he should not be allowed to speak." Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286.

See, also, Van Rensselaer v. Kearney, 52 U. S. 11 How. 297, 13 L. Ed. 703.

2 See Sec. 1123.

3 See Sec. 1124.

4 See Secs. 1125-1128.

1 1 Washburn, Real Property, 464.

2 In a late case in Washington, an owner of land conveyed one acre thereof with a specific water right, and subsequently conveyed the remainder of the tract subject to the grant of the water right described in the former deed, but described a greater water right. By mesne conveyances plaintiff acquired title to the one tract and the defendant to the remainder of the tract without knowledge of other conveyances relating to the extent of the water right appurtenant to the one-acre tract. It was held by the Court that both parties were estopped by the recitals in the respective deeds constituting their respective chain of title and their rights must be adjusted without regard to any estoppel, the Court saying: "Thus, if both parties claim under the same person, and one is estopped by one deed and the other is estopped by another deed, both made by that person, one estoppel offsets the other, and the rights of the parties are to be adjusted without regard to any estoppel." Schmidt v. Olympia Light & Pr. Co., 46 Wash. 360, 90 Pac. Rep. 212.

3 Zimmler v. San Luis W. Co., 57 Cal. 221, citing Kepp v. Wiggett, 10 Com. Bench 35, 70 Eng. Cas. L. 34, and saying: "That case is cited as an illustration of the strict adherence of the courts to the rule that an estoppel must be certain to every intent," and holding as to the case at bar that, although in a deed there was a plain and positive grant to

again, an after-acquired title to water rights by the grantor will not inure to the benefit of the grantee, and neither is the grantor estopped from claiming the same, where the grantee knew at the time of the transfer that the grantor had no title and did not expect him to procure one, or where the title purported to be conveyed is an inchoate interest, the completion or forfeiture of which depends upon some acts to be performed, or diligence to be exercised by the grantee.[4]

Upon the other hand, the grantee is not estopped by his acceptance of a deed containing a reservation to the grantor of a priority of appropriation of water for a certain reservoir, when, in fact, the priority of appropriation had been secured from afterward making an appropriation of his own for such reservoir.[5] A party to a contract for water rights, by making claim of the rights under the contract, is estopped from denying the execution and delivery of the same.[6]

§ 1124. **Estoppel by matter of record.**—Estoppel by matter of record is such as arises from the adjudication of a case by a court of record having jurisdiction of the same. Parties who have partici-

convey water over the land, beyond that all was a matter of conjecture, and that the language of the deed did not estop the grantor from denying the right of the grantee to the water formerly conveyed in the ditch or the right to divert water from the creek.

See, also, as to the general recitals not estopping the grantors from disputing statements made in them: Independent School District v. Stone, 106 U. S. 183, 27 L. Ed. 90, 1 Sup. Ct. Rep. 84; Farrer v. Cooper, 34 Me. 394; Noble v. Cope, 50 Pa. St. 17; Muhlenburg v. Druckenmiller, 103 Pa. St. 631; Calkins v. Copley, 29 Minn. 471, 13 N. W. Rep. 904; Lucas v. Beebe, 88 Ill. 427.

An irrigation company is held to be estopped by the covenants of its deed from showing that there was not sufficient water to supply it to those to whom conveyances had been made since the sellers themselves had exercised the functions of the corporation and caused it to make such conveyances. Lombard v. Schlotfeldt, — Wash. ——, 123 Pac. Rep. 787.

4 "To hold their grantors estopped to assert after-acquired title, under such conditions, would be to make estoppel a weapon of injustice, rather than a shield to protect the wronged." Gardner v. Wright, 49 Ore. 609, 91 Pac. Rep. 286.

See, also, Rianda v. Watsonville etc. Co., 152 Cal. 523, 93 Pac. Rep. 79.

5 Windsor Res. etc. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

6 Fresno etc. Co. v. Hart, 152 Cal. 450, 92 Pac. Rep. 1010.

pated in the benefits of a decree and have claimed and enjoyed the rights under the same by accepting its provisions and using the waters decreed to them, are estopped from assailing its validity, and are bound by the same.[1] But, in order to work an estoppel by matter of record, in cases of this nature, the decisions of the courts establish the rule that the same degree of certainty must be attained as in the case of estoppel by deed discussed in the previous section. The judgment and decree of the Court must fix the extent of the right, the quantity of the water allowed, and all other matters adjudicated by the Court in the case with certainty and definiteness, otherwise the judgment fails to attain the certainty necessary to work an estoppel.[2] Vague and uncertain judgments do not consti-

1 One who recognizes a decree by participating in its benefits is estopped from denying its validity. Boulder etc. Co. v. Lower Boulder D. Co., 22 Colo. 115, 43 Pac. Rep. 540.

A party accepting and retaining the fruits of a void judgment is estopped from assailing the judgment itself. And, as to him, such a judgment has the same force and effect as a valid judgment. Denver City etc. Co. v. Middaugh, 12 Colo. 434, 21 Pac. Rep. 565, 13 Am. St. Rep. 234; Handy D. Co. v. South Side D. Co., 26 Colo. 333, 58 Pac. Rep. 30.

See, also, Town v. Town of Yellowhead, 80 Ill. 208; Town v. Town of Blackbury, 29 Ill. 137; Duff v. Wynkoop, 74 Pa. St. 300; Felch v. Gilman, 22 Vt. 39; Arthur v. Israel, 15 Colo. 147, 25 Pac. Rep. 81, 10 L. R. A. 693, 22 Am. St. Rep. 381; Embury v. Connor, 3 N. Y. 511, 53 Am. Dec. 325; Sabin v. Vermont C. R. Co., 25 Vt. 363; Freeman on Judgments, Sec. 249.

A party to a decree settling priorities of water rights is estopped from assailing its validity after the lapse of several years, where he stood by while third parties expended money in the acquisition of valuable rights upon the strength of the decree. Broadmoor etc. Co. v. Brookside etc. Co., 24 Colo. 541, 52 Pac. Rep. 792.

See, also, Last Chance D. Co. v. Heilbron, 86 Cal. 1, 26 Pac. Rep. 523; Water Supply etc. Co. v. Tenney, 24 Colo. 344, 51 Pac. Rep. 505; Consolidated etc. Co. v. New Loveland etc. Co., 27 Colo. 521, 62 Pac. Rep. 364; Lowe v. Yolo County etc. Co., 157 Cal. 503, 108 Pac. Rep. 297, 8 Cal. App. 167, 96 Pac. Rep. 379.

Where plaintiff relied in the trial Court on an estoppel arising from defendant's admission in his answer in a previous suit, she could not change her position on appeal, and claim that the judgment was conclusive as to the facts on which the estoppel was based. Flannery v. Campbell, 30 Mont. 172, 75 Pac. Rep. 1109.

"And, even if the water decree of 1897 were void, plaintiff in error would be now estopped from repudiating or assailing the same." Kerr v. Burns, 42 Colo. 285, 93 Pac. Rep. 112.

2 See for judgments and decrees, Secs. 1557-1564.

"The decisions of this Court establish that in cases like the present the findings and judgment must fix the

tute a complete determination of the rights of either party, and can not, therefore, be pleaded as an estoppel.[3] So, again, a prior appropriator of water is not estopped from asserting against another his superior rights to the water of a stream in times of scarcity, because he had, without objection upon his part, permitted the water commissioner to distribute such water between the parties claiming the same on the basis of an erroneous construction of a decree settling the rights.[4]

But an estoppel need not rest alone upon a judgment or decree. It may rest upon other matters of record. Estoppel by record may be worked by the pleadings made by the party sought to be estopped or by some other record made or assented to by him in the course of the trial of the case.[5]

§ 1125. **Estoppel by matter in pais—Definition and essentials.**—The third kind of estoppel under our classification [1] is estoppel by matter *in pais*, or, as it is sometimes called, equitable estoppel, or estoppel by conduct. Estoppels of this character are the most common in connection with the subject of the rights under discussion. Estoppel by matter *in pais*, or equitable estoppel, is such as arises from the acts and declarations of a person by which he designedly induces another to alter his position injuriously to himself. It is said to have its foundation in fraud in its most general sense.[2] To

extent of the superior right, viz., the quantity of water to be allowed to the party whose claim is paramount; otherwise the judgment fails to attain the certainty necessary to an estoppel upon the main subject of the litigation." Riverside W. Co. v. Sargent, 112 Cal. 230, 44 Pac. Rep. 560, citing Dougherty v. Haggin, 56 Cal. 522; *Id.*, 61 Cal. 305; Alhambra W. Co. v. Richardson, 72 Cal. 598, 14 Pac. Rep. 379; Lakeside D. Co. v. Crane, 80 Cal. 182, 22 Pac. Rep. 76; Barrows v. Fox, 98 Cal. 63, 32 Pac. Rep. 811; Lillis v. Emigrant D. Co., 95 Cal. 553, 30 Pac. Rep. 1108.

3 Rogers v. Overacker, 4 Cal. App. 333, 87 Pac. Rep. 1107.

Condemnation proceedings brought by plaintiff to secure a right of way for an enlarged pipe line will not estop him from asserting a prescriptive right to the land upon which the original line was maintained, since the proceedings were not to acquire the right then in use, but to enlarge it. Knight v. Cohen, 7 Cal. App. 43, 93 Pac. Rep. 396.

4 Water Supply etc. Co. v. Tenney, 24 Colo. 344, 51 Pac. Rep. 505.

5 See Hackett v. Larimer & Weld Res. Co., 48 Colo. 178, 109 Pac. Rep. 965; Shaw v. Profitt, 57 Ore. 192, 109 Pac. Rep. 584, 110 Pac. Rep. 1092.

1 See Sec. 1122.

2 For a leading case upon this subject, see Pickard v. Sears, 6 Ad. & El. 469.

constitute such an estoppel, the person sought to be estopped must do some act or make some admission with an intention of influencing the conduct of another, or that he had reason to believe would influence his conduct, and which act or admission is inconsistent with the claim he afterward makes. The other party, too, must have acted upon the strength of such admission or conduct.[3]

Mr. Bispham, in his work on Equity, upon this subject, says: "Equitable estoppel, or estoppel by conduct, has its foundation in fraud considered in its most general sense; because a man can not be prevented by his conduct from asserting a previous right, unless the assertion would be tantamount to a fraud upon a person who had subsequently acquired the right."[4]

Therefore, there must be some actual misrepresentation or some degree of turpitude upon the part of the party sought to be estopped before a Court will estop him from the assertion of his title—the effect of the estoppel being to forfeit his property and transfer it to another.[5] "In all this class of cases," says Mr. Justice Story, speaking of equitable estoppels, "the doctrine proceeds upon the ground of constructive fraud or of gross negligence, which, in effect, implies fraud. And, therefore, where the circumstances of the case repel any such inference, although there may be some degree of negligence, yet courts of equity will not grant relief."[6]

As laid down by the Supreme Court of Utah, in order to create an equitable estoppel, the essential elements are that the party

[3] New York Rubber Co. v. Rothery, 107 N. Y. 310, 14 N. E. Rep. 269, 1 Am. St. Rep. 822; Rigney v. Tacoma etc. Co., 9 Wash. 576, 38 Pac. Rep. 147, 26 L. R. A. 425; Madison v. Spokane Valley etc. Co., 40 Wash. 714, 82 Pac. Rep. 718, 6 L. R. A., N. S., 257.

[4] Bispham on Equity, Sec. 282.

"A party who claims that another, seeking to enforce his rights, shall not be permitted to allege and show the truth, must establish that he has been induced, by his faith in or reliance upon the assertions or acts of such party to the contrary, to do some act, or incur some liability, which would make it injurious to, or a fraud upon him to allow the truth to be shown." Herman on Estoppel, Sec. 1304.

[6] Story on Equity, Sec. 391.

See, also, cases cited in the next sections, Nos. 1126-1128.

estopped should have: "First, falsely represented or concealed a material fact; second, the false representation or concealment must have been knowingly made; third, the party pleading the estoppel must have been ignorant of the fact; fourth, the representation must have been made with the intention that it should be acted upon; fifth, the party pleading it must have been misled thereby to his injury in some substantial particular."[7] The long receipt of mere waste water does not give a permanent right to have the discharge continued, either by appropriation, prescription, or estoppel. This matter has been discussed in another portion of this work,[8] and further discussion here is unnecessary.

**§ 1126. Estoppel by matter in pais as applied to water rights.**—In an early California case it was held to the effect that, where one had the prior right to the use of water and merely "stood by and saw" others take steps to appropriate the water at a great expenditure of money, the prior appropriator was estopped from setting up his prior right.[1] But from the weight of authority we do not think that the above ruling is or was the law upon the subject of equitable estoppel as applied, the effect of such an estoppel being to forfeit the property of a prior appropriator and transfer it to a later comer.[2] The early California case of Parke v. Kilham was, in effect, a few years after its decision overruled by the Court, and the rule adopted that, in order to constitute an equitable estoppel, there must be some degree of turpitude in the conduct of the party sought to be estopped before a court of equity will estop him from the assertion of his title.[3] In the case of Lux v. Haggin, it is said of the Parke v. Kilham decision:[4] "In the light of subsequent

4 *Supra.*

decisions it can scarcely be claimed that the facts recited in the instruction constituted an equitable estoppel which could be relied on as a defense at law."[5] And the Court in the later case said: "To constitute such an estoppel it must also be shown that the person sought to be estopped has made an admission or done an act with the intention of influencing the conduct of another, or that he had reason to believe would influence his conduct, inconsistent with the evidence he proposes to give, or the title he proposes to set up; that the other party has acted upon or been influenced by such act or declaration; that the party so influenced will be prejudiced by allowing the truth of the admissions to be disproved." This, in view of the definition and essentials of equitable estoppel, as given in the preceding section,[6] is the correct rule upon the subject.[7] So the mere fact that the subsequent appropriator employed the prior

[6] See Sec. 1125.

[7] "There must be some degree of turpitude in the conduct of a party, before a Court of equity will estop him from the assertion of his title, when the effect of the estoppel is to forfeit his property, and transfer its enjoyment to another." Lower Latham D. Co. v. Louden etc. Co., 27 Colo. 267, 60 Pac. Rep. 629, 83 Am. St. Rep. 80.

See, also, Water Supply etc. Co. v. Tenney, 24 Colo. 344, 51 Pac. Rep. 395; Smyth v. Neal, 31 Ore. 105, 49 Pac. Rep. 850; Rigney v. Tacoma etc. Co., 9 Wash. 576, 38 Pac. Rep. 147, 26 L. R. A. 425; Wimer v. Simmons, 27 Ore. 1, 39 Pac. Rep. 6, 50 Am. St. Rep. 685; Elliot v. Whitmore, 23 Utah 342, 65 Pac. Rep. 70, 90 Am. St. Rep. 300; Williams v. Harter, 121 Cal. 47, 53 Pac. Rep. 405; Senior v. Anderson, 130 Cal. 290, 62 Pac. Rep. 563; Strong v. Baldwin, 154 Cal. 150, 97 Pac. Rep. 178, 129 Am. St. Rep. 141; Village of Hailey v. Riley, 14 Idaho 481, 95 Pac. Rep. 686, 17 L. R. A., N. S., 86; Verdugo etc. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021; Riverside Heights W. Co. v. Riverside Trust Co., 148 Cal. 457, 83 Pac. Rep. 1003; Madison v. Spokane etc. Co., 40 Wash. 414, 82 Pac. Rep. 718, 6 L. R. A., N. S., 257; Gustin v. Harting, —— Wyo. ——, 121 Pac. Rep. 522; Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045, where the Court held that there could be no estoppel as to the defendants, where it did not appear that they said or did anything to mislead the plaintiff.

A water company is not estopped from contesting the constitutionality of a city ordinance fixing its water rates at a rate in violation of a provision in a contract between the city and the grantors of the company, merely because for 15 years it had collected the rates established by similarly objectionable ordinances, where it had annually protested against the city's conduct. City of Los Angeles v. Los Angeles etc. Co., 177 U. S. 558, 44 L. Ed. 886, 20 Sup. Ct. Rep. 736; affirming 88 Fed. Rep. 720.

appropriator in the construction of his works does not estop the prior appropriator from afterward asserting his rights.[8] To work such an estoppel, the evidence must conclusively show that the money had been expended or labor performed pursuant to an agreement of the parties.[9] The safer way, where one sees works being constructed for the appropriation of waters which are liable to interfere with the rights of an owner, is to serve a notice of his claim upon the parties constructing the works. This will prevent any estoppel in favor of the parties so served by reason of any subsequent expenditures made by them.[10]

Upon the other hand, any conduct upon the part of the owner of a right, ditch, or canal, or other works [11] which will lead others to change their position on the faith of representations made by him, will estop the owner of such rights from asserting rights inconsistent with his representations.[12] Rights to real estate may be obtained

[10] Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 158 Cal. 206, 110 Pac. Rep. 927; Burr v. Maclay etc. Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 715.

[11] For estoppel as to rights in ditches and canals, see Sec. 984.

[12] Where the appellant abandoned the possession of an unsurveyed tract of land, and stated to the respondent's grantor that he no longer had any interest in it; and whereupon the latter took actual possession of the land, at considerable expense, and used the water in dispute upon it, without objections from the appellant, such party was estopped from claiming the water right against the respondent. Morrison v. Winn, 18 Utah 15, 54 Pac. Rep. 761.

Where the evidence shows that the owner consented to the diversion in derogation of his prior rights, he is estopped from afterwards claiming them. Churchill v. Bauman, 95 Cal. 541, 30 Pac. Rep. 770; *Id.*, 104 Cal. 369, 36 Pac. Rep. 93, 38 Pac. Rep. 43.

Where parties have settled differences by an agreement, each will thereafter be estopped from denying the right of the other to divert and use the water in accordance with such agreement. Saunders v. Robinson, 14 Idaho 770, 95 Pac. Rep. 1057.

See, also, Natoma W. Co. v. Hancock, 101 Cal. 42, 35 Pac. Rep. 334, reversing 101 Cal. 42, 31 Pac. Rep. 112; Huston v. Bybee, 17 Ore. 140, 20 Pac. Rep. 51, 2 L. R. A. 568; Parker v. City of Atchison, 58 Kan. 29, 48 Pac. Rep. 631; De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac.

and irrevocably fixed and determined by estoppel by matter *in pais*.[13]

The question of estoppel as to questions relating to ditches and canals and rights of way for the same has been discussed in a previous portion of this work.[14] But, in general, we will say here that where one enters the enclosure of another and constructs a ditch, canal, or other works thereover at large expense, and the owner of the land acquiesces and permits them to remain there for a long period of time, such owner is estopped from denying the appropriator's right on the ground that he is a trespasser.[15] Again, where the owner of an irrigation ditch constructed on public lands induces subsequent settlers to take up lands that can only be irrigated by the ditch, and to labor upon and increase its capacity with the understanding that they were to use the water and the ditch as the other settlers, he is estopped to deny their right so acquired.[16]

**§ 1127. Estoppel by matter in pais—Silence not amounting to consent will not work an estoppel.**—Upon the question of silence operating as an estoppel, the authorities are not quite harmonious. The true rule as we view the subject is that unless the silence upon the part of the owner can be construed as a consent or at least an acquiescence, an estoppel will not be worked. Of course, if the silence is continued for the full period of the statute of limitations as a bar to an action for the recovery of real property, by the laches of the owner, and the adverse possession and user of the one seeking the right, a prescriptive right may be acquired. But where one party invades the right of another, that other does not, in general, deprive himself of the right of seeking redress merely because he remains passive, unless, indeed, he continues inactive so long as to

Rep. 1001; Fabian v. Collins, 3 Mont. 215.

14 See Sec. 984.

15 Miller v. Douglas, 7 Ariz. 41, 60 Pac. Rep. 722; Scott v. Toomey, 8 S. D. 639, 67 N. W. Rep. 838; Sweetland v. Grants Pass etc. Co., 46 Ore. 85, 79 Pac. Rep. 337; Foster v. Bear Valley Irr. Co., 65 Fed. Rep. 836; Campbell v. Shivers, 1 Ariz. 161, 25 Pac. Rep. 540.

But see South Side Imp. Co. v. Burson, 147 Cal. 401, 81 Pac. Rep. 1107.

16 Lehi Irr. Co. v. Moyle, 4 Utah 327, 9 Pac. Rep. 867; Brown v. Evans, 18 Nev. 141, 1 Pac. Rep. 673.

bring the case within the purview of the statute of limitations.[1] Therefore, silence in and of itself does not imply consent or acquiescence unless that silence should continue for such a period that the owner would be guilty of laches in not speaking when the law says he should have spoken in order to protect his rights. And, generally speaking, the statute of limitations governs in cases of this nature. Therefore, that a ditch, canal, or other works were constructed at a great cost and were maintained and they and the water right used with the knowledge of the prior appropriator or owner, without any objection or opposition upon his part, is not by the mere silence upon his part sufficient to operate as an immediate estoppel against his afterward asserting his claim to his rights.[2]

1 Wood on Limitations, Sec. 62.

For the acquisition of rights by prescription, see Chap. 54, Secs. 1033-1058.

2 Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674, where it is said: "But, whatever the facts, we can not assent to the proposition—apparently recognized by the Court—that the mere silence of plaintiff's grantors, disconnected from other circumstances in evidence, created an estoppel at law."

"The evidence shows that the plaintiff was employed by the defendant about its mill; that he knew that it was being constructed to reduce ores, and made no objection to the erection thereof. Such tacit acquiescence, however, is not sufficient to create an equitable estoppel." Brown v. Gold Coin M. Co., 48 Ore. 277, 86 Pac. Rep. 361.

A corporation is not estopped from challenging the validity of a contract made on behalf of its directors, interested therein adversely to the corporation, by laches on the part of such directors in not causing the contract to be set aside, but allowing the other party to expend money on the strength of the contract. Goodell v. Verdugo etc. Co., 138 Cal. 308, 71 Pac. Rep. 354.

"The mere fact that the defendants expended money in sinking wells and putting in pumps each upon his own lands, with the knowledge of the plaintiffs and without objection by them, creates no estoppel." Verdugo Canon W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021.

In Wyoming, where the defendant acquired a water right before the adoption of the constitution, the fact that he failed to present his claim of priority to the board of control, after notice of proceedings to establish his claim, does not estop him from asserting his right in the District Court. Farm Inv. Co. v. Carpenter, 9 Wyo. 110, 61 Pac. Rep. 258, 50 L. R. A. 747, 87 Am. St. Rep. 918.

See, also, Lavery v. Arnold, 36 Ore. 84, 57 Pac. Rep. 906, 58 Pac. Rep. 524; Hallock v. Suitor, 37 Ore. 9, 60 Pac. Rep. 384; Ewing v. Rhea, 37 Ore. 583, 62 Pac. Rep. 790, 52 L. R. A. 140, 82 Am. St. Rep. 783; Bolter v. Garrett, 44 Ore. 304, 75 Pac. Rep. 142; Lower Latham D. Co. v. Louden etc. Co., 27 Colo. 267, 60 Pac. Rep. 629, 83 Am. St. Rep. 80; Madison v. Spokane Valley etc. Co., 40

The silence without objection upon the part of the owner is a mere license, and may be treated as such.[3] So, as held by the Oregon court, the mere passive acquiescence on the part of the owners of land in the expenditure of a considerable sum of money for the construction of an irrigating ditch across their property does not estop them, or their grantees, from destroying the ditch within the period of limitations, since the right to maintain it is a mere license, and revocable at pleasure.[4] And where the word "acquiescence" is used it must mean more than a passive acquiescence or a failure to object. "A mere passive acquiescence where one is under no duty to speak does not raise an estoppel."[5]

[5] Verdugo Canyon W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021.

But, upon the other hand, the circumstances may be such that it is the duty of one, where he sees his rights about to be invaded by another to speak out and lay claim to the same; otherwise he will be estopped from afterward setting them up and claiming them. Such was held to be the case where one who had a prior right by prior appropriation to the use of water of a certain stream stood by and allowed another wrongfully claiming to own the right to sell it to a third party, without asserting and making known his claim. By reason of his failing to speak when he should have spoken, he was estopped from thereafterward asserting or claiming the right.[6] "It is elementary that he who fails to assert his alleged rights, when in good faith he should have done so, is estopped from afterward asserting the same."[7] As was said in a recent Colorado case:[8] "He that remains silent when conscience requires him to speak shall not be heard to speak when conscience requires him to remain silent."

Again, where the evidence is conclusive that the owner, knowing that his rights were about to be invaded by another, stood by and permitted the other parties to construct expensive works, use, and enjoy the rights, and by his actions assented and invited such works and use, although he did not do so in terms, but by his very silence, he induces them to believe that such rights might be acquired, that thereafterward to deprive them of such rights would work an injustice and fraud upon them, such owner will be held to be estopped from setting up or claiming such rights.[9] It must be noticed here, however, that some of the authorities go to the extent that such a case works an estoppel only as to injunctive relief, and that the owner may have his action at law for damages. We will discuss these subjects in a subsequent portion of this work.[10]

[10] For actions for injunctions, see Chap. 81.

For actions for damages, see Secs. 1660-1704.

**§ 1128. Estoppel by matter in pais—Riparian owners estopped when.**—As is the case with those who have acquired their rights by the Arid Region Doctrine of appropriation, discussed in the previous sections,[1] so, also, may riparian owners estop themselves from asserting their rights as against persons who have been induced by their conduct to go to the expense of making improvements for the utilization of the waters of a stream on the faith of such representations made by them in such a way that it would constitute a fraud upon the other parties for him afterward to claim the right.[2] So, therefore, where a riparian proprietor has been guilty of misrepresentation or some degree of moral turpitude, as in other cases,[3] and has stood by and permitted others to appropriate the waters of a stream at great expense, he may be estopped from claiming his right to the water as such riparian proprietor. But usually something more than mere silence is required to create such an estoppel; and a riparian proprietor who sees parties preparing to appropriate the

"Where the complainant has stood by while the development was made for public use, and has suffered it to proceed at a large expense to successful operation, having reasonable cause to believe it would affect his own water supply, the injunction should be refused, and the party is left to his action for such damages as he can prove." Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

Co., 48 Ore. 277, 86 Pac. Rep. 361; Andrus v. Berkshire Pr. Co., 145 Fed. Rep. 47; reversing 147 Fed. Rep. 76, 77 C. C. A. 248; McBroom v. Thompson, 25 Ore. 559, 37 Pac. Rep. 57, 42 Am. St. Rep. 806; McCook Irr. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249; Duckworth v. Watsonville etc. Co., 150 Cal. 520, 89 Pac. Rep. 338; *Id.*, 150 Cal. 206, 110 Pac. Rep. 927.

Where a riparian owner diverts the stream into an artificial channel and continues such change for the time exceeding the statute of limitations, he is estopped as against a person making a beneficial use of the water to return it to the latter. Hallet v. Davis, 54 Wash. 326, 103 Pac. Rep. 423.

A riparian owner who knowingly stands by while a public service corporation constructs and completes at great expense a system of works designed for public use is estopped from invoking the aid of equity to restrain the diversion of water necessary for the works, and his remedy is at law for damages. Miller & Lux v. Madera C. Co., 155 Cal. 59, 99 Pac. Rep. 502, 22 L. R. A., N. S., 391.

3 See Sec. 1125.

waters of a stream, and constructing their ditches, canals, or other works, has been held not to lose his rights by mere silence in not objecting.[4] Nor is an upper riparian proprietor who enters into an agreement with a lower proprietor whereby the latter grants for a certain term the right to the use of the water of the adjoining stream, upon the expiration of the agreement, estopped from asserting his rights as a riparian proprietor to the use of the water of such stream, by virtue of his own ownership.[5] Further, no estoppel can arise from the failure of a riparian proprietor to object to the use of the water of a stream by another proprietor during such times as there is an abundant supply for the use of all.[6] Again, in the absence of some representations showing misconduct, the mere non-user of the water by a riparian owner creates no estoppel.[7]

[4] Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Hargrave v. Cook, 108 Cal. 72, 41 Pac. Rep. 18, 30 L. R. A. 390.

A riparian owner is not estopped by mere silence and not objecting to maintain a suit to enjoin an unlawful diversion of water above his lands by any delay in not bringing the suit short of the statutory period of limitations. California v. Enterprise & Ag. Co., 127 Fed. Rep. 741.

# CHAPTER 58.

## THE POLLUTION OF WATERS.

§ 1129. Scope of chapter—Pollution of waters defined.
§ 1130. Pollution—In general.
§ 1131. Pollution of water used for irrigation.
§ 1132. Pollution of water used for various purposes.
§ 1133. Pollution from sewage.
§ 1134. Pollution from sewage—Missouri v. Illinois.
§ 1135. Pollution from the discharge of water from factories and mills.
§ 1136. Pollution from debris from mines and reduction mills.
§ 1137. Pollution by miscellaneous means.
§ 1138. The pollution of underground waters.
§ 1139. The acquisition of the right of pollution by contract and prescription.
§ 1140. Pollution as against the rights of riparian owners.
§ 1141. Pollution as against the rights of appropriators—Priority.
§ 1142. Remedies for injuries from pollution.
§ 1143. Remedies—Injunctions.
§ 1144. Remedies—Actions for damages—Measure of damages.
§ 1145. Remedies—Criminal prosecution.
§ 1146. Remedies—Defenses.
§ 1147. Remedies—Evidence—Burden of proof.

**§ 1129. Scope of chapter—Pollution of waters defined.**—As the pollution of waters constitutes a distinct phase of the subject of the law of waters, in order to discuss the entire subject together in this chapter, we will discuss the subjects of the pollution of waters, protection against pollution, and remedies therefor.

Pollution of waters may be defined as any use of a stream, or other body of water, that materially fouls the water, or the deposit therein of any filth or debris that so far affects the water as to impair its value for ordinary purposes, or anything which renders the water offensive to taste or smell, or which is calculated to excite disgust in those using it for ordinary purposes.[1] In this chapter, however, we will go further than is defined by the above definition, and include the debris from mines and mills cast into streams.

[1] Shoffner v. Sutherland, 111 Va. 298, 68 S. E. Rep. 996.

§ 1130. **Pollution—In general.**—Water may be polluted in any one of three states or in all. First, in falling through the air the rain water naturally washes out any impurities held there in suspension, which impurities may consist of dust of organic and mineral matter. Consequently, oftentimes, when the rain falls upon the earth, it is not, as commonly supposed, pure water; second, water after it strikes the surface of the earth, either flowing over the earth as what is known technically as surface water, or in streams and rivers, gathers up many more impurities, such as organic matter, algae, disease germs, and mineral substances; third, water may be polluted in its passage underground, where it comes in contact with organic or mineral substances, and although it may be practically pure when it strikes the earth and sinks into the ground, it may emerge in the form of springs in a polluted condition.[1] All of these polluted conditions of waters may be solely the result of natural laws, or they may have been materially aided by the works of man. With the first, in this work, we have nothing to do; with the second we will treat only so far as the legal phases of the question are concerned.

Wherever man exists the pollution of the natural waters caused by his agency will also be found to a more or less extent. And as the population of the country becomes more and more dense, the pollution of the natural streams increases proportionately. The subject has long occupied the attention of chemists, engineers, legislatures, and the courts. And it has been determined that, wherever civilization exists, it is an absolute impossibility to wholly prevent it. As well may we attempt to legislate against the pollution of streams by the laws of Nature as to attempt to prohibit by legislation any pollution of streams in a country where man exists and carries on the various occupations of civilization. But by wise laws the pollution of natural waters may be restricted and the injuries resulting therefrom minimized.

In an economic sense, as to whether or not water must be deemed polluted or not, depends largely upon the purpose for which it is used, and the extent and character of the impurities in the water. And as we will discuss in the following sections of this chapter the

[1] See for normal and polluted waters, Water-Supply and Irrigation Paper No. 79, U. S. Geological Survey, 1903, by M. O. Leighton.

law, to a greater or less extent follows this rule. Streams or bodies of water used only for navigation may stand any amount of impurities, and so long as the water is sufficient in amount to float vessels, as far as navigation is concerned, it can not be deemed as polluted water. The same may be said, in a general way, of water used for power, which depends upon the amount or fall of the water forcibly delivered upon the water wheels used to operate machinery. The constituents of the water used for the development of power are not of great importance; therefore, polluted or unpolluted water may be used, and accomplish, as far as this use is concerned, the same results. Yet, upon the other hand, if it were attempted to use the very water which can accomplish these two results successfully in an impure state, for some other purpose, such as drinking, domestic, ice-making, or manufacturing purposes, where the water itself enters largely into the product, such water would be deemed polluted in the worst sense of the term.

§ 1131. **Pollution of water used for irrigation.**—From the standpoint of absolutely pure water, water used for irrigation may contain a large amount of impurities and still be bettered for the purpose for which it is used. One of the benefits derived from the cultivation of crops by irrigation is the increased fertility of the soil caused by the substances carried in the water and spread over the land with the irrigation water.[1] Therefore, where the water carries quantities of silt, not containing any deleterious mineral matter, it is considered a benefit to the irrigator rather than an injury. This is illustrated where the farmers below Salt Lake City, Utah, recently voluntarily traded their water rights to the water in Big Cottonwood Creek—which water is as clear and pure as any that can be found running in surface streams—to the city for water from Utah Lake, which water contains large quantities of silt, and can not be used for domestic purposes. The result of such a trade was that both parties were benefited. Another example is that the sewage of cities mixed with irrigation water is considered exceedingly beneficial to vegetation.[2] And in foreign countries especially the sewage of cities is utilized to aid in the cultivation of lands in this manner. But sewage pollutes the water to such an extent as

[1] See Sec. 13.

[2] For the use of sewage in Italy, see Sec. 146.

to render it absolutely worthless for drinking and domestic purposes. Again, some of the mineral solutions are beneficial to vegetation, while others contain chemical poisons which are destructive to both animal and vegetable life. So, as far as the use of the water for irrigation is concerned, it is not necessary that the water be chemically pure. And, further, it may contain impurities of such a nature and to such an extent that it would render it absolutely worthless and harmful for some of the other uses, and still for irrigation the very impurities render the water more valuable.[3]

But, upon the other hand, water may be so polluted that it is unfit for irrigation purposes. Water used for this purpose must contain none of the various mineral impurities, which are known to have injurious effect upon vegetation. And, as the irrigated portions of this country more often than otherwise lie in the valleys of mountainous regions, and in the mountains and at the headwaters of the sources of water supply are mines, the irrigation waters of the streams are oftentimes polluted by the discharge into them of mineral substances from the mines, and from the mills used in the reduction of their ores. The effect of this depends largely upon the nature and amount of the deleterious substances so discharged into the waters. At times, the effect is not only to kill all vegetation which such polluted water touches, but also to poison the soil to such an extent that, until the poison is finally washed out, future crops can not be raised. Animals are also poisoned and killed from drinking such water, and from eating the forage over and through which such water has been permitted to run. Water may also be polluted to such an extent that it is unfit for irrigation by the discharge of alkali water into the streams or ditches. Again, it may be rendered unfit by the discharge of large quantities of vegetable matter, such as sawdust. All of these acts tending to pollute the water constitute a nuisance, and work actual injuries to the owners of the land, who have the right to use the water for irrigation.[4]

[3] See Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583, holding that what deterioration in quality will constitute an evasion of the rights of a prior appropriator will depend upon the circumstances of each particular case. "A slight deterioration in quality might render the water unfit for drink or domestic purposes, whilst it would not sensibly impair its value for mining or irrigation."

[4] The owners of a water ditch are entitled to have the water flow therein in its natural state, and when they claim such water by prior appropria-

**§ 1132. Pollution of water used for various purposes.**—There are other uses of water for which the highest degree of purity possible must be maintained. The standards set for water used for drinking and domestic purposes are higher than those prescribed for any other use. And the greatest effort is exercised by the legislatures and those in authority to maintain a water supply fit for drinking and domestic purposes, and to prevent the water from coming into contact with any substance which will contaminate it and render it unfit for use. Where the water supply is from surface streams or other surface bodies special care is exercised in this respect. The health and prosperity of any community largely depends upon the character of its supply of drinking water. The value of water for this purpose is commonly reckoned according to its availability for public consumption. To be acceptable to the public it must have little or no turbidity, and must contain little or no sediment or organic waste, color, taste, or odor.

The requirements of water to be used as a source of ice supply are practically the same as those above described with reference to the use of water for drinking and domestic uses.

The same requirements as above are essential where the water is used in manufacturing processes, and where the water enters into one of the constituent parts of the product. It is essential that a water used for such a purpose shall contain nothing which, from a chemical or sanitary standpoint shall be injurious to health.

The pollution of the fresh water streams of the country and its injury to fisheries has received considerable attention from the legislatures and the courts. Many of the waters of the country that formerly were good fishing grounds have, within recent years, become practically destitute of fish because of the discharge of wastes from factories, mills, or public sewers into lakes and rivers. The

tion, its corruption by any stranger is a private nuisance. Crane v. Winsor, 2 Utah 248.

See, also, North Point Consol. etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607, where it was held that the drainage of alkali waters into an irrigation ditch constituted a nuisance.

See, also, Cushman v. Highland D. Co., 3 Colo. App. 437, 33 Pac. Rep. 344; Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907; Humphreys etc. Co. v. Frank, 46 Colo. 524, 105 Pac. Rep. 1093; Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476; Montana etc. Co. v. Gehring, 75 Fed. Rep. 384, 21 C. C. A. 414, 44 U. S. App. 629.

pollution of the water of a river by means of such wastes or refuse from factories and mills, so as to destroy the fish therein is a nuisance.[1]

Where the water is used merely for navigation, mining, or for the generation of power, the amount of impurities in the water makes little difference, so long as the quantity is sufficient to float vessels, or the force with which it is delivered upon the wheels is sufficient for the development of the power.[2]

Having discussed the various uses for which polluted water must not be used, and cases which polluted water may be used without injury, in the following sections we will discuss briefly the specific causes of pollution.[3]

§ 1133. **Pollution from sewage.**—One of the most common methods of the pollution of waters, and one that is not confined to any particular country, or to any particular locality in any country, is that of the discharge of the sewage of cities and towns into the running streams or other bodies of water. This subject is one that has occupied the attention of scientists, legislative bodies, and the courts, for many centuries, and still it is today unsettled, as to what cities and towns may do with the great amounts of refuse, and not impair the health, surroundings, or the property, not only of the citizens of such municipalities, but also of the citizens of the country lower down on the streams, through which such waters flow. In the older and more thickly settled communities, the conditions in this respect are the worse, and yet no legislature has been able to stop it, and no court has been able to lay down such a rule that can or will prohibit this pollution from continuing. Its injurious effects are manifest in many ways, for no matter how the sewage is disposed of, whether it is discharged directly into the streams, or whether it is discharged upon the land and finally washed away by the rains, all, or a large portion thereof, eventually finds its way into the streams. This discharge of sewage into the streams, or other bodies of fresh water, is

1 Pollution of water of a river by means of refuse from a sawmill, so as to destroy fish therein, is a nuisance. People v. Truckee Lumber Co., 116 Cal. 397, 48 Pac. Rep. 374, 39 L. R. A. 581, 58 Am. St. Rep. 183.

See, also, Threatt v. Brewer M. Co., 49 S. C. 95, 26 S. E. Rep. 970; Seaman v. Lee, 10 Hun, 607; Fitzgerald v. Firbank, 2 Ch. 96, 66 L. J. Ch. N. S. 529, 76 L. T. N. S. 564.

2 See, also, Sec. 1130.

3 See Secs. 1133-1138.

injurious to life and health of human beings, in fact to all animal life which comes in contact therewith, both that which lives upon the land, as well as that which lives in the water. Yet legislation or the courts have not been able to prohibit this evil; and about all that they have been able to do is to mitigate it, and in some instances to counteract its results.

The discharge of sewage and drainage from their streets by cities and towns into the streams and other bodies of fresh water includes many intricate questions, which, in detail, it is not the purpose of this work to discuss. Therefore, only the most general discussion of the subject will be covered.

Municipalities have the same rights, and are subject to the same restrictions as other riparian owners in the disposition of filth, such as the washings of their streets and sewage, into the waters which flow by such cities and towns. They may discharge sewage and other filth into such waters, provided always that by so doing they cause no injury to the persons or property of those below; and, provided further, they do not thereby increase the flow of the water in the streams so as to exceed the capacity of the channel of the streams to carry it off.[1] Where, however, by such acts a nuisance is maintained and the property or lives of the owners below on the stream are injured, the overwhelming weight of authority, both in England and in this country, denies such a right, and the parties injured have their remedy both at law, for damages, and in equity, to prevent the continuance of such a nuisance. As was said by what may be called a leading case upon the subject by the Supreme Court of Connecticut: "The use of a stream for drainage may under some circumstances be reasonable, although the water is thereby rendered unfit for its primary use; but the concentration of filth accumulated by one proprietor, whether an individual or a municipal corporation, and its discharge into the river in such quantities that it is necessarily carried to the premises of another where it produces a nuisance dangerous to the health and destructive of the value of his property, must be unreasonable."[2]

of sewerage, and to discharge the sewage matter into any particular waters, the statutory authority thus granted is to be exercised subject to the implied condition that such discharge will not constitute a nuisance, and thereby cause injury to the property of others. As was said in the Connecticut case: "So the legislative authority for emptying the sewage of cities into water courses is coupled with the provision that no nuisance is thereby authorized."[4] Any other construction would be in effect the taking of property without due process of law and without just compensation, contrary to the provisions of the Federal and State constitutions. And, as to whether or not the use of a river by a municipality for such a purpose is a reasonable one which the court will allow depends upon the circumstances of each particular case, and is essentially a question of fact.[5] It therefore follows that the burden of proof is upon the party alleging that such a nuisance is being committed and that he is materially injured thereby.[6]

**§ 1134. Pollution from sewage—Missouri v. Illinois.**—The most famous case in this country involving this question is that of Missouri v. Illinois,[1] an original action brought by the plaintiff State against the defendant State in the Supreme Court of the United States to enjoin the discharge of the sewage of the City of Chicago through an artificial channel into the Desplaines River, which river empties into the Illinois River, and the latter empties into the Mississippi at a point about forty-three miles above the City of St. Louis. It was alleged in the bill that the result of the threatened discharge would be to send 1,500 tons of poisonous filth daily into the Mississippi, to deposit great quantities of the same upon the part of the

bed of the river belonging to the plaintiff, and to so poison the water of the river, upon which various of the plaintiff's cities, towns, and inhabitants depended, as to make it unfit for drinking, agricultural, or manufacturing purposes. The decision of the Court upon the demurrer was mainly upon the question of the jurisdiction of the Court as to the parties to the action, and the subject-matter of the action; and it was held that the Court had original jurisdiction both over the parties[2] and the subject-matter, and that: "The nuisance set forth in the bill was one which would be of international importance—a visible change of a great river from a pure stream into a polluted and poisoned ditch." And, the demurrer being overruled, leave was granted the defendant State to answer the allegations of the bill.[3] Upon the merits of the case, it was decided for the defendant upon the ground of the failure of proof, that the nuisance complained of was not proven by satisfactory evidence, which left it in doubt whether such pollution can and did survive the journey from Chicago to St. Louis, and reach the intake of the latter city, and especially where the evidence showed other possible sources of infection in the discharge of sewage above St. Louis from other towns and cities, some of which were situated in Missouri.

**§ 1135. Pollution from the discharge of waste from factories and mills.**—Probably the most common cause of the pollution of waters, next to that of sewage,[1] and one that is universal to the entire country, is the discharge of refuse and waste from factories and mills, into the streams or other bodies of water. As a general rule the owner of property is entitled to the free use and enjoyment of the same, so long as the rights and property of others are not injured thereby.[2] This rule applies with especial force to the owners of lands bordering upon streams and other bodies of fresh water. He may work and develop his own land as he sees fit, and is not answerable for the elements and forces of Nature that may by natural processes affect the lands of others below him on the stream. But the owners of factories and mills are usually engaged

2 For original jurisdiction in actions between States, see Sec. 1233.

3 See first citation, *supra*.

1 For the pollution by sewage, see Secs. 1133, 1134.

2 For the rights of riparian owners, see Sec. 1140.

in bringing to the same, not from their own premises, but from elsewhere, materials, which they work up into the products; and, where such mills are located upon the banks of a stream, even if the waste is not directly discharged into the same, by the washings of rains, it, or the most of it, finds its way into such streams, unless special works are constructed to effectually destroy or to carry off such waste. And the rule of law upon this subject is that any material which finds its way into streams, from mills and factories, that so befouls and pollutes the water as to impair its value for the ordinary purposes of life, is deemed a violation of the rights of the lower owners on the stream, and is actionable in equity or at law. As was said by the Indiana Court upon this subject: "No court, so far as we have observed, has gone so far as to recognize the right of a manufacturer to establish his plant upon the banks of a non-navigable stream, and pollute its waters by a business wholly brought to the place, entirely disconnected with any use of the land itself, and which he may just as well conduct elsewhere, without responding in damages to those injured thereby, and to injunction if the injury done is substantial and continuing." [3]

The pollution of waters by operators of saw mills throwing the sawdust into streams comes properly under this classification. Such deposits discolor the water, and in warm weather the decaying sawdust gives it an offensive odor. Livestock in some instances refuse to drink the water, and it is even less fit for domestic purposes. The decaying sawdust affects the purity of the water to such an extent

New Jersey Stockyards Co., 20 N. J. Eq. 296; City of Durango v. Chapman, 27 Colo. 169, 60 Pac. Rep. 635.

that it generally causes disease along the streams where found.[4] It also destroys the fish in the stream.[5] The sawdust also tends to clog up the ditches and canals so as to diminish the flow of the water therein.[6] All of these acts which tend to befoul and pollute the water to the extent that it is not fit for the ordinary purposes of life are held to be nuisances which may be abated in equity, and for which damages will lie for actual injuries sustained.[7]

**§ 1136. Pollution from debris from mines and reduction mills.**—A common cause of the pollution of streams, and one that has received considerable attention of legislatures and the courts, is that from the casting of the debris from mines and the tailings from reduction mills into the streams. Of course, pollution from this cause is local to those sections of the country where there are such mines and reduction mills, but in the irrigated mountainous regions, where there are many mines and such mills, the waters of the running streams of many localities are affected. Some of the material thus cast into the streams from this cause is entirely harmless, and the only injury resulting is that of impeding the natural flow of the water both in the streams and in the ditches and canals which take out the waters. And where the water is used for irrigation, oftentimes the land itself is injured by being covered with particles of rock, gravel, coal, or waste, which is carried onto the land with the irrigation water and thereby prevents the growing of crops. Examples of this are seen from the operations of placer

[4] Shoffner v. Sutherland, 111 Va. 298, 69 S. E. Rep. 996; People *ex rel.* Ricks W. Co. v. Elk River etc. Co., 107 Cal. 221, 40 Pac. Rep. 521, 48 Am. St. Rep. 125; Phoenix W. Co. v. Fletcher, 23 Cal. 482, 15 Morr. Min. Rep. 185; Mitchell v. Barry, 26 U. C. Q. B. 416; Red River Roller Mills v. Wright, 30 Minn. 249, 15 N. W. Rep. 167, 44 Am. Rep. 194; State v. Mitchell, 47 W. Va. 789, 35 S. E. Rep. 845; Washburn v. Gilman, 64 Me. 163, 18 Am. Rep. 246; State v. Griffin, 69 N. H. 1, 39 Atl. Rep. 260, 41 L. R. A. 177, 76 Am. St. Rep. 139; City of Aberdeen v. Lytle Logging etc. Co., 58 Wash. 368, 108 Pac. Rep. 945.

See, also, State v. Kroenert, 13 Wash. 644, 43 Pac. Rep. 876.

[6] Phoenix W. Co. v. Fletcher, 23 Cal. 482, 15 Morr. Min. Rep. 185.

[7] See Sec. 1144.

mining, both where worked by hand by the means of ordinary sluices,[1] and where worked by hydraulic rams or other devices;[2]

1 Chessman v. Hale, 31 Mont. 577, 79 Pac. Rep. 254, 68 L. R. A. 410, where it is held that a clause in a contract for the delivery of water at the head of grantee's ditch, reserving the right to use it for mining purposes, confers no right to pollute the water to any greater extent than that permitted by law.

In placer mining the operator has no right to deposit tailings, etc., in a running stream to such an extent as to cause his neighbor's land to be flooded by them, and thereby to substantially impair its usefulness; and, if he does so, he is liable in damages, regardless of the question of negligence, or of the question whether his mine can be operated successfully without such result, or of the question of priority of appropriation of the waters of the stream. Fitzpatrick v. Montgomery, 20 Mont. 181, 50 Pac. Rep. 416, 63 Am. St. Rep. 622.

See, also, McCarthy v. Gaston etc. Co., 144 Cal. 542, 78 Pac. Rep. 7; Levaroni v. Miller, 34 Cal. 231, 91 Am. Dec. 692, 12 Morr. Min. Rep. 232; Yuba County v. Kate Hayes M. Co., 141 Cal. 360, 74 Pac. Rep. 1049; Sierra County v. Butler, 136 Cal. 547, 69 Pac. Rep. 418; Esmond v. Chew, 15 Cal. 137, 5 Morr. Min. Rep. 175; Wixon v. Bear River etc. Co., 24 Cal. 367, 85 Am. Dec. 69, 1 Morr. Min. Rep. 656; Stone v. Bumpus, 40 Cal. 428, 4 Morr. Min. Rep. 278; Gregory v. Harris, 43 Cal. 38, 14 Morr. Min. Rep. 91; Pilot Rock Creek C. Co. v. Chapman, 11 Cal. 162; Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814; Logan v. Driscoll, 19 Cal. 623, 81 Am. Dec. 90, 6 Morr. Min. Rep. 172; Fuller v. Swan River etc. Co., 12 Colo. 12, 19 Pac. Rep. 823, 16 Morr. Min. Rep. 252.

But see the early cases of California and Colorado, where an exception was made in favor of miners to use the streams to carry off waste as against the agriculturists on the stream below. Sims v. Smith, 7 Cal. 148, 68 Am. Dec. 233, 13 Morr. Min. Rep. 161; Bear River etc. Co. v. New York etc. Co., 8 Cal. 327, 68 Am. Dec. 325, 4 Morr. Min. Rep. 526; Yunker v. Nichols, 1 Colo. 551, 8 Morr. Min. Rep. 64.

"The law appears to be that a person located on a mining stream and operating a placer mine is entitled to a reasonable and proper use of the channel and the water. To unreasonably restrict such use is to interdict the prosecution of a lawful and valuable enterprise. However, such miner has no legal right to dump his mining debris into the channel or stream and allow it to be carried down by the water to the land of a lower proprietor, or to fill up the channel to the injury of such riparian proprietor." Rep. 740.

As a result of the many California cases involving hydraulic mining and the depositing debris in the navigable rivers, especially relating to the Sacramento and San Joaquin, Congress prohibited the depositing of such debris in such rivers, except under the terms and conditions as granted by the debris commission, provided for by the Act. See 5 Fed. Stat. Ann., 1905, pp. 61-67; U. S. Comp. Laws, 1901; 27 Stat. L. 507. Approved March 1, 1893.

For the construction of the above Act, see North Bloomfield etc. Co., 81 Fed. Rep. 243, 88 Fed. Rep. 64, 32 C. C. A. 84; 20 Op. Atty. Gen. 604; 21 Op. Atty. Gen. 62; 22 Op. Atty. Gen. 554.

It was also held by the Supreme Court of California that, while the purpose of the Act was to prevent injuries from the discharge of debris from hydraulic mines, it was not intended to exonerate the miner from liability therefor, nor to limit the powers of the State courts to protect private property from threatened injury, and to redress inflicted injury thereto from the operation of hydraulic mines, though carried on under a permit and in strict compliance with the plans of the commission. Sutter County v. Nichols, 152 Cal. 688, 93 Pac. Rep. 872, 15 L. R. A., N. S., 616, 14 Am. & Eng. Ann. Cas. 900.

seen from the discharge of the tailings and waste from coal mines.[5] Again, at other times, the material so discharged from such mines or reduction works and carried down to the lower lands by the water is highly poisonous to all animal and vegetable life. Such is especially the case where such washings and tailings are from cyanide plants and from mills reducing arsenical, lead, and copper ores.[6] Such was held to be the case in a recent action in Kansas against a salt mining company, where it was proven that the company deposited a large quantity of refuse salt in such a manner that by the action of the rain upon it the water underlying an adjacent tract was impregnated with salt through percolation so as to render it unfit for use and harmful to vegetation and established a legal wrong against the owner of the tract.[7]

No one has the right to poison water, however innocently, or to contaminate it so that when it reaches his neighbor's land it is in such a condition as to be unfit for use, either by man or beast.[8] In either case, where there is a positive, material, and continuing injury, to the owners of lands below, or to the waters, the right to the use of which another is entitled, either as an appropriator or as a riparian owner, a nuisance is committed which a court of equity will abate by a direct action brought for that purpose,[9] or by an injunction;[10] also, an action at law for damages for past injuries which have actually resulted from such acts.[11]

Each case for an injunction or damages, involving the pollution of waters by debris and deleterious substances from mines and reduction works must be determined from its own facts and circumstances. No positive rule of law can be laid down which will be applicable to all cases. Mining and the reduction of ores from mines is a lawful and necessary business; and, even if conducted in the most careful and prudent manner, some of the debris or other impurities will find their way into the running streams and pollute their waters. Therefore, the rights of both parties to such an action, the nature and extent of the pollution of the water, the purposes for which the water is being used, and the nature and extent of the injuries caused by such pollution, must be carefully considered by the jury, under proper instructions of the court, or by the court, if tried without a jury. As was said by the Montana Court: "It is a field of litigation filled with great annoyance and difficulty to both legislatures and courts. It will continue to be such as long as the interests of men conflict."[12]

In the State of Idaho, as we have discussed under the subject of preference uses,[13] the second preference is given to mining. But, in the face of the statute, the Idaho Court holds that even a miner is

13 For preference uses, see Secs. 771-794.

not permitted to pollute the stream as against prior appropriators using the water for irrigation purposes.[14]

**§ 1137. Pollution by miscellaneous means.**—There are many causes of the pollution of waters other than those discussed in the previous sections.[1] In fact, any use of a stream that materially befouls the water, or deposits therein any filth which so far affects the water as to discolor it, or anything which renders the water offensive to taste or smell, and so affects the water as to impair its value for ordinary purposes, is deemed a pollution, and for which an action will lie by those actually and materially injured to enjoin the acts causing such pollution in the future and for damages for past injuries.

A very common cause of the pollution of the waters of running streams is that from cattle, sheep, horses, and hogs, or other animals being fed or permitted to pasture in close vicinity to such streams and to wade in or drink from the same.[2] But as to whether or not an action will lie for an injunction against, or damages for such pollution of a stream, depends upon the use that the plaintiff makes of the water, or, in other words, as to whether or not the plaintiff is being or was actually injured by such impurities in the water. In some cases, he might be actually benefited, as would likely be the case where the water was used for irrigation only. But in other cases, he might be materially injured, as where he used the contaminated water for drinking and culinary purposes.[3] Of

[14] Hill v. Standard etc. Co., 12 Idaho 223, 85 Pac. Rep. 907; McCarthy v. Bunker Hill etc. Co., 164 Fed. Rep. 927, 92 C. C. A. 259.

[1] See Secs. 1130-1136.

[2] Where the defendant fed a maximum of 3750 head of cattle near a running stream, and washed out his barn daily by means of pumps, and such washings were carried by means of sewers into the stream, and by the stream down to and upon the plaintiff's land, thereby fouling and polluting the water, and rendering it unfit for use, and creating an atmosphere of stench and nuisance, it was held that the defendant would be enjoined from continuing such a nuisance. Barton v. Union Cattle Co., 28 Neb. 350, 44 N. W. Rep. 454, 7 L. R. A. 457, 26 Am. St. Rep. 340.

Where the defendant drove 6000 head of sheep along the land lying along the banks of a creek, to the injury of rights to the water thereof appropriated for irrigation, domestic, and culinary purposes. Watterson v. Saldunbehere, 101 Cal. 107, 35 Pac. Rep. 432.

[3] For the pollution of water used for irrigation, see Sec. 1131.

course, if the plaintiff was actually benefited by such a use of the water, it stands to reason that he can neither enjoin such acts nor recover damages.[4]

Then, again, as far as the pasturing of animals is concerned, the courts hold that the owners of lands through which streams flow have the right to use such lands and to pasture their animals thereon so long as such use is not made in an unreasonable manner, regardless of the stream, and even if the water is contaminated to some extent thereby; and as to what constitutes a reasonable or unreasonable use of the land for this purpose is a question of fact for the court or jury to decide from the facts and circumstances surrounding each particular case.[5] Even where the water is used by others for domestic or municipal purposes, it is held that every land owner has the right to the natural use and enjoyment of his property, if exercised within reasonable limits; and those who have the right to the use of the water of such streams must themselves take steps to protect the water from contamination.[6]

[4] For injunctions against pollution, see Sec. 1143.

For damages for pollution, see Sec. 1144.

[5] The owner of 7½ acres of land upon which springs arose, forming a pond, the waters of which flowed across the property of another, had a right to permit his stock, consisting of as many as six cows, six or seven horses, and his geese, to the number of about 20, to drink from the pond and to go into it, though a pollution of the water resulted; such use not being unreasonable. McEvoy v. Taylor, 56 Wash. 357, 105 Pac. Rep. 851.

An appropriator making no use of the water below another appropriator's dam is not entitled to an injunction restraining the other from polluting the water by allowing sheep to go into it. Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476.

See, also, Hazeltine v. Case, 46 Wis. 391, 1 N. W. Rep. 66, 32 Am. Rep. 715; Gould v. Hudson River R. Co., 6 N. Y. 522; People v. Hulbert, 131 Mich. 156, 91 N. W. Rep. 211, 64 L. R. A. 265, 100 Am. St. Rep. 588, 18 Am. & Eng. Ency. of Law 135, 139; Helfrich v. Cantonsville W. Co., 74 Md. 269, 22 Atl. Rep. 72, 13 L. R. A. 117, 28 Am. St. Rep. 245; Spring Valley Waterworks v. Fifield, 136 Cal. 14, 68 Pac. Rep. 108.

[6] The fact that a municipality uses water that it conveys to a place of use through a ditch that runs across the field of another does not of itself entitle the municipality to maintain an action against the owner of the land for a perpetual injunction restraining him from allowing his cattle to feed and graze in the field along the banks of the ditch, and to cross over the same or wade the waters thereof; but in such case the primary duty of fencing or protecting the ditch and the waters therein from contamination and impurities rests upon the owner of the easement, and not upon the owner of the fee. City of Belle-

Water may be polluted by the felling of trees and permitting them to lie therein, or by permitting logs to remain in the water for an unreasonable time.[7] Again, it may be polluted from oil wells.[8] It may be polluted by the location of a cemetery.[9] Again, the pollution may consist of the filling up of the natural channel or the ditches and canals taken therefrom with the debris from mining claims or reduction works, although such debris contains no poisonous or deleterious matter. However, a late Idaho case attempts to make a distinction between the pollution of the quality of the water and filling up of the bed of the stream by dumping matter in it.[10]

Again, it is held upon the principle that each owner through which a stream flows has the right to make such a reasonable use of the water as he can without materially injuring the rights of those below, and that bathing in the water is not an unreasonable use, even when such use has the tendency to render the water less desirable for drinking and culinary purposes.[11]

Rep. 117, 24 L. R. A. 568; *Id.*, 151 Ind. 160, 47 N. E. Rep. 671, 41 L. R. A. 737; St. Louis etc. R. Co. v. Burrows, 29 Okla. 378, 118 Pac. Rep. 143.

§ 1138. **The pollution of underground waters.**—As far as the pollution is concerned, it makes no difference whether the contaminating matter is discharged directly into a running stream, or whether it is deposited over the surface of the ground, and by the action of the rains and melting snows is drawn underground and carried with the percolations until it reappears with the water in the streams, springs, or wells of the land owners below. If the pollution of the water can be traced directly to the acts of the defendant, and to the actual, positive, material injury of the complainant, it is a nuisance which is actionable both in equity and at law, regardless of the fact as to whether the water so polluted first appears in living streams or in springs or wells. This principle was illustrated in a recent Kansas case, where the defendant company deposited a large amount of waste salt upon its own land and where the rain dissolved a part of the salt and by percolation carried it into the soil of the land of the plaintiff, injuring the vegetation and imparting a salty taste to a number of springs on his land, and in deciding the case the Court said: "We regard it as well settled by the weight of authority, and in accordance with sound reason, that one has no right to deposit upon his land refuse matter of any sort, whether in itself offensive or not, by which the water underlying his neighbors' land may be so affected through percolation as to be unfitted for ordinary use, or injurious to vegetation."[1] And, whatever may be held to be the rights of an owner of the soil to the waters percolating underneath and whether under the old common law rule he is considered the absolute owner thereof the same as he is of the stones found therein or whether under the more modern and more equitable rule that such land owner has but a right to a reasonable use of such waters,[2] under neither rule has he "the right to poison the water, or to contaminate, so that when it reaches his neighbor's land it is in such a condition as to be unfit for use, either by man or beast."[3] So, also, one is liable for the pollution of a subsurface

1 Gilmore v. Royal Salt Co., 84 Kan. 729, 115 Pac. Rep. 541, 34 L. R. A., N. S., 48; Mann v. Retsof M. Co., 49 App. Div. 454, 63 N. Y. Supp. 752.

See, also, Mears v. Dole, 135 Mass. 508.

2 For the rights in percolating waters, see Secs. 1185-1211.

3 Kinnaird v. Standard Oil Co., 89 Ky. 468, 12 S. W. Rep. 937, 7 L. R. A. 451, 25 Am. St. Rep. 545, 11 Ky. Law. Rep. 692.

See, also, Collins v. Chartiers Val. Gas Co., 139 Pa. 111, 21 Atl. Rep. 147; Beatrice Gas Co. v. Thomas, 41 Neb. 662, 59 N. W. Rep. 925, 43 Am.

stream of water, whose course is known and defined, to the same extent and for the same causes that he would be liable for the pollution of a surface stream.[4]

But before a party claiming to be injured from the pollution of subterranean waters can recover either in an action in equity or at law, as in other cases, he must prove by competent evidence that the injury resulted from the defendant's acts. This may be, at times, harder to do than where the action is for the pollution of surface streams.[5]

**§ 1139. The acquisition of the right of pollution by contract and prescription.**—The right to pollute waters may be acquired by contract or by prescription, and as between the parties thereto such a right may be enforced. As was said by the United States Circuit Court of Appeals in a recent case:[1] "We think the agreement granted to the defendants an easement to have the slimes and tailings from their mills flow through the flumes, pipes, sluices, and reservoirs upon the properties of complainant in question, and as a natural incident thereto, upon his said lands."[2]

Under certain conditions, a right may be acquired by prescription to pollute the waters of a stream to a greater extent than is allowed under the rule of common or reasonable use, and to such an extent

2 Provolt v. Bailey, —— Ore. ——, 121 Pac. Rep. 961, where it was held that complainants were bound to comply with the conditions of an arrangement to prevent the mining water from running into the irrigation ditch before obtaining relief in a Court of equity as to such water.

that even a nuisance is committed. But a distinction must be made in this respect between acts constituting a private nuisance as against certain individuals and public nuisances against the public at large, or as against a certain portion of the public. Prescriptive rights of pollution may be acquired to maintain a private nuisance in this respect.[3] But if such pollution of a stream is such as to constitute a public nuisance, or if it is forbidden by statute, no prescriptive right can be acquired.[4] In Idaho it is also held that a "continuing injury" is not barred by the statute of limitations.[5] In order to acquire a right to pollute a stream as against the private

[3] Masonic Temple Assn. v. Harris, 79 Me. 250, 9 Atl. Rep. 737; Lentz v. Carnegie Bros., 145 Pa. 612, 23 Atl. Rep. 219, 27 Am. St. Rep. 717; Boston Rolling Mills v. Cambridge, 117 Mass. 396.

Under Sec. 3463, Comp. Laws Utah, the mixing of impure water with water used for irrigation and domestic purposes, which renders it unfit for such use, causes a nuisance; and a prescriptive right to maintain a private nuisance must be adverse, under a claim of right, uninterrupted and continuous for 20 years, with the knowledge and acquiescence of the party whose right is invaded. North Point etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607.

[4] The right to continue a public nuisance can not be acquired by custom or prescription. People v. Gold Run etc. Co., 66 Cal. 138, 4 Pac. Rep. 1152, 56 Am. Rep. 80.

See, also, Bowen v. Wendt, 103 Cal. 236, 37 Pac. Rep. 149; Woodruff v. North Bloomfield etc. Co., 18 Fed. Rep. 753, 9 Sawy. 441; State v. Griffin, 69 N. H. 1, 39 Atl. Rep. 260, 41 L. R. A custom to discharge tailings from stamp mills into streams does not give a right to do so to the injury of others having rights to the waters of the stream. Suffolk etc. Co. v. San Miguel etc. Co., 9 Colo. App. 407, 48 Pac. Rep. 828.

The befouling of the waters of a canal from which a number of persons, more than three, obtain water for irrigation, culinary, and other domestic purposes, so that it is unfit for use, is a public nuisance, under Sec. 4566, Comp. Laws of Utah, 1888, and the right to maintain it can not be gained by prescription. North Point etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607.

[5] Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907, where it is said: "The plaintiffs could have commenced their action when the damage first developed, or they may wait until their property is entirely destroyed and rendered valueless for any purpose, and then sue to recover the value of the property in damages."

rights of individuals, such a use of the stream must be under a claim of right, an invasion of the rights of the persons against whom the claim is made, and continued for the full period of time required by law and must have all of the essential elements necessary for the acquisition of the title of real property and heretofore discussed in this work.[6] The right is also limited to the nature and extent of the pollution during such period. And if either during such time the nature or extent of the pollution is increased, the statute begins to run from the time of such increase.[7] In an action brought against one claiming the right to pollute a stream by prescription, the burden of proof, as in other cases where such rights are claimed, is upon the defendant under his proper pleadings in the case.[8]

**§ 1140. Pollution as against the rights of riparian owners.**—Under the rule of the common law that riparian proprietors have the right to insist that the waters of streams which flow through or adjoin their lands shall continue to flow as they are wont by Nature, undiminished in quantity as well as undeteriorated in quality,[1] any unreasonable pollution of a stream by one proprietor, appropriator, or another to such a degree as to impair its purity and usefulness for any of the purposes to which the lower proprietor has the right to apply the water, is an invasion of the private rights of such proprietor who is actually and materially injured thereby, and for which such proprietor has a remedy both in equity and at law.[2]

6 For the acquisition of title by prescription, see Secs. 1033-1058.

See, also, Lockwood v. Lawrence, 77 Me. 277, 52 Am. Rep. 763; Holsman v. Boiling Springs Bleaching Co., 14 N. J. Eq. 335; North Point etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607.

A right of prescription is limited by the character and extent of the user during the period requisite to acquire the right. Chessman v. Hale, 31 Mont. 577, 79 Pac. Rep. 254, 68 L. R. A. 410.

8 See Sec. 1147.

See, also, McCallum v. Germantown W. Co., 54 Pa. 40, 93 Am. Dec. 656.

1 For the common law rule, see Secs. 543-547.

2 A lower riparian owner is entitled to protection by injunction from pollution of a stream which prevents his reasonable use of the water, in the absence of special equities or qualifying circumstances which take the case out of the general rule. Thropp v.

But as each riparian proprietor upon the same stream has the right to a reasonable use of the waters thereof, having due regard to the like right of the other owners, even if some impurities are cast or permitted to run into the stream, as the population along these streams increases, the strict rule of the common law that the stream must continue to flow as it was wont by Nature is modified by the authorities, both as to the diversion of the waters[3] and the impairment of their quality. It therefore follows that no riparian proprietor, under the more modern rule, can insist on having the water come down to him in its natural purity, when such a claim, if granted, would have the effect of the destruction or impairment of the rights of the upper owners to a reasonable use of the waters of such stream.[4] So it is held that each riparian owner has the right

Shirley, 135 Ind. 547, 34 N. E. Rep. 600, 35 N. E. Rep. 117, 24 L. R. A. 568; *Id.*, 151 Ind. 160, 47 N. E. Rep. 671, 41 L. R. A. 737.

8 For the pollution by sewage, see Secs. 1133, 1134.

As was summed up in a recent case by the Supreme Court of Oklahoma of Markwardt v. City of Guthrie, 18 Okla. 32, 90 Pac. Rep. 26, 9 L. R. A., N. S., 1150, 11 Ann. Cas. 581, in which the Court said: "From a careful examination and consideration of these authorities, and many others, we have reached the conclusion: (1) That the settled doctrine of the English courts, as well as some of our State courts, is that a lower riparian proprietor is entitled to recover damages for the pollution of the waters of a stream by a municipal corporation, by the discharge of sewage into the stream, on the broad ground of common sense and natural justice; (2) that the Supreme Court of the United States and a number of the State courts base their decisions on the ground that it is a taking of private property for public use, within the meaning of the Federal Constitution; (3) that other States hold that it is a damage to property, within the meaning of their constitutional inhibitions against the taking or damaging of property without just compensation; and (4) a number of the States hold that the lower riparian proprietor is entitled to recover damages for injury to his health, comfort, and repose, on the ground that it is the maintenance of a nuisance. While these decisions are based upon different grounds, yet, upon whatever

whereby the lower riparian proprietor has suffered a real, material, and substantial injury by rendering the waters of the stream unfit for his use, he may maintain an action for damages for the injuries which are the direct result of such unlawful acts;[9] and if such acts are continuing he may maintain an action in equity to perpetually enjoin such acts as cause the injury.[10]

But, as can be readily seen, no positive rule can be laid down as to just when either or both of such actions will lie by a riparian owner, which will be applicable to all cases. It therefore follows, that both the questions as to what constitutes a reasonable or unreasonable pollution of the waters of the stream, and as to what constitutes "a real, material, and substantial injury," to the riparian ownership, are questions of fact for the court or jury to decide upon the particular facts and circumstances surrounding each individual case.[11]

ground they may rest, they all, with the exception of the decisions of the Indiana courts, seem to uniformly hold that, under such circumstances, damages are recoverable; and many of them hold that, where the evidence is clear and convincing, injunction will lie to restrain the continuance of the nuisance."

See, also, Peterson v. Santa Rosa, 119 Cal. 387, 51 Pac. Rep. 557; People *ex rel.* Lind v. San Luis Obispo, 116 Cal. 617, 48 Pac. Rep. 723.

A non-riparian proprietor has no right of action for the pollution of the waters of a stream by a riparian owner who, in the interest of sanitary conditions, discharges sewage into the stream. Conrad v. Arrowhead etc. Co., 103 Cal. 399, 37 Pac. Rep. 386.

9 For actions for damages for pollution, see Sec. 1144.

10 For injunctions against pollution, see Sec. 1143.

Neither can a riparian proprietor use the water of a stream in such a manner as to corrupt the atmosphere, to the injury of other riparian proprietors, or to the community at large. Story v. Hammond, 4 Ohio 376.

11 Tiede v. Schneidt, 105 Wis. 470, 81 N. W. Rep. 826.

**§ 1141. Pollution as against the rights of appropriators—Priority.**—In the Western States, where the Arid Region Doctrine of appropriation of waters for beneficial uses or purposes is in force,[1] an appropriator of the waters of a certain stream, as far as the question of pollution is concerned, must take the water as he finds it in that regard at the date of the inception of his rights, so long as a public nuisance is not maintained.[2] But he may insist that the water

1 For the Arid Region Doctrine of appropriation, see Secs. 585-594.

2 "Locators and appropriators of the waters of a stream have no rights antecedent to the date of their location. If others have, prior to their location, decreased the quantity of the water flowing in such stream, or caused a deterioration of its quality, the subsequent locator can not complain. Familiar examples of the application of this rule, as between appropriators, are of frequent occurrence in the mining regions of this State, where water is diverted from flowing streams upon which mining has destroyed the purity of the water. In such case the appropriator takes the water with his eyes open—takes it as he finds it—and as to him the like continued deterioration is *damnum absque injuria.*" Conrad v. Arrowhead etc. Co., 103 Cal. 399, 37 Pac. Rep. 386; Sims v. Smith, 7 Cal. 148, 68 Am. Dec. 233, 13 Morr. Min. Rep. 161; O'Keefe v. Cunningham, 9 Cal. 581, 9 Morr. Min. Rep. 451; Jacob v. Day, 111 Cal. 571, 44 Pac. Rep. 243.

See, also, Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476.

So it was held in a case where the defendant had built its mill and had been engaged for years in manufacturing lumber, whereby the water of the stream was polluted to a certain extent, and subsequently a water company appropriated the polluted water below the defendant's works to supply the public, it was held that the mill company could not be enjoined from continuing the pollution, as long as a public nuisance was not maintained, the Court saying: "After he had built his mill and had been for years engaged in manufacturing lumber, the relator built its works, and in defiance of law, which provides that it shall only supply the city with pure water, commenced taking the water from the stream, 4½ miles below the mill, to sell to the inhabitants of Eureka. The water had been condemned by the board of health of the city of Eureka before it was taken by the relator. Apparently the relator attempted through this proceeding to enable itself to perform its duty to sell pure, fresh water. Instead of taking pure water, as the Court found it could have done, it will make this stream pure by destroying the property of the defendant." People *ex rel.* Ricks W. Co. v. Elk River etc. Co., 107 Cal. 221, 40 Pac. Rep. 521, 48 Pac. Rep. 125.

But see *Id.*, 107 Cal. 214, 40 Pac. Rep. 486, 48 Am. St. Rep. 121.

But see the case of Suffolk etc. Co. v. San Miguel etc. Co., 9 Colo. App. 407, 48 Pac. Rep. 828, where the Court held that the appropriator of a part only of the waters of a stream, the remainder being open to appropriation by others, takes title to the part appropriated, subject to the limitation that its use will not injure

continue to flow down to his point of diversion in the same condition of purity that it was at the date of his appropriation, if by any further pollution a real, material, and substantial injury to his rights is caused thereby. As one of the essential elements of a valid appropriation is that of priority over others, we believe that this is the only logical rule which can be adopted. As was stated in a recent Arizona case: "Under the doctrine of appropriation, he who is first in time is first in right, and so long as he continues to apply the water to a beneficial use, subsequent appropriators may not deprive him of the rights his appropriation gives, either by diminishing the quantity or deteriorating the quality."[3]

And, as we discussed in previous sections of this work, as the same degree of purity of water is not required for all uses,[4] it therefore follows as to what constitutes real, material, and substantial injury to the rights of a prior appropriator depends upon the following conditions: First, upon the use or purpose for which the water was appropriated; and, second, upon the nature and extent of the pollution. So, where the prior appropriator makes his appropriation for domestic or culinary purposes, he has the right to insist that the quality of the stream remain in the same condition as it was at the date of the inception of his right, in order that his use for those purposes may continue. But, if his appropriation was for the generation of power, where no actual injury resulted from the pollution, or if it was for the purpose of irrigation where the very pollution

or pollute the remainder of the waters of the stream, to the detriment of other users, though subsequent in right, where the use made of it leaves it possible for him, by taking reasonable measures to that end, "at a very slight expense, and at very slight inconvenience," to enjoy his own rights and to observe such limitation.

See, also, Fitzpatrick v. Montgomery, 20 Mont. 181, 50 Pac. Rep. 416, 63 Am. St. Rep. 622.

[3] Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465.

See, also, Montana etc. Co. v. Gehring, 75 Fed. Rep. 384, 21 C. C. A. 414, 44 U. S. App. 629; Crane v. Winsor, 2 Utah 248; Cushman v. Highland D. Co., 3 Colo. App. 437, 33 Pac. Rep. 344.

"As we have already seen, plaintiff acquired valid rights as the result of his direct appropriation from the stream, and to the overflow of the stream for his meadow lands, and these rights were vested before the defendant began the construction or the operation of its mill. Plaintiff's rights were, of course, paramount to any rights defendant had to the waters of the stream." Humphreys etc. Co. v. Frank, 46 Colo. 524, 105 Pac. Rep. 1093.

[4] See Secs. 1131, 1132.

might be a benefit, he has no right to complain.[5] At an early day in California, a sort of preference right was sought to be given to miners to pollute the waters of the streams, at the expense of the agriculturists, and even at the expense of other miners. And it was in effect held that as the operation of especially placer mining claims naturally caused more or less debris and sediment to be deposited in the streams and upon the lands below, the business of mining being of such a paramount interest any pollution of streams from that cause might be permitted and that, too, whether there was a direct injury to agriculturists or to other miners.[6] But later cases of the same court repudiated this doctrine upon the ground that it would annihilate the doctrine of priority in all cases where the controversy was between the miner or ditch owner and one who claims the exercise of any other kind of right or the ownership of any other kind of industry. "To such a doctrine we are unable to subscribe."[7] "Neither the miner nor the riparian proprietor

5 As said by the Supreme Court of the United States in one of its earliest cases upon this subject: "What diminution of quantity, or deterioration in quality, will constitute an invasion of the rights of the first appropriator will depend upon the special circumstances of each case, considered with reference to the uses to which the water is applied. A slight deterioration in quality might render the water unfit for drink or domestic purposes, whilst it would not sensibly impair its value for mining or irrigation. In all controversies, therefore, between him and parties subsequently claiming the water, the question for determination is necessarily whether his use and enjoyment of the water to the extent of his original appropriation have been impaired by the acts of the defendant." Atchison v. Peterson, 1 Mont. 561; *Id.*, 87 U. S. 20 Wall. 507, 22 L. Ed. 414, 1 Morr. Min. Rep. 583.

7 Wixon v. Bear River etc. Co., 24 Cal. 367, 85 Am. Dec. 69, 1 Morr. Min. Rep. 656; Pilot Rock etc. Co. v. Chapman, 11 Cal. 162.

can so use the water as to prejudice or injure the prior right to a like use by another. The question between miners is the same as between riparian proprietors: 'Is the plaintiff's use and enjoyment of the water for the purpose for which he claims it impaired by the acts of the defendant?' "[8]

So, as far as the rights of the prior appropriator are concerned, it may be regarded as a settled rule of law, that any use which defiles or corrupts the water so as to essentially impair its purity and usefulness for the purpose for which the water was appropriated by such prior appropriator is an invasion of his private rights, and for which he is entitled to a remedy both at law and in equity.[9] And as in other cases of this nature as to what constitutes such an invasion of the rights of the prior appropriator for which an injunction will be granted or for which damages may be awarded, is a question of fact for the court or jury.[10]

But the natural right of an appropriator, as is the case with riparian proprietors,[11] to have the water descend to him in its pure state must yield in a reasonable degree to the rights of those who have located above upon the stream and subsequently to him. This is especially true where the purpose of the appropriation is that of irrigation, and it is of public importance that the proprietor of useful manufactories, the owners of mines or reduction works, or of other industries, where some pollution of the waters of the stream upon which their works are located necessarily follows their operation, should be held responsible only for real, material, and substantial injury caused by their works, and not for any slight inconvenience or occasional annoyances, or even some degree of interference with irrigation or agricultural pursuits.[12]

[8] Hill v. Smith, 27 Cal. 476; *Id.*, 32 Cal. 166, 4 Morr. Min. Rep. 597.

[9] Hill v. Smith, 27 Cal. 476; *Id.*, 32 Cal. 166, 4 Morr. Min. Rep. 597; Crane v. Winsor, 2 Utah 248; Phoenix W. Co. v. Fletcher, 23 Cal. 482, 15 Morr. Min. Rep. 185; Courtright v. Bear River etc. Co., 30 Cal. 573; Arizona Copper Mining Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465.

[10] Montana etc. Co. v. Gehring, 75 Fed. Rep. 384, 21 C. C. A. 414, 44 U. S. App. 629.

For the evidence in such cases, see Sec. 1144.

[11] See Sec. 543.

[12] "We do not mean to say that the agriculturist may captiously complain of a reasonable use of water by the miner higher up the stream, although it pollutes and makes the water slightly less desirable, nor that a Court of equity should interfere with mining industries because they cause slight inconveniences or occasional annoyances, or even some degree of inter-

As the population grows more and more dense along the streams in the Western portion of this country, it is becoming more and more an impossibility to keep the water of the streams in their naturally pure condition. Nor is this condition peculiar to the West, but there is the same condition of affairs in the East and in all countries where there is a considerable population. Great industries exist along these streams, which have equal rights to the use of water, and equal right of existence, and from the operation of which necessarily there is more or less a pollution of the waters of the streams. To stop the operation of these legitimate enterprises is a serious question, and one which might affect the welfare and prosperity of an entire State. Therefore, when an injunction is sought, which may have the effect of stopping the operations of large and expensive works which cause the waters to be polluted, it must clearly appear that a real, material, and substantial injury is being caused the prior appropriator by such operations, that the remedy at law is entirely inadequate, and that he will suffer irreparable injury from the continuance of such pollution.[13]

§ 1142. **Remedies for injuries from pollution.**—In cases of private nuisances from the pollution of waters, or where the rights of certain individuals alone are affected, there are two principal remedies through the courts which are open to the injured party, and these are: First, an action for an injunction against the continuance of the injuries;[1] and, second, an action for damages for past injuries.[2] And although one form of these actions appeals to the equity side of the court and the other to the law, where there are the proper parties, both of these remedies may be granted in the same action, as in the case of other actions for the protection of and dam-

ference, so long as they do no substantial damage, but to permit a subsequent appropriator to so pollute or burden the stream with debris as substantially to render it less available to the prior appropriator causes him to lose the rights he gained by appropriation as readily as would be the diversion of a portion of the water which he appropriated." Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465; People v. Rogers, 12 Colo. 278, 20 Pac. Rep. 702; McCauley v. McKeig, 8 Mont. 389, 21 Pac. Rep. 22, 16 Morr. Min. Rep. 1.

[13] For injunctions against pollution, see Secs. 1142, 1143.

[1] For injunctions against pollution, see Sec. 1143.

[2] For damages for pollution, see Sec. 1144.

ages to water rights, discussed in previous portions of this work.[3] Where both remedies are prayed for, the question as to whether or not the injunction should be granted is for the court to decide; but the questions as to whether damages should be awarded and the measure of damages should be submitted to a jury, unless the trial by jury is waived.[4]

Upon the subject of parties to these actions, the same rules are followed as in other actions for the injury to or the protection of water rights, and later discussed.[5] Where the action is for an injunction only, if several persons are similarly affected, they may join as parties plaintiff in one action.[6] So, also, may a single action be maintained against several persons as parties defendant, for the maintenance of a common nuisance in the pollution of the waters of a stream, although it was the result of their individual acts.[7] But in actions for damages, several persons can not be joined as parties plaintiff or defendant, unless as plaintiffs they have some joint interest or as defendants they were joint and not several tort feasors.[8]

In actions for the abatement of public nuisances for the pollution of the waters of streams, such an action must be brought by the State, or by some political division thereof, or by some public official designated by the statute. A private person can not maintain an action to abate a public nuisance, unless it is specially injurious to him, in which case such special injuries must be alleged

3 For injunctions and damages in the same action, see Secs. 1536, 1599.

See, also, Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14; Miller v. Highland D. Co., 87 Cal. 430, 25 Pac. Rep. 550, 22 Am. St. Rep. 254.

and proven.[9] To authorize a private person to maintain an action to abate a public nuisance, he must show a special injury different in kind, and not merely in degree, from that suffered by the public generally.[10]

In Colorado, where under the constitution, the Supreme Court will assume original jurisdiction in actions to abate public nuisances, it is held that it will do so only in cases of public character; and that it will not assume jurisdiction of a case, where it does not involve the interest of the State at large, except incidentally, or affect in any manner its sovereignty, or the liberty of its citizens.[11]

Where the action is between two States, the Supreme Court of the United States will assume original jurisdiction to hear and determine such case.[12]

§ 1143. **Remedies—Injunctions.**—A riparian proprietor or an appropriator whose right to the use and enjoyment of the waters of a stream have been invaded by the pollution thereof by another, if the facts warrant it, will be granted an injunction in a proper action brought for that purpose. As far as the procedure is concerned, it does not differ from that in actions brought to enjoin other invasions against a water right, discussed in other sections of this work,[1] or, in fact, from that in actions brought to enjoin an invasion of rights other than water rights. Before the injunction will be granted to permanently restrain the acts causing the pollution of the waters, it must be shown by the party seeking such relief that all the essential facts exist, which are necessary to confer jurisdiction upon a court of equity for this purpose. It must be shown that the acts causing the injury are a real, material, and substantial invasion of the

necessarily results to the one entitled to the use of the water from the conduct of the business of another whereby the pollution is caused will be enjoined by a court of equity on account of the inadequacy of the remedy at law and also in order to prevent a multiplicity of suits.[6] A preliminary injunction may be granted in a proper case, even without notice. But, as in other cases, in order for such a peremptory writ to issue, a clear showing must be made that there is an urgent necessity for the same.[7] An injunction will also be granted not only where there is a pollution of the quality of the water as a fluid by discharging some deleterious substance therein, but also where the bed of the stream is filled up by dumping material in it and thereby causing it to overflow,[8] so that the lands of the plaintiff are injured thereby, or where the plaintiff is prevented from getting the quantity of water to which he is entitled.[9] As the converse of the right of injunction against the pollution of streams, the Oregon Court held that where a dam erected by a lower riparian proprietor backed the water and the debris up on the mining ground of the upper proprietor, who possessed the superior right to the use of the water, and prevented the upper proprietor from discharging the debris from his mine into the stream, and thereby interfered with the operation of the mine, the upper proprietor was entitled to have the maintenance of the dam enjoined, so as to permit his use of the stream for that purpose.[10]

As was held in a late Idaho case,[11] the rule that "every person

[6] Strobel v. Kerr Salt Co., 164 N. Y. 303, 58 N. E. Rep. 142, 51 L. R. A. 687, 79 Am. St. Rep. 643, 21 Morr. Min. Rep. 38; Jessup etc. Co. v. Ford, 6 Del. Ch. 52, 33 Atl. Rep. 618; Harris v. Mackintosh, 133 Mass. 228; Peterson v. Santa Rosa, 119 Cal. 387, 51 Pac. Rep. 557.

[7] For preliminary injunctions, see Sec. 1607.

[11] City of Bellevue v. Daly, 14 Idaho 545, 94 Pac. Rep. 1036, 15 L. R. A., N. S., 992.

shall so use and enjoy his own property, however absolute and unqualified his title, that his use of it shall not be injurious to the equal enjoyment of others having an equal right to the enjoyment of their property, nor injurious to the rights of the public," [12] must be considered and applied in the light of that other principle, "that every man has a right to the natural use and enjoyment of his own property, and if while lawfully in such use and enjoyment, without negligence or malice on his part, an unavoidable loss occurs to his neighbor, it is *damnum absque injuria,* for the rightful use of one's land may cause damage to another without any legal wrong." [13] Therefore, it is held that the fact that a municipality uses water that it conveys to the place of use through a ditch that runs across the field of another does not of itself entitle the municipality to maintain an action against the owner of the land for a perpetual injunction restraining him from allowing his cattle to feed and graze in the field along the banks of the ditch, and to cross over the same or wade through the waters thereof, but that the primary duty of protecting the waters from contamination was upon the city.[14]

In general, we will add that as to whether or not an injunction will be granted against the contamination or pollution of the waters of a stream should depend upon the real equities, as shown by the facts and circumstances of each particular case. The court should consider the rights of the respective parties, the use for which the party asking for the injunction is making of the water, the nature of the pollution, the injurious effect which it has upon the rights of the plaintiff, the continuing nature and extent of the injury, and the means available for its correction.[15] And in the decree of injunc-

12 People v. Truckee Lumber Co., 116 Cal. 397, 48 Pac. Rep. 374, 39 L. R. A. 581, 58 Am. St. Rep. 183; State v. Roberts, 59 N. H. 256, 47 Am. Rep. 199; Kinnaird v. Standard Oil Co., 89 Ky. 468, 12 S. W. Rep. 937, 7 L. R. A. 451, 25 Am. St. Rep. 545, 11 Ky. Law. Rep. 696; Gilmore v. Royal Salt Co., 84 Kan. 729, 115 Pac. Rep. 541, 34 L. R. A., N. S., 48.

13 Beach on Injunctions, Sec. 1112, note 1; Barnard v. Shirley, 135 Ind. 547, 34 N. E. Rep. 600, 35 N. E. Rep. 117, 24 L. R. A. 568; *Id.*, 151 Ind. 160, 47 N. E. Rep. 671, 41 L. R. A. 737.

14 City of Bellevue v. Daly, 14 Idaho 545, 94 Pac. Rep. 1036, 15 L. R. A., N. S., 992.

15 Whether in such case relief may be had by injunction depends upon the equities of the case, in view of the practical consequences of the wrong and the means available for its correction. Gilmore v. Royal Salt Co., 84 Kan. 729, 115 Pac. Rep. 541, 34 L. R. A., N. S., 48.

"In short, each case must be gov-

tion, no greater relief will be granted than is necessary to put an end to the pollution of the water, and to restore the rights of the plaintiff. The conducting of a legitimate business will not be enjoined, and only the acts causing the pollution.[16] It therefore follows that the defendant may take such steps as he may see fit to stop the pollution, and still continue his business.[17] Again, under the same rule, a riparian owner can not be enjoined from felling trees upon his own lands into a stream, on the ground that the water is rendered unfit for domestic use by an owner lower down the stream, where it does not appear that the quality of the water was materially affected.[18] But the connection of a sewer underdraining a cemetery into a stream of water which is used for do-

erned by the circumstances that surround it, and by relative equities." Peterson v. Santa Rosa, 119 Cal. 387, 51 Pac. Rep. 557.

17 Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465, where it was said: "We think, to enable the mining company to take advantage of any efforts it may make in this direction, it should be left to the discretion of the trial Court hereafter, upon a proper showing made to it temporarily, to modify the injunction so as to permit of reasonable experiments being made to ascertain the probability of successfully erecting and maintaining settling basins to effectually dispose of the tailings and slimes without detriment to the lands lying under the canals, and with authority in the District Court likewise permanently to enforce or modify the injunction in accordance with the conditions as they shall be found to be."

See, also, Brown v. Gold Coin etc. Co., 48 Ore. 277, 86 Pac. Rep. 361; Humphreys Tunnel Co. v. Frank, 46 Colo. 524, 105 Pac. Rep. 1093.

18 Fisher v. Feige, 137 Cal. 39, 69 Pac. Rep. 618, 59 L. R. A. 333, 92 Am. St. Rep. 77, where it is said: "No doubt the defendants could be enjoined from felling trees into the stream, if thereby the water was made unfit for domestic use; but on that subject the findings should, we think, be more certain and specific. It does not fully appear that the injury thus done to the quality of the water was material; and the finding as to that matter is rather inconsistent with the other finding that all the damage done by all of the alleged acts of defendants amounted to only 1 cent. If there be another trial, there should be a fuller finding on the subject."

See, also, City of Aberdeen v. Lytle etc. Co., 58 Wash. 368, 108 Pac. Rep. 945.

mestic purposes, watering animals, making ice for domestic use, is held to be a nuisance and may be enjoined.[19]

**§ 1144. Remedies—Actions for damages—Measure of damages.**—As is the case of other injuries to water rights, the party who has been injured by the pollution of water to which he is entitled to the use, in an action at law, may recover damages for past actual injuries and that, too, regardless of the fact as to whether he claims the use of the water as a riparian proprietor or as an appropriator.[1] The mode of procedure in actions for damages resulting from the pollution of waters does not differ from other actions for damages to injuries to water rights,[2] or, in fact, to other rights. A complaint that states fully and concisely the nature of the damage, the amount, and that it was caused by the unlawful, wrongful, and negligent acts of the defendant, and specifying such acts, states a cause of action.[3] As a general rule, however, in such actions it is not necessary to set forth any act of negligence upon the part of the defendant, which caused the injury. The injury itself and that it was caused by the acts of the defendant are all that is necessary for the plaintiff to allege or prove.[4]

[4] Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907.

"However cautiously or carefully the miner works is of no consequence, for, if his work in fact injures an-

Where the plaintiff is entitled to recover at all, as in other actions for damages, he may recover for all injuries which were the direct and proximate result of the unlawful acts of the defendant in polluting the water.[5] Where there is a total destruction of the value of land or other property, a recovery may be had for the full value of such property before the injury.[6] Where there is a permanent injury to land, the measure of the damages is the difference between the value of the land immediately prior to the injury and its value immediately after the injury. And the recovery of such damages for a total and permanent injury to land includes all injuries—past, present, and future.[7] But where the injury is but temporary, as for example for the destruction of crops for a certain year, the plaintiff is entitled to recover all damages which were the natural, obvious, and proximate consequence and result of the acts complained of.[8]

other, he is none the less liable." 2 Lindley on Mines, Sec. 843.

See, also, Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814.

5 For measure of damages for injuries to water rights, see Secs. 1697-1701.

6 Where property is entirely destroyed and rendered valueless for any purpose, plaintiff may sue to recover the value of the property in damages. Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907.

See, also, Paris v. Allred, 17 Tex. Civ. App. 125, 43 S. W. Rep. 62.

7 The measure of damages for permanent injury to land, resulting from the poisoning of the waters of a stream, is the difference between the value of the land prior to the injury and its value after the injury. Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14.

"The difference between the value of the land with and without the permanent injury is recoverable." Drake v. Lady Ensley Coal etc. Co., 102 Ala. 501, 14 So. Rep. 749, 24 L. R. A. 64, 48 Am. St. Rep. 77.

See, also, Paris v. Allred, 17 Tex. Civ. App. 125, 43 S. W. Rep. 62; Unscheid v. San Antonio, —— Tex. Civ. App. ——, 69 S. W. Rep. 496.

8 For the measure of damages for the loss of crops, see Chap. 83.

So, in an action for the loss of water by the pollution of the water in a canal, it was held that the proper measure of damages was what the water was worth in the market for irrigation purposes. North Point etc. Co. v. Utah etc. Co., 23 Utah 199, 63 Pac. Rep. 812.

So, where the injury can be repaired by the removal of the debris, the measure of damages is the cost of its removal up to the value of the entire property, which it can not exceed. Stevenson v. Ebervale Coal Co., 201 Pa. 112, 50 Atl. Rep. 818, 88 Am. St. Rep. 805; *Id.*, 203 Pa. 316, 52 Atl. Rep. 201.

See, also, Seely v. Alden, 61 Pa. 302, 100 Am. Dec. 642; Mineral Wells v. Russell, 30 Tex. Civ. App. 232, 70 S. W. Rep. 453; Hollenbeck v. Marion, 116 Iowa 69, 89 N. W. Rep. 310; Schoen v. Kansas City, 65 Mo. App. 134.

Where in such a case the injury is to the land, but is temporary, a common method is to assess the damages according to the depreciation of the rental value of the property from that before the injury was committed.[9]

In a late case in California,[10] where there was a partial injury to land and a total destruction of growing crops, it was said: "The true rule as to the measure of damages in the case at bar was this: Plaintiffs were first entitled to the value of the growing crop destroyed. As to the land available exclusively for mining purposes, if the cost of repairing the injury by removing the debris deposited by defendant would amount to less than the value of the property as it was prior to the injury, such cost would be the proper measure of damage; but, if such cost of repair or of restoration would exceed such value, then the value of the property would be the proper measure."

Where a permanent injury to land for agricultural purposes does not immediately result from the acts complained of, but several years elapse before the injury is completed, the plaintiff is entitled to damages for the yearly injury to his crops, caused by the continuing nuisance, until the completion of the total and permanent injury, but no damages can be allowed for injury to crops after that time, as they are all included in such permanent injuries.[11] Again, damages resulting from the pollution of a stream, are not restricted to the mere depreciation of property, but may also include the expense caused by sickness and the inconvenience and discomfort caused to the plaintiff and his family by the emanation of noxious odors from the polluted water.[12]

9 Bennett v. Marion, 119 Iowa 473, 93 N. W. Rep. 558.

10 Salstrom v. Orleans etc. Co., 153 Cal. 551, 96 Pac. Rep. 292.

11 Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14.

12 Weston Paper Co. v. Pope, 155 Ind. 394, 57 N. E. Rep. 719, 56 L. R. A. 899; Mansfield v. Hunt, Ohio C. C. 488; Baltimore etc. Co. v. Fifth Baptist Church, 108 U. S. 317, 27 L. Ed. 739, 2 Sup. Ct. Rep. 719; Threatt v. Brewer M. Co., 49 So. Car. 95, 26 S. E. Rep. 970; Tennessee etc. Co. v. Hamilton, 100 Ala. 252, 14 So. Rep. 167, 46 Am. St. Rep. 48; Gulf etc. Co. v. Reed, 80 Tex. 363, 15 S. W. Rep. 1105, 26 Am. St. Rep. 749; Jacksonville v. Doan, 145 Ill. 23, 33 N. E. Rep. 878; Ferguson v. Firmenich Mfg. Co., 77 Iowa 576, 42 N. W. Rep. 448, 14 Am. St. Rep. 319.

Where, from the nature of the action, the law furnishes no rule for the measurement of damages, their assessment is peculiarly within the province of the jury, or of the Court, where the case is tried without a jury.

**§ 1145. Remedies—Criminal prosecution.**—In every State there are penal codes against the pollution of waters, where such acts constitute a public offense or a public nuisance. In most of the States it is made a felony, punishable in the penitentiary, to poison the water of any spring, well, or reservoir. For lesser offenses it is usually made a misdemeanor, punishable either by confinement in jail or by fine, or both. It is not our purpose to discuss these statutory laws to any great extent in this work. And those who wish to make a further examination of the same will find about the best compilation upon the subject in a pamphlet published by the Government, entitled "A Review of the Laws Forbidding Pollution of Inland Waters in the United States."[1]

A statute prohibiting the pollution of waters by defining what acts shall constitute the same and fixing the penalty therefor must be strictly construed. Therefore, a statute which prohibits the pollution by placing in the stream any dead animal, or putrid, nauseous, or offensive substance, is held not to apply to sawdust; and if the statute is limited to streams or other bodies of water used for domestic purposes, it is held not to apply to other streams, the waters of which are not used for those purposes.[2] And where the defendant built dams across bayous on his land for irrigating purposes, and after the waters which had risen on the lands of others had receded, a disagreeable smell arose, it was held that no criminal prosecution would lie where it was not shown that there was the intent upon the part of the defendant to produce such smells.[3] But the keeping of sheep in a corral on the banks of a stream from which a city's water supply is drawn, and thereby polluting the water, is a misdemeanor for which criminal prosecution will lie.[4] As in civil cases, there must be proof that the water was polluted before a conviction can be maintained. So, where the waters of a lake were used for a bathing resort by the defendant, and which

Aldrich v. Palmer, 24 Cal. 513; North Point etc. Co. v. Utah etc. Co., 23 Utah 199, 63 Pac. Rep. 812; Kewanee v. Guilfoil, 81 Ill. App. 490; Wood on Nuisance, 2d Ed., Sec. 866.

See, also, for the statutes of the various States upon the subject of pollution, Part XIV.

2 State v. Mitchell, 47 W. Va. 789, 35 So. Rep. 845.

3 Stacy v. State, 54 Tex. Civ. App. 610, 114 S. W. Rep. 807, 12 L. R. A., N. S., 1259.

4 People v. Borda, 105 Cal. 636, 38 Pac. Rep. 1110.

waters were also used by a municipality for its water supply, where there was no proof that any injury resulted, it was held that a conviction of the defendant was erroneous and was set aside.[5]

At common law, without any special statute governing the subject, the maintenance of a public nuisance by the pollution of waters, is a criminal offense for which an indictment will lie, and, if convicted, the defendant will be punished therefor.[6]

The indictment and conviction of a person for maintaining a nuisance by polluting waters will not bar a civil action in favor of persons who were injured by the act.[7]

§ 1146. **Remedies—Defenses.**—The defendant, in an action for an injunction or for damages for the pollution of waters, in addition to his denial of the allegations of the plaintiff's complaint, may set up such special defenses as he may have by properly pleading the same. Where a right has been acquired against the plaintiff by prescription to pollute the waters, such a defense is good if the same is properly pleaded and proven. But where the acts of the defendant constitute a public nuisance, such a defense can not be maintained. This subject has been sufficiently discussed in a previous section of this chapter.[1] But where a public nuisance is maintained, and the plaintiff is a private individual, who brings the action in behalf of himself, it is a good defense in an action for an injunction that the plaintiff has not sustained special injuries, or injuries other than are common to the public at large.[2]

5 People v. Hulbert, 131 Mich. 156, 91 N. W. Rep. 211, 64 L. R. A. 265, 100 Am. St. Rep. 588, 18 Am. & Eng. Ency. Law 135, 139.

7 Columbus etc. Co. v. Tucker, 48 Ohio St. 41, 26 N. E. Rep. 630, 12 L. R. A. 577, 29 Am. St. Rep. 528.

See, also, Spring Valley Waterworks v. Fifield, 136 Cal. 14, 68 Pac. Rep. 108.

1 For the acquisition of the right of pollution by prescription, see Sec. 1139.

2 Spring Valley Waterworks v. Fifield, 136 Cal. 14, 68 Pac. Rep. 108; Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465; Georgetown v. Alexandria Canal Co., 12 Pet. 91 (U. S.), 9 L. Ed. 1012; Wesson v. Washburn Iron Co., 13 Allen (Mass.) 95, 90 Am. Dec. 181.

A bill in equity to abate a public nuisance may be filed by one who has sustained special damages; but, unless one shows that he has sustained and is still sustaining individual damage from such nuisance, he can not maintain such bill. Mississippi etc. Co. v. Ward, 67 U. S. 2 Black 485, 17 L. Ed. 311.

It is also a good defense as against a private individual who brings the action that the right to pollute the water was acquired by grant or contract.[3] So, a contract granting an easement to the defendants to discharge tailings from their mills or other works, through the reservoirs, sluices, and pipes of a placer mining company, is held good during the designated term, both as against the original owners and as against subsequent purchasers of the property.[4] But a contract is no defense where a public nuisance is maintained.[5] The acquiescence of the plaintiff to the acts of pollution by the defendant may also constitute a good defense;[6] or, again, such acts as would constitute an estoppel.[7] Again, an action may be defeated by the showing of accord and satisfaction, as in the case where a receipt is shown against all claims for damages.[8] But, upon the other hand, it is no defense for the pollution of a stream that a mine was worked carefully and without actual negligence upon the part of the defendant.[9] As was said in a late California case:[10] "It is thoroughly established that, no matter how carefully the miner may conduct his operations, he has no lawful right to flood or wash away his neighbor's land, or deposit mining debris thereon, to its injury, and that, if by the deposit of mining debris in the stream he causes such a result, he is liable for the resulting damage. The fact that he uses all the care for the protection of his neighbor's property consistent with the successful conduct of his mining operations is immaterial."[11] Or the fact that others contributed to the contamination in the water is no

7 Lowenback v. Switzer, 1 Va. Dec. 141.

But see Weston Paper Co. v. Pope, 155 Ind. 394, 57 N. E. Rep. 719, 56 L. R. A. 899; Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814; Snow v. Williams, 16 Hun, 468; Silver Spring etc. Co. v. Wanskuck, 13 R. I. 611.

See, also, for acts constituting an estoppel, Secs. 1121-1128.

8 Vedder v. Vedder, 1 Denio 257.

9 Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814.

10 Salstrom v. Orleans etc. Co., 153 Cal. 551, 96 Pac. Rep. 292.

11 Citing Hill v. Smith, 27 Cal. 476; *Id.*, 32 Cal. 166, 4 Morr. Min. Rep. 597; Robinson v. Black Diamond Coal Co., 57 Cal. 412, 40 Am. Rep. 118; Hobbs v. Amador etc. Co., 66 Cal. 161,

defense of one against whom the action is brought, if, in fact, he himself was guilty of polluting it.[12] But as one party is liable in damages only for the injuries caused by him, in mitigation of damages only, the plea that others are also contributing to the pollution of a stream is good.[13]

**§ 1147. Remedies—Evidence—Burden of proof.**—The burden of proof in an action either for an injunction, or for damages, or for both, for the pollution of waters, as is the case in other actions for the invasion of or injury to water rights,[1] is, in the first instance, upon the plaintiff to establish by competent and material evidence the injury to his rights or other property, and that the same was caused by the unlawful acts of the defendant. This well-known principle of evidence is best illustrated in the decisions in the case of Missouri v. Illinois, where the Supreme Court of the United States first held upon demurrer that the bill was good and that "the nuisance set forth in the bill was one which would be of international importance—a visible change of a great river from a pure stream into a polluted and poisoned ditch," but "that the nuisance must be made out upon determinate and satisfactory evidence, that it must not be doubtful, and that the danger must be shown to be real and imminent." But upon the final hearing of the action the Court held that the evidence was not sufficient to establish within the rule laid down in the previous hearing either

4 Pac. Rep. 1147; Fitzpatrick v. Montgomery, 20 Mont. 181, 50 Pac. Rep. 416, 63 Am. St. Rep. 622.

12 The fact that other manufacturers are doing the same thing as the one against whom an injunction is sought, will not prevent the relief, but may require it. Strobel v. Kerr Salt Co., 164 N. Y. 303, 59 N. E. Rep. 142, 51 L. R. A. 687, 79 Am. St. Rep. 643, 21 Morr. Min. Rep. 38.

The fact that others besides the defendant have polluted the stream, will not prevent an action against one actually polluting it. Wood v. Waud, 3 Exch. 748, 18 L. J. Exch. N. S. 305, 13 Jur. 472.

See, also, Weston Paper Co. v. Pope, 155 Ind. 394, 57 N. E. Rep. 719, 56 L. R. A. 899; Bradley v. Warner, 21 R. I. 36, 41 Atl. Rep. 564.

13 Chipman v. Palmer, 77 N. Y. 51, 33 Am. Rep. 566; Tennessee etc. Co. v. Hamilton, 100 Ala. 252, 14 So. Rep. 167, 46 Am. St. Rep. 48; Seely v. Alden, 61 Pa. 302, 100 Am. Dec. 642.

1 For the burden of proof in injunction suits, see Chap. 81.

For the burden of proof in damage suits, see Chap. 83.

the injury itself, or, if any, that it was caused by the act of the defendant in discharging the sewage of the City of Chicago into the river, and in concluding the Court said: "But our conclusions upon the present evidence are that the case proved falls so far below the allegations of the bill that it is not brought within the principles heretofore established in the cause."[2]

Therefore, it may be stated as a rule of evidence well settled by the above case, and many others, that a permanent injunction will be granted by a court of equity to restrain a nuisance based upon the pollution of waters of a stream only in cases where the fact of the nuisance is made out upon determinate and satisfactory evidence. If the evidence is conflicting, and the injury doubtful, such conflict and doubt will be ground for refusing to grant the injunction; but if these facts are established by such evidence, the Court will grant the injunction.[3] But where the interposition by injunction is sought to restrain that which it is apprehended will create a nuisance, the proofs must show such a state of facts as will manifest the danger to be real and immediate before the injunction will be granted.[4]

In an action to recover damages for the pollution of waters, the plaintiff must show, by a preponderance of the evidence, the wrongful act of the defendant that he has suffered real, material, and substantial injuries from such acts, and the pecuniary amount in

2 Missouri v. Illinois, 180 U. S. 208, 45 L. Ed. 497, 21 Sup. Ct. Rep. 331; *Id.*, 200 U. S. 496, 50 L. Ed. 572, 26 Sup. Ct. Rep. 268; *Id.*, upon assessment of costs in actions between States, 202 U. S. 598, 50 L. Ed. 1160, 26 Sup. Ct. Rep. 713.

3 "It is not shown that any such germs ever did reach the intake pipe, or that any illness in Battle Creek could be traced to the use of the water taken from this lake." People v. Hulbert, 131 Mich. 156, 91 N. W. Rep. 211, 64 L. R. A. 265, 100 Am. St. Rep. 588, 18 Am. & Eng. Ency. Law 135, 139.

See, also, Missouri v. Illinois, *supra;* Markwardt v. City of Guthrie, 18 Okla. 32, 90 Pac. Rep. 26, 9 L. R. A., N. S., 1150, 11 Ann. Cas. 581; Platt Bros. v. Waterbury, 72 Conn. 531, 45 Atl. Rep. 154, 48 L. R. A. 691, 77 Am. St. Rep. 335; Esson v. Wattier, 25 Ore. 7, 34 Pac. Rep. 756; Carson v. Hayes, 39 Ore. 97, 65 Pac. Rep. 814.

4 Missouri v. Illinois, *supra;* Esson v. Wattier, 25 Ore. 7, 34 Pac. Rep. 756; Cushman v. Highland D. Co., 3 Colo. App. 437, 33 Pac. Rep. 344; Branstetter v. Williams, 6 Idaho 574, 57 Pac. Rep. 433.

See, also, for actions for injunction for pollution, Sec. 1143.

which he has been damaged thereby.[5] It is then left to the jury or the Court, if the case is tried without a jury, to assess the damages.[6]

5 "It is hardly probable that any serious damage would result to plaintiffs from the mining operations of the defendant. In fact, the evidence upon this question on the part of the plaintiffs is so meager and inconclusive as to scarcely raise a presumption." Branstetter v. Williams, 6 Idaho 574, 57 Pac. Rep. 433.

In an action for damages caused by the pollution of a stream, testimony as to the effect of the water on land and crops is not objectionable as opinion evidence; a non-expert witness, when he states facts showing his competency, may give his opinion of the amount of injury or damage. Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14; Merrifield v. Worcester, 110 Mass. 216, 14 Am. Rep. 592; Columbus etc. Co. v. Freeland, 12 Ohio St. 392.

6 Tiede v. Schneidt, 105 Wis. 470, 81 N. W. Rep. 826.

# PART X.

## SUBTERRANEAN WATERS AND RIGHTS ACQUIRED THERETO.

### CHAPTER 59.

### SUBTERRANEAN WATERS IN GENERAL—CLASSIFICATION.

§ 1148. Scope of part—Scope of chapter.
§ 1149. Subterranean waters—In general.
§ 1150. Underground waters—How derived and distributed.
§ 1151. Subterranean waters—Cause of utilization.
§ 1152. Subterranean waters defined and classified.

**§ 1148. Scope of part—Scope of chapter.**—In a previous chapter of this work we classified and defined the different classes of water according to the bodies, streams, or conditions, where found.[1] But outside of the bare classification of subterranean waters we did not discuss that subject,[2] deeming it better to discuss the subject of subterranean waters altogether in this part. Therefore, in this part of this work, we will confine our discussion to subterranean or underground waters, and the rights which may be acquired in them by individuals, both under the Arid Region Doctrine of appropriation and at common law.

The scope of the present chapter will be confined to a discussion of subterranean waters in general, and to the classification of those waters. As the character and extent of the rights which may be acquired by individuals in and to subterranean waters depend largely upon the character of the subterranean streams and bodies themselves, the classification of these waters into their main divisions and subdivisions will be as they are known and recognized by the most modern scientific authorities and by the courts. The definitions, descriptions, and the rights which may be acquired to

1 See for classification and definitions of waters, Chap. 14, Secs. 292-323.

2 See Sec. 323.

these waters will be discussed in the following chapters of this part under their respective divisions.

§ 1149. **Subterranean waters—In general.**—In all parts of the world where there are land and a precipitation of moisture there is subterranean or underground water. This is especially true of the arid, or mountainous regions of the earth. A large portion of the precipitation, whether it comes in the shape of rain or snow, instead of flowing off over the surface of the land, or in the surface water courses, owing to the dry, rocky, and gravelly soil, sinks below the surface of the land, and thereby subterranean streams or other bodies of underground water are formed. Even in the great desert areas of the earth these underground waters are found, notably in the Great Sahara Desert, where great tracts of barren land have been reclaimed and brought under cultivation solely by the means of these underground waters.[1] Upon the great plains, the part that is called the semi-arid or subhumid region of our own country, these underground waters are found in great quantities. The same may be said of every valley of the mountainous and arid regions of this country. These underground waters, either keeping themselves within the underground channels of the surface streams or by independent underground streams, taking their sources in the higher lands, gradually flow downward under the valleys, where either by Nature itself or by the hand of man aiding Nature, they are brought to the surface, and thus augment the scanty flow of the surface streams of these regions in the reclamation of barren lands. In many sections of the country the reclamation of large tracts of land is carried on entirely by underground water, as, for example, where the land is at considerable distance from surface streams. As through scientific research the knowledge of the movement of subterranean waters becomes better known, and the devices for raising these waters to the surface become perfected, these waters will be utilized more and more as the years go by.

The investigation of underground waters is a branch of geology known as hydrology.[2]

1 See Sec. 163.

2 Geology and Underground Waters of South Dakota, by N. H. Darton, 1909, Water-Supply Paper No. 227, U. S. Geological Survey.

**§ 1150. Underground waters.—How derived and distributed.**—Subterranean or underground water is derived from rain and melted snows and passes underground in porous materials, such as sandstone, sand, and gravel. Some of the subterranean water is absorbed directly by such materials immediately after it has fallen or has melted, but much water passes underground by the sinking of streams, or water from streams; many of the surface streams lose a portion of their flow in crossing porous strata or coming in contact with fissures. When the surface water comes in contact with the porous strata it is absorbed and immediately begins moving downward, or as nearly in that direction as is possible with the obstacles which it encounters. Sooner or later it comes in contact with an impervious stratum below, and thereafter can only move laterally down the incline of that surface. The rapidity of motion of underground water depends principally upon two conditions—the angle of inclination of the impervious surface and the degree of porosity of the material through which the water moves. In the case of fissures the movement of the water may be very rapid and equal to that of surface streams. At times the water sinks under impervious strata of clay or rock, and is held by them underground, oftentimes to a great depth, thus forming the artesian basins, which we will discuss more at length in a succeeding section of this part.[1] More often, however, the water is held above the impervious clay or rocks and thus forms the subsurface flow of surface streams,[2] and the "ground water," or those great bodies of water under, but near, the surface of the earth which are discoverable by shallow wells, and which are slowly percolating their way to a lower level. By the recent scientific investigations, both those made by the United States Geological Survey and others, this movement of underground waters has been ascertained in many localities. By borings its width of flow has been determined, also the depth of strata through which it flows; also the rapidity with which it flows through the strata has been ascertained. Its total flow, from this data, has been reduced into cubic feet per second.[3] Or, from the same data, with the additional data of the amount of water to each cubic foot of this porous earth, from any given section, the

[1] See Secs. 1166-1184.

[2] See Secs. 1161-1163.

[3] See the Underflow of the South Platte Valley, Water-Supply and Irr. Paper No. 184, 1906, by Chas. S. Slichter and H. C. Wolf, p. 12.

amount of water therein contained may be measured like wheat in a bin. It matters not whether this porous stratum is on the surface of the ground in the form of a soil covering or whether it is deeply buried by impervious layers, the water movement within it is practically the same. When the porous layer is on the surface, as is often the case on the Great Plains, no pressure or head can be produced, for the water is simply running down an inclined plane underneath the surface, with nothing above to prevent it from rising. This water, however, can be collected in surface wells, from which it may be pumped by any mechanical power, as is so often the case in many portions of this country, and after it has been brought to the surface, it may be used for domestic, irrigation, or any other purpose. It is by this means and by this water that many thousands of acres of land are irrigated which would otherwise remain in their barren condition.[4] Where, however, the porous strata through which the water is slowly flowing lies under

[4] For irrigation by means of pumping plants, see the following works: Pumping Water for Irrigation, by Herbert M. Wilson, containing an interesting description of early devices for pumping water for irrigation, and the history of their use. Water-Supply and Irr. Paper No. 1, U. S. Geol. Survey, 1896; Mechanical Tests of Pumping Plants in California, by J. N. LeConte and C. E. Tait, U. S. Dept. of Agriculture, Office of Exper., Bulletin No. 181, 1907; Windmills for Irrigation, by E. C. Murphy, Water-Supply and Irr. Paper No. 8, U. S. Geol. Survey, 1897; Mechanical Tests of Pumps and Pumping Plants, by W. B. Gregory, U. S. Dept. of Agriculture, Office of Exper. Stations, Bulletin No. 183, 1907; Irrigation Practice on the Great Plains, by E. B. Cowgill, Water-Supply and Irr. Paper No. 5, U. S. Geol. Survey, 1897; Underground Waters of the Coastal Plain of Texas, by Thomas U. Taylor, Water-Supply and Irr. Paper No. 190, 1907; Underground Waters of Southwestern Kansas, by E. Haworth, Water-Supply and Irr. Paper No. 6, U. S. Geol. Survey, 1897; Geology and Underground Waters of South Dakota, by N. H. Darton, Water-Supply and Irr. Paper No. 227, U. S. Geol. Survey, 1909; Underground Waters in the Valleys of Utah Lake and Jordan River, by G. B. Richardson, Water-Supply and Irr. Paper No. 157, U. S. Geol. Survey, 1906; A Reconnoissance in Southeastern Washington, by I. C. Russell, Water-Supply and Irr. Paper No. 4, 1897; Water Resources of Beaver Valley, Utah, by W. T. Lee, Water-Supply and Irr. Paper No. 217, 1908.

See, also, the many reports of the Government in the Water-Supply and Irrigation Papers, upon the subject of Geology and Water Resources of certain sections of the country, in the portion devoted to underground waters, containing a detailed description of the underground water supply and the methods used in those particular sections for utilizing it.

impervious strata of clay or rock, and a sufficient head is produced, a well drilled through the upper and impervious layers allows the water to rise through the drill hole, and an artesian well results.[5] Thus, again, by the hand of man are the underground waters tapped and brought to the surface, and thereby many thousands of acres of arid land reclaimed and made to produce crops.[6] Oftentimes, without the aid of the hand of man, the underground water in slowly flowing to lower levels strikes a cross dyke of impervious rock or clay, and if this dyke is high enough and of sufficient length, it acts as a dam to this subterranean stream, and causes the water to rise even to the surface, where it passes out of the earth from springs, the original source of the most of the surface streams. And thereafter these waters are governed by the laws of surface streams, treated in the previous chapters of this work. But before they make their appearance at the surface they must be treated both in law and in fact, as subterranean and underground waters—the principal subject under discussion in this chapter. Again, the same physical result may be had in certain sections of the country by the sinking of trenches to bedrock and the construction of artificial dams in the place of the natural dykes, and thus damming these subterranean streams. But as these waters are forced to the surface by artificial means, and as they run off in artificial channels, ditches, or canals, and not in natural water courses, such waters are treated as subterranean or underground waters, and not the waters of natural surface water courses.[7]

**§ 1151. Subterranean waters—Cause of utilization.**—Since the first edition of this work was written, in 1893, the courts have been called upon to decide certain questions relative to underground

[5] For artesian wells, see Secs. 1169, 1170.

[7] See Secs. 1197-1204.

waters which either had never been raised or had never been decided before. This is specially true relative to percolating waters. It will be also noticed that what were termed percolating waters in some cases have been either taken from that class and placed in the class known as underground waters or classified as different kinds of percolating waters.[1] This is due largely to the conditions of the country where these questions have been raised and the great need of water for all useful purposes in those regions. In the arid region of this country the greater proportion of the rainfall sinks below the surface of the earth and is there stored by Nature. This section of the country having naturally a very fertile soil and a fine climate, together with great mineral resources, has drawn from the Eastern States thousands of intelligent people, who have made this Western country their homes, hence the demand on the water resources of this section has, in many places, greatly exceeded the surface supply, and still there were, and now are, vast tracts of as fertile land as can be found in God's sunshine lying barren and unproductive, simply because there was no water for it. In this extremity it was found that there were great bodies of subterranean or underground waters, which were slowly flowing or percolating their way under the surface of the earth, and from which practically no benefit was being derived. The people who had settled in this Western country, possessing great intelligence, and, in many instances great wealth, after the surface water became so scarce that the supply was practically exhausted, as far as any additional drafts on it were concerned—as high as $1,000 being paid for a miner's inch of flow, or $50,000 for a stream flowing at the rate of one cubic foot per second [2]—naturally turned to the great bodies of subterranean or underground waters, which at that time were practically unknown, except the bare fact that they were there and wholly undeveloped. By scientific research, assisted by the Government in its Geological Survey, and their own native ingenuity, these people began in various ways to draw upon the subterranean waters and to use the same for the irrigation of tracts of land and other useful demands. Of course, as this use extended and the draft upon the subterranean waters increased, and, as was the case

[1] See subterranean or underground water courses, Secs. 1153-1165.

[2] See Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

of surface waters in this same section of the country, adverse claims arose to certain rights, or supposed rights, and thus the questions finally got into the courts; hence new classifications of underground waters were made and new rights in them defined and allowed.[3] Owing to the elasticity of our laws, which are so framed to meet new conditions as they arise, and to apply the principles of morals, justice, and equity to all new cases, this was and is permitted. In our classification and treatment of this subject we will endeavor, as far as possible, to conform to this new classification and to the new principles of law governing these subterranean waters.

§ 1152. **Subterranean waters defined and classified.**—That certain rights may be acquired in and to these subterranean or underground waters is recognized by law in all countries and in all jurisdictions, and as the nature and extent of these rights depend entirely upon the character of the subterranean streams or bodies themselves, it becomes necessary to define these waters and to classify them.

Subterranean or underground waters may be defined as all waters flowing, percolating, or lying underneath the surface of the earth and not visible without exploitation. They comprise all waters which, for the time being, are below the surface of the ground, and that, too, whether they have reached their present position by penetrating the ground directly after the fall of rain or the melting of snow, or by the escape of surface bodies or streams of water; whether they are confined to definite channels or are dissipated throughout the mass of more or less porous rock or earth; and whether they are ultimately to reach the sea without reappearing at the surface, or are soon to emerge as well-defined streams or numerous widely distributed springs from which natural streams and rivers have their original source.

These waters are divided by the later authorities into three main classes, depending largely upon their condition and where found, namely: First, subterranean water courses or streams;[1] second, artesian waters;[2] and, third, percolating waters.[3]

Subterranean water courses or streams are again subdivided into

[3] For rights in subterranean or underground waters, see Secs. 1153-1211.

[1] See Chap. 60, Secs. 1153-1165.

[2] See Chap. 61, Secs. 1166-1184.

[3] See Chap. 62, Secs. 1185-1211.

two general classes: First, those whose channels are known and defined; and, second, those whose channels are unknown and undefined.[4] Those waters whose channels are known and defined are again subdivided into two classes: First, known independent subterranean water courses,[5] and known dependent subterranean water courses, as where the underground waters are dependent for their supply upon surface streams or the underflow of such streams.[6]

The second main class of subterranean waters, artesian waters, need no further classification as far as this work is concerned, and will, therefore, be treated together as one class.[7]

Percolating waters, the third main class of subterranean waters, are divided by the authorities into four subdivisions, which are: First, diffused percolations;[8] second, percolations tributary to water courses or other surface bodies of water;[9] third, percolations tributary to underground reservoirs, or reservoirs or lakes of water below the surface of the earth;[10] and, fourth, seepage waters.[11]

We will now take up the subject of these waters and discuss them further in the following chapters, following the main division, as set forth above, for the subject matter of the respective chapters.

# CHAPTER 60.

## SUBTERRANEAN WATER COURSES.

§ 1153. Scope of chapter.
§ 1154. Subterranean or underground water courses—In general.
§ 1155. The classification of "defined and known," or "undefined and unknown" made both at common law and under the Arid Region Doctrine.
§ 1156. Known independent subterranean water courses.
§ 1157. Known independent subterranean water courses—Rights which may be acquired therein.
§ 1158. Known independent subterranean water courses—Riparian rights thereto.
§ 1159. Known independent subterranean water courses—Rights by appropriation.
§ 1160. Known independent subterranean water courses—Both riparian rights and those by appropriation.
§ 1161. Known dependent subterranean water courses—The underflow of surface streams.
§ 1162. The underflow dependent on surface streams—Rights which may be acquired therein—At common law.
§ 1163. The underflow dependent on surface streams—Rights under the law of appropriation.
§ 1164. Undefined and unknown water courses.
§ 1165. Existence, how proven and thereby become known—Burden of proof.

**§ 1153. Scope of chapter.**—In this chapter we will discuss subterranean water courses as distinguished from artesian waters and percolating waters, discussed in subsequent chapters of this part.[1]

**§ 1154. Subterranean or underground water courses—In general.**—Under our main division in our classification of subterranean or underground waters, in a preceding section,[1] the first, and, we will say, at present, the most important class of subterranean waters, is that to which subterranean water courses and streams belong. These subterranean water courses are, as their name indicates, those streams or currents of water which flow under-

[1] For artesian waters, see Secs. 1166-1184. For percolating waters, see Secs. 1185-1211.

[1] See Sec. 1152.

neath the surface of the earth in water courses.[2] A large portion of the Great Plains, and also the valleys of the mountainous regions of the West, is underlaid by strata of water-bearing sand and gravel which are fed by the mountain drainage. These water-bearing strata are oftentimes of great thickness, and the water moving freely through them is practically inexhaustible; and if it can be brought to the surface it is sufficient to irrigate a large portion of the country overlying it. Again, in and near the mountains many streams have their beds underneath the surface of the earth which were formerly upon the surface. This is caused by the canyon or gorge, after the stream had once formed, later being filled up with rock, gravel, and other debris. And while, apparently, the canyon is dry, the stream is still there, but below the more recent surface, with its waters passing through the boulders and gravel, to reappear upon the surface only when some rocky, impervious natural reef, or subterranean dam constructed by the hand of man stops the downward flow of the water and forces it to the surface. The movement of this water in subterranean streams, owing to the declivity of their beds, is often quite rapid, and oftentimes nearly equaling that of the surface streams, but usually the movement of the water is much slower. Thus great volumes of water oftentimes pass down the channels of these subterranean water courses, entirely hidden from sight, and, as far as all practical purposes are concerned, unless "developed" by man, are practically lost.

It is a description of and the rights in these subterranean streams or water courses which we propose to discuss in this chapter.

**§ 1155. The classification of "defined and known," or "undefined and unknown," made both at common law and under the Arid Region Doctrine.**—The only classification of subterranean or underground waters made by the common law is based on the method of transmission through the ground, and is that they belong to one of only two classes, namely: First, underground currents of water flowing in known and defined channels, or water courses; or, second, water passing through the ground beneath the surface in channels which are undefined and unknown. And, generally speaking, the rights which may be acquired by individuals to one of these two classes of water are, under the common law, entirely different

[2] For a description of surface water courses, see Secs. 301-310.

from the rights which may be acquired to the waters of the other class. The rights to the waters of the first class are governed by the rules of law governing surface streams; while the waters of the second class are treated as mere percolations, and, therefore, belong to the owner of the soil wherein they are found.[1]

The first of these subterranean water courses have all of the characteristics of surface water courses, that is to say, they have beds,[2] banks forming a channel,[3] and a current of water. The second class, while upon the one hand, may have all of these characteristics, upon the other hand these, as their names indicate, are still unknown and undefined. However, that they are there is well known as a scientific fact, and as the years go on, by the exploitation of these streams many of the underground water courses in the latter class, which were formerly undefined and unknown, become defined and known, and thus pass from the second class to the first. It is necessary to bear this distinction in mind in our discussion, as these two classes are governed by entirely different principles at common law.[4] However, as we shall see in subsequent sections, under the Arid Region Doctrine of appropriation the tendency has been more and more to treat the waters flowing or percolating beneath the surface to a great extent the same as surface streams, except as to what is now known as diffused percolations, and as to these there still remains a distinction.[5] And this is probably due to the fact that they are still unknown and still undefined. And in this connection it will be well to say that the word "defined" means a contracted and bounded channel, though the course of the stream may be undefined by human knowledge; and the word "known" refers to the knowledge of the course of the stream by reasonable inference.[6]

1 See Secs. 1188-1190.

2 See Secs. 303, 304.

3 See Sec. 305.

4 For the rights to subterranean waters at common law, see Secs. 1188, 1189.

5 See Sec. 1188 for diffused percolations.

6 Black v. Ballymena Commissioners, Ir. L. R. 17, Eq. 459; Roath v. Driscoll, 20 Conn. 533, 52 Am. Dec. 352; Brown v. Illius, 25 Conn. 583; Haldman v. Bruckhart, 45 Pa. St. 514, 84 Am. Dec. 511.

"'Defined' means a contracted and bounded channel, though the course of the stream may be undefined by human knowledge; and the word 'known' refers to knowledge of the course of the stream by reasonable inference." City of Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585, quoting from Kinney on Irr., 1st Ed., Sec. 48.

The common law classification as given above as to the general division of subterranean or underground waters into "defined and known" or "undefined and unknown" streams, has, as will be noticed by the authorities cited, been adopted to a great extent by the States composing the arid and semi-arid regions. However, as the scientific investigations of the movements of these waters progress, there is a constantly growing tendency to take from what was formerly the unknown and add to the known. Also, led off by the State of California, in the case of Katz v. Walkinshaw, there is a tendency to classify what, under the common law, were all included in the unknown streams and percolations, and to change the rule of law relative to the rights which might be acquired thereto. We will discuss this subject in a future chapter of this part.[7]

**§ 1156. Known independent subterranean water courses.**—Those subterranean water courses whose channels are known and defined, as stated in our classification,[1] are again subdivided into known independent subterranean water courses and known dependent subterranean water courses.[2] Known independent subterranean water courses are those which, independent of the influence of any surface streams, flow underneath the surface of the land in well-defined and known channels, the courses of which can be distinctly traced.[3]

See, also, Willow Cr. Irr. Co. v. Michaelsen, 21 Utah 428, 60 Pac. Rep. 943, 51 L. R. A. 280; Willis v. Perry, 92 Iowa 297, 60 N. W. Rep. 727, 26 L. R. A. 124; Medano D. Co. v. Adams, 29 Colo. 317, 68 Pac. Rep. 431; Herriman Irr. Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719; Huber v. Merkel, 117 Wis. 355, 94 N. W. Rep. 354, 62 L. R. A. 589, 98 Am. St. Rep. 933; Deadwood C. R. Co. v. Barker, 14 S. D. 558, 86 N. W. Rep. 619, all citing Kinney on Irr., 1st Ed., Sec. 49.

7 See Chap. 62, Secs. 1193-1204.

1 See Sec. 1152.

2 For known dependent subterranean water courses, see Secs. 1161-1163.

3 For the distinction between independent subterranean water courses and dependent subterranean water courses, see Sec. 1161.

For the definition of "well-defined" and "known," see Sec. 1155.

"Subterranean streams" are those which flow in a permanent, distinct, and well-defined channel from the lands of one to those of another proprietor. Tampa Waterworks Co. v. Cline, 37 Fla. 586, 20 So. Rep. 780, 33 L. R. A. 376, 53 Am. St. Rep. 262.

See, also, Deadwood Cent. R. Co. v. Barker, 14 S. D. 558, 86 N. W. Rep. 619; Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585; Wyandot Club v. Sells, 6 Ohio N. P. 64, 9 Ohio S. & C. P. Dec. 106; Case v.

There are many of these independent subterranean water courses, especially in the Western portion of this country, which are defined and therefore known. It is often the case with streams in the arid region that the waters appear at the surface only at times of high water or freshets. Again, there are many streams where the water appears at the surface only at occasional points along the channel, while at other points the waters entirely sink below the surface, there flowing downward underground until they strike some barrier or less permeable ground, and then they reappear upon the surface. If a surface stream flows into a sink hole in a definite direction, pursues for a short space a subterranean course, and then emerges on the surface again, it is considered to have a defined and known channel. There are, as we shall see in a future section, many methods by which these streams may be traced and their channels be defined and therefore become known.[4] But the evidence upon this point must be definite and certain, for otherwise they belong to the class of streams undefined and unknown, or are treated as mere percolations.[5]

**§ 1157. Known independent subterranean water courses—Rights which may be acquired therein.**—Where an independent underground stream has once become defined and known as such, the same principles of law of the jurisdiction where the same is found governs it as governs the surface streams. Therefore, if the laws of that particular jurisdiction recognize only the common law of riparian rights, only such rights attach to these streams, and in favor of the riparian owners thereon.[1] In those States where the common law of riparian rights has been abolished, and the law recognizes only the rights which can be acquired by the Arid Region Doctrine of appropriation, such is the law governing the rights which can be acquired to the waters of these streams.[2]

Hoffman, 84 Wis. 438, 54 N. W. Rep. 793, 20 L. R. A. 40, 36 Am. St. Rep. 937; *Id.*, 100 Wis. 314, 72 N. W. Rep. 390, 74 N. W. Rep. 220, 75 N. W. Rep. 945, 44 L. R. A. 728; Board of Supervisors Clarke County v. Mississippi Lum. Co., 80 Miss. 535, 31 So. Rep. 905.

4 For the proof of subterranean water courses, see Sec. 1165.

5 For percolating waters, see Secs. 1188-1190.

1 For the common law of riparian rights, see Chap. 22, Secs. 457-466.

For riparian rights on subterranean water courses, see Sec. 1158.

2 For the States which have abolished the common law of riparian rights, see Sec. 621.

For the Arid Region Doctrine of

And, again, in those States which have the dual laws governing waters within their respective jurisdiction of both the common law of riparian rights and the Arid Region Doctrine of appropriation, rights may be acquired to these subterranean water courses and to the waters flowing therein both by virtue of the ownership of riparian lands on these streams and by the appropriation of their waters under the doctrine of appropriation.[3]

We will now discuss these subjects in the order named.[4]

**§ 1158. Known independent subterranean water courses—Riparian rights thereto.**—In those States which have only the common law of riparian rights governing water courses and the waters flowing therein, no distinction is made by the law as to whether the water courses or streams flow upon or under the surface of the earth in well-defined and known channels.[1] Therefore, in these jurisdictions, if in fact or by reasonable inference it is known that a subterranean stream of water flows in a well-defined channel, capable of being distinctly traced, riparian rights attach to such a stream by virtue of the ownership of the land through or adjoining which it naturally flows, the same as though the stream flowed entirely upon the surface.[2] But in order for such rights to attach

appropriation, see Chap. 31, Secs. 585-594.

For the appropriation of water, see Chap. 38, Secs. 706-732.

For the appropriation from subterranean streams, see Sec. 1159.

[3] For the States having both the common law and the law of appropriation governing waters, see Sec. 507.

For the laws governing the waters of subterranean streams in these States, see Sec. 1158.

[4] See Secs. 1158-1163.

[1] For the common law of riparian rights, see Chaps. 21-28, Secs. 450-551.

[2] "If, in fact, or by reasonable inference, it is known that a subterranean stream of water flows in a well-defined channel, capable of being distinctly traced, it is said to be governed by the rules of law applicable to streams flowing upon the surface of the earth." Willis v. Perry, 92 Iowa 297, 60 N. W. Rep. 727, 26 L. R. A. 124, citing Kinney on Irr., 1st Ed., Sec. 48.

"If the course of a subterranean stream were well known, as is the case with many which sink underground, to pursue for a short space a subterranean course and then emerge again, it could never be contended that the owner of the soil under which the stream flowed could not maintain an action for the diversion of it, if it took place under such circumstances as would have enabled him to recover if the stream had been wholly above ground." Dickinson v. Grand Junction Canal Co., 7 Exch. 299, 21 L. J. Exch. N. S. 241, 16 Jur. 200.

See, also, Chasemore v. Richards, 7

the proof must be definite and certain that the underground water flows in well-defined and known channels, so as to constitute regular and constant streams,[3] for otherwise the presumption will be that the waters have their sources in the percolations through the soil.[4] This is the rule under the common law of England, as will be seen from the cases cited, and the States in question, closely following that law as to riparian right, have adopted the same rule. The same rule is also applied in those Western States which adhere to the common law of riparian rights as one of their systems of laws governing water.[5]

**§ 1159. Known independent subterranean water courses—Rights by appropriation.**—In the particularly arid States which by statutory enactment or by Court decisions have abolished the common law of riparian rights,[1] and the Arid Region Doctrine of appropriation only is in force, the right to the use of the waters of

H. L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; affirming 2 Hurlst. & N. 168; Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Exch. N. S. 289; Dudden v. Clutton Union Guardians, 1 Hurlst. & N. 627, S. C. 26 L. J. Exch. N. S. 146, 38 Eng. L. & Eq. 526; Bradford Corporation v. Ferrand, 2 Ch. Div. 655; Smith v. Adams, 6 Paige 432; Mason v. Cotton, 2 McCreary 82, 4 Fed. Rep. 792; Delhi Trustees v. Youmans, 50 Barb. 316; Wheatley v. Baugh, 25 Pa. 531, 64 Am. Dec. 721; Fraiser v. Brown, 12 Ohio St. 294; Whetstone v. Bowser, 29 Pa. 59; Saddler v. Lee, 66 Ga. 45, 42 Am. Rep. 62; Haldman v. Bruckhart, 45 Pa. 514, 84 Am. Dec. 511; Heltman's Appeal, 4 Walk. (Pa.) 35; Collins v. Chartier's Gas Co., 131 Pa. St. 143, 18 Atl. Rep. 1012, 6 L. R. A. 280, 17 Am. St. Rep. 791; *Id.*, 139 Pa. 111, 21 Atl. Rep. 147; Good v. City of Altoona, 162 Pa. St. 493, 29 Atl. Rep. 741, 42 Am. St. Rep. 840; Tampa Waterworks Co. v. Cline, 37 Fla. 586, 20 So. Rep. 780, 33 L. R. A. 376, 53 Am. St. Rep. 262; Wyandot Club v. Sells, 6 Ohio N. P. 64, 9 Ohio S. & C. P. Dec. 106; Barclay v. Abraham, 121 Iowa 619, 96 N. W. Rep. 1080, 64 L. R. A. 255, 100 Am. St. Rep. 365; Springfield Waterworks Co. v. Jenkins, 62 Mo. App. 74.

But see Green Castle v. Hazelett, 23 Ind. 186, where it was held that the laws regulating the relative rights of riparian owners to surface streams do not apply to subterranean streams, no distinction being made in subterranean streams and percolations.

For rights to percolating water, see Secs. 1185-1211.

[3] For the proof of subterranean water courses, see Sec. 1165.

[4] For rights to percolating waters, see Secs. 1185-1211.

[1] For these States, see Sec. 621.

known defined subterranean streams can be acquired by a valid appropriation and perpetuated by the continuous use of the water for some beneficial purpose.[2] And after it has been once appropriated and actually applied to some beneficial use or purpose, it can not be interfered with either by subsequent appropriators or by the land owners through which these streams naturally flow. No distinction in this respect exists between waters running under the surface in well-defined and known channels and those running in distinct channels upon the surface.[3] As was said by the Supreme Court of Utah: "That known underground streams of water flowing in well-defined channels, such as the one under consideration is shown to be, are subject to appropriation, and that the rights acquired in them by appropriation can not be diverted by the wrongful act of another, is so well settled that we deem it unnecessary to enter upon a discussion of the question."[4] Furthermore, the method of making a valid appropriation of these waters is the same under the same rules of the law of the jurisdiction where they are found as govern the appropriation of the waters of surface streams.[5] But the right acquired by appropriation of the waters of such streams, as is the case of riparian rights to the same,[6] must depend upon the

2 For the Arid Region Doctrine of appropriation, see Chap. 31, Secs. 585-594.

For the appropriation of water, see Chap. 38, Secs. 706-732.

3 Where a vein of water was struck in running a tunnel to a mining claim, and the water of which was appropriated by the one who discovered it, a later comer intercepting the flow of the stream, was enjoined from depriving the prior appropriator of its use. 6 See Sec. 1155, 1158.

fact as to whether their course underground is well defined and known.[7] However, it is held that the channels and existence of such streams, though not visible, are "defined" and "known" within the meaning of the law when their courses and flow may be determined by reasonable inference.[8]

**§ 1160. Known independent subterranean water courses—Both riparian rights and those by appropriation.**—In those jurisdictions which have both the common law of riparian rights and the Arid Region Doctrine of appropriation [1] the same rules govern the rights to the known independent subterranean water courses and the waters flowing therein as govern surface streams. Therefore, where underground currents of water flowing in well-defined channels are shown to exist, the rules of law which govern the use of similar streams flowing upon the surface of the earth are applicable to them.[2] And in these jurisdictions, as to these subterranean streams also, we have the same clashing of interests in respect to the rights claimed on the same streams under these two irreconcilable principles of law as we find is the case where the streams flow wholly upon the surface.[3] Therefore, when riparian rights have once attached in these jurisdictions to these underground water courses, the riparian owner may invoke the same rules under the common law in insisting upon their uninterrupted flow as though the stream flowed entirely upon the surface. And all appropriations of their waters made thereafter must be made subject to these riparian rights.[4]

7 For defined and known subterranean streams, and how proven, see Sec. 1165.

The only difference in the application of the law to surface and sub terranean streams is the additional requirement in the case of subterranean streams to prove that its waters flow in well-defined and known channels and are not mere percolations.[5]

Again, the waters of well-defined subterranean and known streams may be appropriated in the jurisdictions having both laws governing the rights to waters as is the case where the laws of the State provide for the acquisition of water rights only by the doctrine of appropriation.[6]

**§ 1161. Known dependent subterranean water courses—The underflow of surface streams.**—The second class of "defined and known" subterranean or underground streams or water courses, under our classification,[1] are the known dependent subterranean water courses. These waters are dependent for their supply upon the surface streams, or are the "underflow," "sub-surface flow," "subflow," or "undercurrent," as they are at times called, of surface streams. These waters may be defined as those which slowly find their way through the soil, sand, and gravel constituting the beds of streams, or the lands under and adjacent to the surface streams, and are themselves a part of the surface streams.[2] Those who are acquainted with the water courses in the arid portion of our country know that some of the most important and well-defined surface streams in that section become almost, and sometimes entirely, dry during a portion of the year. All of them, nevertheless, have well-defined beds, channels, banks, and currents of water at least a portion of the year, and there is at all times what is known as the underflow, and they are in every respect natural water courses, to which legal rights may attach. At certain periods of the year water flows on the surface in a well-defined course, and there is at all times what is known as the underflow. This is the broad and deep subterranean

1 See Sec. 1152.

2 For rights to the waters of these streams, see Secs. 1162, 1163.

volume of water which slowly flows through the sand and gravel underlying the most, if not all, of the streams which traverse the country adjacent to the mountain systems of the arid region. These underground streams are probably much greater in volume in some cases than the water upon the surface, and are, as far as rights of appropriation or riparian rights are concerned, but a valuable portion of the well-defined surface stream.[3] In fact, it is a common expression used in the West that during part of the season certain streams "flow upside down"; that is to say, the rocks and gravel are on top and the water flowing underneath. There is considerable truth in this statement, for at times during the dry season the surfaces of many of them are entirely dry, while underneath their dry surfaces may be found flowing the subterranean water.[4]

"The existence of a well-defined subsurface flow within the bed and banks of streams such as this is well recognized." Vineland Irr. Co. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820, citing Kinney on Irr., 1st Ed., Sec. 44.

See, also, for scientific investigations made along this line, The Underflow of the South Platte Valley, by C. S. Schlicter and Henry C. Wolf, Water-Supply and Irr. Paper No. 184, 1906, U. S. Geol. Survey.

See, also, the Geology and Water Resources of many sections of the country, issued as Water-Supply Papers by the U. S. Geol. Survey.

As our name to this class of these waters—the underflow of surface streams—indicates, physically they constitute a part of the surface streams themselves, and are simply incidents thereto; and, also, they in the main depend upon the surface streams to which they are incident for the greater portion of their water supply; the test being that there can not be any abstraction of the water of the underflow, without abstracting a corresponding amount from the surface stream. This is so for the reason that the water from the surface stream must first necessarily fill the loose, porous material underneath to the point of complete saturation before there can be any surface flow, and by tapping and drawing off a quantity of water from the underflow, it draws on the surface flow to the same extent to fill the void.[5] Therefore, the river bed must continue to

[5] Montecito v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113, where the Court held that it was not error to instruct that tunnels driven into the sub-flow created an artificial draft, first upon the saturated strata which support the flow of the stream, and, exhausting that, or, in the process of exhausting that, to suck down and drain directly the waters flowing in the channel of the stream.

"It is true that there is evidence to the effect that during the summer months, when the stream is dry in the San Pasqual Valley, there is some water running at the defendant's point of diversion. It does not follow, however, that the taking of this water would not injure the respondents. There are long stretches of sandy bottom between the defendant's proposed works and the lands of the plaintiffs. Water flowing over the rocky bed above sinks into the sand, which must become saturated before there can be a flow over its surface. To so fill this sand requires, as a witness testifies, several weeks. The Court was justified in drawing from this testimony the inference that an interruption to the flow of this water would prevent or diminish the saturation of the sandy bed underlying the stream and thereby materially postpone the time when a surface flow would come to plaintiffs' lands. Such postponement would be a clear injury to the plaintiffs, whose interest in the waters of the stream included the right to have the river bed continue to hold sufficient water to supply and support the surface stream in its natural state." Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424.

The sub-surface supply of a stream, whether it comes from tributary swamps or runs in the sand or gravel constituting the bed of the stream, is held to be as much a part of the stream as the surface flow, and is governed by the same rules. Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

See cases *supra*.

See, also, McClintock v. Hudson, 141 Cal. 275, 74 Pac. Rep. 849; Hale v. McLea, 53 Cal. 578; Vineland Dist. v. Azusa Dist., 126 Cal. 486, 58 Pac. Rep. 1057, 26 L. R. A. 820; Yarwood v. West L. A. W. Co., 132 Cal. 204, 64 Pac. Rep. 275; Verdugo Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep.

hold sufficient water to support the surface stream, as it were, for otherwise in drawing upon the underground flow of the stream will draw upon the water flowing upon the surface.[6]

If the bed of a stream is not solid rock, but gravel or earth, through which water will percolate, or flow, undoubtedly water will be found sometimes many feet below the surface, and the lighter the soil the more easily will it find its way downward, and the more water will be discoverable by exploring the subsurface. Undoubtedly, too, in many cases there may be corresponding to the flow on the surface a current underneath the surface, but the presence of such subsurface water, even though in places of considerable amount and running in the same direction, *is something very different from an independent subsurface water course. "It is not properly denominated a second and subsurface stream. It is rather to be regarded as merely the accumulation of the water which will always be found beneath the bed of any stream whose bottom is not solid rock. . . . As subsurface water it percolates on either side as well as moves along the course of the river, and the more abundant the subsurface water, the further it will reach in its percolations on*

1021; Cohen v. La Canada Co., 142 Cal. 437, 76 Pac. Rep. 47; *Id.*, 150 Cal. 680, 91 Pac. Rep. 584; Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585; Howcroft v. Union & Jordan Irr. Co., 25 Utah 311, 71 Pac. Rep. 487; Whitmore v. Utah Fuel Co., 26 Utah 488, 73 Pac. Rep. 764.

"It must not be forgotten that the sub-surface supply of a stream, whether it comes from tributary swamps or runs in the sand and gravel constituting the bed of the stream, is as much a part of the stream as is the surface flow and is governed by the same rules." Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

6 "It is obvious that the continued presence in the soil, sand, and gravel composing the bed of the canyon of a sufficient quantity of water to supply and support these surface streams in their natural state is essential to their existence and preservation, and that the parties have a clear right to have this quantity remain underground for that purpose as they have to the stream upon the surface. Neither party should be permitted to decrease this necessary quantity of underground water to the depletion of the surface stream and the injury of those to whom it has been assigned." Verdugo Canyon W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021.

See, also, Huffner v. Sawday, 153 Cal. 86, 94 Pac. Rep. 424; Grand Junction Canal Co. v. Shugar, L. R. 6 Ch. App. 483; Village of Delhi v. Youmans, 45 N. Y. 362, 6 Am. Rep. 100; affirming *Id.*, 50 Barb. 316; English v. Metropolitan etc. Co., 1 K. B. 601.

*either side, as well as more distinct will be its movement down the course of the stream.*"[7] Again, as was held in the leading case in California upon this subject, where water passes through the voids of any loose, permeable material, filling or partially obstructing the channel of a stream, it is still a part of the stream. If it all sinks below the surface, the whole stream is subterranean. If a part sinks and the remainder is on the surface, that water which is invisible is as much a part of the stream as the surface flow.[8] Again, many of the streams of this Western country flow a portion of the way over the surface, there being at all times the underflow, and at certain intervals the surface portion of the flow sinks from sight and is carried down with the underflow until it strikes some less permeable ground, when a portion of the water may again rise to the surface. Streams of this character are termed intermittent streams, and both the surface flow and the underflow are treated as a single stream.[9] These waters, in order to constitute the underground flow of surface streams, must be connected with the stream and strictly confined to the river bottom and moving underground, as was stated in a California case, "in connection with it, and a course within a space reasonably well defined."[10] In other words, the water must be within the bed of the surface stream itself.[11] Otherwise such underground waters must be classified with percolating waters, hereinafter discussed.[12]

See, also, Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

**§ 1162. The underflow dependent on surface streams—Rights which may be acquired therein—At common law.**—The underflow of surface streams being dependent upon the surface streams for their water supply, both at common law and under the Arid Region Doctrine of appropriation, are recognized as parts thereof and incidents thereto.[1] Under both of these rules of law rights may be acquired therein, but these rights can be acquired only as a portion of the surface streams. This rule is by no means new to the Arid Region Doctrine of appropriation, but this dependent underflow of surface streams has been recognized at common law both by the English, the Eastern American, and also the Western authorities in those States which have both rules of law governing the waters flowing within their respective jurisdictions. Therefore, the general law upon the subject is that the underflow of surface streams, being portions of them, are governed by the same rules as the surface streams themselves.

Therefore, under the common law water can not be diverted by tapping the underflow of surface streams feeding the same to the injury of the vested rights of riparian proprietors on the stream. This is the rule of all jurisdictions where the common law of riparian rights is in force.[2] In the Western States of this country, where

1 See previous section, No. 1161.

2 "If you can not get at the underground water without touching the water in a well-defined surface channel, I think that you can not get at it at all." Lord Hatherly in Grand Junction Canal Co. v. Shugar, L. R. 6 Ch. 483, 24 L. T. N. S. 402, 19 Week. Rep. 569.

See, also, Village of Delhi v. Youmans, 45 N. Y. 362, 6 Am. Rep. 100; affirming *Id.*, 50 Barb. 316, where Mr. Justice Peckham said: "If the action of the defendant took the water away from springs, after it had reached there, after it had become a part of an open, running stream, then this action would lie." Citing Rawstron v. Taylor, 33 Eng. L. & Eq. 428, 25 L. J. Exch. N. S. 33, 11 Exch. 369, 4 Week. Rep. 290; Broadbent v. Ramsbotham, 34 Eng. L. & Eq. 553, 11 Exch. 602, 25 L. J. Exch. N. S. 115, 4 Week. Rep. 290; Chasemore v. Richards, 7 H. of L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; affirming 2 Hurlst. & N. 168; Pixley v. Clark, 35 N. Y. 520, 91 Am. Dec. 299; Goodale v. Tuttle, 29 N. Y. 459; Ellis v. Duncan, 21 Barb. 230, 11 How. Prac. 515. But holding in the case at bar that where a land owner dug a well which prevented the water from reaching, by percolations, a spring or open running stream of an adjoining owner, that an action would not lie to prevent such use. The decision thus made a distinction between underground waters before and after they reached the surface stream or the underflow thereof.

riparian rights have not been abolished, the same rule is in force. The leading case in California upon this subject, of which the Court itself says, "This is, in fact, the pioneer case of its kind, so far as this Court is concerned," in construing one of the instructions of the trial court, said: "But the instruction is limited to subterranean water, which is a part of the stream, as in other instructions defined, and if it is a part of the stream it can not be diverted, whether it would come to the surface or not. *It belongs to the stream and must flow on to the lower riparian proprietor.* His right to the subsurface portion of the stream is identical with his right to the surface flow, and is entitled to the same protection."[3] This case has been followed by other California cases, and may be called the well-settled law in that State, one of the latest cases upon the subject holding that where waters in an underground stratum are in such immediate connection with a surface stream so as to make them a

part of the stream, land overlying the water is riparian to the stream and entitled to riparian rights with reference to such water.[4]

**§ 1163. The underflow dependent on surface streams—Rights under the law of appropriation.**—Under the Arid Region Doctrine of appropriation, the underflow of surface streams is considered, and, therefore, treated as part of the surface streams from which they, in the main, receive their water supply. And upon this subject the law has become well settled that one may, by appropriate works, develop and secure for useful purposes the subsurface flow of the streams flowing within the States where the doctrine of appropriation is in force and become a legal appropriator by so doing. However, in acquiring such a right, due regard must be had to the vested prior rights of others to the waters of the stream, whether these others claim also by appropriation, or as riparian owners, in those jurisdictions where both laws are in force, either to the surface stream or to its subsurface flow.[1] And, as we shall see in a

4 Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

See, also, Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772; Kansas v. Colorado, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552; *Id.*, 206 U. S. 46, 51 L. E. 956, 27 Sup. Ct. Rep. 655, holding that the underflow is not a separate stream, and that it must be considered a part of the surface stream upon which it is dependent for its water supply.

1 In the case of Vineland Irr. Co. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1056, 46 L. R. A. 820, which may be regarded as the leading case upon this subject, at least in California, the Court said: "We therefore hold it to be the law, and we think it to be a moderate and just exposition thereof, that one may, by appropriate works, develop and secure to useful purposes the subsurface flow of our streams, and become, with due regard to the rights of others in the stream, a legal appropriator of waters by so doing." Citing Kinney on Irr., 1st Ed., Sec. 44.

subsequent section of this work, this is the same rule which is applied to the appropriation and diversion of percolating waters where those waters feed the stream and are necessary to its continued flow.[2]

There is no reason in law why separate rights, under certain circumstances, may not be acquired by appropriation of the underflow of surface streams. In this portion of the country, in many of the streams, the greater portion of the water may be found in the underflow.[3] In a country where water is so scarce and so much depends upon the available supply all being used, the underflow of surface streams should be utilized. Where there is a large surplus underflow which can be tapped by either tunnels or excavations and the waters of the underflow thus drawn off without injury to the prior rights of the appropriators of the surface flow, this should be allowed. But, as we have seen, drawing off the waters of the underflow draws also upon the surface flow and if this is all claimed by the prior appropriators, it is hard to imagine a case of this kind where injury would not result to the rights of the appropriators of the surface flow. And as the law now stands, no party is permitted to decrease the quantity of the underflow to the depletion of the surface stream and to the injury of those who have lawful claims

For the presumption and burden of proof as to these waters, see Sec. 1165.

2 For percolating waters feeding surface streams, see Secs. 1193-1195.

"There is no rational ground for any distinction between such percolating waters and the waters in the gravels immediately beneath and directly supporting the surface flow. . . . Such waters, together with the surface stream supplied by them, should be considered a common supply." Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

See, also, Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

3 See Sec. 1161.

thereto.[4] Where, however, the claim to the underflow is prior to the claim to the waters of the surface flow there may be a valid appropriation of the underflow which will hold good as against later appropriations of the surface flow.[5]

**§ 1164. Undefined and unknown water courses.**—The waters which flow in undefined and unknown channels [1] come under the second class of subterranean or underground waters as we have classified them.[2] This, as we have seen, was the only classification known to the common law and included percolating waters.[3] But, as the rights which might be acquired to these undefined and unknown streams were the same as might be acquired to percolating waters, the entire subject will be fully discussed in connection with the subject of percolating waters.[4]

**§ 1165. Existence, how proven, and thereby become known—Burden of proof.**—The existence of both independent [1] and dependent [2] subterranean or underground water courses may be proven by a number of methods, and the tendency is, as scientific investigations progress and greater knowledge is year by year acquired of the movement of subterranean waters, to take from the general class of the undefined and unknown streams and correspondingly to add to the defined and known streams. The difficulty has been not so much to determine the law as to rights which may be acquired in subterranean waters, where certain water has been determined to be of a certain character, as it has been to determine the character or the particular class to which the water belongs. This is a question of fact to be determined by the facts of each particular case, and any evidence tending to prove that a certain body or stream belongs to a particular class, whether it be from surface indications or from subterranean explorations, is admissible. How-

2 See Secs. 1161-1163.

ever, it is much more difficult to prove the existence of a subterranean water course than it is to prove the existence of a surface water course. This is largely due, as was held in an early Vermont case,[3] to the physical laws governing underground water and its subterranean progress being irregular and unknowable to any certainty, and such water being changeable and uncontrollable in character and subject to secret and incomprehensible influences.

Therefore, for the reasons set forth above, the authorities adopted the rule that underground waters are presumed to be percolating waters, until it is shown that they flow in well-defined and known channels.[4] So, in a recent case decided by the Supreme Court of the United States, where the finding of fact sustained by the testimony was that the only water on the land in question was percolating water, oozing through the soil beneath the surface in an undefined and unknown channel, Mr. Justice Brewer, in rendering the opinion of the Court, said: "Of course, this excludes the idea of a 'river, creek, or stream of running water.'"[5] However, the presumption that underground waters are percolations, as is the case of other presumptions, may be rebutted. But such being the presumption, the burden of proof is upon those asserting the right to waters below the surface upon the ground that they flow in defined channels to establish the existence of such channels by a preponder-

ance of the evidence and to prove by the facts of each particular case as to how these channels may become known.[6] Otherwise, the presumption that they are percolations will govern, and a different rule of law applies as to the rights which may be acquired thereto.[7]

There are a number of methods whereby subterranean waters may be proven to flow in well-defined channels and thus become known. Their courses may be distinctly traced by the topographical features of the country, and the geological character of the ground through which they flow;[8] also, by the trees, shrubs, bushes, and grasses which grow along their courses.[9] They may also be traced by a series of wells or borings,[10] or by the means of tunnels.[11] Evidence is also

6 Subterranean water is presumed to be percolating, and one who claims rights in such water as a flowing stream has the burden of showing its existence as a stream. Arroyo etc. Co. v. 9 Hale v. McLea, 53 Cal. 578.

10 Yarwood v. West Los Angeles W. Co., 132 Cal. 204, 64 Pac. Rep. 275; Burroughs v. Satterlee, 67 Iowa 396, 25 N. W. Rep. 808, 56 Am. Rep. 350.

11 Cole etc. Co. v. Virginia etc. Co., 1 Sawy. 470, Fed. Cas. No. 2,989; Whitmore v. Utah Fuel Co., 26 Utah 488, 73 Pac. Rep. 764; McClintock v. Hudson, 141 Cal. 257, 74 Pac. Rep. 849; Keeney v. Carillo, 2 N. M. 480.

admissible to prove this point upon the fact that material of some sort was placed in the stream above and appeared again in openings below;[12] so, also, that the color and character of the water is the same, and different from other water in the immediate neighborhood;[13] and, again, the sound of the water passing underneath the surface of the earth.[14] Evidence may also be admitted of the fact that by the sinking of a second well into the subterranean stream, the flow of the water of a prior well ceased;[15] again, where by the tapping of the underground flow by means of tunnels, springs dry up or their flow is diminished.[16]

As to the underflow of surface streams,[17] where water has once reached the banks of a stream and there disappears in the sands of the bed, the presumption is that such water augments the flow of the surface stream; and the burden of proving the contrary is upon the party claiming and diverting the water.[18] As was well said in a recent California case:[19] "With a creek bed as porous as this is conceded to be, no evidence is necessary to establish the fact that the taking of a substantial part of the underflow from the channel at any point on the stream would cause a corresponding diminution in the surface stream below. The law of gravitation would raise a presumption that it would operate to that effect. One who would establish the contrary would have the burden of proving conditions which would prevent such diminution."

## ARTESIAN WATERS.

§ 1166. Scope of chapter.
§ 1167. Artesian waters—In general.
§ 1168. Artesian belts, or basins.
§ 1169. Artesian wells—Origin and definitions.
§ 1170. The use and value of artesian waters.
§ 1171. The conservation of artesian waters.
§ 1172. Power of the legislature to regulate the use of the water from artesian wells.
§ 1173. Correlative rights to the waters of artesian basins—Origin and cause of the doctrine.
§ 1174. Correlative rights to the waters of artesian basins—Definition—Limitations to use.
§ 1175. Correlative rights not the rule in all jurisdictions.
§ 1176. No riparian rights to artesian basins.
§ 1177. The appropriation of waters from artesian basins under public lands.
§ 1178. Correlative rights—Doctrine of appropriation.
§ 1179. Rights to, may be acquired how—Grants.
§ 1180. The acquisition of rights by grant.
§ 1181. Rights to artesian waters and wells may be lost by abandonment.
§ 1182. Rights acquired and lost by prescription.
§ 1183. Rights acquired and lost by estoppel.
§ 1184. Contracts to sink artesian wells.

**§ 1166. Scope of chapter.**—In this chapter we will discuss the subject of artesian basins, artesian waters, and wells, and the general rights which may be acquired to such waters, and the regulations governing the same. Artesian waters belong in general to percolating waters, but to a distinct class of such waters. The distinguishing features are described in the following section.[1]

**§ 1167. Artesian waters—In general.**—Our second main class of subterranean waters are the artesian waters.[1] Underground water is derived from rain and melted snow, and passes underground in porous materials, such as sandstone, sand, and gravel. Some of the rain and melted snow is absorbed directly by such materials, but

1 See Sec. 1167.

1 See Sec. 1152.

much water passes underground by the sinking of surface streams in crossing the upturned edges of sandstone and other porous rock, or in passing over the sandy or gravelly beds. Many of the surface streams by this means lose a large portion of the volume of their flow, and the water thus absorbed seeps slowly through the rocks as their dip carries it to lower levels, until sometimes a great depth has been attained. Oftentimes the water is kept underground by a thick stratum of impervious shale or other rock overlying the porous strata through which the water has sunk, and thus artesian belts or basins are formed.

Artesian waters are, therefore, those waters which underlie the lower lands of a section of the country having seeped there through porous strata from upper levels, and which are kept down within their natural basins by the impervious shale or other rock overlying the saturated porous strata, but which, if tapped from above, will rise above the depth at which it is struck, and oftentimes above the surface of the earth.

The waters of subterranean basins, although technically percolating waters, differ materially from the ordinary percolations from the fact that they are kept down within their basins by the impervious stratum above, which, when tapped by wells, by their own pressure from above, are forced to the surface. Therefore, artesian waters stand in a class by themselves, and in this work they will be so treated.[2]

§ 1168. **Artesian belts, or basins.**—Artesian belts, or basins as they are sometimes called, are composed of those underground strata of gravel or loose, porous, water-bearing material, lying at a greater or less depth from the surface of the earth, and under stratum of an impermeable character, the edges of which are usually in distant hills or mountains, thus forming in the lower levels strata where water may settle under pressure, varying in accordance with the height of the edges of the strata, or source of water. The word "belt" is indefinite and refers simply to the region or section of the country where the above conditions may be found. A stratification is an essential characteristic of an artesian belt. These artesian belts or basins usually lie at a considerable depth from the surface of the earth, and before the expense incident to the drilling of the deep

2 See *Ex parte* Elam, 6 Cal. App. 233, 91 Pac. Rep. 811.

wells necessary to tap them is incurred, it is desirable to give attention to at least two conditions: First, the conditions which render the obtaining of artesian water possible; and, second, the geology of the region where it is proposed to drill a well. The conditions requisite are not found in all sections of the country, but after a study of these questions by a competent man in reference to a given locality, one may predict with considerable confidence whether or not success is possible, and thereby at times save useless expense. In what is properly termed an artesian basin the layers of rock are bent downward, so as to resemble a pile of shallow plate-shaped dishes, placed one within another. One or more of the beds of rock are porous and allow the water, supplied by rain or the melting of snows on its upturned and exposed margin, to percolate into it. Above and below the water-charged layer are impervious strata of shale or other impervious rock, or closely textured beds of clay, which prevent the escape of the water in the layer between them. The leading conditions which characterize artesian basins may be reproduced on a small scale if one tin pan is placed within another and the two separated by a layer of sand and the spaces between the sand grains are filled with water. If a hole is drilled in the bottom of the uppermost pan, the water will rise from below and overflow, until the level of the water in each pan is the same.

The old prevalent idea that the waters supplying artesian wells came from vast subterranean channels, caverns, or lakes, in which the waters flow, has, by the investigations of the scientists, been long since abandoned. There is no longer any doubt upon the subject, and it is held that the courts may take judicial notice of the question of the source of supply of the waters of artesian wells.[1]

1 Huber v. Merkel, 117 Wis. 355, 94 N. W. Rep. 354, 62 L. R. A. 589, 98 Am. St. Rep. 933, where it is said: "Were there any doubt of this conclusion from the evidence, scientific knowledge on the subject of the sources of artesian wells in general, and the artesian wells of Wisconsin in particular, is now so complete and certain as to leave no room for doubt, and of such facts courts may take judicial notice. It has long since become a matter of scientific knowledge that the ordinary artesian well derives its supply from a pervious stratum of rock imprisoned between two impervious strata of earth or rock, the water bearing stratum being inclined, and coming to the surface at some distant and higher point, called the 'intake,' where it receives the water, and that the water percolates with greater or less rapidity along and through the inclined stratum, obedient to the law of gravity, until it reaches some obstruction so as to be

The artesian conditions of many sections of this country have been carefully investigated by the Department of the Interior of the Government, under the division known as the United States Geological Survey, and much valuable information may be had from these reports. This is true both as to the conditions of certain specific localities where a survey has been actually made and also information as to the general conditions requisite for artesian basins, which information may be applied to localities where a survey has not been made.[2]

Under the terms of the National Reclamation Act,[3] the Secretary of the Interior was thereby instructed and directed to make examinations and surveys for and to locate and construct, as therein provided, irrigation works for the storage, diversion, and development of waters, including artesian wells, and to report to Congress the results of such examinations and surveys. Much valuable information may therefore be obtained from the various reports of the Reclamation Service since its organization as to the results of these investigations.[4] Also, much valuable information may be acquired upon this subject from the investigations of the agricul-

imprisoned, in which event, if the stratum be pierced, water will rise in a tube by hydrostatic pressure, due to the greater height of the intake. The idea that there are vast subterranean channels or caverns, in which artesian waters flow like a river, has been long since abandoned."

2 For information upon this subject, see the following: The Requisite and Qualifying Conditions of Artesian Wells, by T. C. Chamberlain, Fifth Ann. Rep. U. S. Geol. Survey, 1885, pp. 125-173; General Principles Pertaining to Artesian Water, in A Geological Reconnoissance in Central Washington, by I. C. Russell, 1893, Water-Supply Paper No. 108, U. S. Geol. Survey; A Reconnoissance in Southeastern Washington, by Russell, 1897, Water-Supply Paper No. 4, *Id.*; Preliminary Report on Artesian Basins in Southwestern Idaho and Southeastern Oregon, by Russell, 1903, Water-Supply Paper No. 78; Underground Waters of Southeastern Kansas, by Erasmus Haworth, 1897, Water-Supply Paper No. 6; Geology and Underground Waters of South Dakota, by N. H. Darton, Water-Supply Paper No. 227, *Id.*

tural colleges of the Western States; also from those made by the State engineers.[5]

**§ 1169. Artesian wells—Origin and definitions.**—Artesian wells derive their name from the word "artésién," after the town Artois, in France, from the notable occurrence of these wells in and near that town, and where this kind of a well was first sunk.[1]

Artesian wells are simply vertical perforations from the surface of the earth down through the impervious stratum and into the strata charged with water, together with the water itself, which is forced upward toward the surface by its own pressure. The term "artesian well," as commonly employed, signifies a well which overflows upon the surface. But this is not necessarily so. "In an artesian well the water sometimes rises to the surface and overflows, or it may be under sufficient pressure to form a fountain-like jet above the surface; in other cases the water rises some distance in the well, but fails to reach the surface. In all these instances the well is classed as artesian."[2] "Better usage, however, restricts it to those wells in which water is under sufficient pressure to cause it to rise notably above the depth at which it is struck, whether or not it overflows at the surface."[3] But the statutes of the various States are not inclined to use the technical definition given these wells by the scientists. The term "artesian well" is used in its more popu-

5 The reports of these investigations are usually obtainable from the agricultural colleges, or from the reports of the State engineers.

1 Andrews v. Cross, 8 Fed. Rep. 269, 19 Blatchf. 294.

2 I. C. Russell, in a Reconnoissance in Southeastern Washington, Water-Supply Paper No. 4, U. S. Geol. Survey.

The word "artesian" is sometimes used in reference to underground waters which, by reason of pressure, will rise to its natural level, though not to the surface of the ground, when the stratum in which it lies is pierced by a well. Burr v. Maclay etc. Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 713.

See, also, *Ex parte* Elam, 6 Cal. 233, 91 Pac. Rep. 811, defining an artesian well as being an artificial opening in the ground through which water naturally flows from subterranean sources to the surface of the ground.

3 G. A. Waring in Geology and Water Resources of the Harney Basin of Oregon, 1909, Water-Supply Paper No. 231, U. S. Geol. Survey.

See, also, Ure's Dict. of Arts, Manufactures, and Mines, Sub., Artesian Wells; Hattiesburg Plumbing Co. v. Carmichael, 80 Miss. 66, 31 So. Rep. 536, holding that the word "artesian" is one of equivocal significance; Andrews v. Carman, 1 Fed. Cas. 868, 13 Bl. 307, 2 B. & A. 277; Foster v. City of Joliet, 27 Fed. Rep. 899.

lar sense. In Colorado, by statute, an "artesian well" is defined for the purpose of the Act as applying to any artificial well the waters of which, if properly cased, will flow continuously over the natural surface of the ground adjacent to such well at any season of the year.[4] The primary definition of the dictionaries of the term also indicates a well from which the water flows naturally to the surface of the earth without any artificial pressure. In other words, it is a flowing well.[5] As the rights which may be acquired to the waters of these wells are the same in either case, whether the water rises and flows over the surface from its own pressure or whether it rises only a portion of the way to the surface, and from that point has to be pumped to the surface, we will not confine our discussion to either class. These waters all lie below the impervious strata, and upon being tapped rise either to the top of the well or a considerable distance toward the top. As was said in a recent California case, where several plaintiffs were the owners of separate tracts of land situated over an artesian basin, on which each had been accustomed to use the waters of the basin: "'Some of them obtain the water by means of pumps, or artesian wells, and others by means of diversions from natural streams forced to the surface from subterranean strata within the basin by the pressure of the water from the higher lands surrounding it.'"[6]

The waters of artesian basins are easily distinguishable from the ordinary percolations from the fact that they are always found below the impervious strata and are under pressure, while the ordinary percolating waters lie above the impervious strata and are under no pressure.[7] In fact, the cause of the water of many artesian wells not overflowing the surface is due to the lack of or improper casing. The water rising in these wells above the im-

[5] Webster's Dict.: "Artesian wells, wells made by boring into the earth till the instrument reaches the water, which, from internal pressure, flows spontaneously like a fountain. They are usually of small diameter and of great depth. Brande."

[6] Barton v. Riverside W. Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331.

[7] For percolating waters, see Secs. 1185-1211.

pervious strata comes to strata which is porous and seeps away through the ground before it reaches the top.

With the definitions and illustrations given in this and the preceding sections,[8] it will be easier to understand the rules of law provided by the statutes and the courts governing artesian waters when we come to that discussion.[9]

§ 1170. **The use and value of artesian waters.**—In certain portions of this country, at a distance from other sources of water supply, where the conditions are such that artesian wells may be successfully sunk, the use of artesian water is of almost inestimable value. On account of the ease with which it is brought to the surface and made to run over the ground, this is especially true of the waters of flowing artesian wells. In fact, the land in many instances would be practically worthless and entirely uninhabitable were it not for the waters from this source. For example, take some of the lands in South Dakota, Southeastern Washington, Southern Oregon, and the lands of many of the valleys within the Rocky Mountains, where many of these wells are found. An extreme example of the reclamation of lands by this means is that of the Great Sahara Desert, portions of whose sandy wastes have been brought under cultivation and made to produce crops by the use of the waters from artesian wells.[1]

In general, however, the water from artesian wells is not so desirable for irrigation as is the waters from rivers and creeks. This is due to the fact that the water from the latter usually contains a large amount of silt, which serves to enrich the land and prevent loss of fertility. Artesian water, upon the other hand, is almost always clear, although it sometimes carries a quantity of mineral salts in solution. Their waters range from those nearly as soft as rain water to the strongest brine. Other minerals, such as sulphur or lime, are also at times found. But, in spite of these facts, there are many wells the water of which may be used for irrigation, culinary and other domestic or beneficial purposes, and thousands of acres of land throughout this Western country have been reclaimed and made productive and made to produce crops, where

8 See Secs. 1167, 1168.

9 For rights to artesian waters, see Secs. 1173-1183.

1 See Sec. 163.

without the use of this water they would have remained unsettled and uninhabitable, and still a part of the public domain, valuable only for the scanty pasturage which they afforded. Again, in many parts of the country, in sections where there are surface streams, there are to be found artesian basins, and water has been obtained from them by the means of these wells. This water serves to help out the surface supply, which, in many instances, is scanty. There is usually more land which might be irrigated within the arid region than there is water to irrigate it. Therefore, any additional supply from artesian sources can always be utilized.

There is another advantage to the farmer in the use of this water, and that is the ownership of his own source of supply, instead of having to depend upon the water, ditches, and canals owned by others, as is oftentimes the case. Again, after a good flowing artesian well has been once sunk, the expense of keeping it in condition is trifling, as compared with the cost of ditch repairs, water rental, and other expenses incident to the appropriation of water from the surface streams.

§ 1171. **The conservation of artesian waters.**—The waters of artesian basins are not inexhaustible. It has been found from experience that where many wells which have tapped the same basin have been permitted to run continually for a considerable period of time, the flow of some of the wells would stop entirely and that of others would be materially lessened. If an artesian basin is perforated by a number of wells the water in the basin is gradually lowered, and, therefore, the pressure upon the water discharged by the wells is lessened. And unless the supply of the water which finds its way into the basin is equal to, or more than equal to, the water flowing from the wells, this process is carried on until the rim of the water sinks below the surface of the earth or the opening of the wells, when the natural discharge will cease entirely. Of course, the more wells that there are tapping the basin, the quicker will be the reduction of the pressure and the failure of the wells. Therefore, it is even of more importance that the waters of these basins should be conserved and not wasted than it is that the waters of surface streams should be used economically and without waste.[1]

[1] For the economical use of water and the prevention of waste, see Secs. 874-916.

The water of surface streams, even if wasted one year, are replenished by the precipitation during the fall, winter, and spring for the next season. While, upon the other hand, it may take years to replenish the waters of an artesian basin, depending as it does upon the slow seepage of water through miles of porous strata.

This loss of water from artesian basins may in a measure be obviated to a great extent; but the loss is by no means entirely after the wells have been constructed by permitting them to flow continually, but it enters into the construction of the wells themselves. There are three principal restrictions which have been adopted by statutory law in the most of the States where artesian basins are common, and these restrictions should be adopted in all others.

First—Every drill hole in an artesian basin should be properly cased. By this is meant that an iron casing or tube should line the drill hole and be made sufficiently tight to prevent the water from rising outside of it or leaking through. This is accomplished in the following manner: As the hole is made the iron pipe for the casing is passed down, more or less closely following the bit. The pipe is lowered or gently forced down length upon length, each new length being screwed tightly into the coupling of the preceding one, until the water is reached. The lower end of the casing should be just above the water-bearing stratum. The reason why the owner of a well should be required by law to properly case it is that the lateral escape of the water may be prevented. The escape of water from an artesian basin in excess of the natural overflow results in a decrease in pressure on the portion of the water remaining within the casing, and consequently a lowering of the artesian head. Therefore, in arid regions especially, the sources of supply of an artesian basin may be small, and the question of economically using the water it contains and maintaining the artesian head are not only matters of interest to the owner of the well, but are matters of public concern.

Second—Every artesian well, when not in use, should be securely closed. The principal reason why a law to this effect should be enacted and enforced is that the waters of an artesian basin are not an inexhaustible supply. At best it is but a reservoir, and when the water is once drawn off the supply is exhausted, at least until considerable time has elapsed for the reservoir to again fill. Therefore, every practical means should be employed by law for the conserva-

tion of this supply and its legitimate use. There may be exceptional cases when it would not be wise to close an artesian well absolutely tight, as in cases where the well throws sand or other material. This can be obviated, however, by not completely shutting it off, but allowing a small stream to flow.

Third—Every abandoned drill hole in an artesian basin should be completely filled with impervious material. A desirable way in which to do this is to fill the hole slowly with moist clay and ram it down with a heavy, blunt tool. The most effective way, however, is to fill the hole with Portland cement. The object of this filling of abandoned holes is in order that leakage may be prevented. In many wells of this nature the water rises some distance toward the surface, but does not overflow the surface, and because of this the wells are abandoned, usually after the casing has been drawn, if any was used. The water, therefore, rising in the wells above the impervious stratum which confines it, comes to strata of porous material or fissures in the earth, and thus either seeps or drains away. This, as can be readily seen, reduces the artesian pressure and at the same time no benefit to any one has been derived.

In many of the States of the West laws have been enacted providing for these restrictions, and for severe penalties in case of their violation.[2] Some of the States, however, have been negligent in failing to pass such laws, and others, after passing them, have failed to enforce them. The above rules are not only the result of scientific investigations, but also are based upon actual experience with the waters of artesian basins, and by their strict enforcement much of the waters may not only be conserved for present use, but the life of the artesian water of the basins will be greatly prolonged.

Having sufficiently discussed the natural laws governing artesian basins, their waters, and wells, we will now discuss the laws of man upon the subject.[3]

**§ 1172. Power of the legislature to regulate the use of the water from artesian wells.**—From experience it has been ascertained that the waters of artesian basins, like the waters of other basins, are not inexhaustible. They are originally the accumulation of the percolations of many years.[1] Where the porous strata has

2 For the laws of the various States, see Part XIV.

3 See Secs. 1172-1184.

1 See Secs. 1167-1169.

been tapped by wells of a sufficient number and capacity that the flow exceeds the supply from the percolations, there can be but one result, and that is that eventually the artesian pressure will be decreased as the water in the rim of the basin gets lower and lower. This may be noticed by the decrease in the flow from the wells as the water gets lower and lower, the flow from the surface may entirely cease, until the basin is again replenished from the percolations. It stands to reason, therefore, that it is even more necessary to conserve the supply of artesian basins than it is to conserve the supply from surface streams, which is replenished each year by the annual precipitation; while, upon the other hand, the supply of an artesian basin may not be replenished for a number of years, so that its water will again overflow from the wells tapping it. However, by the conservation of their supply they may be made to last for long periods of time. And by regulating the amount of water which may be drawn off and keeping it down to within the amount of the supply from the percolations from the lands above, these basins may be made to be practically inexhaustible. This is exactly what the legislature of a number of the States have attempted to do.[2]

We will now discuss the power of a State legislature to regulate the flow from artesian wells.

Artesian basins and the waters percolating through them, lying as they do under large tracts of land sometimes owned by many owners, belong to all of these owners, and to each of them, according to their respective holdings.[3] And as drawing off the waters of these basins draws the waters from the lands of all the owners, it is a matter of public concern, at least to the community directly interested in these basins and their waters, that these waters be conserved. It is also a matter of public interest to the public at large and to the State where found, that these waters be not wasted and that they be only used "as may be necessary for some useful purpose in connection with the land from which they are taken."[4] Also, whenever one land owner exceeds this reasonable use, and

2 See, also, for the laws of the various States upon the subject, Part XIV.

3 For artesian waters and basins, see Secs. 1167-1171.

4 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

either allows the water from artesian wells to run to waste when the same is not needed, or actually uses even for a beneficial use or purpose, more water than he is justly entitled to under his holdings over the basin, he is appropriating to himself that which belongs to others, who are entitled to a like use, and to that extent is obstructing the free use of property so as to interfere with its reasonable enjoyment by all the owners thereof. These acts, therefore, apply to the waters of artesian basins, the right to the use of which is common to a large portion of the community, and affect the general public. These waters do not belong to a single land owner, even if he has the only wells tapping the basin; but, again, whatever right one has, even to his own, is subject to that well-established principle of law, that his use shall not be injurious to the rights of others or to the rights of the general public. It therefore follows that the use of property which is common to all owners over an artesian basin is, to a much greater extent, a matter of public concern than the use of property by an absolute individual owner of the same. It therefore follows that a State legislature has the power to enact laws regulating the use of the waters of these artesian basins and preventing waste thereof, and such legislation affects the public welfare and comes under the police power of a State, which is "the power to make laws to secure the comfort, convenience, peace, and health of the community."[5] It may therefore be regarded as the settled law that all property is held subject to the exercise of police power, and that the provisions of the Constitutions declaring that property shall not be taken without due process of law have no application in such cases. The substances of gas and oil lie in similar basins to those containing artesian water; in fact, in the sinking of artesian wells sometimes one substance is struck and sometimes another.[6] Therefore, legislation restricting the wasting and use of gas and oil is strictly analogous to legislation restricting the wasting and use of artesian water. And upon this subject it was held by the Supreme Court of the United States[7] that the re-

[5] *Ex parte* Whitwell, 98 Cal. 79, 32 Pac. Rep. 870, 19 L. R. A. 727, 35 Am. St. Rep. 152.

[6] See De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001, where in sinking for oil a flow of water was struck.

[7] Ohio Oil Co. v. State of Indiana, 177 U. S. 190, 44 L. Ed. 729, 20

striction on the waste of gas and oil by the owners of land overlying the oil-bearing strata was not the taking of the private property of the owners of land without adequate compensation and therefore without due process of law, since the owner of the surface has no property right in the gas or oil until he has actually reduced it to possession; or, if he has any property right therein, it is a right in common with the coequal rights of other land owners to take from the common source of supply, and, therefore, subject to the legislative power to prevent the destruction of the common property by one of the common owners. This case was followed in an exceedingly well-argued case decided recently by the California Court of Appeals relating to artesian waters,[8] where it was held that one land owner has no right to extract artesian water from a common basin underlying the lands of others in excess of a reasonable and beneficial use on the land from which it was extracted, and, therefore, the Act of the legislature of March 6, 1907,[9] declaring an artesian well not provided with appliances for preventing the flow of the water therefrom to be a nuisance and prohibiting the wasting of these waters, and providing penalties for its violation, did not deprive him of his property without due process of law, and that the Act in question was within the police powers of the State to enact and enforce. It is true that the Supreme Court of Wisconsin held exactly to the contrary in the case of Huber v. Merkel,[10] where it was held that the police power of a State does not justify legislation prohibiting the waste of water from artesian wells where sunk by a land owner upon his lands, but that such owner can use the water flowing therefrom to any extent, or he may allow it to run to waste, regardless of the effect upon his neighbors' wells or lands, and that, too, even in a case where it was done maliciously. But, fortunately, whatever was the old rule upon the subject, that case, as we have said,[11] while it may govern artesian waters in the State of Wisconsin until it is overruled, or until the Supreme Court of the United States decides the question, is not the law, or, at best, it is "bad law." As we shall discuss in the following sections the law

of correlative rights in and to the waters of artesian basins has, during the more recent years, been adopted as the law upon the subject in most jurisdictions, and is the only just and equitable rule upon the subject.[12]

§ 1173. **Correlative rights to the waters of artesian basins—Origin and cause of the doctrine.**—Although the waters of artesian basins are, in the main, treated as percolations,[1] and under the early common law rule were considered a part of the soil where found, and belonged to the owner of the soil, there are some important rules under the more modern authorities governing the drawing off and the use of these artesian waters which must be observed. If these waters, like the earth under which they flow or percolate, remained perfectly stationary, and the same were in fact a part and parcel thereof, there would be no question as to the right of the owner of the land to draw off the water to any extent, to use or to waste it, as he saw fit, as his own individual property, the same as he might take out the mineral, rock, beds of clay, or the earth itself. And as long as he drew off only such water as was within his own lines, he could not be prevented from taking out any portion or all of the water within them. But, unfortunately for this rule, water never remains stationary, fixed, or immovable while in the ground. As was said in a recent Minnesota case: "While water is defined to be a mineral, the rules of law as to its use must logically vary from those applicable to coal, ore, and the like. Water is a fluid, and mobile, 'a fugitive.' Coal and ores have a fixed and permanent place."[2] Water is constantly seeking its level, and hence it follows that for a land owner to draw off unlimited quantities of the artesian waters from his lands not only takes the supply from his own lands, but also draws from the lands of his neighbors. His boundary line fences do not extend downward as impervious subterranean dams and thereby keep the underground waters from flowing or percolating from his lands under those of his neighbors, or the waters from the lands of his neighbors from flowing or percolating under his

12 See Secs. 1173, 1174.

1 For rights to percolating waters, see Chap. 62, Secs. 1185-1211.

2 Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1050, 10 Am. & Eng. Ann. Cas. 843; *Id.*, 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

lands. Neither are there imaginary vertical planes drawn from his surface lines downward, as is the case where there is ore, coal, or other solid material in question, to which he may go in their extraction, but no further. But from the very nature of the element and its movements underground when he draws upon his own supply he also draws upon the supply in the lands adjoining his. Hence the early common law rule, as laid down by the English authorities, and even by some of the American cases, that all underground waters not flowing in defined and known channels[3] belong to the soil, and that the owner of the land may draw them off at pleasure, though in so doing he may entirely drain such waters from the lands of adjacent or neighboring owners to or from which they would necessarily pass, has, in most jurisdictions in this country, been modified and given way to the more equitable rule of the correlative rights of all the owners of the lands under or through which these waters find their way.[4] And although this rule applies to all percolating waters, except what are known as diffused percolations,[5] it is especially true in the case of the waters of artesian basins, where they flow through all the lands of their respective owners through the same porous strata, and where the tapping of these strata by the means of artesian wells will draw upon the entire supply. In the following section we will discuss more at length the correlative rights to the waters of artesian basins and the limitations to the use of these waters.[6]

In another chapter of this part we will discuss the correlative rights to the use of other percolations, not strictly connected with artesian basins.[7]

**§ 1174. Correlative rights to the waters of artesian basins—Definition—Limitations to use.**—The doctrine of the correlative

3 For the rights to these waters, see Secs. 1155, 1188-1190.

4 For the reason of this change, see the well considered cases of Pence v. Carney, 58 W. Va. 296, 52 S. E. Rep. 702, 6 L. R. A., N. S., 266, 112 Am. St. Rep. 963; Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35; Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1050, 10 Am. & Eng. Ann. Cas. 843, 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

5 For the correlative rights to percolating waters, see Secs. 1198-1200.

6 See Sec. 1174.

7 See Chap. 61, Sec. 1166.

rights to the use of the subterranean or underground waters, whose channels are unknown or undefined, is that doctrine which modifies the common law maxim of *cujus est solum, ejus est usque ad infernos,* or "he who owns the soil owns it to the lowest depths below," by the maxim of the civil law of *sic utere tuo ut alienum non laedas,* or, "so use your own as not to injure another's property." The *cujus est solum,* etc., doctrine as modified relative to these waters means in effect that, although you may be the owner of the soil and everything in it to the lowest depths, you must so use these subterranean waters found in your own land that the use will not injure the rights or property of another. And although this modified maxim or rule of law applies to other percolating waters than the ones now under discussion,[1] it applies with special force to the waters of artesian basins for the reason that the porous strata wherein these waters are found usually underlie large areas of country, and the tapping of which by artesian wells will draw the waters from the lands of many owners. And, although even the modern authorities are by no means unanimous in the adoption of this modified rule, we are of the opinion that it is the only just and equitable one. And, therefore, the rule should be applied to all cases where it is known that by the flow of artesian wells naturally overflowing the surface, or the pumping of water in considerable quantities from wells on the lands of one person it draws from or prevents it from percolating to the lands of others, to their injury. And this rule of correlative rights has been adopted as the rule of law governing the waters of artesian basins in many States.[2] As there are no riparian rights

[1] For correlative rights to percolating waters, see Secs. 1198-1200.

[2] The law of correlative rights applies to the use by adjoining land owners of waters drawn from an artesian basin. Such proprietors must so use their wells as to not unreasonably injure their neighbors. Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1050, 10 Am. & Eng. Ann. Cas. 843; *Id.,* 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

The use of water from a flowing well for usual domestic purposes can not lawfully be impaired by pumping from another well which reaches the same subterranean stream for a city water supply. Willis v. Perry, 92 Iowa 297, 60 N. W. Rep. 727, 26 L. R. A. 124.

Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35, where it was held that where a tract of land is saturated below the surface by water percolating from the mountain slopes to the valley, and is held under an impervious stratum of earth, so that, when the latter is per-

in and to these artesian basins, the common rules governing the waters of surface streams and those of defined and known subterranean streams do not apply.[3] Neither should the rules of the law of appropriation of waters apply as to priority of right, exclusive use, etc., for the reason that these waters are not visible, and neither do they flow in defined and known subterranean streams. They are discoverable usually only by deep exploitation, and the owner of the land might be in possession of the same for many years before he became aware of the fact that there were artesian waters under his land. And, therefore, if the rule of priority governed as to these waters, they might be all exhausted by another before the owner of the land was aware of the fact that a portion of them came from his lands.

**§ 1175. Correlative rights not the rule in all jurisdictions.**—But the correlative rights to the use of waters of artesian basins, as

forated, the pressure from above causes artesian wells, the owner of a portion of the tract of land so saturated can not remove the water from the wells thereon for sale, if the remainder of the tract is thereby deprived of water necessary for its profitable enjoyment.

See, also, the recent case of Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A. 772, where it was held that the rights of owners of land overlying a water-bearing artesian stratum to withdraw and use the waters are correlative, so that one owner may not divert such waters for sale elsewhere to the injury of others, and that an injunction would be granted to prevent the same.

See, also, an analogous case relating to oil and gas wells of Ohio Oil Co. v. State of Indiana, 177 U. S. 190, 44 L. Ed. 729, 20 Sup. Ct. Rep. 576, 30 Morr. Min. Rep. 466; affirming *Id.*, 150 Ind. 698, 50 N. E. Rep. 1125, in which it was held that the right to gas or oil is a right in common with the co-equal right of other land owners to take from the common source of supply.

See, also, Barclay v. Abraham, 121 Iowa 619, 96 N. W. Rep. 1080, 64 L. R. A. 255, 100 Am. St. Rep. 365; Forbell v. New York, 164 N. Y. 522, 58 N. E. Rep. 644, 51 L. R. A. 695, 79 Am. St. Rep. 666; affirming *Id.*, 47 App. Div. 371, 61 N. Y. Supp. 1005; *Ex parte* Elam, 6 Cal. App. 233, 91 Pac. Rep. 811; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748; City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755; Barton v. Riverside W. Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331, where it was held, relative to the waters of artesian basins, that the doctrine of correlative rights was a change in the law, so that a clear case must be made thereunder to justify an injunction to prevent a continuance of the use of such waters, taken in good faith before such doctrine was enunciated, and which use was in full operation at that time.

3 That there are no riparian rights to artesian basins, see Sec. 1176.

treated in the preceding sections, is not the rule of law adopted by all jurisdictions in this country, even by the more modern authorities.[1] Some of the States still follow the English rule and classify all subterranean waters into but two classes; that is, those flowing in channels defined and known, and those flowing in channels undefined and unknown, all of which are treated as mere percolations, and therefore a part of the very soil itself, belonging to the owner of the land where they are found. In view of the fact that these waters of artesian basins,[2] as determined beyond all question by scientific investigations, underlie great areas of land, and the flow of a well sunk upon the land of one owner draws its supply from the lands of all owners of the basin, the determined adherence of some of the courts to the old English rule that one land owner has a right to sink an artesian well on his land and use the water therefrom as he chooses, or allow it to flow away regardless of the effect of such use upon his neighbors' wells or land, even with malicious intent, is not only against the great weight of authority in this country, against sound reason and justice, but also is against the common law in adapting itself to varying conditions and circumstances. Yet this is exactly what some of our courts have done in their more recent decisions, as will be seen from our note.[3] Again,

1 For the correlative rights to artesian waters, see Secs. 1173, 1174.

For correlative rights to percolating waters, see Secs. 1198-1200.

2 See Secs. 1167, 1168.

3 In Huber v. Merkel, 117 Wis. 355, 94 N. W. Rep. 354, 62 L. R. A. 589, 98 Am. St. Rep. 933, decided in 1903, the Court held that a land owner had a right to sink a well on his premises and use the water thereof as he chooses, or allow it to flow away regardless of the effect of such use upon his neighbors' wells; and such right is not affected by malicious intent, and that, too, where the Court had full knowledge of the source of supply of the waters of artesian basins, as is stated in the argument and indicated by the following expression: "Thus in the present case both evidence and well established scientific knowledge agree as to the source of the water supply of the wells in question." The Court, to be sure, cited the first edition of this work, Section 48, but the expression used referred only to the early common law classification; and then, the case of Katz v. Walkinshaw had not been decided at the time the section was written.

Of the decision in the above case an eminent law writer upon the subject says: "There is absolutely no principle on which that decision can be founded. It is opposed to good morals, good sense, and all common law principles which are applicable to analogous subjects, and the later and better considered cases are beginning to recognize correlative rights in percolating waters and confine land own-

where the common law can not be made to adapt itself to different conditions and circumstances from those existing in England, where it originated, as we have discussed in a previous portion of this work, it may be abrogated as to any particular condition where by its strict application injustice would be worked, even where it has been adopted as the law of that jurisdiction. As was said by the Court in the leading case upon this subject, and in regard to these waters: "An ordinary difference in the conditions would scarcely justify the refusal to adopt a rule of the common law, or one which has been so generally supposed to exist; but where the differences are so radical, as in this case, and would tend to cause so great a subversion of justice, a different rule is imperative."[4] Again, in the State of Minnesota, where theretofore no other law was recognized governing the waters within that jurisdiction other than the

ers to a reasonable use of it." Farnham on Waters and Water Rights, Sec. 938, p. 2718.

"The merits of that opinion justify little more than reference to it." Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1050.

In a case decided by the Texas Supreme Court, the Court held the same with the exception of the question of malice. See Houston etc. R. Co. v. East, 98 Tex. 146, 81 S. W. Rep. 279, 66 L. R. A. 738, 107 Am. St. Rep. 620, 4 Ann. Cas. 827. Of this case the same authority, Mr. Farnham, in the note to the L. R. A. report, says: "The above case is not only opposed to the trend of the modern decisions upon the subject of subterranean waters, but it would also seem to be opposed to equity, justice, and sound reason. There is no doubt but that the exhaustion of the subterranean water from a tract of land will not only destroy the wells, but render the land sterile and unproductive, and any system of reasoning which will authorize the unreasonable use of a parcel of land within the tract, such as the use of the railroad company in this case was found to be, by removing therefrom great and unusual quantities of water so as to materially depreciate the value of the remaining tract, must be unsound, and require careful revision."

See, also, Miller v. Wheeler, 54 Wash. 429, 103 Pac. Rep. 641, 23 L. R. A., N. S., 1065; Stoner v. Patten, 132 Ga. 178, 63 S. E. Rep. 897.

"The water is a part of the land so long as it is on the land or in it, and it was definitely granted by the appellant's grantor." Charon v. Clark, 50 Wash. 191, 96 Pac. Rep. 1040, 17 L. R. A., N. S., 647, 126 Am. St. Rep. 896.

[4] Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

NOTE.—It is interesting to see how the Court of California has repudiated the common law as to the rights to subterranean waters, and at the same time adhered so strenuously to the common law of riparian rights to surfact streams, a law abrogated by the most of the Western States.

rules of the common law, the rule of the correlative rights of the waters of artesian basins was adopted in a leading and most well-considered case; and in the opinion the Court said: "Nothing is better settled than that the fundamental principles of right and justice, on which the common law is founded, and which its administration is intended to promote, require that a different rule should be adopted whenever it is found that, owing to the physical features and character of a State, and the peculiarities of its climate, soil, products, and water supply, the application of a common law rule tends constantly to cause injustice and wrong, rather than the administration of justice and right."[5] And, furthermore, under our system of law, in time right and justice are bound to prevail. Therefore, before many years go by we look for an overruling of the Wisconsin and Texas cases cited in our notes, and the adoption of the rule of correlative rights governing the waters of artesian basins and all percolating waters, except what are known as diffused percolation,[6] as the only just and equitable rule upon the subject.

**§ 1176. No riparian rights to artesian basins.**—As we have stated before, under the common law subterranean waters are divided into two classes: Those whose channels are defined and known, and those whose channels are undefined and unknown.[1] The latter included all percolations, which also included the waters of artesian basins. We have also discussed the rights which can be acquired in and to the waters of defined and known subterranean streams,[2] and the rights to the undefined and unknown streams, or percolations, both at common law and under the Arid Region Doctrine of appropriation, will be discussed when we come to the subject of percolating waters.[3]

Under the common law there are no riparian rights recognized to artesian basins or to the waters percolating therein, such as are recognized and enforced to surface water courses and their waters. In the leading case deciding this question it was held that water percolating from the mountain slopes to the valley, where it reaches

5 Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1250, 10 Am. & Eng. Ann. Cas. 843; *Id.*, 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

6 See Secs. 1188-1190.

For the correlative rights to percolating waters, see Secs. 1198-1200.

1 See Sec. 1155.

2 See Secs. 1156-1163.

3 See Chap. 62, Secs. 1185-1211.

an impervious barrier and is held under an impervious stratum of earth so that when the latter is perforated the pressure from above causes artesian wells, can not be regarded as a water course so as to confer riparian rights upon the owners of the surface.[4]

The waters of these artesian basins, although they are in a way percolating, being held under an impervious stratum of clay or rock and under pressure of itself from above,[5] legally must be treated as a class by themselves. They differ from the ordinary percolations in that they are above the impervious stratum and are under no pressure.[6] There is also a distinction between wells having a natural flow and those not so constituted. It is, therefore, obvious that different legislation and laws are required peculiar to those waters and wells from those of the ordinary percolations.[7]

**§ 1177. The appropriation of waters from artesian basins under public lands.**—While the artesian waters still remain in their natural artesian basins underlying the public lands of the United States, undiscovered and untapped, no valid appropriation can be instituted of them which will in anywise affect the title to the lands afterwards acquired from the Government by private individuals or others.[1] It is only after the wells have been sunk and the waters rise to the surface of the earth and form a stream, the same as though they flowed from natural springs, that a valid appropriation can be made of them and finally consummated.[2] In other words,

4 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35; Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1250, 10 Am. & Eng. Ann. Cas. 843; *Id.*, 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

5 For artesian waters, see Secs. 1167, 1168.

For rights to these waters, see Secs. 1173-1175.

6 For percolating waters, see Chap. 62, Secs. 1185-1211.

7 For the rights to percolating waters, see Chap. 62, Secs. 1185-1211.

"It is obvious that different legislation is required peculiar to those whose lands are so situated with reference to the artesian supply that a natural flow results from a penetration into the subterranean reservoir. The distinction between wells having a natural flow and those not so constituted as natural, reasonably indicates the necessity or propriety of legislation restricting the former class." *Ex parte* Elam, 6 Cal. 233, 91 Pac. Rep. 811.

1 For the acquisition of lands from the Government, see Chap. 20, Secs. 408-449.

2 For the appropriation of water from springs, see Secs. 648, 1195.

a stream of water must be discovered and must be produced, and in this respect it makes no difference whether the aperture or opening through which it flows is the result of Nature's forces or the result of the sinking of artesian wells by artificial means. When, however, a stream of unappropriated water flows from an artesian well having its location upon occupied Government land, it is the subject of a valid appropriation to the same extent as the waters of a natural spring likewise located,[3] under the Acts of Congress of 1866 and 1870,[4] where the right of appropriation of water is recognized by the local customs, laws, and decisions of the courts. The appropriator takes the water at the starting point; that is to say, at the mouth of the well, and if after the right of the appropriation has once vested the Government sells the land upon which the artesian wells are situated, the purchaser takes it subject to the rights acquired by the appropriator, both as to the water flowing from the wells and the right of way for the necessary ditches used in connection therewith.[5] Therefore, while the land is still a part of the public domain the posting of a valid notice of appropriation of the waters of certain wells sunk thereon and abandoned by the parties sinking the same, by another person, followed up with reasonable diligence in the construction of the ditches for the conducting of the waters to the place of use, constitutes a valid appropriation of the waters flowing from the wells, together with the necessary rights of way. The water in question being the stream issuing from the surface of the earth, it is immaterial whether this stream is supplied by water percolating and filtering through the earth or not, after it has gathered into a stream and flows over the surface of the

For the appropriation of water, see Chap. 38, Secs. 706-732.

4 See Secs. 611-619.

5 De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001; but see the criticism of the ruling in this case in jurisdiction where the rule of correlative rights to the use of these waters has been adopted, Sec. 1178.

Where one enters land under the desert land laws on which is situated a spring and an old artesian well which was constructed prior to the entry of the land, and the water was originally used for watering stock, and the person who made the well afterward sold his interest in the same to the entryman, and she made application of the water to irrigate the land on said entry, it was held that her appropriation was as valid as though she had made application to the State Engineer for a permit to appropriate the same. Youngs v. Reagan, 20 Idaho 275, 118 Pac. Rep. 499

earth.[6] And if the land is filed upon by a homestead entryman after the rights of an appropriator have once vested, he takes the lands subject to the vested rights of the appropriator. And, furthermore, where the entryman capped the wells and enjoined the appropriator from completing his ditches, the entryman is estopped to deny that the appropriator had prosecuted the work with sufficient diligence to acquire the rights by a valid appropriation.[7] But after the land has been once entered as a homestead, the appropriator, by virtue of his prior appropriation is entitled to enter the land only to avail himself of the water flowing from such wells as supplied a stream of running water, legally appropriated by him before such entry. He can not enter the land for the purpose of developing water by boring additional wells.[8] The rights of such an appropriator are subject, however, to the rights of all the land owners whose lands overlie the same artesian basin.[9]

**§ 1178. Correlative rights—Doctrine of appropriation.**—Each State has the right to adopt whatever rule of law it may see fit governing both the surface and subterranean waters within its jurisdiction.[1] Therefore a State has the right to either adopt the rule of correlative rights to the waters of artesian basins or other percolating waters,[2] or it may adopt the law known as the Arid Region Doctrine of appropriation.[3] But where the law of correlative rights as to the waters of artesian basins has once been adopted by a State, as the law governing those waters within that jurisdiction, the doctrine of appropriation can not also apply as to all of its features, for the reason that the right to the use of these waters under the two doctrines respectively are entirely different, especially upon the question of the exclusive use of the water based upon a priority of appropriation. As far as the rights of the United States are con-

6 "No distinction can be made between the water flowing from these artesian wells and that flowing from springs." De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001.

cerned, and as between appropriators who have sunk artesian wells on the public lands tapping artesian basins lying thereunder, and even as against the rights of those who have afterwards entered the lands and acquired title thereto from the United States, a State can undoubtedly adopt a law that a priority of appropriation gives a priority of right. Under this rule the appropriator will be entitled to the use of the entire flow of the water from the wells, and that, too, even if he drained the entire basin. But where a State has once adopted the law of correlative rights to the waters of artesian basins,[4] where one has sunk artesian wells on lands which were then a part of the public domain, these lands and the others lying over the same artesian basin, after they have passed into private ownership, are as much entitled to the use of the waters of the artesian basin as the lands of the one who sunk the wells. And while the one who sunk the wells on these lands would undoubtedly own the wells and be entitled to the use of his share of the waters from the same and the right of way over the lands for his ditches, when it comes to the amount of water which he may use, he can only use his share, having due regard to the rights of others owning lands overlying the same basin under the rule of correlative rights.

The California Court of Appeals, in the case of De Wolfskill v. Smith, decided in 1907,[5] held in effect that an appropriator of the waters of artesian wells sunk upon the public lands of the United States by virtue of his priority had the exclusive right to conduct the full flow of the wells to other and distant lands, regardless of the rights of the one who afterwards acquired title to the land upon which the wells were sunk and also of the rights of other owners of lands overlying the same artesian basin. The court of appeals in this case therefore disregarded the rule of correlative rights to these artesian waters, which rule had been adopted in the State of California in 1902 in the case of Katz v. Walkinshaw and reaffirmed by the Supreme Court of that State in many cases since.[6] This was upon the theory, however, that the water flowing from the well was the same as from a surface stream or spring, and not artesian waters. Upon this subject the Court said: "The law is well settled that

[4] See Secs. 1173-1175.

[5] 5 Cal. App. 175, 89 Pac. Rep. 1001. See, also, preceding section, No. 1177.

[6] Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35. See, also, Secs. 1198-1200.

water flowing from springs upon the public lands of the United States is subject to appropriation, under Section 1410 of the Civil Code, which provides that 'The right to the use of running water flowing in a river or stream, or down a canyon or ravine, may be acquired by appropriation.'[7] . . . The water in question here is the stream issuing from the wells, and it is immaterial, for the purposes of this decision, whether this stream is supplied by water percolating and filtering through the earth or not; at all events, it has gathered into a stream. No distinction can be made between the water flowing from these artesian wells and that flowing from springs. . . . When a stream of unappropriated water flows from an artesian well having its location upon unoccupied Government land, it is the subject of appropriation to the same extent as the waters of a natural spring likewise located." It seems to us that the Court of Appeals endeavored to draw a too fine distinction between "artesian waters" and waters flowing from an artesian well. The natural source of supply in either case is the artesian basin. Then, again, the Court was unfortunate in its comparison as to the water flowing from an artesian well—an artificial means of diversion—and that of a spring, a natural source of water supply. As well might the Court have said that the water might be appropriated from an artificial ditch or canal as from an artificial well. The artesian well was but the artificial means of the diversion of the water from the artesian basin.

In a later case, decided by the Supreme Court in 1908,[8] the question was presented as to whether or not, after an appropriator of water from common water-bearing strata has begun to take water therefrom to distant lands not situated over the artesian basin for use thereon, the owner of other overlying land, upon which he had never used the water, may invoke the aid of a court of equity to protect him in his right to thereafter use the water on his land, and thus prevent the appropriator from defeating the landowner's right or acquiring a paramount right by adverse use, or by lapse of time. The Court held that this might be done, and that the rights of the appropriator for use on distant lands are subject to the reasonable use by the owners of land overlying the same artesian basin. The Court also held that the rights of these owners were *analogous*

[7] 2 Kerr's Cyc. Codes, p. 1137.

[8] Burr v. Maclay etc. Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 715.

to the rights of the owners of land riparian to a surface stream who, by virtue of the situation of the lands with reference to the stream, are given rights to the waters thereof, having due regard to the rights of the other owners on the same stream, so far as necessary for the use on their lands, which rights are paramount to the right of one riparian owner to divert the waters to lands not riparian. In view of the adoption in that State of the rule of correlative rights, this is the only decision which could be made by the Court which would be equitable and just in the premises and consistent with the rights of the respective owners of land overlying the same artesian basin.

§ 1179. **Rights to, may be acquired how—Grants.**—As is the case of the waters of natural surface streams, the right to the use of waters of artesian basins is subject to grant,[1] and the right to their use may be lost by abandonment.[2] The right to their use may also be acquired by one party and correspondingly lost by another by prescription[3] or by estoppel.[4] The right to their use may also be acquired by virtue of the power of eminent domain.[5]

In the following sections we will discuss the acquisition and loss of the rights to these waters by the methods mentioned.

§ 1180. **The acquisition of rights by grant.**—The right to the use of waters may be acquired by a grant from the owner thereof; and, as is the case with other grants, the right of the grantee must be determined from the construction of the instrument alone where its terms are clear. Where, however, the terms of the instrument are ambiguous and uncertain, the intent of the parties may be determined from the instrument itself and the surrounding facts and circumstances. And if the granting instrument conveyed all of the artesian water within a certain tract of land, the grantor is liable

1 For the sale of water rights, see Secs. 994-1032.

2 For abandonment, see Secs. 1099-1117.

For abandonment of artesian waters, see Sec. 1181.

3 For rights by prescription, see Sec. 1182.

For right by prescription to artesian waters, see Sec. 1182.

4 For estoppel, see Sec. 1183.

For rights by estoppel, see Secs. 1121-1128.

5 For eminent domain, see Secs. 1059-1098, 1210.

For right by eminent domain to percolating waters, see Sec. 1210.

for subsequently diverting and intercepting it to the injury of the right of the grantee.[1] So, where the owner of an artesian well granted a perpetual flow to a certain amount of water therefrom, and then when the grantee was in possession and enjoyment of such flow of water he granted another party the land embracing the well, subject to all existing rights to take water therefrom, the last grantee can not be protected in his interference with the flow of the well under the principle applying, in the absence of contract, to the diversion of percolating subterranean waters.[2] This comes under the general rule that a grant of a thing without reservation will preclude the grantor, his heirs or assigns, from doing anything which will interfere with the enjoyment of the thing granted.[3]

Where an oil company bored three wells on the public domain in a vain search for oil, and after producing two artesian wells of water abandoned the land, it was held that a subsequent deed to the wells passed no title.[4]

In a recent case in California,[5] "a contract in terms granted all the water now flowing or hereafter to flow" from three wells on a certain five acres of land, and covenanting that the water flowing from the wells at the date of the contract was 110,000 gallons during each twenty-four hours. It was held by the Court that no specific quantity of water was mentioned or granted, but that the amount granted was all of the waters of the three wells "now flowing or hereafter to flow therefrom." The Court said: "What the grantor did convey was all the water flowing from the three wells, whatever that amount might be, with an accompanying agreement that he would endeavor to keep that flow up to 110,000 gallons by certain means to be taken by him for that purpose, and to the extent of one-third of the water obtained by such means; but this falls far short of a grant of a specific quantity of water."

5 Jones v. Van Nuys, —— Cal. ——, 118 Pac. Rep. 541.

§ 1181. **Rights to artesian waters and wells may be lost by abandonment.**—The right to the waters of artesian wells sunk upon the public domain may be lost by abandonment.[1] So, also, may the wells themselves be abandoned and so lost to those who sunk them. When this is the case the waters flowing from them may be appropriated by others, who take the proper steps to consummate their appropriation within a reasonable time.[2] The rights of an appropriator thus acquired, however, are subject to the rights of all of the owners of land overlying the same artesian basin in those jurisdictions where the law of correlative rights has been adopted as the rule of law governing the waters of artesian basins.[3]

§ 1182. **Rights acquired and lost by prescription.**—The right to the use of artesian waters from wells sunk on the lands of one land owner after notice to other land owners that thereby the waters of the general source of supply underlying their lands were being exhausted may be acquired by adverse user amounting to prescription.[1] Therefore, where wells were sunk and the waters from the same used for a period longer than the period required as a bar for the commencement of an action for the recovery of real property, and during this period the other land owners knew of the existence of the wells and also knew that by their flow the waters of the general supply of the artesian basin underlying their lands were being decreased, an action to prevent the flow from the wells will be barred.[2]

§ 1183. **Rights acquired and lost by estoppel.**—Again, where the facts warrant it, one may lose the right to the use of the waters

1 De Wolfskill v. Smith, 5 Cal. App. 175, 89 Pac. Rep. 1001.

For doctrine of abandonment, see Secs. 1099-1117.

2 For reasonable time, see Secs. 733-741.

3 See for rule of correlative rights, Secs. 1173-1178.

1 For prescriptive rights to the use of water, see Chap. 54, Secs. 1033-1058.

2 "These wells were sunk more than five years before the action was begun. The evidence shows that the plaintiff knew of such use and knew that the flow in the creek immediately decreased. By reasonable inquiry she could have ascertained that the decrease was caused by the wells. Under these circumstances the action is clearly barred." Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

See, also, Burr v. Maclay W. Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 715.

from an artesian basin by estoppel.[1] Or, to state the case differently, a land owner whose lands overlie an artesian basin, who has stood by while a development of the waters of the basin was being made by others for a public use, by the means of artesian wells, and has suffered it to proceed at large expense to successful operation, having reasonable cause to believe it will affect injuriously his own water supply, will be estopped from enjoining the continued use of such wells, and he will be left to his action for such damages as he can prove that he has sustained by such operations.[2]

§ 1184. **Contracts to sink artesian wells.**—The general rules of the law of contracts also apply to contracts for the sinking of artesian wells; but the conditions to be complied with in these contracts are at times so peculiar that it has frequently happened that the parties have had to resort to the courts to obtain a construction as to what was the true intent of the parties. It therefore follows that these contracts should be drawn as carefully as possible, and that the true intent of the parties thereto should be expressed in their terms as clearly and as definitely as possible. The term "artesian well" includes not only the hole, but it also implies the water. In other words, a well is not a well unless it also has the water.[1] Therefore, where one contracts to sink an artesian well, the courts hold that not only must the hole be sunk, but that it must also furnish water. And, therefore, where a dry hole is sunk under such a contract, the contractor can not recover unless the well does furnish water. However, if water is found, and no specification is made as to the quantity of the flow, the land owner must pay the contract price, whether there is sufficient for his use or not.[2] So,

1 For the doctrine of estoppel, see Secs. 1121-1128.

2 "Where the complainant has stood by while the development was made for public use, and has suffered it to proceed at large expense to successful operation, having reasonable cause to believe it would affect his own water supply, the injunction should be refused, and the party left to his action for such damages as he can prove." Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35; Barton v. Riverside W. Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331.

See, also, injunctions, Chap. 81.

1 For definition of artesian wells, see Sec. 1169.

2 Omaha etc. Co. v. Burns, 49 Neb. 229, 68 N. W. Rep. 492; Elmendorf v. Classen, 92 Tex. 472, 49 S. W. Rep. 1043; Jackson v. Creswell, 94 Iowa 713, 61 N. W. Rep. 383; Stewart v. Weaver, 12 Ala. 538.

where after a contract to sink an artesian well was rescinded by the land owner assuming the responsibility of driving a 10-inch pipe farther than the contractor thought safe, and the pipe subsequently collapsed, the contractor may collect the contract price up to the time of the rescission.[3] And, again, it may be said that if the owner interferes with or obstructs the performance of the contract, he may be held liable either for the contract price or damages, according to the circumstances in the case.[4] Again, the land owner may recover damages against the contractor for the breach of the contract. So, where the contract provided that, upon the condition the well was abandoned, the casing furnished the contractor was to be drawn, and the well was abandoned by the contractor, who failed to draw the casing, the landowner may recover damages for the value of the casing.[5]

In a recent case in Washington,[6] where there was a contract to sink a well, and a reasonable price for the same agreed upon, and there was no guarantee that water would be obtained, it was held that the contractors had a right to a mechanic's lien on the premises for the drilling actually done.

But see Bohrer v. Stumpff, 31 Ill. App. 139, which held that the contractor need go but a reasonable depth.

# CHAPTER 62.

## PERCOLATING WATERS.

§ 1185. Scope of chapter.
§ 1186. Percolating waters—Defined and described.
§ 1187. Classification of percolating waters.
§ 1188. Diffused percolating waters.
§ 1189. Rights in diffused percolating waters—Common law rule.
§ 1190. Diffused—No riparian rights and no rights by appropriation can be acquired.
§ 1191. The doctrine of reasonable use.
§ 1192. Distinction between the rule of "reasonable use" and that of "correlative rights."
§ 1193. Percolating waters tributary to surface waters—Definition and description.
§ 1194. Percolating waters tributary to surface waters—Rights thereto.
§ 1195. Percolating waters tributary to springs.
§ 1196. Percolating waters tributary to springs—Rights which may be acquired thereto.
§ 1197. Percolating waters tributary to underground reservoirs or catchment basins—Definition and description.
§ 1198. Percolating waters tributary to underground reservoirs—Correlative rights thereto.
§ 1199. Percolating waters—Correlative rights thereto—Extension of doctrine.
§ 1200. Rule of correlative rights—Effects of rule in California upon the common law rule.
§ 1201. Percolating waters supplying surface wells.
§ 1202. Percolating waters supplying surface wells—Rights thereto.
§ 1203. Waters tributary to underground reservoirs or catchment basins—Nature of ownership in such waters.
§ 1204. Waters tributary to underground reservoirs or catchment basins—Extent of ownership in such waters.
§ 1205. "Developed" or "artificial" water—Definition and description.
§ 1206. Rights to developed waters.
§ 1207. Seepage waters—Definition and description.
§ 1208. Seepage waters—Rights to.
§ 1209. Rights acquired to percolating waters by prescription.
§ 1210. Rights acquired to percolating waters by eminent domain.
§ 1211. Rights acquired or lost to percolating waters by estoppel.

**§ 1185. Scope of chapter.**—In this chapter we will discuss what are known strictly as percolating waters, and the classification of such waters, under the modern scientific investigations, as upheld by

the courts. We will also discuss the rights which may be acquired in and to such waters. In a previous chapter we have discussed the subject of percolating waters as tributary to artesian basins.[1] Also, we have discussed the underflow of surface streams, where it is seen that such waters are a part and parcel of the streams themselves.[2]

**§ 1186. Percolating waters—Defined and described.**—As we have stated before, as the result of the extensive scientific investigations made during the recent years as to the movement of subterranean waters through the ground, much of the underground waters, which were formerly classified as those of undefined and unknown courses, or as mere percolations, have been reclassified by the authorities as either belonging to defined and known water courses or as different classes of percolating waters.[1]

Percolating waters may be defined as those waters which slowly percolate or infiltrate their way through the sand, gravel, rock, or soil, which do not then form a part of any body of water or the flow of any water course, surface or subterranean, but which may eventually find their way by force of gravity to some water course or other body of water, with whose waters they mingle, and thereby lose their identity as percolating waters. The underflow of surface streams, treated in a previous chapter in this part of our work,[2] are not, strictly speaking percolating waters, although they flow through the sand and gravel of the beds of the stream; this is so for the reason that they are a part of the streams themselves, and are so treated.[3] Upon the other hand, the waters supplying artesian basins are percolating waters. But, owing to the importance of that subject, we have treated those waters in a separate chapter

1 For artesian basins, see Chap. 61, Secs. 1166-1184.

2 See Secs. 1161-1163.

1 For the common law classification of subterranean waters, see Secs. 1152, 1155.

See, also, Sec. 1187.

2 See Secs. 1161-1163.

3 See Sec. 1163.

See, also, Vineland Irr. Dist. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820, holding that the term "percolating waters" as applied to the underflow of surface streams was incorrect and not justified by the facts.

See, also, Montecito W. Co. v. City of Santa Barbara, 144 Cal. 587, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

For the investigations by the Government of these waters, see the reports cited to Sec. 1168, note.

by themselves.[4] The popular name of "ground water" is sometimes given to percolating waters, and at times the term "seepage water" is applied. As such, "seepage water" has been defined by a very eminent authority [5] as "the water which reaches the lowest grounds or stream channels, swelling the latter by imperceptible degrees, and keeping up the flow long after the rains have ceased and the snow melted." [6]

§ 1187. **Classification of percolating waters.**—Strictly speaking, water while it is still percolating through the ground can not be itself classified, but all comes within the definition given in the last section. It is only during the recent years that an attempt has been made to clasify percolating waters. This classification is made not from any distinction which may be made in the water itself or in its percolations through the ground, but with reference to the streams or other bodies of water of which the percolating waters are tributary. The courts, especially some of those within the arid region of this country, led off by those of California, have decided that certain percolating waters which supplied streams or other bodies of water had such a status that rights may be acquired therein where rights had already been acquired to the waters of the streams or other bodies. This is upon the principle that the percolating waters are tributary to those waters, and the owners of rights to waters of streams are also the owners of rights to the waters of their tributaries so far as are necessary to supply their needs within their respective rights. We will, therefore, adopt a classification of percolating waters, with reference to the bodies of water of which the percolating waters are tributary, if they are so tributary; if they are not tributary to other bodies of water, they will be classified as diffused percolations. This classification, then, is as follows: First, diffused percolations; [1] second, percolating waters tributary to surface water courses or other bodies of surface waters; [2] third, percolating waters tributary to underground reservoirs or other bodies of underground waters; [3] fourth, seepage waters.[4]

4 See Chap. 61, Secs. 1166-1184.

5 Prof. Samuel Fortier, now Chief of Irrigation and Drainage Investigations, Water-Supply and Irr. Paper No. 7, p. 11, U. S. Geol. Survey.

6 For seepage water, see Secs. 1207, 1208.

1 See Secs. 1188-1190.

2 See Secs. 1193, 1194.

3 See Secs. 1197-1204.

4 See Sec. 1207.

We will now take these classes up in the order named and further define and describe them, and also discuss the rights which may be acquired to their use.

§ 1188. **Diffused percolating waters.**—Probably the most of the waters percolating through the ground come under the class of diffused percolating waters. These waters have been defined as "vagrant, wandering drops moving by gravity in any and every direction along the line of least resistance."[1] It is essential to the nature of diffused percolating waters that they do not form a part of a stream or other body of water, either surface or subterranean.[2] Diffused percolating waters may have their source in the rains or melting snows, or they may be waters seeping through the beds or banks of streams or other bodies of water, and which have so far left the bed and other waters as to have lost their character as a part thereof.[3] These waters are those which, as far as known, do not contribute, or are not tributary to the flow of any definite stream or body of surface or subterranean waters. Under the common law classification these waters, known under the more recent classification as diffused percolations, composed the greater portion of the second class of subterranean or underground waters, which were: First, those which flowed in defined and known channels; and, second, those which flowed in undefined or unknown channels, or percolating waters. In other words, all subterranean waters which do not flow in defined and known channels are presumed to be percolating waters and are not further classified.[4] Under this rule of law they are considered as a part of the very soil itself and belong to the realty in which they are found.[5]

1 City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

2 "It is essential to the nature of percolating waters that they do not form a part of the body or flow, surface or subterranean, of a stream." Vineland Irr. Dist. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820.

3 Vineland Irr. Dist. v. Azusa Irr. Co., *supra*.

See, also, Montecito v. City of Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935.

See, also, Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748; Erickson v. Crookston etc. Co., 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

4 For the classification under the common law, see Secs. 1152, 1155.

5 For rights to diffused percolating waters, see Secs. 1188-1190.

It is plain to see that, as the years go by, the class of diffused percolating waters will be growing smaller and smaller. This is due to the scientific investigations of the movements of percolating waters through the ground, and also to the discoveries which are constantly being made that certain waters which were once considered mere percolations flowed in defined subterranean channels which have become known.[6] This is particularly true in arid countries, as, for example, the Western portion of our own country, where the demand for water is great, and enterprise and scientific investigations stimulated thereby. In time, if the courts are as active in establishing new rules governing subterranean waters within the next few years as they have been in the past ten years, which rules have but kept pace with the scientific investigations upon the subject, this class of subterranean waters will pass from the class of those flowing in unknown courses to those flowing in known courses, and the "secret incomprehensible influences," and "practical uncertainties"[7] will become comprehensible influences and practical certainties.

**§ 1189. Rights in diffused percolating waters—Common law rule.**—The English rule is that all percolating waters are considered a part of the soil where found, and, therefore belong absolutely to the owner thereof. In the leading case of Chasemore v. Richards[1] it was also settled that, so far as that rule was concerned,

[6] For defined and known subterranean water courses, see Chap. 60, Secs. 1155-1163.

[7] Chatfield v. Wilson, 28 Vt. 49; *Id.*, 27 Vt. 670; *Id.*, 31 Vt. 358.

[1] Chasemore v. Richards, 7 H. L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; affirming *Id.*, 2 Hurlst. & N. 168, where it is said: "There is no difficulty in determining the rights of the different proprietors to the usufruct of the water in a running stream. Whether it has been increased by floods or diminished by drought, it flows on in the same ascertained course, and the use which every owner may claim is only of the water which has entered into and become a part of the stream. But the right to percolating underground water is necessarily of very uncertain description. When does this right commence? Before or after the rain has found its way to the ground? The principle applying to surface water not flowing in any defined natural water course applies equally, if not more strongly, to subterranean water of the same casual, indefinite, and varying description."

Percolating water "rather falls within the principle which gives to the owner of the soil all that lies beneath its surface; that the land immediately below is his property, whether it is solid rock, or porous ground, or veinous earth, or part soil,

no right can be acquired to the permanent use of water, either surface or subterranean, the definite course of which can not be traced. This rule of the common law as to all percolating waters was generally adopted by the various States and Territories of this country, both East and West; and, until the more recent decisions, subdividing percolating waters into those which were tributary to streams or other bodies of water, and diffused percolations was regarded as the law upon the subject.[2] And in all jurisdictions, at the present time,

part water." Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Exch. N. S. 289.

See, also, the opinion of Mr. Justice Temple, in the case of Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35, where he referred to the rule stated in the text and said: "The defense, conceding that the water held in the earth is percolating water, relies upon certain decisions which assert and apply literally the maxim, *Cujus est solum, ejus est usque ad infernos*, and that the water percolating in the ground, or held there in saturation, belongs to the land owner as completely as do the rocks, ground, and other material of which the land is composed, and therefore he may remove it and sell it, or do what he pleases with it."

See, also, Broadbent v. Ramsbotham, 11 Exch. 602, 25 L. J. Exch. N. S. 115, 4 Week. Rep. 290, 34 Eng. L. & Eq. 553; New River Co. v. Johnson, 2 El. & L. 434, 105 Eng. Com. L. 29, L. J. Mag. Cas. N. S. 93, 6 Jur. N. S. 374, 1 L. T. N. S. 295, 8 Week Rep. 179; Bradford v. Pickles (1895), A. C. 587; Ballacorkish etc. Co. v. Harrison, L. R. 5 C. P. 62, 43 L. J. P. C. N. S. 19, 29 L. T. N. S. 658, 22 Week. Rep. 227; Popplewell v. Hodkinson, L. R. 4 Exch. 248, 38 L. J. Exch. N. S. 126, 20 L. T. N. S. 587, 17 Week. Rep. 806; Rawston v. Taylor, 25 L. J. Exch. N. S. 33, 11 Exch. 369, 4 Week. Rep. 290; *Id.*, Eng. L. & Eq. 428; Regina v. Metropolitan Board of Works, 3 Best & S. 708, 32 L. J. Q. B. N. S. 105, 9 Jur. N. S. 1008, 8 L. T. N. S. 238, 11 Week. Rep. 492; Hodgkinson v. Ennor, 9 Jur. N. S. 1152, 4 Best & S. 229, 32 L. J. Q. B. N. S. 231, 8 L. T. N. S. 451, 5 Week. Rep. 775; English v. Metropolitan etc. Co., 1 K. B. (1907) 601; Grand Junction v. Shugar, L. R. 6 Ch. App. 483, 24 L. T. N. S. 402, 19 Week. Rep. 569;

2 For percolating waters tributary to other bodies of water, see Secs. 1193-1204.

The owner of land through which sub-surface water, without any distinct, definite, and known channel, percolates or filters through the soil to that of an adjoining owner, is not prohibited from digging into his own soil and appropriating the water found there to any legitimate purpose of his own, though by so doing the water may be entirely diverted from the land to which it otherwise would naturally have passed. Tampa Waterworks Co. v. Cline, 37 Fla. 586, 20 So. Rep. 780, 33 L. R. A. 376, 53 Am. St. Rep. 262.

"When percolations are gathered into sufficient volume to have an appreciable value, and flow into a clearly defined channel, it is generally possible to see it, and to avoid diverting it without serious detriment to the

what are considered mere diffused percolations[3] come within the common law rule as stated above. Even the Western States which distinguish those percolating waters which are the source of supply to other waters, from diffused percolations, apply the common law rule to diffused percolations and that, too, since the modern classification was made, which originated with the case of Katz v. Walkinshaw.[4] The common law rule was also applied to all percolating

owner of the land through which it flows. But percolations spread in every direction through the earth, and it is impossible to avoid disturbing them without relinquishing the necessary enjoyment of the land. Accordingly the law has never gone so far as to recognize in one man a right to convert another's farm to his own use, for the purpose of a filter." Wheatley v. Baugh, 25 Pa. 528, 64 Am. Dec. 721, 13 Morr. Min. Rep. 374.

Even as to waters of known artesian basins, it is held that the right of a land owner to sink wells and gather and use percolating waters as he will, even though the flow of his neighbor's well be diminished, can not be taken away from him or impaired by legislation, unless by the exercise of the power of the eminent domain or police power; and that the police power does not justify legislation prohibiting the waste of water from artesian wells to the injury of wells of neighboring proprietors. Huber v. Merkel, 117 Wis. 355, 94 N. W. Rep. 354, 62 L. R. A. 589, 98 Am. St. Rep. 933. For the further discussion of this ruling, see Sec. 1175, note.

See, also, Edwards v. Haeger, 180 Ill. 99, 54 N. E. Rep. 176; Wyandot Club v. Sells, 6 Ohio N. P. 64, 9 Ohio S. & C. P. Dec. 106; Houston etc. R. Co. v. East, 98 Tex. 146, 81 S. W. Rep. 279, 66 L. R. A. 738, 107 Am. St. Rep. 620, 4 Ann. Cas. 827; Pixley v. Clark, 35 N. Y. 520, 91 Am. Dec. 299; Ellis v. Duncan, 21 Barb. 230, 11 How. Prac. 515, 15 Morr. Min. Rep. 182; Roath v. Driscoll, 20 Conn. 533, 52 Am. Dec. 352; Brown v. Illius, 27 Conn. 84, 71 Am. Dec. 49; Greenleaf v. Francis, 18 Pick. 117; Davis v. Spaulding, 157 Mass. 431, 32 N. E. Rep. 650, 19 L. R. A. 102; Haldman v. Bruckhard, 45 Pa. 514, 84 Am. Dec. 511, 5 Morr. Min. Rep. 108; Fraizer v. Brown, 12 Ohio St. 294; Ocean Grove etc. Assn. v. Ashbury Park Comrs., 40 N. J. Eq. 447, 3 Atl. Rep. 168; Board of Supervisors of Clarke County v. Mississippi Lum. Co., 80 Miss. 535, 31 So. Rep. 905; Deadwood Cent. R. Co. v. Barker, 14 S. D. 558, 86 N. W. Rep. 619; Chatfield v. Wilson, 28 Vt. 49, 27 Vt. 670, 31 Vt. 358; Clark v. Conroe, 38 Vt. 469.

[3] For definition of percolating waters, see Sec. 1186.

[4] See Newport v. Temescal W. Co., 149 Cal. 531, 87 Pac. Rep. 372, 6 L. R. A., N. S., 1098, which case dealt purely with diffused percolating waters, and in which it is said: "The decision in Katz v. Walkinshaw is adhered to, but plaintiffs, on the facts, failed to establish any ground for relief under the principles there laid down."

See, also, Cohen v. La Canada etc. Co., 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752, where it is held that percolating waters which do not supply springs, or other bodies of

waters in the State of California, before the modern classification was made of these waters in that State under the rules established by that case and the later cases following its decision.[5] The common law rule is also applied in all jurisdictions where the classification originated with the case of Katz v. Walkinshaw[6] has not yet been attempted.[7]

water, may be developed by a tunnel and conducted away from the land, as against the owners of adjoining lands, where the waters otherwise in their natural flow sink into the ground and be lost, and that the rules laid down in the case of Katz v. Walkinshaw did not apply to such waters.

See, also, for the distinction between the rights to "strictly percolating waters" and those percolations which feed subterranean reservoirs, in City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

5 One has the right to dig trenches upon his own land for a useful purpose, although percolating waters are thereby diverted from a spring from which others obtain a water supply. Southern Pac. R. Co. v. Dufour, 95 Cal. 615, 30 Pac. Rep. 783, 19 L. R. A. 92.

Even as late as 1899, it was held that: "Percolating waters are a part of the soil, and belong to the owner of the soil. He may impound them at will, and the proprietor of lower lands injuriously affected can not be heard to complain." Vineland Irr. Dist. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820.

7 "Water intermingling with the ground, or flowing through it by filtration or percolation, or by chemical attraction, is but a component part of the earth, and has no characteristic of ownership distinct from the land itself. In the eye of the law, water so commingled and flowing, or motionless, underneath the surface, is not the subject of ownership apart and distinct from the soil." Willow Cr. Irr. Co. v. Michaelson, 21 Utah 248, 60 Pac. Rep. 943, 51 L. R. A. 280, 81 Am. St. Rep. 687, citing Kinney on Irr., 1st Ed., Secs. 48, 49.

See, also, Sullivan v. Northern Spy M. Co., 11 Utah 438, 40 Pac. Rep. 709, 30 L. R. A. 186; Herriman v. Keel, 25 Utah 96, 69 Pac. Rep. 719; Deadwood etc. R. Co. v. Barker, 14 S. D. 558, 86 N. W. Rep. 619, all citing Kinney on Irr., 1st Ed., Secs. 48, 49.

See, also, Crescent M. Co. v. Silver King M. Co., 17 Utah 444, 54 Pac. Rep. 244, 70 Am. St. Rep. 810; *Id.*, 14 Utah 57, 45 Pac. Rep. 1093; Boyce v. Cupper, 37 Ore. 256, 61 Pac. Rep. 642; Taylor v. Welch, 6 Ore. 198; West v. Taylor, 16 Ore. 165, 13 Pac. Rep. 665; Mosier v. Caldwell, 7 Nev. 363; Howard v. Perrin, 200 U. S. 71, 50 L. Ed. 374, 26 Sup. Ct. Rep. 195; affirming 8 Ariz. 347, 76 Pac. Rep. 460.

**§ 1190. Diffused—No riparian rights and no rights by appropriation can be acquired.**—Diffused percolations being but a component part of the earth, or ground, where they are found, it follows that they are not subject to ownership separate and distinct from the soil itself. And from their very nature they can not be treated as are the waters of defined and known streams, either surface or subterranean. It therefore follows that there can be no riparian rights to these waters. They must therefore be treated in a class by themselves.[1]

Again, while waters come under the classification of diffused percolations, no right can be acquired to their use by appropriation under the Arid Region Doctrine, as is the case with the waters of the surface,[2] and even subterranean, streams having known and defined channels.[3] As held by the Utah Court, the owner of the soil is entitled to the waters percolating through it, and therefore such water is not subject to appropriation.[4] But see the inconsistent holding by the same Court in an earlier case,[5] where it was held that under

1 For the common law rule as to diffused percolations, see previous section, No. 1189.

In a leading English case upon the subject of percolating waters it is said: "The case under discussion does not fall within the rule which obtains as to surface streams, nor is it to be governed by analogy therewith." Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Exch. N. S. 289.

2 For the doctrine of appropriation, see Chap. 31, Secs. 585-594.

For the appropriation of water, see Chap. 38, Secs. 706-732.

3 For subterranean water courses, see Chap. 60, Sec. 1159.

4 "The ordinary rules applying to the appropriation of surface streams do not apply to percolating waters, with undefined and unknown courses and banks." Willow Cr. Irr. Co. v. Michaelson, 21 Utah 248, 60 Pac. Rep. 943, 51 L. R. A. 280, 81 Am. St. Rep. 687, quoting from Kinney on Irr., 1st Ed., Sec. 48.

Percolating water, oozing through the soil beneath the surface in an undefined and unknown channel, is not within the provisions of the Ariz. Rev. Stat., 1887, Par. 3199, Sec. 1, Par. 3201, Sec. 3, for the appropriation of water from rivers, creeks, or streams of running water. Howard v. Perrin, 200 U. S. 71, 50 L. Ed. 374, 26 Sup. Ct. Rep. 195; affirming *Id.*, 8 Ariz. 347, 76 Pac. Rep. 460.

See, also, Crescent M. Co. v. Silver K. M. Co., 17 Utah 444, 54 Pac. Rep. 244, 70 Am. St. Rep. 810, 14 Utah 57, 45 Pac. Rep. 1093; Deadwood etc. R. Co. v. Barker, 14 S. D. 558, 86 N. W. Rep. 619; Hansen v. McCue, 42 Cal. 303, 10 Am. Rep. 299; Mosier v. Caldwell, 7 Nev. 363; Southern Pac. R. Co. v. Dufour, 95 Cal. 615, 30 Pac. Rep. 783, 19 L. R. A. 92.

See, also, cases cited in the preceding section, No. 1189.

5 Sullivan v. Northern Spy M. Co., 11 Utah 438, 40 Pac. Rep. 709, 30 L. R. A. 186.

the Acts of Congress of 1866 and 1870 [6] the discoverer of a *flow* of percolating waters on the public lands may, by digging wells and constantly using the water for a beneficial purpose, acquire a right to take the water from such wells as against one who by subsequent location acquires title to the land; and, at the same time the Court stated that: "The doctrine may be said to be well settled that the owner of lands has a right to dig thereon and to appropriate and use percolating waters therein, although by so doing he may dry up the wells or spring of an adjacent proprietor." If such an appropriation was a valid one it was good as against all subsequent claimants. But the Court, although holding the appropriation valid, rendered the same nugatory by holding that: "This right of an appropriator is, of course, subject to the rule of law which will permit the owner to sink an adjoining well on his own premises, although he should thereby dry up that of the first appropriator." Therefore, the Court, even in this case, in effect held that there could be no valid appropriation of these percolating waters by permitting the very waters appropriated to be taken away from him by another. With this construction of the case it is in harmony with the general rule upon the subject that mere diffused percolating waters spreading themselves, or infiltrating throughout the soil, are not subject to appropriation any more than what are known as diffused surface waters, or waters which after a fall of rain or the melting of snow spread themselves over the surface of the ground, are subject to a permanent right acquired by appropriation.[7]

§ 1191. **The doctrine of reasonable use.**—The English rule has at least been consistent upon the subject of the rights to percolating waters, always treating them as a part of the soil itself, and therefore holding that the owner of one tract of land is permitted to draw off the water found in his own land, even for sale to a distant municipal corporation, or that a corporation could buy up the particular tract of land for the express purpose of abstracting the water therefrom for municipal use, and that, too, although the effect is to destroy the wells and springs upon the lands owned by others in the neighborhood; and that, because of this right, the injury to the other land owners is *damnum absque injuria*.[1] This rule, which we

[6] See for Acts, Secs. 611-619.

[7] For diffused surface waters, see Secs. 318, 654.

[1] New River Co. v. Johnson, 29 L. J. Mag. Cas. N. S. 93, 6 Jur. N. S. 374, 2 El. & El. 435, 1 L. T. N. S.

may term the doctrine of unreasonable use of percolating waters, originated in the humid climate of England, where there is ample water for all, and is based upon the theory that the taking out all the waters from different tracts of land by one owner was no injury to the other land owners for the reason that the water was regarded as practically valueless. But in this country, especially the Western portion thereof, where there is always a shortage of surface water and where the greater portion of the water is found beneath the surface of the earth, we are presented with a different physical condition. And, therefore, what might be a reasonable use of these waters in England might be a most unreasonable use in different sections of this country. However, a number of our Eastern States adopted the English rule of the use of all percolating waters regardless of any class distinctions; and, prior to the decision of the Supreme Court of California in the case of Katz v. Walkinshaw, as surprising as it may seem, it was the general rule of law throughout the Western States.[2] But this English rule which permits one man to draw off the percolating waters from the lands and wells of his neighbors; and, in turn, permits these neighbors by means of larger

Also for other cases adopting the English rule, see Clarke County v. Mississippi Lum. Co., 80 Miss. 535, 31 So. Rep. 905; Wilson v. New Bedford, 108 Mass. 261, 11 Am. Rep. 352; Houston etc. R. Co. v. East, 98 Tex. 146, 81 S. W. Rep. 279, 66 L. R. A. 738, 107 Am. St. Rep. 620, 4 Ann. Cas. 827; Huber v. Merkel, 117 Wis. 355, 94 N. W. Rep. 354, 62 L. R. A. 589, 98 Am. St. Rep. 933.

wells, or tunnels, or more powerful pumps, to drain these waters from the land of the first and to dry up his wells, and again in turn about to dry up each others' wells in the same manner, is not the rule in the great majority of the States of this country. During the later years the doctrine of the maxim, "*Sic utere tuo alienum non laedas,*" has been adopted in the majority of the States, which doctrine restricts one owner not only to a reasonable use of his own property, but where, as is the case of water percolating from the land of one man to the lands of others, and there is therefore a common ownership in these waters, and the drawing off large quantities of water from one tract draws from all and where the amount is unreasonable, it is a positive injury to the lands and wells of the other land owners, it is held that the rule of reasonable use applies with much greater force than where a man is simply using his own absolute property. This rule of reasonable use is therefore simply this, that one man must so use the waters percolating through his own lands in a manner reasonable to the needs and necessities of his own tract of land, and thereon, and also having due regard to the coequal rights of his neighbors whose lands overlie the same strata or saturated basins. One of the first courts to adopt this rule of reasonable use of percolating waters, upon principle, common sense, and justice, rather than English precedent, was the Supreme Court of New Hampshire, in the case of Bassett v. Salisbury Mfg. Co., in 1862.[3] In fact the Court in rendering its decision recognized the fact that it was against precedent, in the following language: "We are aware that since the case of Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Ex., N. S., 289, the weight of authority elsewhere is against the view of the law which we have adopted." But with that decision as the opening wedge against the strict English rule, many of the Eastern and Western courts have fallen in line and have adopted the rule of the reasonable use of all waters percolating from the lands of one person to the lands of others, and which finally led up to the rule of correlative rights in these waters as laid down in the case of Katz v. Walkinshaw;[4] and, in the majority of the opinions it will be noticed that the case of Bassett v. Salisbury Mfg.

Co.[5] is cited as one of the leading authorities upon which their decisions are based.[6]

**§ 1192. Distinction between the rule of "reasonable use" and that of "correlative rights."**—It must be noticed that there is a distinction between the English rule as modified by the modern American rule of reasonable use and the rule of correlative rights. Under the rule of reasonable use some of the authorities hold that a land owner has a right to make such a beneficial use of the water found percolating through his land to the extent that may be necessary for the improvement of his land, so long as it is used thereon, although in so doing he may drain the lands of his neighbors.[1] Upon the other hand, the rule of correlative rights to these owners is the rule which abrogates the English rule as to these waters and

5 *Supra.*

6 Tending to sustain the later doctrine of reasonable and beneficial use of percolating waters, see the following: Pence v. Carney, 58 W. Va. 296, 52 S. E. Rep. 702, 6 L. R. A., N. S., 266, 112 Am. holds that the rights of all land owners over a common basin, saturated strata, or underground reservoir, are coequal or correlative, and that one land owner can not extract more than his share of the water even for use on his own lands, where the rights of others are injured thereby.[2]

**§ 1193. Percolating waters tributary to surface waters—Definition and description.**—Our second class of percolating waters we will define as those waters which infiltrate their way through the adjoining ground to some surface water course or other body of surface water.[1] These waters differ from the underflow of surface streams in the fact that they have not yet reached the channels of the water courses to which they are tributary; while, upon the other hand, the underflow of surface streams have reached these channels and are therefore dealt with as component parts of such streams.[2] These waters are those which come from rain or the melting of snows within the watershed of any stream, or other body, and sinking below the surface for the time being again reappear when the channel is reached and swell the flow of such surface streams or other bodies. They are therefore properly treated as tributary to those streams. They also differ from diffused percolations, treated in the previous sections of this chapter, which are mere vagrant drops moving in any and every direction and which, as far as known, are not tributary to any stream, nor swell the volume of water flowing therein. The distinction between diffused percolations and percolating waters supplying the flow of a stream is correctly drawn in a recent case decided by the Supreme Court of California,[3] wherein it was held that the waters of the San Fernando Valley were not "percolating waters" in the common law sense of the term "vagrant wandering drops moving by gravity in any and all directions"; that these waters percolate, it is true, but only in the

2 Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772; Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 90 Am. St. Rep. 35.

2 See Sec. 1161.

3 City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

See, also, Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

sense that they form a vast mass of water, always moving downward to the outlet, which was the Los Angeles River.

It was not until the case of Katz v. Walkinshaw was decided that the courts classified these waters as a distinct class of percolating waters, although their existence had been recognized by much earlier decisions. They were regarded as too precarious in their movements to be considered as anything but a part of the soil itself and accordingly they were so treated. In the early cases it was considered that a stream took its source only in the water that could be seen with the eye issuing from the surface of the ground, from a spring, or otherwise;[4] and that, too, without regard to the source of supply of the spring, or the water percolating from the sides into the water course. But the case of Katz v. Walkinshaw was decidedly revolutionary in character, and not only gave these waters, which slowly percolate into and feed the surface water courses a distinct classification, but also decided that certain rights could be acquired in them as tributaries to the surface water course.[5] This decision grew out of the very necessities of the conditions in the arid region of this country, and all common law distinctions were expressly repudiated.[6]

**§ 1194. Percolating waters tributary to surface waters—Rights thereto.**—It was not until the more recent scientific investigations, before mentioned,[1] as to the movements of underground waters through the soil, that these percolating waters tributary to surface waters were recognized as belonging to any particular class, or that any rights could be acquired in them other than the rights which could be acquired to the soil itself, through which they found their way, of which soil, under the prevailing common law rule, they were

4 Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Exch. N. S. 289; Chasemore v. Richards, 2 Hurlst. & N. 168, 7 H. L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; Hanson v. McCue, 42 Cal. 303, 10 Am. Rep. 299; Southern Pac. R. Co. v. Dufour, 95 Cal. 615, 30 Pac. Rep. 783, 19 L. R. A. 92; Gould v. Eaton, 111 Cal. 639, 44 Pac. Rep. 319, 52 Am. St. Rep. 201; *Id.*, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181.

5 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

6 For rights in waters tributary to surface water courses, see Secs. 649, 1194.

1 See Secs. 1150, 1151, 1186.

considered component parts.[2] But, by these geological and topographical investigations made by the Government and others, it has been proven in many instances that waters percolating through the soil of watersheds were not only the sources of supply, but the only source of supply of certain streams and other surface bodies of water. It being proven absolutely that these percolating waters physically are directly tributary to these streams, the law has kept pace with these scientific investigations proving this fact; and, therefore, it follows that in law they should be, and in many jurisdictions are, dealt with and treated as tributary waters. And, where rights to the waters of the stream itself have been once acquired, by appropriation or otherwise, it is unlawful for persons owning land bordering on the stream to intercept the waters percolating through them on their way to the stream, and apply it to any use other than its reasonable use upon the land upon which it is taken, if he thereby diminishes the flow of the stream to the damage of those having rights therein.[3] Therefore, this rule modifies the common law rule that the owner of the land is also the owner of all the water found percolating as a part of the soil itself, and that he may use and dispose of it as he sees fit,[4] to the extent that he may only use these waters so percolating through his land, subject: First, to the rights of others to the water flowing in the stream which this water augments, upon the same principle as though this water was a part of the stream itself, as, for example, its underflow;[5] and, second, the

2 For rights in diffused percolations, see Secs. 1188-1190.

3 It is unlawful for one owning land bordering on a stream to intercept percolating waters therein and apply it to any use other than its reasonable use on the land from which it is taken, if he thereby diminishes the stream to the damage of those having rights therein. City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

4 For the common law rule as to percolating waters, see Sec. 1155.

5 "There is no rational ground for any distinction between such percolating waters and the waters in the gravels immediately beneath and directly supporting the surface flow, and no reason for applying a different rule to the two classes." Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

"It is usual to speak of the extraction of this water from the ground as the development of a hitherto unused supply. But is it not demonstrated that the process is not in fact, for the most part, an exhaustion of the underground sources from which the surface streams and other supplies previously used have been fed and supported? In some cases this has been proven by the event. The danger of exhaustion in this way threatens surface streams as well as underground percolations and reser-

reasonable use of the water so percolating through his land, limited only by the operation of the maxim, "*Sic utere tuo ut alienum non laedas,*" for the reason that, as held by a very recent California case, all who have access to these waters, by virtue of their natural situation and the ownership of the lands through which these waters find their way, "have a common right, and of which they may each make a reasonable use upon the land so situated. . . . The natural rights of these defendants and the plaintiff in this common supply of water would therefore be coequal, except as to quantity, and correlative." [6] This latter rule goes farther than even the courts of

voirs." Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

"Under the rule established with respect to percolating waters, it is not lawful for one owning land bordering on a stream to excavate in his land, intercept percolating water therein, and apply it to any other than its reasonable use upon the land from which it is taken; he thereby diminishes the stream to the damage of others having rights therein." McClintock v. Hudson, 141 Cal. 275, 74 Pac. Rep. 849.

It must be noted that the Court in the case of Katz v. Walkinshaw, although referring to the danger of the exhaustion of surface streams by the taking of percolations as above, established no rule relative thereto. The rights decided by that case were simply the rights of the owners of lands to the waters of subterranean basins or reservoirs. Therefore the McClintock case added the rule as to percolations supplying surface streams.

6 Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

California had therefore gone relative to the correlative rights to percolating waters which supply streams. But as these waters percolate from the lands of one owner to the lands of others through common porous strata on their way to the stream, there is no reason why the same rules should not be applied to them as are applied to the percolating waters of artesian basins [7] and catchment basins.[8] And, in fact, in the State of California it may now be said that the common law rules as to all percolating waters with the exception of what are termed mere diffused percolations,[9] have been wholly abrogated, and the doctrine of correlative rights to all waters percolating through common strata underlying the lands of a number of land owners has been substituted therefor. As was said in a still more recent case:[10] "With the common law doctrine modified to meet the conditions in this State necessitating it, and modified so as to preserve to each owner of lands overlying a common stratum of percolating waters a right to a fair, reasonable use of these waters of which their lands have a natural advantage, no reason suggests itself why the same rule should not apply as between appropriators of waters of a stream for use elsewhere than on riparian lands and the owners of lands overlying a water-bearing channel, so directly connected with the stream as to be supplied by percolation from it. The conditions in all cases are analogous as far as the natural supply of waters is available upon the lands concerned, whether the lands be riparian to the stream or overlying a common subterranean stratum, or whether the underlying strata are connected and supplied directly from the flow of the stream itself." As yet the courts of the other States have not gone to the extent in respect to these waters as have the courts of California, in abrogating the common law rule. But, as we view the subject, it is only a question of time when they will. In a country where the greater portion of the water supply percolates through a common stratum which underlies the lands of all, the common law rules governing these waters are wholly inapplicable.

10 Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

In Kansas it is provided by statute that "no person shall be permitted to take or appropriate the waters of any subterranean supply which naturally discharge into any superficial stream, to the prejudice of any prior appropriator of the water of such superficial channel." [11]

**§ 1195. Percolating waters tributary to springs.**—Percolating waters supplying natural springs come under this classification of percolating waters tributary to surface streams. A spring of water may be defined as water flowing out of the ground by natural forces at a particular place.[1] When a spring flows from the ground over the surface of the earth in a well-defined channel, from the point where the water issues, it becomes a surface water course and the waters therein are treated according to the laws governing surface water courses. But, before these waters reach the outlet of the spring they are subterranean waters, and are therefore treated according to the laws governing those waters. If the waters flow to the point of outlet in a well-defined and known subterranean channel, they are then treated as subterranean or underground water courses, which, as we have seen, are governed by the same rules of law as those which govern the waters of surface streams.[2] If, however, the waters of the springs are supplied from percolations, the laws then governing the waters until they reach the outlet are the laws governing percolating waters. In point of value, springs are one of the most valuable sources of domestic and stock water supply. They are found in every section of the country, some of them of such a capacity that large tracts of land are irrigated by their waters.[3] Springs are also the principal source of supply to the surface rivers and streams.[4]

**§ 1196. Percolating waters tributary to springs—Rights which may be acquired thereto.**—Under the English rule of the common law, percolating waters tributary to springs were treated the same as all other percolating waters as a part of the soil where found

4 See Secs. 313, 648, 649.

and belonged absolutely to the owner thereof, who could do what he pleased with them, even though in abstracting the water it dried up the springs, to which the water was tributary, on the land of another.[1] And it is immaterial that the springs so supplied with water were the sources of a stream or surface water course upon which riparian rights had vested, provided that the water was intercepted while it was still percolating through the soil before it had reached the surface of the ground at the springs. And any injury to the rights of the owner of the spring were deemed excusable and *damnum absque injuria.*

But under the principles of reasonable use and correlative rights to percolating waters, discussed more in detail in other sections, the American courts have, in some jurisdictions, refused to adopt the English rule as to these percolating waters so supplying springs. And the modern American rule upon this subject is to the effect that a land owner who explores for and develops percolating water within the boundary of his land is limited to a reasonable use of such water, when to otherwise use it would deplete the water supply of a natural spring of another on adjoining or neighboring land, and thereby materially injure or destroy such spring.[2]

Under the Arid Region Doctrine of appropriation, where the waters of springs have been appropriated for a beneficial use or pur-

pose, later comers can not acquire rights to the waters of the springs simply because the means by which the waters are conveyed to the springs are by percolations.[3]

**§ 1197. Percolating waters tributary to underground reservoirs or catchment basins—Definition and description.**—The third class of percolating waters, under our classification,[1] we may define as those waters which percolate down through the gravel porous rock, and soil from various directions until they reach some barrier of impervious rock, clay, or other material, constructed either by Nature or by the hand of man, thereby forming catchment basins, and there these percolating waters, mingling with the rock, gravel, sand and soil, form what are called underground reservoirs, with the water at times rising nearly or quite to the surface of the earth. These catchment basins differ from artesian basins in that the water is above the impervious rock instead of below it.[2] Again, where the porous layer is next to the surface and above the impervious rock, as is often the case on the Great Plains and in California and other parts of the West, no pressure or head can be produced, for the water is simply running down an inclined surface, with no impervious stratum above to prevent it from rising, so that it would be comparable to water flowing down a wide, open trough slightly inclined and filled with loose gravel. In this case, when the water reaches the end of the trough, it will rise toward the surface. As is the case with percolating waters tributary to surface streams,[3] and the waters of artesian basins,[4] heretofore discussed, it has been but within the last few years that these waters were recognized as a separate class, to which rights could attach. This class of underground waters also draws upon what was known under the common law as "percolating waters," a part of the soil itself, without being attached to any body or stream of water, either surface or subterranean, and which we have classified in this work as diffused percolating waters. These

4 See Secs. 1166-1184.

waters tributary to underground reservoirs percolate, it is true, but only in the sense that they form a vast mass of water confined in a basin filled with detritus, always moving slowly down to lower levels in the effort, in conformity with physical law, to attain a uniform level.[5] The classification of these waters also had its inception in the scientific investigations which have been made during the recent years relative to the movements of percolating waters through the ground, and the general physical and topographical conditions of the arid and semi-arid portions of our country, where every drop of water is of value. Many early cases had recognized these waters, but had failed to define or classify them, or to define any rights which could be acquired in them, unless it is with the single exception that some of the authorities held that percolating waters should be so drawn upon within reason, or with reference to a reasonable use, where it was found that others were affected by that use.[6] Based upon the investigations of scientists, these underground reservoirs or catchment basins were first recognized by the California court in 1899, in which it was held that the lands including them might be condemned by a city in order to acquire the waters which they contained.[7] And three years afterwards, in 1902, the same court further recognized these waters and in such

[5] For the distinction between diffused percolating waters and the percolating waters supplying subterranean reservoirs, see City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748; Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A. 772.

[6] For the doctrine of reasonable use of percolating waters, see Sec. 1191.

[7] Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585, in which it is said: "The land is found to be saturated with water to within a few feet of the surface. It is proposed to construct a subterranean dam at the lower end of the tract. A sub-surface dam, of course, would not have the effect of flooding the surface permanently, but it would permanently raise the plane of saturation. This being done, it is next proposed to tap this heavily saturated bed of sand and gravel by means of a tunnel connected with lateral galleries, through which the water will be drained off and conducted to the supply pipes. In other words, the land is to be used as a reservoir, such as essentially it is, and none the less so because the water does not rise and stand above the surface. The evidence in the case shows that from one-fifth to one-third of the entire bulk of the material filling the valley below the plane of saturation is water. The land in its natural state, therefore, is a reservoir, and a subsurface dam is to be constructed in order to make it better serve the purposes of a reservoir."

a manner that, in that jurisdiction, at least, they must be regarded as belonging to a distinct class of percolating waters, and upon which we base our classification to them.[8]

The classification originating with this case has been followed by the courts of a number of the States, and, in fact, by some of the courts of the Eastern States, within what is known as the humid region, and where the needs of water are not so great as in the arid West and in California, where the case was decided.

We will now discuss the rights which may be acquired in and to these percolating waters tributary to and within underground reservoirs or catchment basins.

**§ 1198. Percolating waters tributary to underground reservoirs —Correlative rights thereto.**—As we have seen in the preceding sections, although the doctrine of certain percolating waters had been modified in a number of the States of this country,[1] it was not until the case of Katz v. Walkinshaw was decided by the Supreme Court of California,[2] that percolating waters tributary to underground reservoirs or catchment basins, after they had filled these reservoirs or basins, were recognized as a distinct class of percolating waters and the rights which might be acquired to them decided. The facts in this case also involved the rights to the

8 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35, in which Mr. Justice Shaw, in rendering the opinion upon the rehearing, at which all phases of the case were most ably presented, said: "The geological history and formation of the country is peculiar. Deep borings have shown that almost all of the valleys and other places where water is found abundantly in percolation were formerly deep canyons or basins, at the bottom of which anciently there were surface streams or lakes. Gravel, boulders, and, occasionally, pieces of driftwood have been found near the coast far below tide level, showing that these sunken streams were once high enough to discharge water by gravity into the sea. These valleys and basins are bordered by high mountains, upon which there falls the more abundant rain. The deep canyons or basins in course of ages have become filled with the washings from the mountains, largely composed of sand and gravel, and into this porous material the water now running down from the mountains rapidly sinks, and slowly moves through the lands by the process usually termed 'percolation,' forming what are practically underground reservoirs."

See, also, the cases cited in the following section, No. 1198.

1 See Sec. 1191.

2 Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

waters of artesian basins, heretofore discussed in a separate chapter.[3] As to both of these classes of waters, this decision, as far as the State of California is concerned, utterly abrogated the English common law rule that all percolating waters were a part of the soil where found, and that the owner thereof had the exclusive right to them while they were on his land, and that he could draw them off and use them, sell, or waste them, as he saw fit, even if in so doing he might also draw off all of the waters from the lands of his neighbors.[4]

Physically, the reason for this decision was based upon the geological history and formation of the country, as compared to that of England, where the common law rule originated, the recent scientific investigations and discoveries as to the movements of percolating waters through the ground, and the peculiar needs of the arid region for water, in order to develop the country to the fullest possible extent. As was said by the Court: "An ordinary difference in the conditions would scarcely justify the refusal to adopt a rule of the common law, or one which has been so generally supposed to exist; but where the differences are so radical as in this case, and would tend to cause so great a subversion of justice, a different rule is imperative."[5] Legally it was based upon the more modern American authorities, adopted in some of the States, holding that one land owner had the right to only the reasonable use of the waters percolating through his land, having due regard to the rights of the other land owners through whose lands these waters also percolated.[6] In other words, the doctrine of the maxim, *Cujus est solum, ejus est usque ad infernos,* "that water percolating in the ground or held there in saturation belongs to the land owner as completely as do the rocks, ground, and other material of which

[3] For rights to artesian waters, see Secs. 1166-1184.

[4] For the rights to percolating waters under the common law, see diffused percolations, Secs. 1188, 1189.

[5] Mr. Justice Shaw in Katz v. Walkinshaw, *supra.*

[6] For the reasonable use of percolating waters, see Sec. 1191.

"I think it clear that the American cases do not require us to hold that the maxim, *Sic utere tuo,* does not limit the right of the land owner to the use of subsurface water, but, on the contrary, all the cases in which the question has been discussed hold or admit that such maxim should limit such right where justice requires it. Such, I think, is the proper rule." Mr. Justice Temple in Katz v. Walkinshaw, *supra.*

the land is composed, and therefore he may remove it and sell it, or do what he pleases with it," was utterly repudiated, and in lieu thereof the doctrine of the maxim, *Sic utere tuo alienum non laedas*, "you must so use your own as not to injure another's property," was substituted in its stead.[7] This is the doctrine of correlative rights as to these waters, which in effect means that although you may be the owner of the soil and everything therein to the lowest depths, you must so use the percolating waters to which this class belongs, found in your own lands, that that use will not injure the rights or property of others to the correlative use of these waters which also percolate through their lands. This is a doctrine which, owing to its just and equitable rules, has already been adopted in a number of the States, and which in time is bound to be adopted in all as to all waters, regardless of class, percolating to and from the land of one person from and to the lands of others.

**§ 1199. Percolating waters—Correlative rights thereto—Extension of doctrine.**—The doctrine of correlative rights as to the percolating waters tributary to underground reservoirs, as enunciated in the case of Katz v. Walkinshaw,[1] discussed in the preceding section,[2] did not stop with this particular class of percolating waters, nor is it limited to the State of California, where that case was decided, but has been extended to other classes of percolating waters, and has been adopted by other jurisdictions as the law governing waters percolating from the land of one person to the lands of others. As we have seen in a previous chapter, the rule has been adopted relative to the waters of artesian basins in the majority of the States where those rights have been considered.[3] As to correlative rights to artesian waters, the rule of Katz v. Walkinshaw was specifically adopted by the Supreme Court of Minnesota,[4] but

7 For a further discussion of this subject, see artesian waters, Secs. 1173-1175.

2 See Sec. 1198.

3 For correlative rights to the waters of artesian basins, see Chap. 61, Secs. 1173-1175.

4 Erickson v. Crookston etc. Co., 100 Minn. 481, 111 N. W. Rep. 391, 8 L. R. A., N. S., 1250, 10 Am. & Eng. Ann. Cas. 843; *Id.*, 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650.

it was rejected in Texas [5] and in Wisconsin,[6] the first of these cases being decided just after and the latter a few months before the Katz case. In West Virginia the doctrine was adopted as to percolating waters which supplied the waters of a spring of another on adjoining or neighboring land.[7]

In Colorado the law as to percolating waters seems to be still undecided. The Supreme Court in a late case said: "The law regulating the ownership of percolating waters in the arid States is now of great—as time passes it will be of still greater—importance, and until a proper case is presented calling for it we decline to announce the rule applicable to our local conditions." [8]

**§ 1200. Rule of correlative rights—Effect of rule in California upon the common law rule.**—Although the decision in the case of Katz v. Walkinshaw positively decided that the rule of correlative rights applied to waters both of artesian basins and saturated underground reservoirs or catchment basins, where these underlaid the lands owned by a number of land owners, some confusion existed as to the effect of the decision upon the common law rule of percolating waters, which, prior to that decision, had been the rule in California.[1] This was due largely to the different lines of argument used by Mr. Justice Temple in rendering the first opinion of the Court, and by Mr. Justice Shaw in rendering the opinion upon the rehearing of the case. In brief, Mr. Justice Temple contended that the old English rule as to percolating waters,[2] as laid down in the early cases of Acton v. Blundell,[3] and Chasemore v. Richards,[4] should be adhered to as the foundation of the decision, but modified only where injury occurred to the neighboring land owners by the

5 Houston etc. R. Co. v. East, 98 Texas 146, 81 S. W. Rep. 279, 66 L. R. A. 738, 107 Am. St. Rep. 620, 4 Ann. Cas. 827.

For the common law rule as to percolating waters, see Sec. 1189.

2 See Secs. 1155, 1189.

3 12 Mees. & W. 324, 13 L. J. Exch., N. S., 289.

4 2 Hurlst. & N. 168, 7 H. L. Cas. 349, 29 L. J. Exch., N. S., 81, 5 Jur., N. S., 873, 7 Week. Rep. 685.

withdrawal by one land owner of more than his share of the water, or his unreasonable use of the water, by the rule adopted by the later Eastern American authorities of reasonable use. In other words, he adopted *in toto* the reasoning and conclusions reached by the New Hampshire Court in the case of Bassett v. Salisbury Manufacturing Company upon the question of reasonable use of percolating waters.[5]

Mr. Justice Shaw, upon the other hand, contended that as the common law is entirely unsuited to the conditions of the State of California as far as these percolating waters are concerned, that, as to those waters in question, the common law rule was entirely abrogated, and in lieu thereof the doctrine of the correlative rights of the respective land owners was adopted in its stead. All of the other justices of the court concurred in both opinions. Mr. Justice Angellotti, in a short concurring opinion, stated that he concurred in the views expressed in the opinion of Mr. Justice Temple as to the application of the doctrine of reasonable use to percolating waters. And he further stated: "I also concur generally in the views expressed by Mr. Justice Shaw in the majority opinion as to the same subject matter; but several important questions are discussed that are not necessary to a decision of this case, and as to which the opinion herein can not hereafter be considered as authority. As to such matters, I refrain from expressing any opinion." The other justices filed no separate opinions, but concurred in both opinions generally. As can be readily seen, this was a somewhat anomalous condition. And the question arose as to what was the status of the common law rule as to percolating waters which had formerly been the rule in that State. Was the common law rule entirely abrogated or was it simply modified? But whatever may have been the contentions pro and con as to the condition, as we view the matter, the question has been finally settled, in the later decisions of the same court, in favor of the abrogation of the com-

5 "But by far the most satisfactory case upon the subject is Bassett v. Salisbury Mfg. Co., 43 N. H. 569, 82 Am. Dec. 179. That was a most elaborately considered case, and this precise question is discussed with a fullness and ability which I am not so vain as to think I could improve upon. I would like to transcribe the entire argument, but, as it is accessible to the profession, I need only say that I adopt it in full. The decision was approved in Swett v. Cutts, 50 N. H. 439, 9 Am. Rep. 276." Mr. Justice Temple in Katz v. Walkinshaw, *supra*.

mon law rule. The latest exposition upon the subject is to be found in the case of Miller v. Bay Cities W. Co.,[6] in the opinion of which, after citing the Katz case, is to be found the following: "The common law rule was rejected as inapplicable to the conditions of this State, and the rule of *sic utere tuo* announced, and, applying it, it was held that the rights of the parties in the suit to take these particular waters were correlative, and that defendant could not divert them for sale elsewhere so as to prevent the plaintiff from obtaining a reasonable supply for irrigation and other ordinary uses upon the land. The doctrine thus announced in this pioneer case has been subsequently followed, so that the rule is now settled beyond further question."[7]

Therefore, under the California rule the common law of percolating waters, as to those waters in particular which are found in artesian or catchment basins, is entirely abrogated and the rule of correlative or relative rights substituted therefor. And it must necessarily follow that any excessive or wasteful use of these waters

See, also, Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148, in which, referring to the rulings of the California court, it is said: "To what extent, if at all, the common law doctrine of ownership of percolating water shall be modified, was held to depend upon the particular facts of the case; but in any controversy of this nature the general doctrine *cujus solum* might be, the Court said, qualified by the maxim, *Sic utere tuo*," etc.

by one land owner on his own land, causing material and substantial injury to the rights of the other owners, whose lands overlie the same basin, will be prevented by the courts. And as to what is an excessive or unreasonable use by one owner is held to be a question of fact, and depends on the circumstances of each particular case.[8]

§ 1201. **Percolating waters supplying surface wells.**—The water supplying surface wells comes under this class of percolating waters tributary to underground reservoirs or catchment basins. These wells must be distinguished from artesian wells treated in another chapter,[1] for the reason that they are usually more shallow and larger in circumference, and their waters lying above the impervious stratum are not under pressure, and do not rise above the point where first struck, and, therefore, have to be lifted or forced to the surface by some mechanical device.

The term "surface well," or "well," in its ordinary signification means merely a pit or hole sunk into the ground until the water is reached, together with the water in it. It is from wells of this character that the greater portion of the culinary and domestic supply all over the entire country is furnished, especially in the

[8] Anaheim Water Co. v. Fuller, 150 Cal. 327, 88 Pac. Rep. 978, 11 L. R. A., N. S., 1062, wherein it is said: "Riparian owners have correlative rights in the stream, and neither is a trespasser against the other until he diverts more than his share and injures and damages the other thereby. Here the defendants were not, with respect to the land irrigated, riparian owners, but were trespassers on plaintiffs' property rights from the beginning, and the continuance of the trespass for a sufficient time would divest the right of the plaintiffs with respect to the water diverted. The same distinction exists with respect to cases cited involving the taking of percolating water for use by one owner upon his land, to the detriment of other land over the same saturated plane. The rights in such cases are correlative, and, if an injunction can issue at all therein, it can be only when one owner takes more than his due proportion, and damage to the other ensues from such excessive taking."

smaller towns and country districts. During the later years, in the Western States, where the surface of the land overlies strata heavily charged with water, as is the case of the underground reservoirs or catchment basins, described in preceding sections,[2] much water has been and is now being drawn from the ground and used for irrigation and other beneficial and useful purposes. Pumps run by steam, gasoline, electricity, wind, and all sorts of mechanical power, and sometimes of enormous capacity, are being used, and great quantities of water are being drawn from the ground for the various uses upon the surface.[3] Many schemes have also been devised whereby great quantities of water have been withdrawn from the ground for use not upon the surface of the land from which the water was taken, but for use at some distant point. Municipal corporations have acquired small tracts of land overlying heavily saturated strata and have sunk shallow wells, installed pumps of large capacity, and have carried the water by means of pipes for the use of distant cities and towns. As has been seen in the previous sections, the withdrawing of such large quantities of water not only drew the supply from the land where the wells were situated, but also drew from the other lands overlying the same basin owned by others.[4]

**§ 1202. Percolating waters supplying surface wells—Rights thereto.**—The development and history of the laws governing the water supplied by wells is interesting. These waters are supplied by percolations from the neighboring land. The law as to these waters, as we have seen in previous sections of this work,[1] originated

1 See Secs. 1197, 1201.

in England, and the percolating waters were considered a part of the soil where they might be found, the same as the stones or earth. Therefore, the owner of the surface of the land, under the doctrine of the maxim of *cujus est solum*, etc., might withdraw as much water found on his land as he saw fit, regardless of the place where or the manner how the water was used, or he might let the water run to waste, and any injury done to the lands of the neighboring owners was regarded as *damnum absque injuria*, upon the ground that the owner of the land where the well was situated was also the owner of the water found therein, and, therefore, he could do as he pleased with what was his own.[2] This common law of England as to these waters, and as to other subjects, was adopted by the various States of the Union, and at an early day the same rules were applied as were applied to the same class of water in England. This rule continued to hold good in all of the States as long as the amount of water drawn out on the land of one person was of small quantity and used upon his land for domestic and culinary purposes by himself and his family. Under this rule a person owning a town lot could sink a well on the same and draw off the water from the same, and if this act dried up a well upon the lot of a neighbor it would be *damnum absque injuria*, for the reason that it was considered that he had the perfect right to do so.[3] But as time went on and the demand for water, or, in some cases, purer water, became greater, and it was ascertained that in certain sections of the country there were vast supplies of these percolating waters lying beneath the surface, which, owing to the invention in the meantime of mechanical devices for pumping large quantities, might be utilized for municipal, irrigation, and other purposes requiring large quantities of water. A municipal corporation or an irrigation company organized for the purpose of selling water to irrigate distant lands would therefore buy up a small tract of this heavily saturated land, sink a well, or wells, install pumps of large capacity, and thereby draw off vast quantities of water for use in distant places. This, as can be readily seen, was a great injury to the neighboring lands

[2] For the common law right to percolating waters, see Secs. 1186-1188.

[3] Greenleaf v. Francis, 18 Pick. 117; Ocean Grove etc. Assoc. v. Ashbury Park, 40 N. J. Eq. 447, 3 Atl. Rep. 168; Roath v. Driscoll, 20 Conn. 533, 52 Am. Dec. 352; New Albany etc. R. Co. v. Peterson, 14 Ind. 112, 77 Am. Dec. 60.

by draining off all the water thereunder and drying up the wells and springs thereon. As the owners of these neighboring lands have the same right to the water percolating under them as the owner of the wells in question, this was the taking of their property without due process of law against the provisions of the Constitution. This condition of affairs eventually forced a change of the rule of law governing these waters from the strict English rule to the more modern doctrine of reasonable use or correlative rights of the various land owners to these waters, to the effect that one owner has the right to the use of the water pumped from his own lands only to the extent of what is a reasonable use on his own lands, having due regard to the rights of the owners of neighboring lands to a similar use. Under this rule one land owner can not sell the water pumped from wells on his own land for use by a distant municipal corporation or for the purpose of irrigating distant lands. Neither can a corporation, municipal or otherwise, purchase a small tract of land, sink a well thereon, and pump the water underlying all of the lands in that neighborhood for use by the distant city or for the irrigation of distant tracts without first acquiring the right from the other land owners in some lawful manner.[4] However, some of the authorities, while holding that the water can not be sold

[4] The draining of land of a private proprietor by city pumping works which exhausts from all the region thereabout the natural supply of underground or subsurface water and thus prevents the raising of crops to which the land was and is peculiarly adapted, renders the city liable to him for damages which he sustains, and entitles him to an injunction against a continuance of the wrongs. Forbell v. New York, 164 N. Y. 522, 58 N. E. Rep. 644, 51 L. R. A. 695, 79 Am. St. Rep. 666; aff'g *Id.*, 47 App. Div. 371, 61 N. Y. Supp. 1005.

The owner of a portion of a tract of land which is saturated below the surface can not remove water from wells thereon for sale, if the remainder of the tract is thereby deprived of water necessary for its profitable enjoyment. Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

or used at a distant point from the lands where it is extracted, do not go to the extent of the rule of correlative or coequal rights between the respective land owners. This line of authorities hold to the effect that a land owner has the right to make such a beneficial use of the water percolating under his land from the lands of others as he may see fit in the improvement of his estate and where the water is used thereon and not wasted.[5] And, again, a very few of the States adhere to the old English rule, to the effect that even with a malicious intent one land owner may draw water from his land and use the water therefrom as he chooses, or allow it to flow away to waste, regardless of the effect of such a use upon his neighbors' wells.[6] Fortunately, this inequitable and unjust rule does not govern in many States.[7]

**§ 1203. Waters tributary to underground reservoirs or catchment basins—Nature of ownership in such waters.**—Under the new doctrine of correlative rights, discussed in previous sections of this chapter,[1] in and to the percolating waters of underground reservoirs or catchment or artesian basins,[2] the nature of the ownership in such waters has been completely changed, and instead of belonging to the owner of the soil where found, as held under the common law rule, like the rock or stones therein,[3] it is held that the right of

1 See Secs. 1197-1200.

2 For artesian basins, see Secs. 1166-1184.

3 See Secs. 1186-1188.

In general it may be said that the rule of ownership of artesian basins and of catchment basins is practically the same.

the owner of the land over such waters is merely usufructuary,[4] or, as expressed by the California Court in a late case, each land owner has "a common and correlative right to the use of these waters upon his land."[5] It must therefore follow that if each owner has a common or correlative right to the use of the water underlying the common lands of all, no one owner can have the title to such waters which may be found in his individual lands. Therefore, as far as the title to these waters is concerned, while they are percolating through the soil, under this theory of the proposition it has the same status as the water flowing in surface streams, that is to say, it belongs to no one in particular, but its use only belongs to those who may legally avail themselves thereof.[6]

4 "Such rights are usufructuary only." Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

5 Hudson v. Dailey, *supra;* Burr v. Maclay Rancho Co., *supra.*

See, also, Katz v. Walkinshaw, *supra;* McClintock v. Hudson, 141 Cal. 275, 74 Pac. Rep. 849; Cohen v. La Canada etc. Co., 142 Cal. 437, 76 Pac. Rep. 47; *Id.*, 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935; Barton v. Riverside Water Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331.

6 See *Ex parte* Elam, 6 Cal. App. 233, 91 Pac. Rep. 811, in which case, after citing the case of Ohio Oil Co. v. Indiana, 177 U. S. 190, 44 L. Ed. 729, 20 Sup. Ct. Rep. 576, 30 Morr. Min. Rep. 466, 150 Ind. 698, 50 N. E. Rep. 1125, the Court said: "By that case it is established that water, oil, gas, and all fugitive substances held in their natural subterranean reservoirs are exceptions to the general rule establishing absolute ownership in the proprietor of the surface of all that lies underneath; that these minerals, being migratory in their nature, having no fixed *situs*, are a part of the soil only so long as they are on or in it, but after they escape and go to other lands the title of the former owner is gone; that it follows, therefore, that no one owner of the surface of the earth within the area beneath which these minerals move can exercise his right to extract from the common reservoir in which the supply is held without diminishing the source of supply as to which all other owners of the surface must exercise their rights; that, in consequence of the nature of the deposits, of their transmissibility, of their interdependence, of the rights of all, and of the public at large, the State could lawfully exercise the power to regulate the rights of the surface owners among themselves to seek to obtain possession, and to prevent the waste of the products in which all the surface owners within the area wherein

But, as stated in the case cited in our note:[7] "This water, the ownership of which until actual possession is acquired being in the public, or at least that portion of the public who may own the surface of the soil within the artesian belt, is subject to a reasonable use only by those interested therein."[8]

§ 1204. **Waters tributary to underground reservoirs or catchment basins—Extent of ownership in such waters.**—The extent of the right of each land owner whose land overlies a catchment or an artesian basin, under the theory of correlative rights, is well stated by the California Court as follows:[1] "The general rule, as now established by the decisions of this Court, undoubtedly is that where two or more persons own different tracts of land, underlaid by porous material extending to and communicating with them all, which is saturated with water moving with more or less freedom therein, each has a common and correlative right to the use of this water upon his land to the full extent of his needs, if the common supply is sufficient, and to the extent of a reasonable share thereof if the supply is so scant that the use by one will affect the supply of the others."[2]

The limitations prescribed by the above rule for the use of such waters by the land owners overlying the same are as follows: First, there must be an ownership of the land "underlaid by porous material extending to and communicating with them all." In other words, there must be lawful access to such waters by the ownership of the land overlying the same. As was said in the same case, from

they were deposited, as well as the public, had an interest."

For title to running water, see Secs. 455, 772.

8 See, also, Katz v. Walkinshaw, *supra;* Burr v. Maclay, *supra;* Hudson v. Dailey, *supra;* Barclay v. Abraham, 121 Iowa 619, 96 N. E. Rep. 1080, 64 L. R. A. 255, 100 Am. St. Rep. 365; Miller v. Bay Cities Water Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

1 Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

2 Citing Katz v. Walkinshaw, 141 Cal. 134, 144, 150, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35; McClintock v. Hudson, 141 Cal. 275, 74 Pac. Rep. 849; Cohen v. La Canada etc. Co., 142 Cal. 437, 76 Pac. Rep. 47; *Id.*, 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; Burr v. Maclay R. Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 715; Barton v. Riverside Water Co., 155 Cal. 509, 101 Pac. Rep. 790, 23 L. R. A., N. S., 331.

which the above rule was quoted: "All the parties having access to it would have the right to share reasonably in its use. . . . The owner of land has a natural right to the reasonable use of the waters percolating therein, although it may be moving through his land into the land of his neighbor, and although his use may prevent it from entering his neighbor's land or draw it therefrom. This right arises from the fact that the water is then in his land, so that he may take it without trespassing upon his neighbor. His ownership of the land carries with it all the natural advantages of its situation, and the right to a reasonable use of the land and everything it contains, limited only by the operation of the maxim, '*Sic utere tuo, ut alienum non laedas.*'"[3]

The second limitation is that in case of an insufficient quantity of water to supply all the wants of the land owners whose lands overlie such basins, each land owner is limited to a reasonable or correlative share thereof, as against the rights of other land owners. In case, however, of an ample supply, each land owner "has a common and correlative right to the use of this water upon his land to the full extent of his needs."[4]

The third limitation set forth in the above rule is that each land owner has the right to such use of the water "upon his land" as his needs or the conditions of the water supply may require or allow. In other words, not only must the land owner use the water upon his own land, but by the analogy to the common law of riparian rights in surface streams he must use the water upon the land which directly overlies such basin. As was said in a recent California case:[5] "The reasonable rule here would be to hold that the defendant's appropriation for distant lands is subject to the reasonable use

[3] See, also, cases cited, *supra;* Cohen v. La Canada etc. Co., 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752; *Id.*, 142 Cal. 437, 76 Pac. Rep. 47; Erickson v. Crookston etc. Co., 105 Minn. 182, 117 N. W. Rep. 435, 17 L. R. A., N. S., 650; Miller v. Bay Cities Water Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

[4] Hudson v. Dailey, *supra.*

[5] Burr v. Maclay Rancho Co., 154 Cal. 428, 98 Pac. Rep. 260; *Id.*, 160 Cal. 268, 116 Pac. Rep. 715. In the second appeal it was said: "The existence of a common supply of water in a state of percolation of such a character that the taking from one overlying tract will subsequently diminish the quantity available in another overlying tract gives correlative rights in the common supply and creates a right in one such land owner to prevent another from taking the water to distant lands not overlying the common supply, if such taking is injurious to him."

of the water on lands overlying the supply, particularly in the hands of persons who have acquired it because of these natural advantages, and we therefore hold this to be the law of the case with respect to the lands upon which no water has been used by the plaintiff."[6] Neither has such a land owner the right to sell the water discovered in his own land as against the rights of the other land owners whose lands overlie the same basin either to water distant lands or to cities and towns for their use and for the use of their inhabitants. As was held in a late California case,[7] the rights of owners of land overlying a water-bearing subterranean basin to withdraw and use the waters are correlative, so that one land owner is not permitted to divert such waters for sale elsewhere, to the injury of the other land owners, and that one owner of land overlying such a basin is entitled to enjoin the diversion of the waters for use elsewhere than on the lands under which they lie.[8]

Furthermore, it is held that the rights acquired by land owners to lands overlying underground reservoirs or catchment basins are based more nearly upon the rule of the common law of riparian rights in surface streams,[9] and that the doctrine of prior appropriation does not apply to these waters. In other words, the rights of the land owners are correlative or equal, and priority does not apply, even as against the rights of a land owner who does not exercise the same in the use of the water.[10]

**§ 1205. "Developed" or "artificial" water—Definition and description.**—Owing to the great scarcity of water in certain sections throughout the arid West, great efforts have been made during the recent years to find new sources of supply of subterranean or underground waters from which water might be drawn for irrigation and other useful purposes. Therefore, the question of "developed," or, as it is sometimes called, "artificial" water [1] has called forth considerable discussion and a number of decisions by the courts.

"Developed" water may be defined as such subterranean or underground water as is discovered and brought to the surface by the exploitation of man, and which otherwise would run to waste. The last clause of this definition is important, for the reason that by the recent scientific investigations as to the movements of subterranean waters through the ground it has been ascertained that a great portion of these waters are tributary to either surface streams or other bodies of surface water,[2] or to artesian, underground reservoirs, or catchment basins.[3] Therefore, whenever any of the underground waters which are tributary or feed these other bodies, the rights to the waters of which have already been acquired, are exploited and drawn off before they reach the other bodies of water, they can not, under the definition, belong to the class of developed waters; but they belong to the waters to which they are tributary and their use to the owners thereof according to their respective rights.[4] But developed waters, strictly speaking, must be those waters which would run to waste except for their discovery and development.

The means of their development is immaterial, as far as their status as "developed" water is concerned. It may be by means of tunnels run into the mountain sides, or it may be by wells or shafts sunk vertically into the ground; or, again, it may be by a combination of both methods, as is the case of a winze sunk vertically from tunnels.[5] Regardless of the means, water which would otherwise

1 Vernon Irr. Co. v. Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762.

2 For percolating waters tributary to surface streams, see Secs. 1193-1196.

3 See Secs. 1168, 1197.

4 For the rights to tributaries, see Sec. 649.

5 "Tunnels" are practically horizontal wells, differing from ordinary "wells" only in that the water from the former finds its way to the surface by gravity, while in the latter pumping must be resorted to to bring the water to the surface; both disturbing the natural flow of the subterranean waters, and both being artificial means of reaching and controlling the natural subterranean flow. Garvey v.

run to waste or remain stationary, concealed beneath the surface of the ground, which is brought to the surface and thereby made available for use, may be called "developed" water.

Although some of these developed waters, when fully exploited, may be found to belong to underground water courses,[6] a subject which we have heretofore discussed, until their courses become defined and known they belong to percolating waters. Therefore we will treat the rights which may be acquired to developed waters in the present chapter on percolating waters.

**§ 1206. Rights to developed waters.**—Whenever subterranean water discovered and brought to the surface by exploitation is strictly developed water, as the same is defined in the preceding section,[1] the use thereof belongs to those persons who, by their own exertions, discovered and developed the water as far as their needs and necessities require.[2] The water thus developed may be turned

Huntington etc. Co., 154 Cal. 232, 97 Pac. Rep. 428.

6 For underground water courses, see Chap. 60, Secs. 1153-1165.

1 See Sec. 1205.

2 Where persons have by their own exertions developed a supply of water theretofore not a part of the waters of a creek and not before available to the users of the stream, they have the first right to take and use such increase. Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

Burnett v. Whitesides, 15 Cal. 35; Platte Valley Irr. Co. v. Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334; Pomona etc. Co. v. San Antonio W. Co., 152 Cal. 618, 93 Pac. Rep. 881; Herriman Irr. Co. v. Butterfield M. Co., 19 Utah 453, 57 Pac. Rep. 537, 51 L. R. A. 930; Hanson v. McCue, 42 Cal. 306, 10 Am. Rep. 299; Gould v. Eaton, 111 Cal. 639, 44 Pac. Rep. 319, 52 Am. St. Rep. 201; *Id.*, 117 Cal. 539, 49 Pac. Rep. 577, 38 L. R. A. 181; Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; *Id.*, 151 Cal. 377, 90 Pac. Rep. 935; Roberts v. Crafts, 141 Cal. 20, 74 Pac. Rep. 281; Vineland Irr. Dist. v. Azusa Irr. Co., 126 Cal. 486, 58 Pac. Rep. 1057, 46 L. R. A. 820; Beck v. Pasadena W. Co., 130 Cal. 50, 62 Pac. Rep. 219; rev'g 59 Pac. Rep. 387.

Percolating waters may be developed by a tunnel and conducted away from land, as against owners of adjoining lands, where the waters would otherwise in their natural flow sink into the ground and be lost. Cohen v. La Canada etc. Co., 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752; *Id.*, 142 Cal. 437, 76 Pac. Rep. 47.

See, also, Yarwood v. West Los Angeles W. Co., 132 Cal. 204, 64 Pac. Rep. 275; Churchill v. Rose, 136 Cal. 576, 69 Pac. Rep. 416; Paige v. Rocky Ford etc. Co., 83 Cal. 84, 21 Pac. Rep. 1102, 23 Pac. Rep. 875; Cardeli v. Comstock Tun. Co., 26 Nev. 284, 66 Pac. Rep. 950, holding that rights to water developed by the drainage of a mine could not be acquired by an ap-

into a natural stream and conducted therein to the place of use and there be recaptured by the parties developing the same.[3] In doing so, however, the rights of the prior claimants to the waters of the stream must not be injured or impaired.[4] But under the claim that water has been developed by him, one can not intercept waters which find their way through the ground and are tributary to either surface or subterranean streams, or other bodies of water, the rights to the waters of which have been previously acquired, upon the principle that the right to the use of the waters of a certain stream gives the right to the waters of the tributaries.[5] Neither can water be claimed as developed water where a portion of the natural flow of the stream was saved by the reconstruction of its original dam and is in no sense salvage waters. As was said in a recent Washington case:[6] "If the appellant had, by turning additional streams into the river, or by some form of works prevented loss by seepage, evaporation, or the like, and thereby increased its natural flow, it might with some reason claim the additional waters as salvage waters and appropriate them to an independent use. But the natural flow of waters saved by the reconstruction of its own dams are in no sense such salvage waters."[7]

propriation by others; Deadwood Cent. R. Co. v. Barber, 14 S. D. 558, 86 N. W. Rep. 619; Jordan v. Lang, 22 S. C. 159; Ripley v. Park Center etc. Co., 40 Colo. 129, 90 Pac. Rep. 75; Garvey W. Co. v. Huntington etc. Co., 154 Cal. 232, 97 Pac. Rep. 428; Mayberry v. Alhambra Add. W. Co., 125 Cal. 444, 54 Pac. Rep. 530, 58 Pac. Rep. 68.

[3] For right of recapture, see Secs. 798-800.

For right to use stream as a part of ditch system, see Sec. 832.

Alhambra etc. Co., 125 Cal. 444, 54 Pac. Rep. 530, 58 Pac. Rep. 68; Platte Valley Irr. Co. v. Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334; Farmers' Union D. Co. v. Rio Grande C. Co., 37 Colo. 512, 86 Pac. Rep. 1042.

Where it is a question of simply saving water and not developing it, no right can be allowed. Vernon Irr. Co. v. Los Angeles, 106 Cal. 237, 39 Pac. Rep. 762.

[5] For right to tributaries, see Sec. 649.

[6] Evans v. Prosser Falls etc. Co., 62 Wash. 178, 113 Pac. Rep. 271.

[7] The rule as to development of water does not apply to the mere removal of obstructions or the hastening of the flow, so that the actual amount of the water is not increased, but only in cases in which a supply of water is added to the stream which would not otherwise have flowed there. Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587.

Where a surface stream under nor-

The burden of proof is upon the one who has discovered certain subterranean water and claiming the same to show that such water is, in fact, "developed water."[8] Therefore, whoever asserts that he is entitled to the exclusive use of water by reason of his having discovered and "developed" the same, must assure the Court by a preponderance of the evidence that he is not intercepting the tributaries of the main stream or other body to the waters of which others are entitled.[9]

**§ 1207. Seepage waters — Definition and description.** — The fourth and last class of percolating waters, under our classification,[1] is that of seepage waters. Although the terms "seepage waters" and "percolating waters" are frequently used interchangeably, the former are but a subdivision of percolating waters. As understood by Western irrigators, "seepage" waters have a more restricted meaning than the ordinary percolating waters, which we have discussed in the preceding sections of this chapter.[2] The term "seepage water" is applied particularly to the water which begins to appear in spots below irrigation canals and fields cultivated by irrigation, usually some months, or even years, after irrigation has been introduced, and which tends to convert the lowlands into marshes and gives rise to springs, and which, in turn, may be employed in watering other fields.[3] In other words, under this definition the

mal conditions was proportionate to the contributions of water from rainfall and underground storage, and the defendant's artesian wells drew from the underground supply, with the effect of appreciably diminishing the surface flow, the Court properly found that the waters developed in the wells were a part of the subterranean flow of the water. City of Los Angeles v. Hunter, 156 Cal. 603, 105 Pac. Rep. 755.

See, also, Hudson v. Dailey, 156 Cal. 317, 105 Pac. Rep. 748; Los Angeles v. Pomeroy, 124 Cal. 597, 57 Pac. Rep. 585.

8 For the definition of developed water, see Sec. 1205.

Rep. 644; Smith v. Duff, 39 Mont. 382, 102 Pac. Rep. 984, 133 Am. St. Rep. 587; Beaverhead C. Co. v. Dillon etc. Co., 34 Mont. 135, 85 Pac. Rep. 880; Wilcox v. Hausch, 64 Cal. 461, 3 Pac. Rep. 108; Paige v. Rocky Ford etc. Co., 83 Cal. 84, 21 Pac. Rep. 1102, 23 Pac. 875; Herriman Irr. Co. v. Butterfield etc. Co., 19 Utah 453, 57 Pac. Rep. 573, 51 L. R. A. 930.

1 For classification of percolating waters, see Secs. 1152, 1187.

2 See Secs. 1186-1204.

3 Fortier, Water-Supply and Irr. Paper No. 7, p. 11, U. S. Geol. Survey.

source of seepage water is usually an artificial one, such as that water which percolates through the soil from canals, reservoirs, or from the irrigation of lands.

§ 1208. **Seepage waters—Rights to.**—As a general rule seepage water finding its way underground from the works or irrigated fields of one person to those of another is treated as waste or escaped water, and therefore while one may use the water temporarily, no permanent right can be acquired by the user to have the seepage water kept up.[1] The prior appropriator and original user of the water may at any time change his place and manner of the use of the water and thereby cut off the seepage. Or he may reconstruct his ditch or canal from the open earth ditch to a cement conduit or pipe line, and thereby also cut off all seepage. In either case the one who had temporarily used the water by collecting the seepage has no recourse against the owner of the water right. In going to the expense to use such water he simply takes his chances that the supply will be kept up.[2] To hold otherwise would be to hold that the prior appropriator could not change the manner of the use of the water[3] or the place where the water was originally used;[4] but that he must continue to use the water in the original wasteful method and in the same place in order that the supply of seepage water be kept up. In 1889 the Colorado legislature passed an Act which provided that ditches for utilizing seepage or spring waters

1 For the rights of waste water, see Secs. 661, 1115.

2 Burkart v. Meiburg, 37 Colo. 187, 86 Pac. Rep. 98, 6 L. R. A., N. S., 1104, 19 Am. St. Rep. 279; La Jara etc. Co. v. Hansen, 35 Colo. 105, 83 Pac. Rep. 644; Vanderwork v. Hewes, 15 N. M. 439, 110 Pac. Rep. 567.

Where a creek from which waters were taken for irrigation purposes had its source in certain springs, the fact that the volume of the water in the creek was increased by seepage from irrigated lands above them did not entitle defendants to divert the spring water, as against prior appropriators. Clark v. Ashley, 34 Colo. 285, 82 Pac. Rep. 588.

3 For change of manner of use, see Secs. 869-872.

4 For change of place of use, see Secs. 867-871.

As was well said in a recent Utah case (Garns v. Rollins, decided by the Utah Supreme Court, June 20, 1912): "The law is well settled; in fact the authorities all agree that one land owner receiving waste water which flows, seeps, or percolates from land of another, can not acquire prescriptive right to such water, nor any right (except by grant) to have the owner of the land from which he obtains the water continue the flow."

shall be governed by the same laws relating to priority of right as those ditches constructed for the purpose of utilizing the water of running streams.[5] If it is meant by this that priority should govern as between such ditches only, the law is all right; but if the Act means that one who has acquired a right under it can compel the original owner of the right to continue to use the water in the same manner and in the same place so that the seepage may be kept up, upon the same principle that the user of the seepage was a subsequent appropriator of the waters of a surface stream, the law is clearly unconstitutional.[6] However, it was held in a California case,[7] that where one was entitled to the right of all the surface water of a stream for irrigation and domestic purposes, attempts to sell the right to the city for its use, necessitating the piping of the water beyond the watershed, the owner of a riparian right in the stream was entitled to enjoin such use without proof of damages, it appearing that by permitting the water to flow in the usual way and by using it for the irrigation of the land, some of it would seep into and percolate through the soil, and again reach the stream, to the benefit of such riparian proprietor, and that the right to make such a radical change was subordinate to the right of the riparian proprietor.

Upon the other side of the question the Utah Court held that one could not acquire a prescriptive right to permit seepage from his irrigation ditch to escape and injure the lands of others, upon the ground that it would in effect give a prescriptive right to be negligent.[8]

**§ 1209. Rights acquired to percolating waters by prescription.**—Under the old rule all percolating waters were treated as a part of the soil where found.[1] No right to their use could be acquired by prescription without also acquiring the right to the land itself.[2]

5 Colo. Laws, 1889, p. 215.

6 In the case of La Jara etc. Co. v. Hansen, 35 Colo. 105, 83 Pac. Rep. 644, the Court seems to express some doubt as to the constitutionality of the Act, but held that the case did not come within its provisions.

7 Southern California Inv. Co. v. Wilshire, 144 Cal. 68, 77 Pac. Rep. 767.

8 Jenkins v. Hooper etc. Co., 13 Utah 100, 44 Pac. Rep. 829.

1 For the common law rule, see Secs. 1186-1189.

2 Hanson v. McCue, 42 Cal. 303, 10 Am. Rep. 299; Crescent etc. Co. v. Silver King etc. Co., 17 Utah 444, 54 Pac. Rep. 244, 70 Am. St. Rep. 810; *Id.*, 14 Utah 57, 45 Pac. Rep. 1093.

However, it is held that the right to take water from a well may be acquired by prescription.[3] But under the new rule of correlative rights,[4] where the right to the use of certain classes of percolating waters is distinctly recognized, the rule is different, and rights to these waters may be acquired by prescription. As is the case with the waters of artesian basins, discussed in a previous section,[5] the right to the use of waters of a subterranean reservoir or catchment basin may be acquired by prescription by one land owner whose land overlies the common basin, and from which the water is extracted, and upon which it has been used, as against the rights of all the other land owners whose lands overlie the same basin.[6] It is also held that the lower use in a valley is not adverse to the right of a land owner in the upper part of the valley, the rule in this respect not being different from the rule of the common law of riparian rights in surface streams.[7]

**§ 1210. Rights acquired to percolating waters by eminent domain.**—Under the new rule as to the correlative rights of waters supplying subterranean reservoirs or catchment basins, there is no reason in principle why the rights to the use of these waters can not be acquired by eminent domain upon the institution of condemnation proceedings. This may be done either by a condemnation of the lands containing these waters or it may be done by the condemnation of the waters themselves, provided, of course, all of the parties interested in the common basin or the common supply are served with notice and given an opportunity to be heard before the proper tribunal. In either case the acquisition of the use of the waters being the gist of the action, the taking of those waters should be an element of damages. The water itself is property, and the land

For rights to the use of water rights by prescription, see Secs. 1033-1058.

3 Hoag v. Pierce, 65 Hun, 424, 20 N. Y. Supp. 224.

4 See Secs. 1173-1178.

5 See Sec. 1182.

6 Montecito etc. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; Hudson v. Dailey, 156 Cal. 617, 105 Pac. Rep. 748.

The owner of land overlying common water-bearing strata, upon which he has never used the water, "may invoke the aid of a court of equity to protect him in his right to thereafter use such water on his land, and thus prevent the appropriator from defeating such landowner's right, or acquiring a paramount right, by adverse use, or by lapse of time." Burr v. Maclay etc. Co., 154 Cal. 428, 98 Pac. Rep. 260.

7 See Secs. 1039-1041.

may be practically valueless without it. With the water, which can be used at no other place by the owner than upon the land itself, the land may be of great value. In a California case, decided before the adoption in that State of the rule of correlative rights to these waters,[1] it was held that a certain tract of land which contained from one-fifth to one-third water, and was therefore a natural underground reservoir, might be acquired by eminent domain by a city for the sole purpose of acquiring the underlying water, but that the percolating water was not an element of damage that could be considered in estimating the value of the property so taken. This ruling was probably correct under the old rule that the percolating water was a part of the soil itself, but under the later rulings of that Court as to the rule of correlative rights to the use of these waters it would be erroneous. It would be equivalent to the taking of land and a surface water right therefor and for the purpose of securing the water right, and only estimating as the damages the value of the land without considering the value of the water right.

In the second hearing of the case of Burr v. Maclay Rancho W. Co.[2] it was held that water pumped from wells on land overlying percolating waters extending under adjacent land to fulfill private contractual obligations to deliver water to land sold with a water right is not a taking for public use, but is strictly a private one. And upon this subject the Court said: "The water taken by the defendants to supply the needs of the interveners is not taken for public use. It is not offered to the public generally, or to all who may want it within a certain territory. It is taken solely to fulfill the private contractual obligations of the defendants to deliver water to certain lots which it has sold with a water right. This is a private use."[3]

**§ 1211. Rights acquired or lost to percolating waters by estoppel.**—Under the doctrine of equitable estoppel, discussed in previous sections of this work,[1] it is held relative to the waters of artesian or catchment basins that the right to an injunction by cer-

1 See Secs. 1125-1128.

tain land owners against another land owner for an excessive use of which exceeds the latter's strict correlative rights in and to the water, may be lost and each land owner injured by such use relegated to an action for such damages as he may prove. As was said by the leading case upon the subject:[2] "Where the complainant has stood by while the development was made for public use, and has suffered it to proceed at large expense to successful operation, having reasonable cause to believe it would affect his own water supply, the injunction should be refused and the party left to his action for such damages as he can prove."[3] Again, in a still later California case,[4] it was said: "This rule, briefly stated, is that where one whose property is taken for a public use has stood by without objection, knowing that it was so taken and applied, and has allowed the public use to be instituted and carried on at great expense, and has permitted the people benefited thereby to adapt themselves to the new conditions and avail themselves of the conveniences and advantages thereby afforded, he can not thereafter maintain an action to enjoin the continuance of such public use, or to recover possession of the property so taken, but will be relegated to an action for damages."

It was said in a late California decision:[5] "The rule concerning the establishment of public service with property of another taken without previous compensation has for its basis chiefly the inconvenience to the public if the service is interrupted by the issuance of an injunction to restrain the use. It does not apply to the taking of property for private use. With respect to private uses, the general law of estoppel controls."

# CONDENSED TABLE OF CONTENTS

## OF THE FOUR VOLUMES.

**Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.**

---

## VOLUME ONE.

### PART I.

**ECONOMIC QUESTIONS RELATING TO IRRIGATION AND WATERS.**

SECTIONS

Chapter 1. ECONOMIC QUESTIONS AND METHODS..... 1-39
Chapter 2. FORESTS AND THEIR RELATION TO STREAM FLOW ..... 40-62

### PART II.

**ANCIENT AND MODERN IRRIGATION.**

Chapter 3. THE HISTORY OF IRRIGATION..... 63- 87
Chapter 4. MODERN IRRIGATION IN EGYPT ..... 88-102
Chapter 5. MODERN IRRIGATION IN INDIA ..... 103-118
Chapter 6. MODERN IRRIGATION IN AUSTRALIA ..... 119-130
Chapter 7. MODERN IRRIGATION IN SOUTH AFRICA..... 131-143
Chapter 8. MODERN IRRIGATION IN ITALY ..... 144-159
Chapter 9. IRRIGATION IN VARIOUS COUNTRIES..... 160-176
Chapter 10. MODERN IRRIGATION IN CANADA ..... 177-237
Chapter 11. MODERN IRRIGATION IN THE UNITED STATES 238-270
Chapter 12. IRRIGATION ON INDIAN RESERVATIONS..... 271-285

### PART III.

**CLASSIFICATION, DEFINITIONS, AND THE NATURE OF WATERS.**

Chapter 13. CLASSIFICATION AND NATURE OF RUNNING WATERS ..... 286-291
Chapter 14. DEFINITIONS AND DESCRIPTIONS OF WATERS.. 292-323

271539

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART IV.

### RIGHTS OF THE PUBLIC IN WATERS AND WATER COURSES.

SECTIONS

Chapter 15. MISCELLANEOUS PUBLIC RIGHTS..... 324-340
Chapter 16. THE RIGHT OF NAVIGATION..... 341-357
Chapter 17. RIGHT OF FISHING AND HUNTING..... 358-371
Chapter 18. DEDICATION BY A STATE OF ITS WATERS..... 372-389

## PART V.

### ACQUISITION AND DISPOSAL OF LANDS AND WATERS BY THE UNITED STATES.

Chapter 19. ACQUISITION OF LANDS AND WATERS BY THE UNITED STATES..... 390-407
Chapter 20. DISPOSAL OF LANDS AND WATERS BY THE UNITED STATES..... 408-449

## PART VI.

### THE COMMON LAW GOVERNING WATERS.

Chapter 21. THE NATURE OF RIPARIAN RIGHTS..... 450-456
Chapter 22. UPON WHAT LANDS RIPARIAN RIGHTS ATTACH 457-466
Chapter 23. TO WHAT WATERS RIPARIAN RIGHTS ATTACH 467-475
Chapter 24. WHO ARE RIPARIAN PROPRIETORS..... 476-482
Chapter 25. RIGHT TO THE USE OF WATERS..... 483-497
Chapter 26. IRRIGATION AS A RIPARIAN RIGHT..... 498-525
Chapter 27. GRANTS AND CONTRACTS OF RIPARIAN RIGHTS 526-535
Chapter 28. VARIOUS RIPARIAN RIGHTS..... 536-551

## PART VII.

### THE CIVIL LAW GOVERNING WATERS.

Chapter 29. THE ROMAN CIVIL LAW..... 552-569
Chapter 30. THE CIVIL LAW IN THE UNITED STATES..... 570-584

## PART VIII.

### THE APPROPRIATION OF WATER FOR BENEFICIAL USES.

Chapter 31. ARID REGION DOCTRINE OF APPROPRIATION.. 585-594
Chapter 32. HISTORY OF DOCTRINE OF APPROPRIATION.... 595-626

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## VOLUME TWO.

SECTIONS

Chapter 33. TWO THEORIES AS TO LEGAL RIGHT..... 627-640
Chapter 34. WHAT WATERS MAY BE APPROPRIATED..... 641-669
Chapter 35. ON WHAT LANDS DIVERSION MAY BE MADE.. 670-677
Chapter 36. WHO MAY APPROPRIATE WATER..... 678-689
Chapter 37. THE PURPOSE OF THE APPROPRIATION..... 690-705
Chapter 38. METHODS OF APPROPRIATION WITHOUT CODE 706-732
Chapter 39. REASONABLE DILIGENCE..... 733-741
Chapter 40. THE DOCTRINE OF RELATION..... 742-756

## PART IX.

### THE NATURE, EXTENT, AND CHARACTER OF RIGHTS ACQUIRED TO WATER BY APPROPRIATION, RIGHTS OF WAY, AND THE POLLUTION OF WATERS.

Chapter 41. THE NATURE AND CHARACTER OF A WATER RIGHT ..... 757- 774
Chapter 42. RIGHTS TO WATER AS BETWEEN APPROPRIATORS ..... 775- 803
Chapter 43. APPROPRIATION AS AGAINST CONGRESSIONAL GRANTS ..... 804- 809
Chapter 44. APPROPRIATION AS AGAINST RIPARIAN RIGHTS ..... 810- 823
Chapter 45. MEANS OF THE USE AND CHARACTER OF THE WORKS ..... 824- 836
Chapter 46. RESERVOIR AND STORAGE RIGHTS..... 837- 846
Chapter 47. MILL AND POWER RIGHTS..... 847- 855
Chapter 48. CHANGES WHICH MAY BE MADE..... 856- 873
Chapter 49. ECONOMICAL USE AND THE SUPPRESSION OF WASTE ..... 874- 916
Chapter 50. CONTRACTS RELATING TO WATER RIGHTS.... 917- 926
Chapter 51. RIGHTS OF WAY OVER PUBLIC DOMAIN..... 927- 971
Chapter 52. RIGHTS OF WAY OVER PRIVATE LANDS..... 972- 993
Chapter 53. SALE AND ALIENATION OF WATER RIGHTS AND RIGHTS OF WAY..... 994-1032
Chapter 54. RIGHTS ACQUIRED BY PRESCRIPTION..... 1033-1058
Chapter 55. RIGHTS ACQUIRED BY EMINENT DOMAIN.... 1059-1098
Chapter 56. ABANDONMENT AND FORFEITURE..... 1099-1120
Chapter 57. THE DOCTRINE OF ESTOPPEL..... 1121-1128
Chapter 58. THE POLLUTION OF WATERS..... 1129-1147

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART X.

### SUBTERRANEAN WATERS AND RIGHTS ACQUIRED THERETO.

SECTIONS

Chapter 59. SUBTERRANEAN WATERS IN GENERAL—CLASSIFICATION ..... 1148-1152
Chapter 60. SUBTERRANEAN WATER COURSES..... 1153-1165
Chapter 61. ARTESIAN WATERS..... 1166-1184
Chapter 62. PERCOLATING WATERS..... 1185-1211

---

# VOLUME THREE.

## PART XI.

### INTERNATIONAL, INTERSTATE, FEDERAL, STATE, DISTRICT, AND MUNICIPAL CONTROL.

Chapter 63. INTERNATIONAL CONTROL..... 1212-1220
Chapter 64. INTERSTATE CONTROL..... 1221-1234
Chapter 65. THE NATIONAL RECLAMATION ACT..... 1235-1286
Chapter 66. THE DESERT LAND ACTS..... 1287-1311
Chapter 67. THE CAREY LAW..... 1312-1336
Chapter 68. THE LAWS OF STATE CONTROL..... 1337-1367
Chapter 69. STATE CONTROL OF WATER RATES..... 1368-1385
Chapter 70. STATE IRRIGATION DISTRICT LAWS..... 1386-1432
Chapter 71. CONTROL BY MUNICIPAL CORPORATIONS..... 1433-1448

## PART XII.

### CONTROL BY PRIVATE WATER COMPANIES.

Chapter 72. SUBJECT IN GENERAL AND CLASSIFICATION OF PRIVATE WATER COMPANIES..... 1449-1452
Chapter 73. UNINCORPORATED COMPANIES..... 1453-1463
Chapter 74. ORGANIZATION AND POWERS OF CORPORATIONS ..... 1464-1478
Chapter 75. MUTUAL WATER CORPORATIONS..... 1479-1489
Chapter 76. CORPORATION FOR PROFIT..... 1490-1508
Chapter 77. CONTRACTS WITH COMPANIES..... 1509-1529

**Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.**

## PART XIII.

### ADJUDICATION AND PROTECTION OF RIGHTS—INJURIES TO RIGHTS AND REMEDIES THEREFOR.

SECTIONS

Chapter 78. THE ADJUDICATION OF WATER RIGHTS IN EQUITY ..... 1530-1566
Chapter 79. STATUTORY ADJUDICATION OF WATER RIGHTS 1567-1584
Chapter 80. DETERMINATION OF WATER RIGHTS BY BOARDS ..... 1585-1595
Chapter 81. PROTECTION OF RIGHTS BY INJUNCTION..... 1596-1647
Chapter 82. PROTECTION BY MISCELLANEOUS ACTIONS.. 1648-1659
Chapter 83. ACTIONS FOR DAMAGES..... 1660-1704

---

# VOLUME FOUR.

## PART XIV.

### SPECIAL FEATURES AND STATUTORY LAWS OF THE ARID AND SEMI-ARID STATES.

Chapter 84. ALASKA ..... 1705-1710
Chapter 85. ARIZONA ..... 1711-1723
Chapter 86. CALIFORNIA ..... 1724-1768
Chapter 87. COLORADO ..... 1769-1804
Chapter 88. HAWAII ..... 1805-1816
Chapter 89. IDAHO ..... 1817-1843
Chapter 90. KANSAS ..... 1844-1861
Chapter 91. MONTANA ..... 1862-1880
Chapter 92. NEBRASKA ..... 1881-1899
Chapter 93. NEVADA ..... 1900-1923
Chapter 94. NEW MEXICO..... 1924-1941
Chapter 95. NORTH DAKOTA..... 1942-1957
Chapter 96. OKLAHOMA ..... 1958-1972
Chapter 97. OREGON ..... 1973-1997
Chapter 98. PHILIPPINE ISLANDS..... 1998-2009
Chapter 99. PORTO RICO..... 2010-2023
Chapter 100. SOUTH DAKOTA..... 2024-2039
Chapter 101. TEXAS ..... 2040-2053
Chapter 102. UTAH ..... 2054-2075
Chapter 103. WASHINGTON ..... 2076-2096
Chapter 104. WYOMING ..... 2097-2129

# TABLE OF CONTENTS.

## VOLUME THREE.

## COMPLETE TABLE OF CONTENTS OF VOLUME THREE BY SECTIONS AND PAGES.

### PART XI.

### INTERNATIONAL, INTERSTATE, FEDERAL, DISTRICT, AND MUNICIPAL CONTROL.

#### CHAPTER 63.

#### INTERNATIONAL CONTROL.

| SECTIONS | PAGES |
|---|---|
| 1212. Scope of chapter | 2195 |
| 1213. Definition—Subject in general | 2195 |
| 1214. T aty making power—The establishment of commissions | 2197 |
| 1215. Treaties with Great Britain | 2197 |
| 1216. Treaties with Mexico, relative to international waters | 2198 |
| 1217. Treaties with Mexico—International boundary commission | 2200 |
| 1218. Conditions leading to treaty of May 21, 1906, governing the division of the waters of the Rio Grande | 2203 |
| 1219. Text of treaty of May 21, 1906, relative to division of the waters of the Rio Grande | 2204 |
| 1220. Treaty of May 21, 1906, with Mexico—Effect of treaty | 2206 |

#### CHAPTER 64.

#### INTERSTATE CONTROL.

| | |
|---|---|
| 1221. Scope of chapter | 2210 |
| 1222. Definition—Subject in general | 2210 |
| 1223. The equitable rights of respective States | 2211 |
| 1224. The Kansas-Colorado case | 2213 |
| 1225. Rights of appropriators—Adjoining States are not affected by State lines | 2216 |

*The Index references are to pages.*

SECTIONS PAGES

1226. Rights of riparian owners in the respective States are not affected by State lines..... 2219
1227. Effect of the conflict of laws of interstate streams..... 2220
1228. The appropriation of the waters in one State for use in another—Interstate streams..... 2222
1229. The appropriation of waters in one State for use in another—State streams ..... 2223
1230. The division of interstate waters involves no question of international law..... 2225
1231. Late statutes relating to interstate waters..... 2226
1232. The pollution of interstate streams by a State..... 2227
1233. Jurisdiction of courts—Original jurisdiction of the Supreme Court of the United States..... 2228
1234. Jurisdiction of courts—Federal and State..... 2230

## CHAPTER 65.

## THE NATIONAL RECLAMATION ACT.

1235. Scope of chapter..... 2233
1236. General scope of the law..... 2234
1237. Conditions leading to its enactment..... 2235
1238. Conditions leading to its enactment—President Roosevelt's message to Congress ..... 2237
1239. The operation as compared to that of the Carey law from the standpoint of the State and private enterprises..... 2240
1240. Its operation as compared to that of the Carey law from the standpoint of the settler..... 2241
1241. Criticism of the Act—The opinion of Elwood Mead..... 2245
1242. The Act is constitutional—Doubts expressed in Kansas-Colorado case ..... 2246
1243. The Act is constitutional—Decisions and conclusion..... 2248
1244. The full text of the National Reclamation Act of June 17, 1902... 2250
1245. Acts amendatory—Indian reservations and lands—Acts of April 21, 1904, April 27, 1904, March 6, 1906, June 21, 1906, March 1, 1907 2255
1246. Acts amendatory—Military reservations—Act of June 9, 1906..... 2262
1247. Acts amendatory—Construction of Rio Grande dam..... 2262
1248. Acts amendatory to the National Reclamation Act—The use of materials from the public lands—Act of February 8, 1905..... 2263
1249. Acts amendatory to the National Reclamation Act—As relating to certain lakes—Act of February 9, 1905..... 2263
1250. Acts amendatory to the National Reclamation Act—As relating to the sale of material used—Act of March 3, 1905..... 2264
1251. Acts amendatory to the National Reclamation Act—As relating to townsites—Act of April 16, 1906, June 11, 1910, February 24, 1911 ..... 2264

*The Index references are to pages.*

SECTIONS PAGES

1252. Acts amendatory to the National Reclamation Act—Relating to subdivisions—The farm unit—Act of June 27, 1906 ..... 2268
1253. Acts amendatory to the National Reclamation Act—Relating to desert land entries—Act of June 27, 1906 ..... 2270
1254. Acts amendatory—Entryman may assign his entry when—Act of June 23, 1910 ..... 2272
1255. New Mexico and Arizona—Price fixed for lands—Reservations .... 2273
1256. Acts amendatory to the National Reclamation Act—The Reclamation Fund Act of June 25, 1910, as amended February 18, 1911 .. 2274
1257. Acts amendatory—Leaves of absence granted when—Act of June 25, 1910 ..... 2277
1258. Acts amendatory—The sale of lands acquired under the provisions of the Act when not needed for its purposes—Act of February 2, 1911 ..... 2278
1259. Acts amendatory—The Government may contract for impounding, storing, and carriage of water, and to co-operate with other projects—Act of February 21, 1911 ..... 2279
1260. Acts amendatory—Act authorizing the Secretary of the Interior to withdraw public notices—Act of February 13, 1911 ..... 2281
1261. Action of the States affected ..... 2281

1263. Reservation of rights of way for Government use ..... 2286
1264. The acquisition of rights of way for Government use ..... 2288
1265. Water rights—Acquisition of, by the Government for its projects .. 2290
1266. Water rights—Reservation of waters by the Government for its projects ..... 2290
1267. Duty of the Secretary of the Interior to construct the works—Contracts ..... 2292
1268. Title and management of reclamation works ..... 2295
1269. The reclamation fund—The use of ..... 2295
1270. Disposition of property not needed for a time—Leases ..... 2298
1271. Entries allowed only under the homestead law ..... 2299
1272. Opening of land to entry—Entries to be made under the homestead law ..... 2301
1273. Contests—Cancellation of entries ..... 2302
1274. Final proof on entries ..... 2304
1275. Action on final proof ..... 2307
1276. Water rights—For lands in private and corporate ownership ..... 2308
1277. Water rights—Applications for same ..... 2310
1278. Water rights—Charges for same—Cancellation of water right ..... 2313
1279. Water rights—As appurtenances ..... 2317
1280. Appeals from the action of field officers in the Reclamation Service. 2318
1281. Water users' associations—Objects ..... 2319
1282. Water users' associations—Organization ..... 2320
1283. Water users' associations—Articles of incorporation ..... 2321
1284. Water users' associations—By-laws ..... 2324

*The Index references are to pages.*

SECTIONS PAGES
1285. Water users' associations—Contract with the Government..... 2333
1286. Water users' associations—And our conclusions..... 2337

## CHAPTER 66.

## THE DESERT LAND ACTS.

1287. Scope of chapter..... 2340
1288. "Desert lands"—Provisions for disposal to individuals..... 2340
1289. Desert land claims—Water rights—Report of the commissioner of the General Land Office, 1911..... 2342
1290. Full text of Acts—Acts of March 3, 1877, March 3, 1891..... 2343
1291. Amendatory Act of June 27, 1906—Delay caused by reclamation projects ..... 2347
1292. Amendatory Act of March 26, 1908, relative to additional entries.. 2349
1293. Amendatory Act of March 28, 1908, restricting entries to the public surveys..... 2351
1294. Relative to entries on coal lands—Acts of March 3, 1909, and June 22, 1910..... 2352
1295. Effect of Act as relating to navigation and appropriation..... 2353
1296. The application for entry..... 2354
1297. Quantity of land that may be entered—Land must be in compact form ..... 2357
1298. Essentials for acquiring land under the Desert Land Laws..... 2358
1299. Essentials—Citizenship ..... 2359
1300. Essentials—The land must be desert land..... 2360
1301. Essentials—The entryman must acquire a water right..... 2362
1302. Essentials—Acts tending toward reclamation—Annual proof..... 2363
1303. Essentials—Actual reclamation necessary—Final proof..... 2366
1304. Essentials—Final proof, when and how taken..... 2369
1305. Essentials—Payment for the land..... 2371
1306. The sale or assignment of desert land entries..... 2373
1307. Contests ..... 2377
1308. Relinquishments ..... 2378
1309. "The Dry Farm Act" or "Enlarged Homestead Act"—Cause of its enactment ..... 2378
1310. "The Dry Farm Act" or "Enlarged Homestead Act" ..... 2379
1311. "The Dry Farm Act"—Construction of the Act..... 2382

## CHAPTER 67.

## THE CAREY LAW.

1312. Scope of chapter..... 2385
1313. The law—In general..... 2385
1314. Cause of the enactment of the Carey Act..... 2387
1315. Full text of Act of August 18, 1894..... 2388

*The Index references are to pages.*

SECTIONS PAGES
1316. Acts amendatory—Act of June 11, 1896 ..... 2390
1317. Acts amendatory—Act of March 3, 1901 ..... 2390
1318. Amendatory acts—Acts of March 1, 1907, and February 24, 1909, relating to Indian lands ..... 2391
1319. Acts amendatory—Act of March 27, 1908, granting additional land to Idaho and Wyoming, and Act of February 18, 1909, extending the law to New Mexico and Arizona ..... 2392
1320. Amendatory acts—Act of March 15, 1910, relating to temporary withdrawals ..... 2392
1321. Amendatory Acts respecting coal lands—Acts of March 3, 1909, and June 22, 1910 ..... 2394
1322. Amendatory Acts—Act of February 21, 1911, relative to furnishing Carey Act projects with surplus water acquired by the Reclamation Service ..... 2395
1323. Particular features of the Acts and their operation ..... 2396
1324. Regulations by the Secretary of the Interior ..... 2399
1325. Acceptance of the grant made by the Carey Act by the States named ..... 2405
1326. The powers of the State board ..... 2406
1327. The acquisition of a water right for projects ..... 2407
1328. Proceedings under State laws—Application to board for selection of lands ..... 2408
1329. Proceedings under State laws—Contract between State and applicant ..... 2410
1330. Proceedings under State laws—The entry and settlement of the land by settlers ..... 2412
1331. Proceedings under State laws—Duties of settlers ..... 2414
1332. Proceedings under State laws—Assignment of entries ..... 2415
1333. Proceedings under State laws—Lands can be disposed of only to actual settlers ..... 2416
1334. Proceedings under State laws—The lien for the water rights ..... 2417
1335. Proceedings under State laws—Rights of way for canals and other works ..... 2418
1336. The proceeds from sale of lands to constitute a State reclamation fund ..... 2418

## CHAPTER 68.

## THE LAWS OF STATE CONTROL.

1337. Scope of chapter ..... 2421
1338. The laws of State control—In general ..... 2421
1339. State constitutions providing for the law of State control or State administration ..... 2423
1340. General statutory declarations preliminary to the laws of State control ..... 2425

*The Index references are to pages.*

SECTIONS PAGES
1341. Power of the legislature to regulate the use of water—Police power 2428
1342. Governing boards—Powers and duties of ..... 2430
1343. The State engineer—Duties of ..... 2434
1344. The State engineer—Power and authority of ..... 2441
1345. Division engineers and division superintendents ..... 2443
1346. Water commissioners—Water masters—Under assistants—Supervisors ..... 2444
1347. The determination of existing rights ..... 2447
1348. The distribution of the water according to the determination of rights ..... 2447
1349. Proceedings to appropriate—Effect of application for permit—Notice—Relation ..... 2448
1350. Proceedings to appropriate—Application for permit ..... 2449
1351. Proceedings to appropriate—Action to be taken upon application—State engineer must approve or reject ..... 2452
1352. Proceedings to appropriate—Permit and effect of ..... 2453
1353. Proceedings to appropriate—Construction of works ..... 2454
1354. Forfeiture of rights and cancellation of permit ..... 2456
1355. Proceedings to appropriate—Certificate of appropriation ..... 2457
1356. Proceedings to appropriate—Consummation of an appropriation—Effect of the certificate to appropriate ..... 2458
1357. Appropriation by actual diversion and use as affected by the laws of State control ..... 2460
1358. Relation as applied to laws of State control ..... 2462
1359. Officers under State control have only ministerial, administrative, or judicial powers ..... 2463
1360. Effect of decisions of administrative officers—Not binding upon the courts ..... 2464
1361. The right of appeal from decisions of officers ..... 2464
1362. State control officers may be sued in their official capacity ..... 2465
1363. Annual State license tax ..... 2466
1364. Place of diversion, how changed—Place of use, how changed ..... 2467
1365. Statutes for prorating in times of scarcity ..... 2468
1366. Vested rights can not be impaired by procedure under the laws of State control ..... 2470
1367. Criticism of the laws of State control ..... 2470

## CHAPTER 69.

## STATE CONTROL OF WATER RATES.

1368. Scope of chapter ..... 2473
1369. Excessive water rates, and their effect ..... 2474
1370. The general right to fix water rates comes within the police powers of a State under the common law ..... 2475
1371. The history of the regulation of water rates—States have full control ..... 2478

*The Index references are to pages.*

SECTIONS PAGES

1372. The judicial regulation of rates in the absence of constitutional or statutory provisions..... 2479
1373. Constitutional provisions relative to water rates..... 2481
1374. Power of the legislature to provide for the regulation of water rates—Constitutional limitations..... 2484
1375. Statutes providing how rates shall be fixed..... 2487
1376. Powers and duties of boards to fix rates..... 2489
1377. Proceedings must be had before the board before the courts will interfere ..... 2491
1378. Values upon what compensation may be based for a "fair return" to the company..... 2491
1379. The determination as to what are reasonable rates..... 2495
1380. The nature and effect of decisions by boards fixing rates—Judicial interference ..... 2496
1381. Right of companies to contract where rates are not fixed by law.. 2499
1382. Power of legislature to regulate water rates—Impairment of contracts ..... 2502
1383. Contracts for discriminatory rates..... 2505
1384. Charges of "royalty" or "bonus" not permitted..... 2507
1385. Terms of payment..... 2508

## CHAPTER 70.

## STATE IRRIGATION DISTRICT LAW.

1386. Scope of chapter..... 2510
1387. The purpose and object of district law..... 2510
1388. The general results of district laws..... 2512
1389. Some beneficial features of district laws..... 2515
1390. History of district laws—States adopting—California..... 2518
1391. History of district laws—Colorado ..... 2520
1392. History of district laws—Idaho ..... 2521
1393. History of district laws—Kansas ..... 2521
1394. History of district laws—Montana ..... 2521
1395. History of district laws—Nebraska ..... 2522
1396. History of district laws—Nevada ..... 2523
1397. History of district laws—New Mexico..... 2523
1398. History of district laws—Oregon ..... 2523
1399. History of district laws—South Dakota..... 2524
1400. History of district laws—Texas ..... 2524
1401. History of district laws—Utah ..... 2524
1402. History of district laws—Washington ..... 2525
1403. History of district laws—Wyoming ..... 2526
1404. Irrigation districts—Definition and corporate nature..... 2526
1405. Constitutionality of irrigation district Acts..... 2529
1406. Constitutionality of Acts—Points upon which held constitutional.. 2533
1407. Constitutionality of Acts—Jurisdiction—Federal questions..... 2539

*The Index references are to pages.*

SECTIONS PAGES
1408. Organization of district can not be collaterally attacked..... 2540
1409. A district can not plead illegality of its own organization.....2542
1410. Proceedings under the laws—The petition for organization..... 2542
1411. Proceedings—Examination by State engineer..... 2545
1412. Proceedings—Hearing on petition—Settlement of boundaries of district ..... 2546
1413. Proceedings—The election on organization..... 2549
1414. Proceedings—Duties and powers of boards of directors..... 2552
1415. District may sue and be sued..... 2552
1416. Proceedings—Power of board—The acquisition of property..... 2552
1417. Proceedings—The issuance of bonds..... 2555
1418. Proceedings—The sale of bonds..... 2558
1419. Proceedings—The payment of bonds..... 2559
1420. Proceedings—Confirmation of bonds and organization of district.. 2560
1421. Proceedings for confirmation—Effect of judgment..... 2563
1422. Proceedings—General annual assessments..... 2566
1423. Proceedings—Special assessments..... 2569
1424. Proceedings—Construction of works..... 2570
1425. Proceedings—Payment for claims for construction..... 2571
1426. Proceedings—Construction of works across the property of others.. 2572
1427. Proceedings—Compensation of officers—Board not to be interested in contracts..... 2573
1428. Proceedings—Limit of indebtedness..... 2573
1429. Proceedings—Governing the use of water..... 2574
1430. Proceedings—Change of boundaries—Inclusion of lands..... 2576
1431. Proceedings—Change of boundaries—Exclusion of lands..... 2577
1432. Proceedings—Dissolution of districts..... 2579

## CHAPTER 71.

## CONTROL BY MUNICIPAL CORPORATIONS.

1433. Scope of chapter..... 2582
1434. Municipal corporations—Corporate nature..... 2582
1435. General power of municipal corporation to own and control its own water rights and plants..... 2583
1436. The appropriation of water by municipal corporations..... 2584
1437. Purchase of water rights and water works by municipal corporations 2587
1438. Acquisition of water rights and water works by condemnation..... 2590
1439. Rights of municipalities succeeding to Spanish-Mexican pueblo rights ..... 2590
1440. Appropriations by others than the municipality for municipal purposes ..... 2593
1441. The alienation of its water rights by a municipality..... 2597
1442. Construction of franchises granted to companies to furnish water to municipalities..... 2599

*The Index references are to pages.*

SECTIONS PAGES
1443. Duty to furnish water to the inhabitants of municipalities..... 2601
1444. Right to fix water rates by city ordinances in the absence of contract ..... 2602
1445. The power of a municipality to fix water rates by contract with a water company..... 2604
1446. Ordinances fixing water rates affecting existing contracts..... 2605
1447. Regulations and control of irrigation ditches within a municipality—Where owned by municipality..... 2607
1448. Regulation and control of irrigation ditches within a municipality—Where owned by other parties..... 2608

## PART XII.

## CONTROL BY PRIVATE WATER COMPANIES.

### CHAPTER 72.

### SUBJECT IN GENERAL AND CLASSIFICATION OF PRIVATE WATER COMPANIES.

1449. Contents of part..... 2611
1450. The subject in general..... 2611
1451. "Public use" and "public service" distinguished..... 2613
1452. Classification of companies..... 2614

### CHAPTER 73.

### UNINCORPORATED COMPANIES.

1453. Scope of chapter..... 2616
1454. Tenants in common—Who are..... 2616
1455. Tenants in common—Rights as between each other..... 2619
1456. Tenants in common—Right of partition..... 2622
1457. Tenants in common—Contribution for necessary expenses..... 2622
1458. Tenants in common—Rights as against third parties..... 2624
1459. Mutual water associations—Voluntary associations..... 2625
1460. Partnerships ..... 2626
1461. Analogous to mining partnerships..... 2630
1462. Right of majority in interest to control..... 2631
1463. Authority of individual members..... 2632

### CHAPTER 74.

### ORGANIZATION AND POWERS OF CORPORATIONS.

1464. Incorporated water companies—In general..... 2634
1465. Objects of incorporating..... 2635
1466. Organization of water corporations ..... 2636

*The Index references are to pages.*

SECTIONS PAGES
1467. Organization of water companies—Incorporation by legislative enactment ..... 2638
1468. General powers of water corporations..... 2640
1469. The purposes of a corporation must be determined from its articles 2642
1470. Power of acquiring water rights by appropriation..... 2645
1471. Power of acquiring water rights by purchase—Prescription ..... 2647
1472. Power of acquiring water rights by condemnation ..... 2648
1473. Power of acquiring water rights by purchase of other entire systems and rights..... 2649
1474. Acquisition of rights of way—Purchase—Prescription—Condemnation ..... 2650
1475. Relation to consumers—Title to the water rights..... 2650
1476. Relation to consumers—Where the company is deemed merely the carrier—Colorado rule..... 2652
1477. Relation to consumers—Where the company is deemed the appropriator and owner of the rights..... 2653
1478. The exemption from taxation..... 2657

## CHAPTER 75.

## MUTUAL WATER CORPORATIONS.

1479. Scope of chapter..... 2659
1480. Definition and objects..... 2659
1481. Title to water rights..... 2661
1482. Relation between corporation or its officers and the shareholders.... 2662
1483. Shares of stock in mutual corporations represent water rights..... 2663
1484. Rights represented by shares of stock as appurtenances..... 2666
1485. The sale and transfer of shares in mutual corporations..... 2669
1486. Duties and liabilities of such a company..... 2671
1487. Rights of stockholders..... 2673
1488. Power of corporation to make rules and regulations..... 2674
1489. Power of mutual water corporations to levy and enforce assessments ..... 2675

## CHAPTER 76.

## CORPORATIONS FOR PROFIT.

1490. Scope of chapter..... 2679
1491. Corporations organized for profit—In general..... 2679
1492. Right to organize for the purpose of profit..... 2681
1493. Corporations for profit—Public service or quasi-public corporations 2682
1494. Public service—Charges which may be made..... 2686
1495. Power of State to regulate—At common law..... 2688
1496. Power of State to regulate—By constitutional provisions—By legislative enactment..... 2689

*The Index references are to pages.*

SECTIONS PAGES
1497. State regulations—Duty to furnish water..... 2690
1498. Duty to furnish water without unreasonable conditions..... 2694
1499. Duty to furnish water—Without discrimination or preference.... 2697
1500. Duty to furnish water—Order of priority..... 2698
1501. Duty to have adequate works and to keep them in repair..... 2699
1502. Duty to furnish water—Order of priority—Rule as to prorating in times of scarcity..... 2700
1503. Power to make rules and regulations for furnishing water..... 2702
1504. Rules governing the collection of water rates..... 2705
1505. Rules for the regulation of use of water by consumers..... 2706
1506. Duty to furnish water—Compulsory service..... 2708
1507. Duty to furnish water—Damages for failure..... 2711
1508. State regulations—For protection of rights of company..... 2712

## CHAPTER 77.

## CONTRACTS WITH COMPANIES.

1509. Scope of chapter..... 2715
1510. Corporations for profit—Power to contract..... 2715
1511. Contracts bad as against statute or public policy..... 2718
1512. Contracts—Form and execution..... 2721
1513. Contracts—Construction ..... 2723
1514. The extent of rights conferred by contracts..... 2727
1515. Extent of rights—Contracts that run with the land..... 2728
1516. Contracts to turn control of companies over to the consumers—General scheme and results..... 2730
1517. Contracts to turn control over to consumers—The enforcement of such contracts..... 2732
1518. Contracts to turn control over to consumers—Liability of contracts for the sale of excess rights..... 2734
1519. Performance of contracts..... 2735
1520. Contracts—The enforcement of performance..... 2736
1521. Recovery on contracts for water furnished ..... 2740
1522. Recovery on contracts for water furnished where a lien on the land ..... 2741
1523. Reformation of contracts..... 2743
1524. Rescission of contracts..... 2743
1525. The cancellation or annulment of contract..... 2745
1526. Breach of contracts ..... 2746
1527. Breach of contracts—Act of God as excuse for failure to perform. 2747
1528. Breach of contracts—Forfeiture of rights..... 2748
1529. Breach of contracts—Damages ..... 2751

*The Index references are to pages.*

# PART XIII.

## ADJUDICATION AND PROTECTION OF RIGHTS—INJURIES TO RIGHTS, AND REMEDIES THEREFOR.

### CHAPTER 78.

### THE ADJUDICATION OF WATER RIGHTS IN EQUITY.

SECTIONS PAGES

1530. Scope of part and chapter..... 2754
1531. Necessity of adjudication or legal determination of water rights... 2754
1532. The general power of courts to adjudicate water rights..... 2755
1533. The jurisdiction of courts—Definition—Venue..... 2758
1534. The nature of the action—Suit to quiet title..... 2762
1535. Action to quiet title..... 2763
1536. Actions to quiet title and injunctions in the same suits..... 2766
1537. Actions to quiet title and damages in the same suits..... 2767
1538. Actions to apportion the use of water among riparian proprietors 2768
1539. Actions to apportion subterranean waters among the owners of the lands under which they flow..... 2769
1540. Actions to determine the rights as between appropriators and riparian owners ..... 2770
1541. Actions to adjudicate and quiet title to ditches and canals and easements therefor..... 2771
1542. Parties to action to adjudicate rights—The right of strangers not before the court..... 2772
1543. Parties to actions to adjudicate rights—Where there are several on the same source of supply..... 2774
1544. Who may bring the action—Parties plaintiff..... 2778
1545. Parties defendant—Right to affirmative relief..... 2780
1546. Parties to actions—Intervenors..... 2783
1547. Pleadings—Complaint or bill in action to quiet title by appropriators ..... 2783
1548. Pleadings—Complaint or bill in actions to quiet title by riparian owners ..... 2788
1549. Pleadings—Complaint or bill in actions to quiet title to ditch or canal ..... 2791
1550. Pleadings—Demurrer—Answer—And cross-complaint or bill..... 2791
1551. Pleadings—The replication or reply..... 2795
1552. Pleadings—Where the claim to the right is made by prescription.. 2796
1553. Practice and procedure—Submission of questions of fact to a jury 2799
1554. Proof of claims—Burden of proof..... 2802
1555. Proof necessary to establish a right by prescription—Burden of proof ..... 2806
1556. The findings of fact and conclusions of law..... 2808
1557. The decrees and judgments—On rights by appropriation..... 2810

*The Index references are to pages.*

SECTIONS PAGES
1558. The decrees and judgments—On rights by appropriation—Quantity of water ..... 2814
1559. Decrees and judgments—Apportioning the water between riparian proprietors ..... 2821
1560. Decrees and judgments—In actions to quiet title to ditches and canals ..... 2824
1561. Decrees and judgments—Apportioning the subterranean waters among the owners of the land ..... 2825
1562. Decrees and judgments—For costs ..... 2826
1563. The decrees and judgments—As res judicata—Rights by appropriation, etc. ..... 2828
1564. The decrees and judgments—As res judicata—As to riparian rights 2832
1565. Appeal from judgments and decrees ..... 2833
1566. The enforcement of judgments and decrees ..... 2838

## CHAPTER 79.

## STATUTORY ADJUDICATION OF WATER RIGHTS.

1567. Scope of chapter ..... 2841
1568. Special statutory proceedings for the adjudication of water rights .. 2841
1569. The nature of such statutory actions ..... 2844
1570. The constitutionality of Acts ..... 2846
1571. The jurisdiction of courts—Venue ..... 2847
1572. The jurisdiction of courts—Subject-matter and parties ..... 2849
1573. Parties to such actions ..... 2852
1574. The pleadings or statements of claims ..... 2854
1575. The process or notice of pending actions ..... 2857
1576. The proceedings on the hearing—Referees ..... 2860
1577. The form and substance of decrees ..... 2861
1578. Decrees as to inchoate rights ..... 2864
1579. Construction and effect of decree ..... 2866
1580. The review and modification of decrees—On petition of parties to the action ..... 2868
1581. Modification of decrees—On independent action by those not parties to the action ..... 2870
1582. Appeals from judgments and decrees ..... 2873
1583. The decree as res judicata ..... 2876
1584. The enforcement of decrees and judgments ..... 2880

## CHAPTER 80.

## DETERMINATION OF WATER RIGHTS BY BOARDS.

1585. Scope of chapter ..... 2883
1586. Statutes for the determination of water rights by boards—Nature of proceedings—Constitutionality of Acts ..... 2883

*The Index references are to pages.*

SECTIONS PAGES
1587. Procedure—Process or notice..... 2887
1588. Procedure—The filing of statements of claims..... 2889
1589. Procedure—The hearing by the board..... 2890
1590. Procedure—The award—Certificates..... 2892
1591. Review of decisions of boards by the courts—Appeal..... 2894
1592. Jurisdiction of courts in cases not submitted to board..... 2896
1593. Conclusiveness of the determination or award by the board..... 2897
1594. The enforcement awards by board..... 2898
1595. Criticism of system for determination by boards..... 2899

## CHAPTER 81.

## PROTECTION OF RIGHTS BY INJUNCTION.

1596. Scope of chapter..... 2905
1597. Actionable injury to a right..... 2906
1598. Action for both injunction and the adjudication of rights..... 2907
1599. Action for both injunction and damages..... 2909
1600. Injunctions—In general—Essentials..... 2911
1601. Injunctions—Must be the existence of the right in the party claiming relief..... 2913
1602. Injunctions—There must be an irreparable injury to the right.... 2914
1603. Injunctions—The injury must be actual, continuing, or threatened. 2918
1604. Injunctions—There must be no adequate remedy at law..... 2919
1605. Injunctions—There must have been no laches in the bringing of the action ..... 2921
1606. Injunctions where no actual damages are shown..... 2922
1607. Restraining orders or preliminary injunctions..... 2925
1608. Mandatory injunctions..... 2928
1609. Injunctions in the alternative, or conditional..... 2930
1610. An appropriator's right to an injunction for unlawful diversion or diminution of quantity..... 2931
1611. Riparian owner's right to injunction for diminution of quantity.. 2937
1612. A riparian owner's right without use to injunction against diversion for use—The California cases..... 2938
1613. A riparian owner's right without use to injunction against diversion for use—The more modern rule..... 2942
1614. A riparian owner with use has a right to injunction for unlawful diversion ..... 2946
1615. Riparian owner's right to protection for future use..... 2949
1616. Injunctions against unlawful diversion of subterranean waters.....2950
1617. Right of riparian owner to an injunction against negligent logging. 2954
1618. Injunctions against the interference with easements..... 2955
1619. Injunctions against the interference with ditches and other works.. 2957
1620. Injunctions relating to reservoir rights..... 2960
1621. The abatement of nuisances by means of injunctions..... 2960

*The Index references are to pages.*

SECTIONS PAGES
1622. Injunctions for trespass on land ..... 2964
1623. Injunctions against the flooding of lands from ditches or other works ..... 2966
1624. Injunctions against the turning of surface water upon the land of others ..... 2968
1625. Injunctions protecting the navigable capacity of waters ..... 2970
1626. Injunctions as between ditch companies and their stockholders or consumers ..... 2971
1627. Injunctions against the violation of contracts ..... 2973
1628. Injunctions to protect decreed rights ..... 2974
1629. Injunctions—Jurisdiction of courts—Venue ..... 2975
1630. Injunctions—Jurisdiction of courts—Person and subject-matter ..... 2978
1631. Injunctions—Parties plaintiff ..... 2979
1632. Injunctions—Parties defendant ..... 2983
1633. Pleadings—Complaint, petition, or bill ..... 2985
1634. Pleadings—Answer—Defenses ..... 2990
1635. Pleadings—Defenses—Cross-complaint or cross-bill ..... 2996
1636. Pleadings—The reply—Answer to cross-complaint ..... 2998
1637. Pleadings—Intervention ..... 2999
1638. Pleadings—Amendments to ..... 2999
1639. Practice in actions brought for injunction ..... 3001
1640. Proof—Burden of proof ..... 3003
1641. Findings of fact and conclusions of law ..... 3007
1642. The decree and judgment ..... 3008
1643. Decree and judgment—The balance of convenience—Authorities against ..... 3011
1644. Decree and judgment—The balance of convenience—Authorities in favor of ..... 3014
1645. Decree and judgment—Effect of ..... 3016
1646. Decree and judgment—Enforcement of—Violation of ..... 3018
1647. Appeals in injunction cases ..... 3021

## CHAPTER 82.

## PROTECTION BY MISCELLANEOUS ACTIONS.

1648. Scope of chapter ..... 3023
1649. Actions for mandamus ..... 3023
1650. Actions on contracts to protect rights—Specific performance ..... 3030
1651. Actions for writ of prohibition ..... 3033
1652. Actions for certiorari or review ..... 3035
1653. Actions in quo warranto ..... 3037
1654. Actions in ejectment ..... 3039
1655. Actions for receivers ..... 3041
1656. Actions for an accounting ..... 3044
1657. The enforcement of the criminal statutes ..... 3045

*The Index references are to pages.*

SECTIONS PAGES
1658. Protection of rights by physical force..... 3046
1659. Protection by various actions previously discussed..... 3049

## CHAPTER 83.

## ACTIONS FOR DAMAGES.

1660. Scope of chapter..... 3053
1661. Actions for damages—In general..... 3053
1662. Damages to prior appropriator for unlawful diversion..... 3054
1663. Damages to riparian owners for unlawful diversion..... 3056
1664. Damages to riparian owners for diversion as against other owners.. 3058
1665. Damages to riparian owners for diversion as against other appropriators ..... 3060
1666. Damages for the unlawful diversion of subterranean waters..... 3063
1667. Damages for the failure to furnish water under duty imposed by law ..... 3065
1668. Damages for breach of contract to furnish water..... 3066
1669. Damages caused by the breakage of works..... 3069
1670. Liability for negligence—Damages from reservoirs..... 3073
1671. Liability fixed by statute—Damages caused by the breakage of works ..... 3077
1672. Liability for negligence—Damages from ditches and canals..... 3079
1673. Injuries from ditches and canals—Actions for damages lie when.. 3083
1674. Damages for flooding lands from overflow and leakage from works. 3085
1675. Damages from seepage of water..... 3088
1676. Damages for the flowage or backing up of water..... 3090
1677. Damages for flooding lands by the interference with the flow of surface waters..... 3092
1678. Damages for injuries to ditches or other works..... 3096
1679. Damages from logging..... 3098
1680. Actions on bonds for damages..... 3099
1681. Damages as the result of fraud..... 3099
1682. Damages for using force..... 3100
1683. Jurisdiction of courts—Venue..... 3101
1684. Parties—Plaintiff ..... 3102
1685. Parties defendant—Joint or several tort feasors..... 3105
1686. Pleadings—Complaint ..... 3108
1687. Pleadings—Answer—Cross-complaint ..... 3111
1688. Pleadings—Defenses—Acts of the plaintiff and contributory negligence ..... 3113
1689. Pleadings—Defenses—Grant or contract..... 3116
1690. Pleadings—Defenses—Limitation of actions and prescriptions..... 3117
1691. Act of God or inevitable accident as a defense for injuries to property ..... 3118
1692. Act of God as a defense for failure to deliver water under duty or contract ..... 3122

*The Index references are to pages.*

SECTIONS PAGES

# PART XI.

## INTERNATIONAL, INTERSTATE, FEDERAL, STATE, AND MUNICIPAL CONTROL.

### CHAPTER 63.

#### INTERNATIONAL CONTROL.

§ 1212. Scope of chapter.
§ 1213. Definition—Subject in general.
§ 1214. Treaty-making power—The establishment of commissions.
§ 1215. Treaties with Great Britain.
§ 1216. Treaties with Mexico, relative to international waters.
§ 1217. Treaties with Mexico—International boundary commission.
§ 1218. Condition leading to treaty of May 21, 1906, governing the division of the waters of the Rio Grande.
§ 1219. Text of treaty of May 21, 1906, relative to division of the waters of the Rio Grande.
§ 1220. Treaty of May 21, 1906, with Mexico—Effect of treaty.

**§ 1212. Scope of chapter.**—In this chapter we will discuss, in all its phases, the subject of the rights to waters flowing in what are known as international streams, or other bodies of waters, both as respecting the countries through which or adjoining which these streams or bodies of water flow or lie, and also as respecting the rights of citizens of the respective countries.

**§ 1213. Definition—Subject in general.**—International waters are those waters which flow through or bound two or more separate and independent countries.[1]

As is the case with interstate waters, so it is with international waters, the most of the law upon the subject has been developed within the last few years. In the early history of this country, when

[1] For the appropriation of the waters of international streams, see Sec. 665.

the waters of these international streams were sufficient for all the uses to which they were put, very little attention was paid to how much or how little was diverted from them by the citizens of the respective nations affected by them. But late years, with the constantly increasing use of these waters, and the growing demand for a still further use, questions have arisen respecting the division of the waters of these streams between the respective countries, which questions are of international importance. And when serious international questions arise between two countries they must be adjusted by the two nations or they lead to war. Two independent and sovereign nations have a different standing in respect to each other than have two States of the Union. A controversy between two States, as we have shown in the preceding chapter, can not lead to war between them, but may be settled by an original action brought in the Supreme Court of the United States.[2] While, upon the other hand, an independent and sovereign nation, for injuries committed by another sovereign nation, may seek a remedy by negotiation and treaty, and, failing in that, may resort to force.[3] The usual method, however, in settling these controversies as to the rights of the respective countries in and to the waters of international streams, both with our neighbors on the north and on the south, has been, and, as we hope will long continue to be, by negotiations by those in authority leading up to treaties between the countries. It is against all principles of good morals, equity, and justice that there should be an unregulated scramble between the citizens of one nation to appropriate for themselves the greatest possible portion of the waters of international streams to the complete exclusion of the rights in and to those waters of the citizens of the adjoining nation. Each country must concede the rights of the other and of its citizens. These rights can be and should be determined by careful investigation, and should be finally fixed by treaties.

2 See chapter on interstate waters, Secs. 1221-1234.

Illinois, 180 U. S. 208, 45 L. Ed. 497, 21 Sup. Ct. Rep. 331; *Id.*, on final determination, 200 U. S. 496, 50 L. Ed. 572, 26 Sup. Ct. Rep. 286, 202 U. S. 598, 50 L. Ed. 1160, 26 Sup. Ct. Rep. 713.

3 Missouri v. Illinois, *supra;* Kansas v. Colorado, *supra.*

§ 1214. **Treaty-making power—The establishment of commissions.**—It is within the treaty-making power of this and adjoining countries to adjust by treaty all controversies relating to the use of the waters of all international streams or other bodies of water, either by the countries themselves or by their citizens. This power, as far as this country is concerned, rests with the President, by and with the advice and consent of the Senate, provided two-thirds of the Senators present concur.[1] In order to carry out the provisions of a treaty it is within the treaty-making power to provide for a commission to be appointed for that purpose to make an equitable adjustment of the rights of the respective countries affected and of their citizens to appropriate and divert the waters of international streams or other bodies of water for the purpose of irrigation or for any other purpose. Upon such an apportionment the rights of each country and its citizens are limited to the amount of water awarded in the aggregate to each country. With the amount of water fixed which each country is entitled to, or its citizens, as between the citizens of the different countries, the right to appropriate the waters of an international stream depend upon the laws of the country where the appropriation is made and the rules and regulations established by the treaty between the two countries or those established by the commission appointed to make the apportionment.

§ 1215. **Treaties with Great Britain.**—By the treaty with Great Britain, proclaimed July 4, 1871,[1] relative to the maintenance of the navigation of the streams bounding the United States and Canada, it was provided: "Article XXVI. The navigation of the River St. Lawrence, ascending and descending from the forty-fifth parallel of north latitude, where it ceases to form the boundary between the two countries, from, to, and into the sea, shall forever remain free and open for the purposes of commerce to the citizens of the United States, subject to any laws and regulations of Great Britain or of the Dominion of Canada not inconsistent with such privilege of free navigation. The navigation of the Rivers Yukon, Porcupine, and Stikine, ascending and descending, from, to, and into the sea, shall

1 Const., Art. 11, Sec. 2.

1 7 Fed. Stat. Ann., 1905, p. 599; Treaties and Conventions, 1899, p. 478.

See, also, the treaty of May 13, 1910, relative to the equal division of the waters of the St. Mary and Milk Rivers.

forever remain free and open for the purposes of commerce to the subjects of Her Britannic Majesty, and to the citizens of the United States, subject to any laws and regulations of either country within its own territory not inconsistent with such privilege of free navigation."

Already protests have been filed by the Dominion of Canada with the Secretary of War of the United States against the increasing of the diversion of the water from Lake Michigan through the great drainage canal from 4,000 cubic feet to 10,000 cubic feet per second. Undoubtedly as to whether the rights of Canada as to navigation and otherwise will be injured by this increased diversion of the amount of water from the lake will have to be determined by expert examination and finally adjusted by treaty between the two countries.

**§ 1216. Treaties with Mexico, relative to international waters.**—By the seventh article of the Treaty of Guadalupe Hidalgo, of February 2, 1848,[1] it is provided that "the River Gila and the part of the Rio Bravo del Norte (the Colorado) lying below the southern boundary of New Mexico being, agreeably to the fifth article, divided in the middle between the two republics, the navigation of the Gila and of the Bravo below said boundaries shall be free and common to the vessels and citizens of both countries, and neither shall, without the consent of the other, construct any work that may impede or interrupt, in whole or in part, the exercise of this right; not even for the purpose of favoring new methods of navigation. Nor shall any tax or contribution, under any denomination or title, be levied upon vessels or persons navigating the same or upon merchandise or effects transported thereon, except in the case of landing upon one of their shores. If, for the purpose of making said rivers navigable, or for maintaining them in such state, it should be necessary or advantageous to establish any tax or contribution, this shall not be done without the consent of both governments. The stipulations contained in the present article shall not impair the territorial rights of either republic within its established limits."

By the fourth article of the Gadsden Treaty of June 30, 1854,[2]

1 7 Fed. Stat. Ann., 1905, p. 694; Treaties and Conventions, 1889, p. 681; 9 Stat. L. 948.

2 7 Fed. Stat. Ann., 1905, p. 704; Treaties and Conventions, 1889, p. 694; 10 Stat. L. 1034.

between the same countries, the provisions of the article above quoted were modified, owing to the fact that the boundary line between the two countries was changed by the latter treaty, Article IV of which provides: "The several provisions, stipulations, and restrictions contained in the seventh article of the Treaty of Guadalupe Hidalgo shall remain in force only so far as regards the Rio Bravo del Norte below the initial of said boundary provided in the first article of this treaty; that is to say, below the intersection of the 31° 47′ 30″ parallel of latitude with the boundary line by the late treaty dividing said river from its mouth upwards, according to the fifth article of the Treaty of Guadalupe." [3]

By the boundary convention of September 14, 1886,[4] it is provided that the Rio Grande and Colorado Rivers, where designated, should remain the boundary, and subject to the provisions, as follows:

"Article I. The dividing line shall forever be that described in the aforesaid treaty, and follow the center of the normal channel of the rivers named, notwithstanding any alterations in the banks or in the course of those rivers, provided that such alterations be effected by natural causes through slow and gradual erosion and deposit of alluvium and not be the abandonment of an existing river and the opening of a new one.

"Article II. Any other change wrought by the force of the current, whether by the cutting of a new bed or when there is more than one channel by the deepening of another channel than that which marked the boundary at the time of the survey made under the aforesaid treaty, shall produce no change in the dividing line as fixed by the surveys of the International Boundary Commissions in 1852, but the line then fixed shall continue to follow the middle of the original channel bed, even though this should become wholly dry or be obstructed by deposits.

3 "It is apparent from these treaty stipulations that we may not, without the consent of Mexico, take any action on the Colorado River where it forms the boundary line between the United States and Mexico, which would impede or interrupt navigation in whole or in part, and this would necessarily be the ultimate effect of subjugating the river absolutely to the purposes of irrigation where it forms such boundary line." Op. Atty. Gen., quoted in opinion, California Dev. Co., 33 Land Dec. 391.

See, also, U. S. v. Rio Grande Dam & Irr. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; *Id.*, 184 U. S. 416, 46 L. Ed. 619, 22 Sup. Ct. Rep. 428.

4 7 Fed. Stat. Ann., 1905, p. 710; Treaties and Conventions, 1889, p. 721.

"Article III. No artificial change in the navigable course of the river by building jetties, piers, or obstructions which may tend to deflect the current or produce deposits of alluvium, or by dredging to deepen another than the original channel under the treaty when there is more than one channel, or by cutting waterways to shorten the navigable distance, shall be permitted to affect or alter the dividing line as determined by the aforesaid commissions in 1852, or as determined by Article I hereof and under the reservation therein contained; but the protection of the banks on either side from erosion by revetments of stone or other material not unduly projecting into the current shall not be deemed an artificial change."

Article IV provides for and the marking of international bridges.

"Article V. Rights of property in respect to lands which may have become separated through the creation of new channels, as defined in Article II hereof, shall not be affected thereby, but such lands shall continue to be under the jurisdiction of the country to which they previously belonged.

"In no case, however, shall this retained jurisdictional right affect or control the right of navigation common to the two countries under the stipulations of Article VII of the aforesaid Treaty of Guadalupe Hidalgo; and such common right shall continue without prejudice throughout the actual navigable main channels of the said rivers from the mouth of the Rio Grande to the point where the Rio Colorado ceases to be the international boundary, even though any part of the channel of the said rivers, through the changes herein provided against, may be comprised within the territory of one of the two nations."

§ 1217. **Treaties with Mexico—International boundary commission.**—Again, by a convention between the United States and Mexico, proclaimed December 26, 1890,[1] provision was made for an international boundary commission and their jurisdiction in the following terms:

"Article I. All differences or questions that may arise on that portion of the frontier between the United States of America and the United States of Mexico where the Rio Grande and the Colorado Rivers form the boundary line, whether such differences or questions grow out of alterations or changes in the bed of the aforesaid

[1] 7 Fed. Stat. Ann., 1907, p. 712; 26 Stat. L. 1512.

Rio Grande and that of the aforesaid Colorado River, or of works that may be constructed in said rivers, or any other cause affecting the boundary line, shall be submitted for examination and decision to an International Boundary Commission, which shall have exclusive jurisdiction in the case of said differences or questions."

Article II provides that the commission shall be composed of a commissioner appointed by the President of the United States of America and another appointed by the President of the United States of Mexico, of a consulting engineer, and of such secretaries and interpreters as each Government may see fit to add to its commission. "Each Government, separately, shall fix the salaries and emoluments of the members of its commission."

"Article III. The International Boundary Commission shall not transact any business unless both commissioners are present. It shall sit on the frontier of the two contracting countries, and shall establish itself at such places as it may determine upon; it shall, however, repair to places at which any of the difficulties or questions mentioned in this convention may arise, as soon as it shall have been duly notified thereof.

"Article IV. When, owing to natural causes, any change shall take place in the bed of the Rio Grande or in that of the Colorado River, in that portion thereof wherein those rivers form the boundary line between the two countries which may affect the boundary line, notice of that fact shall be given by the proper local authorities on both sides to their respective commissioners of the International Boundary Commission, on receiving which notice it shall be the duty of the said commission to repair to the place where the change has taken place, or the question has arisen, to make personal examination of such change, to compare it with the bed of the river as it was before the change took place, as shown by the surveys, and to decide whether it has occurred through avulsion or erosion, for the effects of Articles I and II of the convention of November 2, 1884; having done this, it shall make suitable annotations on the surveys of the boundary line.

"Article V. Whenever the local authorities on any point of the frontier between the United States of America and the United States of Mexico, in the portion in which the Rio Grande and the Colorado River form the boundary between the two countries, shall think that works are being constructed in either of those rivers, such as are

prohibited by Article III of the convention of November 12, 1884, or by Article VII of the Treaty of Guadalupe Hidalgo of February 2, 1848, they shall so notify their respective commissioners in order that the latter may at once submit the matter to the International Boundary Commission, and that said commission may proceed, in accordance with the provisions of the foregoing article, to examine the case, and that it may decide whether the work is among the number of those which are permitted, or of those which are prohibited by the stipulations of those treaties.

"The commission may provisionally suspend the construction of the works in question pending the investigation of the matter, and if it shall fail to agree on this point, the works shall be suspended, at the instance of one of the two Governments.

"Article VI. In either of these cases the commission shall make personal examination of the matter which occasions the change, the question, or the complaint, and shall give its decision in regard to the same, in doing which it shall comply with the requirements established by a body of regulations to be prepared by the said commission and approved by both Governments.

"Article VII. The International Boundary Commission shall have power to call for papers and information, and it shall be the duty of the authorities of each of the two countries to send it any papers that it may call for relating to any boundary question in which it may have jurisdiction in pursuance of this convention.

"The said commission shall have the power to summon any witnesses whose testimony it may think proper to take, and it shall be the duty of all persons thus summoned to appear before the same and to give their testimony, which shall be taken in accordance with such by-laws and regulations as may be adopted by the commission and approved by both Governments. In case of the refusal of a witness to appear, he shall be compelled to do so, and to this end the commission may make use of the same means that are used by the courts of the respective countries to compel the attendance of witnesses, in conformity with their respective laws.

"Article VIII. If both commissioners shall agree to a decision, their judgment shall be considered binding upon both Governments, unless one of them shall disapprove it within one month, reckoned from the day on which it shall have been pronounced. In the latter case both Governments shall take cognizance of the matter, and shall

decide it amicably, bearing constantly in mind the stipulation of Article XXI of the Treaty of Guadalupe Hidalgo of February 2, 1848.[2]

"The same shall be the case when the commissioners shall fail to agree concerning the point which occasions the question, the complaint, or the change, in which case each commissioner shall prepare a report, in writing, which he shall lay before his Government."

§ 1218. **Conditions leading to treaty of May 21, 1906, governing the division of the waters of the Rio Grande.**—For more than two centuries the Mexicans living along the lower part of the Rio Grande River have made extensive use of the waters of the river for the purpose of irrigating their lands. But in recent years private companies on the upper waters of the river, in the United States, have, by the construction of wing dams, diverted a large part of the water to this side of the river, where it is used for the same purpose. Furthermore, according to the plans of the Reclamation Service of the United States, if carried out, it was made certain that unless some equitable division of the waters of the river was made between the two countries, by the treaty-making powers, practically all of the waters would be diverted and used on this side, and that, too, regardless of the rights of the Mexicans upon the other side. The construction of the great dam across the Rio Grande River at Engle, New Mexico, brought the matter to a climax and led to negotiations, which finally culminated in a treaty between the two countries, which is the fundamental law governing the division of the waters of the river between Mexico and the United States.[1]

2 Article XXI of the treaty provides for the settlement of differences by friendly and pacific negotiations.

1 See plans for irrigation of the Rio Grande Valley, 3d Annual Report of the Reclamation Service, pp. 395-426.

For the text of the treaty, see Sec. 1219.

See, also, for treaty between the United States and Mexico of March 1, 1889, providing for an international boundary commission to settle all international differences on the Rio Grande and Colorado Rivers, 7 Fed. Stat. Ann., 1905, p. 712; 26 Stat. L. 1512.

**§ 1219. Text of treaty of May 21, 1906, relative to division of the waters of the Rio Grande.**—The treaty of May 21, 1906, between the United States and the Republic of Mexico, relating to the distribution of the waters of the Rio Grande River, is as follows:

"THE UNITED STATES OF AMERICA AND THE UNITED STATES OF MEXICO, being desirous to provide for the equitable distribution of the waters of the Rio Grande for irrigation purposes, and to remove all causes of controversy between them in respect thereto, and being moved by considerations of international comity, have resolved to conclude a convention for these purposes, and have named as their Plenipotentiaries:

"The President of the United States of America, Elihu Root, Secretary of State of the United States; and

"The President of the United States of Mexico, His Excellency Senor Don Joaquin D. Casasus, Ambassador Extraordinary and Plenipotentiary of the United States of Mexico at Washington,

"Who, after having exhibited their respective full powers, which were found to be good and in due form, have agreed upon the following articles:

"ARTICLE I.

"After the completion of the proposed storage dam near Engle, New Mexico, and the distributing system auxiliary thereto, and as soon as water shall be available in said system for the purpose the United States shall deliver to Mexico a total of 60,000 acre-feet of water annually, in the bed of the Rio Grande at the point where the head works of the Acequia Madre, known as the Old Mexican Canal, now exists above the City of Juarez, Mexico.

"ARTICLE II.

"The delivery of the said amount of water shall be assured by the United States, and shall be distributed through the year in the same proportions as the water supply proposed to be furnished from the said irrigation system to lands in the United States in the vicinity of El Paso, Texas, according to the following schedule, as nearly as may be possible:

See, also, for the text of treaty of May 21, 1906, between Mexico and the United States relative to the division of the waters of the Rio Grande River, Sec. 1219.

| | Acre feet per month | Corresponding cubic feet of water |
|---|---|---|
| January | 0 | 0 |
| February | 1,090 | 47,480,400 |
| March | 5,460 | 237,837,600 |
| April | 12,000 | 522,720,000 |
| May | 12,000 | 522,720,000 |
| June | 12,000 | 522,720,000 |
| July | 8,180 | 356,320,000 |
| August | 4,370 | 190,357,200 |
| September | 3,270 | 142,441,200 |
| October | 1,090 | 47,480,400 |
| November | 540 | 23,522,400 |
| December | 0 | 0 |
| Total | 60,000 | 2,613,600,000 |

"In case, however, of extraordinary drought or serious accident to the irrigation system in the United States, the amount delivered to the Mexican canal shall be diminished in the same proportion as the water delivered to lands under said irrigation system in the United States.

"ARTICLE III.

"The said delivery shall be made without cost to Mexico, and the United States agrees to pay the whole cost of storing the said quantity of water to be delivered to Mexico, of conveying the same to the international line, of measuring the said water, and of delivering it in the river bed above the head of the Mexican Canal. It is understood that the United States assumes no obligation beyond the delivering of the water in the bed of the river above the head of the Mexican Canal.

"ARTICLE IV.

"The delivery of water as herein provided is not to be construed as a recognition by the United States of any claim on the part of Mexico to the said waters; and it is agreed that in consideration of such delivery of water Mexico waives any and all claims to the waters of the Rio Grande for any purpose whatever between the head of the present Mexican Canal and Fort Quitman, Texas, and also declares fully settled and disposed of, and hereby waives, all claims heretofore asserted or existing, or that may hereafter arise, or be asserted, against the United States on account of any damages

alleged to have been sustained by the owners of land in Mexico by reasons of the diversions by citizens of the United States of waters of the Rio Grande.

"ARTICLE V.

"The United States, in entering into this treaty, does not thereby concede, expressly or by implication, any legal basis for any claims heretofore asserted, or which may be hereafter asserted, by reason of any losses incurred by the owners of land in Mexico, due, or alleged to be due, to the diversion of the waters of the Rio Grande within the United States; nor does the United States in any way concede the establishment of any general principle or precedent by the concluding of this treaty. The understanding of both parties is that the arrangement contemplated by this treaty extends only to the portion of the Rio Grande which forms the international boundary, from the head of the Mexican Canal down to Fort Quitman, Texas, and in no other case.

"ARTICLE VI.

"The present convention shall be ratified by both contracting parties in accordance with their constitutional procedure, and the ratifications shall be exchanged at Washington as soon as possible.

"IN WITNESS WHEREOF, the respective plenipotentiaries have signed the convention both in English and Spanish languages, and hereunto affixed their seals.

"Done in duplicate at the City of Washington, this 21st day of May, one thousand nine hundred and six.

"ELIHU ROOT. (Seal.)
"JOAQUIN D. CASASUS." (Seal.)

§ 1220. **Treaty of May 21, 1906, with Mexico—Effect of treaty.**—The effect of the treaty of May 21, 1905, with Mexico,[1] relative to the division of the waters of the Rio Grande River, is to bind the United States to build the project mentioned in the treaty and to annually deliver to Mexico at the point named 60,000 acre-feet named in accordance with the schedule as set forth in Article II. This is approximately the amount of water that has been used for about three hundred years in the old Mexican Canal

[1] For full text of treaty, see Sec. 1219.

prior to 1880, since which time irrigation by American citizens on the headwaters in Colorado has caused a deficiency in the low-water flow of the Rio Grande River at the head of the canal. Upon the other hand, in return for the United States furnishing to Mexico the 60,000 acre-feet of water, the Mexican Government has waived all other claims to the water in the Rio Grande above the town of Fort Quitman, Texas, and also all claims for past damages for the shortage of water. As the United States Government is put to the entire expense of constructing the irrigation project, the Mexican share is only a fractional part of the whole flow of the river. The lands for which the Government contemplates furnishing the water under this project are 180,000 acres—110,000 acres in New Mexico, 45,000 acres in Texas, and 25,000 acres in Mexico.[2]

The Secretary of the Interior holds that he may make withdrawals of public land from the operation of the Right of Way Act of March 3, 1891.[3] This was upon the ground that whether the United States has a prior or superior and paramount claim to the waters of the Rio Grande River to the extent necessary to enable it to keep its obligations with the Republic of Mexico with reference to the delivery of such waters as provided for under the treaty of May 21, 1906,[4] is a question not within the competency of the Land Department to determine. And the Secretary of the Interior will not embarrass the decision of such question, nor the fulfillment of the nation's obligations under such treaty by approving applications for rights of way under the Act of March 3, 1891, which rest upon the appropriation of such waters under State laws and their proposed diversion to other and adverse uses.[5] And the Secretary, upon the subject, said: "After a most painstaking consideration of the entire subject with reference to the situation presented, the department can not see its way clear to approve this application. It may, for the purpose of this case, be admitted that under ordinary circumstances the Secretary of the Interior is without discretion to withhold his approval of an application filed conformably to the Act of March 3, 1891. But manifestly here is a situation unusual and

2 See for Rio Grande Project, 3d Annual Report Reclamation Project, pp. 395-426; 6th Annual Report, *Id.*, pp. 220-224.

3 For the Act of March 3, 1891, and its construction, see Secs. 937-950.

4 For the terms of the treaty, see Sec. 1219.

5 Francis W. Bosco, 39 Land Dec. 104.

critical, which demands the exercise of such discretion. The paramount rights and interests of the United States are vitally involved in this proceeding. No question of the authority of the United States can well be urged in this proceeding. The power to make treaties with foreign nations has been delegated by the States to the Nation, and is exclusive; and it is well settled that where such a power has been delegated the grant carries with it all subsidiary powers necessary to its exercise. Moreover, the question is one not within the competency of the Land Department to determine, and this is sufficient reason to justify that department in refusing to take any action which might in any way embarrass the United States in fulfilling its treaty obligations or further complicate a question it is without right or jurisdiction to decide. It is not overlooked that the contention is made upon this record, and was presented at length at the oral hearing that the diversion of water necessary to carry the Wagon Wheel Gap Project to completion will in nowise interfere with the storage of the necessary waters by the United States Engle dam, to enable it to keep both its treaty obligations with the Republic of Mexico and its contractual obligations with the water users' associations above referred to. The department is by no means convinced that this is true, and in the absence of such conviction it is believed to be the duty of the Secretary of the Interior to exercise such discretion as is necessary to protect the interests of the United States."

In construing the scope of the National Reclamation Act,[6] in connection with the treaty of May 21, 1906,[7] the United States Circuit Court of Appeals recently said:[8] "By the Act of February 25, 1905,[9] the provisions of the Reclamation Act of June 17, 1902, were extended to the portion of the State of Texas bordering upon the Rio Grande which could be irrigated from a dam constructed near Engle in the Territory of New Mexico. This Act was passed for the purpose of enabling the United States to carry into effect the terms of a proposed treaty or convention with Mexico, which was afterward signed on May 21, 1906.[10] This treaty, or convention, provided that: 'After the completion of the proposed storage dam

[10] 34 Stat. 2953.

near Engle, New Mexico, and the distributing system auxiliary thereto, and as soon as water shall be available in said system for the purpose, the United States shall deliver to Mexico a total of 60,000 acre-feet of water annually in the bed of the Rio Grande at the point where the head works of the Acequia Madre, known as the Old Mexican Canal, now exist above the City of Juarez, Mexico.'

"By the Act of March 4, 1907,[11] an appropriation of $1,000,000 was made available as needed, and to be expended under the direction of the Secretary of the Interior, for the construction of the above-mentioned dam in connection with the irrigation project on the Rio Grande. By the Act of June 12, 1906,[12] the provisions of the Reclamation Act were extended so as to include and apply to the State of Texas, where there never has been any public lands of the United States, but where such streams as the Pecos and the Rio Grande, rising in New Mexico, a Territory of the United States, and flowing into Texas, have become important factors in the irrigation and reclamation of the arid lands of that State."

# CHAPTER 64.

## INTERSTATE CONTROL.

§ 1221. Scope of chapter.
§ 1222. Definition—Subject in general.
§ 1223. The equitable rights of respective States.
§ 1224. The Kansas-Colorado case.
§ 1225. Rights of appropriators—Adjoining States are not affected by State lines.
§ 1226. Rights of riparian owners in the respective States are not affected by State lines.
§ 1227. Effect of the conflict of laws of interstate streams.
§ 1228. The appropriation of the waters in one State for use in another—Interstate streams.
§ 1229. The appropriation of waters in one State for use in another—State streams.
§ 1230. The division of interstate waters involves no question of international law.
§ 1231. Late statutes relating to interstate waters.
§ 1232. The pollution of interstate streams by a State.
§ 1233. Jurisdiction of courts—Original jurisdiction of the Supreme Court of the United States.
§ 1234. Jurisdiction of courts—Federal and State.

**§ 1221. Scope of chapter.**—In this chapter we will discuss, in all its phases, the subject of the rights to waters flowing in what are known as interstate streams, and also the right to conduct the waters from the streams or other bodies from one State for the use in another.

**§ 1222. Definition—Subject in general.**—Interstate waters are those which flow through or bound two or more States.[1] When the first edition of this work was published in 1893, there was no law upon the subject of the application of the Arid Region Doctrine of appropriation, either statutory or case, as specially applied to interstate waters.[2] In fact, nearly all the law upon the subject has been developed within the last ten years. Owing to the fact that all of

[1] For the right to appropriate water from interstate streams, see Sec. 664.

[2] For the Arid Region Doctrine of appropriation, see Chap. 31, Secs. 585-594.

the important streams and other bodies of water of this country are not confined within the boundaries of any particular State, the conflicting interests of the respective States through which or adjoining which they flow have led to a number of interesting questions. These conflicts have arisen not only because of the physical fact of the situation of these waters in respect to the different States, but also on account of the difference in their laws governing waters flowing in the respective jurisdictions. This is true as relating to the claim of one State upon the upper reaches of a river to divert and use, if necessary, all of the water of the river, under its laws adopted in accordance with the Arid Region Doctrine of appropriation, before it reaches the boundary line of an adjoining State, which claims the right to the unimpaired flow of the water of the river under the common law of riparian rights, as was especially illustrated in the case of Kansas v. Colorado.[3]

§ 1223. **The equitable rights of respective States.**—It must be borne in mind that a river which takes its head in one State and flows down to and through another State does not end at the boundary line of the States, and a new river begin at that point, but it is one and the same stream throughout its entire course. As was said by Judge Hallett in Hoge v. Eaton,[1] "Water is essential to human life in the same degree as light and air, and no bounds can be set to its use for supplying the natural wants of man other than the mighty barriers which the Creator has made on the face of the earth." Therefore, regardless of the form of its laws governing the waters flowing within its boundaries, each State has rights in and to the waters of such a river which should be respected by the other State. And, while the upper State through which such a river flows has the undoubted right to make such a reasonable use of its waters, even to the extent that the State below may be somewhat damaged thereby, provided that the upper State does not take the waters in excess of what will give to it an equitable apportionment of the benefits of the river, it can not divert and use all of the water

[3] See Sec. 1224.

[1] 135 Fed. Rep. 411, 141 Fed. Rep. 64, 72 C. C. A. 74.

See, also, Kansas v. Colorado, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 665, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552, and the portion of the opinion cited in the next section.

of the river, and thereby deprive the lower State of its entire benefits. In fact, the law upon this subject, as it stands today, is that the right to the use of the waters of an interstate river, by the respective States through which it flows, is analogous to the right of individuals to the use of the waters of a stream flowing by or through their respective lands, under the common law doctrine of riparian rights, as modified by some of the Western States, and discussed in a previous portion of this work.[2] While the upper owner on the stream may take out a considerable portion of the water for irrigation, or for other beneficial uses, even to the extent of considerable injury to the rights of the lower owner, he has no right to take all of the water, and thus deprive the lower proprietor of all the benefits of the stream. And, upon the other hand, the lower proprietor, although his rights may be injured to a considerable extent by such a use of the water by the upper owner, must look for relief by way of an action for damages against the upper owner, and his claim to the right of the undiminished flow of the stream will not be sustained by the courts by way of injunctive relief against any diversion at all by the upper owner.[3]

It must not be understood that the equitable division of the waters of an interstate stream means the equal division of the natural flow of the stream between the States through which it runs. The lower States may not need as much of its waters as the upper States for the reason that the upper Sates are more arid and have less rainfall than the lower States. Then, again, the lower States may be benefited more by the subterranean waters which flow under the surface of the soil, and caused to a great extent by the use of the water by the upper States for irrigation. This is illustrated in the Kansas-Colorado case. Colorado has an arid climate, the land is of a much higher altitude than that of Kansas, and the rainfall is much less than Kansas, and what little rainfall there is in Colorado, on account of the slope of the lands, runs off rapidly to the lower lands in Kansas; and, again, by the use of the water for irrigation in Colorado, the lands in Kansas are greatly benefited by the underflow caused thereby. Hence, to say that the waters of the natural flow of the Arkansas River should be equally divided between the two States would not be an equitable division of its waters.

2 For the modified doctrine of riparian rights, see Secs. 505-515.

3 For right to injunctive relief, see Chap. 81.

§ 1224. **The Kansas-Colorado case.**—In the history of water right litigation, no case has created more interest or has been of so great importance, from a Western standpoint, as the decision handed down on May 13, 1907, in the original action brought in the Supreme Court of the United States in the case of State of Kansas v. the State of Colorado.[1] While that decision bore directly on that particular case, and also involved a number of questions under which it has been already cited in previous portions of this work, being decided by the highest court of the land, it established a precedent that will be followed in all future controversies as to the rights of States to use the waters of an interstate stream in the reclamation of arid land. This action was brought by the State of Kansas against the State of Colorado and a large number of private corporations, to prevent such a use of the waters of the Arkansas River in Colorado as would cause such a depletion of the flow of the waters of the river through the State of Kansas that it would be an injury to the interests of the State of Kansas and her people. The right of the United States to intervene on the ground of the superior right of the National Government to control the flow of the river as a part of the system or scheme for the reclamation of arid lands, under the National Reclamation Act,[2] was denied by the Court without prejudice to the right of intervention only if necessary to preserve or improve the navigability of the river. The right of the State of Kansas to bring the suit was sustained on the ground that the question involved was a matter of State interest, affecting the general welfare of the State, and that in bringing such an action the State was not merely representing individual citizens. Also, that it does not follow that because Congress can not determine the rule of law which shall control the waters flowing through the respective States, or because neither State can enforce its own policy upon the other, that the controversy ceases to be one of a justiciable nature, or that there is no power which can take cognizance of the controversy and determine the relative rights of the two States. Indeed, the dis-

1 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 665; *Id.*, on demurrer, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552.

2 For the National Reclamation Act, see Chap. 65, Secs. 1235, 1286; 7 Fed. Stat. Ann., 1905, p. 1098; 32 Stat. L. 388. See Sec. 8, wherein it is provided, "and nothing herein shall in any way affect any right of any State or of the Federal Government, or of any land owner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof."

agreement, coupled with its effect upon the stream passing through the two States, made the matter in controversy a subject for investigation and determination by the Supreme Court. And, referring to the case of Missouri v. Illinois, which case involved the question of the pollution by one State of an interstate stream, the Court said. "In other words, through these successive disputes and decisions this Court is practically building up what may not improperly be called interstate common law."

A very original and somewhat unique contention upon the part of Colorado was that the Arkansas River in that State terminated at the State line, and that the Arkansas River in Kansas was a new river, beginning below the State line. But upon this subject Mr. Justice Brewer, in speaking for the unanimous Court, said: "Equally untenable is the contention of Colorado that there are really two rivers, one commencing in the mountains of Colorado and terminating at or near the State line, and the other commencing at or near the place where the former ends, and from springs and branches starting a new stream to flow onward through Kansas and Oklahoma toward the Gulf of Mexico. From time immemorial the existence of a single continuous river has been recognized by geographers, explorers, and travelers. That there is a great variance in the amount of water flowing down the channel at different seasons of the year and in different years is undoubted; that at times the entire bed of the channel has been in places dry is evident from the testimony. In that way it may be called a broken river. But this is a fact common to all streams having their origin in a mountainous region, and whose volume is largely affected by the melting of the mountain snows."

But the great question involved in the case was that of the right of the people of Colorado to take the water from this interstate river for the purpose of irrigating arid lands to such an extent that it would thereby diminish the flow of the river through the State of Kansas, and so cause some injury to the riparian owners in the State of Kansas. This question involved, first, the question whether the common law rule of riparian rights or the rule under the Arid Region Doctrine of appropriation should govern; and, second, if the use of the waters for irrigation by the State of Colorado was lawful, to what extent might that State go in such a use. Upon this question the Court held that it was for each State to determine for

itself whether the common law rule or the doctrine of appropriation should govern the waters within its territory, and that Congress can not enforce either rule upon any State. Neither can either State legislate for or impose its own policy upon the other. But the decision also held that since Kansas itself recognized the right of appropriation of the waters of the natural streams for the purpose of irrigation, she could not complain of the adoption of that doctrine by the State of Colorado. Upon the second phase of the question as to the extent to which the appropriation and use might be made, the Court held that there is one cardinal rule underlying all the relations of the States to each other, and that is equality of right, and that the Court must "so adjust the dispute upon the basis of equality of rights as to secure, as far as possible, to Colorado the benefits of irrigation, without depriving Kansas of the like beneficial effect of a flowing stream." That the Court is called upon to settle the dispute in such a way as will recognize the equal rights of both and at the same time to establish justice between them. The Court then found directly that, owing to the diversion of the waters of the river in Colorado, there had been a perceptible injury to the portions of the Arkansas Valley in the State of Kansas, and particularly to those portions closest to the Colorado line; that the result of that appropriation, upon the other hand, had been the reclamation of large areas in Colorado, and the transforming of thousands of acres of arid lands into fertile fields, and rendering possible their occupation and cultivation when otherwise they would have continued barren and unoccupied. And, as previously stated in the opinion, "When we compare the amount of this detriment with the great benefit which has obviously resulted to the counties in Colorado, it would seem that the equality of right between the two States forbids any interference with the present withdrawal of water in Colorado for the purposes of irrigation." The Court further held that at the same time it was obvious that if the depletion of the waters of the river in the State of Colorado continues to increase, there will come a time when Kansas may justly say that there is no longer an equitable division of the benefits, and may rightfully call for relief against the action of Colorado, its corporations and citizens, in appropriating the waters of the Arkansas River for irrigation purposes. The decree accordingly dismissed the bill of the State of Kansas as against all defendants without prejudice to the

right of Kansas to institute new proceedings whenever it shall appear that, through a material increase in the depletion of the waters of the Arkansas by Colorado, its corporations or citizens, the substantial interests of Kansas are being injured to the extent of destroying the equitable apportionment of benefits between the two States resulting from the flow of the river.

Therefore, as to the rights in and to the waters of interstate streams the law of this case, summed up in a concise statement, seems to be that each State through which an interstate river runs is entitled to make reasonable use of its waters, even to the extent that the State below may be damaged to a considerable extent thereby, provided the upper State does not divert the waters in excess of what will give it an equitable apportionment, all facts considered, of the benefits of the river, which apportionment is not confined to an equal division between the two States, or the respective States, of the entire natural flow of the stream.

§ 1225. **Rights of appropriators—Adjoining States are not affected by State lines.**—The rights of the respective States and of the citizens thereof in and to the use of waters of an interstate stream depend somewhat upon the laws of those States governing waters. If the common law is the only law of waters governing two adjoining States through which an interstate river flows, or if both States have adopted the Arid Region Doctrine of appropriation, the right to the use of the waters of an interstate stream is not affected by the boundary line which divides the States. But where there is conflict of the laws relative to the subject of water, that is to say, the lower State upon the stream having only the common law of riparian rights, and the upper State having adopted the Arid Region Doctrine of appropriation, the rule is different, and will be discussed in a subsequent section of this chapter.[1]

The rights as between appropriators of the waters of an interstate stream are not affected by the boundary line between the two States. As was said by a Wyoming case:[2] "The separation of lands capable of irrigation from such streams is of no consequence."[3]

1 For effect of conflict on interstate streams, see Sec. 1227.

2 Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939.

3 See, also, Howell v. Johnson, 89 Fed. Rep. 556.

As was said in a recent Idaho case:[4] "The relative rights, therefore, of appropriators of waters of an interstate stream are the same, whether the appropriations are all in the same State or some in one State and the balance in another State."[5] "The right to divert running waters for irrigating lands in an arid country is not controlled or affected by political divisions. It is the same in all States through which the streams may pass."[6]

[4] Taylor v. Hulett, 15 Idaho 265, 97 Pac. Rep. 37, 19 L. R. A., N. S., 535.

[5] See Anderson v. Bassman, 140 Fed. Rep. 10, 140 Fed. Rep. 14, where a decree was rendered in California settling the rights of the respective appropriators both in California and Nevada.

Cline v. Stock, 71 Neb. 70, 98 N. W. Rep. 454, 102 N. W. Rep. 265, where in a case tried in Nebraska and where the plaintiff's mill where he used the water was in Kansas, the Court said that this fact "ought not to deprive him of any rights which the laws of our State give to a lower riparian owner. Any attempt of our legislature to discriminate against him as compared with the resident mill owners would be promptly declared unconstitutional by the Federal courts. Any such determination by the courts would seem to be equally obnoxious to the Federal Constitution. It seems clear that the plaintiff should be allowed the same standing as one of our own citizens with a mill on this side of the State line."

See, also, Conant v. Deep Creek etc. Irr. Co., 23 Utah 627, 66 Pac. Rep. 188, 90 Am. St. Rep. 721, where it is said: "It is a recognized rule of law that a person who has appropriated water at a certain point in a stream is entitled to have so much of the waters of said stream as he has appropriated flow down to him to the point of his diversion; and, if the settlers higher up on the stream, in another State, whose appropriations are subsequent, divert any of the waters of the stream which have been so first appropriated, then the courts of the latter state will protect the first settler in his rights. The Idaho courts, therefore, have ample and complete jurisdiction to protect the rights of respondents to have the waters which they have appropriated, and which they divert in Utah, flow through the channel of the stream, and to limit and determine the rights of the Idaho appropriators with reference thereto."

"The fact of a State line intersecting the stream does not, within itself, impinge upon the right." Rickey etc. Co. v. Miller & Lux, 152 Fed. Rep. 11, 81 C. C. A. 207; affirming *Id.*, 146 Fed. Rep. 574; affirmed, 218 U. S. 258, 54 L. Ed. 1032, 11 Sup. Ct. Rep. 11.

See, also, Rickey Land etc. Co. v. Wood, 152 Fed. Rep. 22, 81 C. C. A. 218; affirmed, 218 U. S. 258, 54 L. Ed. 1032, 31 Sup. Ct. Rep. 11; Bigelow v. Draper, 6 N. D. 152, 69 N. W. Rep. 570; Turley v. Furman, —— N. M. ——, 114 Pac. Rep. 278; Lamson v. Valies, 27 Colo. 201, 61 Pac. Rep. 231; Taylor v. Hulett, 15 Idaho 265, 97 Pac. Rep. 37, 19 L. R. A., N. S., 535.

[6] Hoge v. Eaton, 135 Fed. Rep. 411, 141 Fed. Rep. 64, 72 C. C. A. 74.

It was also held in the Kansas-Colorado case [7] that the determination of the respective rights of the States of Kansas and Colorado to the benefit of the waters of the Arkansas River can not be affected by any theory that, because at times and in some places the entire bed of the channel was dry, there were two rivers, one commencing in the mountains of Colorado and terminating at or near the State line, and the other commencing at or near the place where the former ends, and from springs and branches starting as a new stream to flow onward through Kansas and Oklahoma toward the Gulf of Mexico, the Court holding that the equitable division of the waters of an interstate stream between the respective States through which or adjoining which the stream flows was the only true rule.[8]

The Supreme Court of the United States, in a decision rendered in 1911,[9] held that that Court, in the absence of Montana legislation to the contrary, will assume that prior appropriators of the waters of an interstate stream at a point in Wyoming could acquire rights as against subsequent or junior appropriators of the waters of the same stream in Montana, enforceable in the latter State. And Mr. Justice Holmes, in rendering the decision of the Court upon this subject, after referring to the common law rule, said: "There is even stronger reason for the same assumption here. Montana can not be presumed to be intent on suicide, and there are as many, if not more, cases in which it would lose as there are in which it would gain, if it invoked a trial of strength with its neighbors. In this very instance, as has been said, the Big Horn, after it has received the waters of Sage Creek, flows back into that State. But this is the least consideration. The doctrine of appropriation has prevailed in these regions probably from the first moment that they knew of any law, and has continued since they became territory of the United States. It was recognized by the statutes of the United States, while Montana and Wyoming were such territory,[10] and is recognized by both States now. Before the State lines were drawn, of course, the principles prevailed between the lands that were

[8] See Sec. 1223.

[9] Bean v. Morris, 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; affirming same case below, 159 Fed. Rep. 651, 86 C. C. A. 519.

[10] Rev. Stat., Secs. 2339, 2340; U. S. Comp. Stat., 1901, p. 1437; Act of March 3, 1877, Chap. 107; 19 Stat. L. 377, U. S. Comp. Stat., 1901, p. 1548.

destined to be thus artificially divided. Indeed, Morris had made his appropriation before either State was admitted to the Union. The only reasonable presumption is that the States, upon their incorporation, continued the system that had prevailed theretofore, and made no changes other than those necessarily implied or expressed."

**§ 1226. Rights of riparian owners in the respective States are not affected by State lines.**—As is the case with the rights of appropriators only in different States taking water from an interstate stream not being affected by State lines as to their respective rights, so also it is the case in those States which only have the common law of riparian rights by governing the waters of the streams. In a recent case decided by the Supreme Court of the United States [1] Mr. Justice Holmes referred to the common law rule in the following language: "But with regard to such rights as came into question in the older States, we believe that it always was assumed, in the absence of legislation to the contrary, that the States were willing to ignore boundaries, and allowed the same rights to be acquired from outside the State that could be acquired from within." [2] It therefore follows that where there is but one rule of law governing the waters of the respective States through which an interstate stream flows, the right to the use of the waters of such stream is not affected by the boundary line which divided the States. Where, however, there is a conflict of laws, the rule is somewhat different, as will be discussed in the next section.

A decision pertinent to the subject under discussion was rendered by the United States Circuit Court of Appeals for the second circuit

1 Bean v. Morris, 121 U. S. 165, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; affirming same case below, 159 Fed. Rep. 651, 86 C. C. A. 519.

2 Citing Mannville etc. Co. v. Worcester, 138 Mass. 91, 52 Am. Rep. 261; Thayer v. Brooks, 17 Ohio 489, 49 Am. Dec. 474; Slack v. Walcott, 3 Mason 508, 516, Fed. Cas. No. 12,932; Stillman v. White Rock Mfg. Co., 3 Woodb. & M. 538, Fed. Cas. No. 13,446; Rundell v. Delaware & R. Canal Co., 1 Wall. Jr. 275, Fed. Cas. No. 12,139, 14 How. 80, 14 L. Ed. 335; Foot v. Edwards, 3 Blatchf. 310, Fed. Cas. No. 4,908; Wooster v. Great Falls Mfg. Co., 39 Me. 246, 253; Armendiaz v. Stillman, 54 Tex. 623; State v. Lord, 16 N. H. 357; Howard v. Ingersoll, 17 Ala. 780, 793; reversed, 54 U. S. 13 How. 381, 14 L. Ed. 189; Ruckman v. Green, 9 Hun, 225.

in the case of Pine v. Mayor etc. of the City of New York.[3] The Court held that the State of New York could not, under its power of eminent domain, authorize water to be taken from a non-navigable stream having its source in New York for the purpose of supplying a municipal corporation at a distance therefrom if the effect would be to materially diminish the flow of the stream to the injury of the rights of riparian owners on the same stream in the State of Connecticut. It is further held that a Connecticut riparian owner might maintain a suit in equity to enjoin the diversion of the water from the stream in New York State to his injury, although the diversion was made under an attempted exercise of the right of eminent domain, and that he was not bound to seek his remedy in compensation in the eminent domain proceedings. This decision was rendered by two of the judges of the Court, with one dissenting. The effect of the decision, however, is left in considerable doubt by reason of the fact that the case was appealed to the Supreme Court of the United States, and there the decision was reversed on other grounds.[4] The Supreme Court of the United States withheld any opinion as to the right as to the diversion of the water, but held that the decree of the lower court was erroneous in the measure of relief given, even if it were assumed that the diversion of the water violated a legal right of the complainant. Therefore, as far as the decision of the lower court is concerned, it is not of much weight as an authority.

§ 1227. **Effect of the conflict of laws on interstate streams.**—The equitable division of the waters of interstate streams between the States through which or adjoining which such streams flow being the rule of law adopted by the Supreme Court of the United States as governing the subject, in what that Court terms the "practically building up what may not be improperly called interstate common law,"[1] as discussed in the preceding sections,[2] it must therefore follow that this rule is not affected by the conflict of the laws of the respective States governing the waters flowing within

[3] 112 Fed. Rep. 98, 50 C. C. A. 145.

their respective jurisdictions. Although each State has the power to adopt such laws as it sees fit to govern the waters within its own territory, no State has the power to enact such laws for another State. As said by Mr. Justice Brewer in rendering the opinion of the unanimous Court in the Kansas-Colorado case: "Neither State can legislate for nor impose its own policy upon the other." So, as far as this rule of equitable division of the waters of an interstate stream is concerned, it makes no difference as to whether or not one of the States has utterly repudiated the common law of riparian rights and adopted the Arid Region Doctrine of appropriation and another State relies wholly upon the common law of riparian rights. The rule of equitable division between the two States must prevail in any event. This rule of law is illustrated by the Kansas-Colorado case, where the Arkansas River takes its rise in the mountains of Colorado, where the rule of law governing the waters of the State is that of the Arid Region Doctrine of appropriation only, and where the stream flows into the State of Kansas, where it was contended that the prevailing rule of law was the common law doctrine of riparian rights, but which State, in fact, had both systems of laws governing waters.

Again, the rule is illustrated in the case of Anderson v. Bassman, where the stream in question takes its rise in the high Sierras in California, which State has both rules of law governing its waters, the doctrine of appropriation and the common law of riparian rights, and where the stream flows into the State of Nevada, which State has utterly repudiated the common law of riparian rights and has adopted the Arid Region Doctrine of appropriation as its only rule of law governing the waters flowing within its boundaries.[3]

Neither does the fact that one of the States has dedicated all the waters flowing within its boundaries, either by constitutional provisions or by statutory enactment,[4] to the State and to its citizens affect the right of the division of the waters of interstate streams

[3] Anderson v. Bassman, 140 Fed. Rep. 14, where it was held that riparian owners of lands on an interstate stream in California and appropriators of the waters from the same stream in Nevada were equally protected in the rights given them by the laws of the respective States, both subject to the limitation that a reasonable quantity of water only for the beneficial use to which it was devoted should be taken.

[4] For the dedication of its waters to the State, see Secs. 372-389.

upon an equitable basis.[5] As was stated by Judge Hallett in the case of Hoge v. Eaton:[6] "The idea of an exclusive right in the people of a State to divert its running waters, to the injury of riparian owners in another State, must be equally untenable. Indeed, the doctrine of riparian ownership and the use of running water is not subject to political boundaries. Between hostile States the doctrine may not be recognized, but any such repudiation would be simply *vis major*. Between States dwelling in peace and concord, as are the States of our Union, the equal right of the inhabitants of each State must always be recognized."[7]

The validity of an appropriation or other use of the waters of an interstate stream is governed by the laws of the State where the appropriation or use is made.[8] A valid appropriation once made in one State will be so recognized and upheld by the courts of another State.[9]

**§ 1228. The appropriation of the waters in one State for use in another—Interstate streams.**—It often happens that, while the use of the waters of an interstate stream is in one State, in order to obtain the necessary fall to conduct the water to the place of use, the diversion must be made in another State. Where this is the case no distinction can be made. The drawing water through a canal from one State for use in another from a stream which naturally flows from the former to the latter is not necessarily a violation

[5] Drawing water through a canal from one State into another for the purpose of irrigating lands in the latter State is not necessarily a violation of the constitution, laws, or policy of the former State, although the State reserves all the waters for itself and its citizens, so far as they are necessary for the beneficial uses to which the State and its citizens apply them. Judge Sanborn, speaking for the Circuit Court of Appeals, Eighth Circuit, in Perkins County, Nebraska v. Graff, 114 Fed. Rep. 441, 52 C. C. A. 243.

[7] See, also, Anderson v. Bassman, 140 Fed. Rep. 10, 14; Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939, where upon streams flowing from a State which recognized riparian rights into a State which denied them, the riparian rights in the former State were upheld.

[8] Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939; Morris v. Bean, 146 Fed. Rep. 432; affirming *Id.*, 159 Fed. Rep. 651, 86 C. C. A. 519; affirmed, 221 U. S. 485, 55 L. Ed. 821, 31 Sup. Ct. Rep. 703; Anderson v. Bassman, 140 Fed. Rep. 14.

[9] *Id.*

of the constitution, laws, or policy of the former State, although that State reserves all its waters for itself and citizens.[1]

There is a rather anomalous condition of affairs between Colorado and New Mexico involving appropriations from interstate streams where the point of diversion was in Colorado and the lands to be irrigated in New Mexico. In a case decided in 1900 by the Supreme Court of Colorado,[2] it was held that the statute of Colorado providing for the statutory adjudications of water rights for irrigation purposes had no application to cases where the point of diversion is within the State but the lands to be irrigated lie without the territorial limits, and hence in a proceeding under such statutes water will not be decreed to irrigate New Mexico lands. Again, in a case decided in 1911 by the Supreme Court of New Mexico,[3] after citing the Colorado case above referred to, it was held that a project to irrigate lands in New Mexico from the waters of a natural stream running from Colorado into New Mexico, when the point of diversion, the headgate, and about six miles of the canal are in Colorado, is not within the jurisdiction of the Territorial Engineer of New Mexico, and that he is without authority to issue a permit for such project.

§ 1229. **The appropriation of waters in one State for use in another—State streams.**—The right to divert the waters of a stream or other body of water which is not interstate, but wholly confined within the boundaries of a State, for use in another State by the citizens of either, presents a different phase of interstate control from that discussed in the preceding sections of this chapter respecting the waters of interstate streams. All authority seems to be against the proposition that this may be done, even where there is not a statute of the State wherein the stream or other body of water flows or lies, prohibiting such a diversion and use.[1] This right of ownership and control of all the waters of a State is in the State itself.[2] This is true either with or without a statutory enactment by the State either dedicating its waters to the State or making it

2 See Secs. 507, 593.

unlawful for any person or corporation to divert and carry its waters into another State for use therein. But where such a statutory enactment is provided, it makes the case so much the stronger, and such a diversion, transportation, and use can not be made. This law, as it seems to us, has been settled by the Supreme Court of the United States in the recent case of Hudson County Water Company v. McCarter,[3] and although it is stated by Mr. Justice Holmes in rendering the opinion of the Court that "the problems of irrigation have no place here," the principles laid down in the case apply as much to cases where the diversion and use is made for the purpose of irrigation as for culinary and domestic purposes of a great city, as was the fact in the case at bar.

The facts in that case were that the legislature of the State of New Jersey in 1905 enacted among other provisions of the Act the following: "It shall be unlawful for any person or corporation to transport or carry, through pipes, conduits, ditches, or canals, the waters of any fresh-water lake, pond, brook, creek, river, or stream of this State into any other State for use therein."[4] After the passage of this statute the defendant made a contract with the City of New York to furnish adequate water for the burrough of Richmond, and of not less than three million gallons a day. Thereupon the action was brought praying that, pursuant to the above Act and otherwise, the defendant be enjoined from carrying the waters of the Passaic River out of the State. An injunction was issued by the chancellor,[5] the decree was affirmed by the court of errors and appeals,[6] and the defendant company, upon constitutional grounds, then appealed the case to the Supreme Court of the United States, and the decree was affirmed by that Court on all grounds. It was held by the latter Court that a State, even without statutory enactment, "as quasi-sovereign and representative of the interests of the public, has a standing in court to protect the atmosphere, the water, and the forests within its territory, irrespective of the private own-

[6] *Id.*, 70 N. J. Eq. 695, 65 Atl. Rep. 489.

ers of the land most immediately concerned." Therefore, no agreement of private owners can sanction the diversion of an important stream outside of the boundaries of the State in which it flows. The Court further held that the police power of a State justifies the enactment forbidding such a diversion and use, and that a riparian owner under the same may be prevented from diverting the waters of a stream of such State into any other State for use therein; that neither due process of law nor the equal protection of the laws is denied by such a statutory enactment; that the obligations of a contract to divert the waters of such a stream into another State, for use therein, are not unconstitutionally impaired by the enactment of such a statute; that the commerce between different States is not unlawfully interfered with thereby, and that the privileges of the citizens of the State owning such waters are not denied to the citizens of other States by such an enactment.

There is no principle of law, as far as we are able to distinguish, why the same principles as laid down in the above case should not equally apply to a case where the diversion and use of the water was made for the purpose of the irrigation of land as well as to a case where they were for municipal purposes.

**§ 1230. The division of interstate waters involves no question of international law.**—The equitable division of the waters of interstate streams between the respective States through or by which they flow involves no question of international law, as is the case of the division of the waters of streams which flow through or bound different independent countries. Under Article I, Section 10 of the Constitution of the United States, it is provided: "No State shall, without the consent of Congress, . . . enter into any agreement or compact with another State," etc. Therefore, "they can not enter upon diplomatic relations, and make treaties."[1] "Bound hand and foot by the prohibition of the Constitution, a complaining State can neither treat, agree, nor fight with its adversary, without the consent of Congress."[2] Therefore, a resort to the judicial power is the only means for adjusting the rights to the waters of

[1] Kansas v. Colorado, on demurrer, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552; *Id.*, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

[2] Rhode Island v. Massachusetts, 37 U. S. 12 Pet. 657, 9 L. Ed. 1233.

interstate streams between the different States entitled thereto. And, again, the idea that there can arise any international question in the case of the use of the waters of an interstate stream by the different States of this country, through which or adjoining which such a stream flows, can not be maintained.[3]

§ 1231. **Late statutes relating to interstate waters.**—Section 8 of the National Reclamation Act provides: "And nothing herein shall in any way affect any right of any State or of the Federal Government, or of any land owner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof." [1]

The legislatures of a number of the States in 1911 evidently fearing that their rights were not being sufficiently protected in the waters of interstate streams, passed a number of Acts and resolutions regarding the same.

The legislature of California, by the Act of April 8, 1911, amending Section 1410 of the Civil Code,[2] provided that: "All water or the use of water within the State of California is the property of the people of the State of California." And by the Act approved March 3, 1911,[3] it was further provided: "It shall be unlawful for any person, firm, association, or corporation to transport or carry through pipes, conduits, ditches, tunnels, or canals, the waters of any fresh water lake, pond, brook, creek, river, or stream of this State into any other State, for use therein." Again, by the joint resolution, No. 8,[4] the State of California claimed to own the major portion of the waters of Lake Tahoe, lying on the boundary of California and Nevada, and protested against the diversion of said waters by the United States Reclamation Service for use in the State of Nevada.[5]

[3] Howell v. Johnson, 89 Fed. Rep. 556; Kansas v. Colorado, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552; *Id.*, 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 665.

[4] Stats. & Amdts., 1911, Chap. 18, p. 1550.

[5] See, also, on this subject, the laws of California—An Act to prevent the waters of the State from being carried into other States.

During the same year the legislature of Nevada, by a retaliatory resolution, denied the claim of California above set forth, and laid claim to the waters in question, for use in that State.[6]

The State of Oregon the same year passed an Act to the effect that the State Engineer may reject all applications for water for use in the State which did not allow diversions for use in Oregon.[7]

The legislature of Wyoming in the year 1911 passed an Act authorizing the Attorney General of that State to take all steps necessary to protect the rights of Wyoming in and to the waters of interstate streams.[8]

§ 1232. **The pollution of interstate streams by a State.**—There is another subject kindred to that of the diversion and use of waters of interstate streams, by the respective States thereon, which needs a short discussion in this place, and that is the right of an upper State to the use of such streams as will pollute the waters thereof to such an extent that they will remain polluted, when they reach the boundaries of the States below, and to their injury. The rule of law upon this subject, as laid down by the Supreme Court of the United States, is that the threatened daily transportation by one State, by artificial means and through an unnatural channel, of large quantities of sewage and of accumulated deposits which will poison the water supply of the inhabitants of a lower State, and injuriously affect that portion of the bed or soil of the river which lies within its territory, entitles a lower State to maintain a suit for equitable relief, in advance of any actual injury sustained thereby.[1] But it was further held that, at the hearing of such a case the nuisance must be made out upon determinate and satisfactory evidence, that it must not be doubtful, and that the danger must be shown to be real and immediate. Therefore, at the determination of the case of the State of Missouri v. State of Illinois it was held that the discharge into the Mississippi River through an artificial drainage channel of the sewage of the City of Chicago, mixed with a large

volume of pure water from Lake Michigan, will not be enjoined by the Federal Supreme Court on complaint by the State of Missouri that the result of such an action is to poison the water supply of its inhabitants, though disclosing an increase in deaths from typhoid fever in St. Louis, leaves it doubtful whether the typhoid bacillus can and does survive the journey and reach the intake of St. Louis in the Mississippi, and shows other possible sources of infection in the discharge of sewage above the St. Louis intake from other towns and cities, some of which are situated in Missouri.[2]

**§ 1233. Jurisdiction of courts—Original jurisdiction of the Supreme Court of the United States.**—The United States Supreme Court has original jurisdiction in a controversy between States, both situated upon an interstate stream, which is presented by a bill filed by one State against another State, the averments of which bill raise the question whether the latter State has the power to wholly deprive the lower State of the benefit of the waters of such river.[1]

The original jurisdiction of the Supreme Court of the United States extends to a controversy between the State of Kansas and the State of Colorado and the United States, presenting the questions whether Kansas has a right to the continuous flow of the waters of the Arkansas River as that flow existed before any human interference therewith, or whether Colorado has the right to appropriate the waters of that stream so as to prevent that continuous flow, or whether the amount of the flow is subject to the superior authority and supervisory control of the United States. See Kansas v. Colorado upon determination of the case,[2] where it is said: "Force, under our system of government, is eliminated. The clear language of the Constitution vests in this Court the power to settle those disputes."

So, too, the construction by a public corporation, as an agency

2 Missouri v. Illinois, 180 U. S. 208, 45 L. Ed. 497, 21 Sup. Ct. Rep. 331; 200 U. S. 496, 50 L. Ed. 572, 26 Sup. Ct. Rep. 268; 202 U. S. 598, 50 L. Ed. 1160, 26 Sup. Ct. Rep. 713.

1 Kansas v. Colorado, on demurrer, 185 U. S. 125, 46 L. Ed. 838, 22 Sup. Ct. Rep. 552, where it is said: "The States of this Union can not make war upon each other. 'They can not grant letters of marque and reprisal.' They can not make reprisal upon each other by embargo. They can not enter into diplomatic relations, and make treaties."

2 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

of the State, of a system of public works to promote the health and prosperity of its inhabitants, but which endangers the health and prosperity of the inhabitants of another State below upon an interstate stream, furnishes a sufficient basis for a controversy between the States, of which the Supreme Court of the United States can take original jurisdiction.[3] This is upon the theory that the right to the use of water is real property;[4] and, therefore, a suit to quiet title to a water right for irrigation purposes, and to determine the land owner's right to divert the waters from the stream for such a purpose, is in the nature to quiet title to real estate. Therefore, the suit must be brought to quiet title to the land in the State court having the proper jurisdiction where the land is situated, or where the water is used.[5] However, the courts of one State in ascertaining, decreeing, and protecting property rights in water appropriations within the jurisdiction of that State, may at the same time and for that purpose inquire into and determine rights and priorities on the same stream that are located and situated higher up on the stream and beyond the State line, in order to fairly and finally judicially determine the relative rights of the parties and decree the extent of title and the right of possession of the subject matter located and situated within the State.[6]

3 Missouri v. Illinois, on demurrer, 180 U. S. 208, 45 L. Ed. 497, 21 Sup. Ct. Rep. 331, where it is said: "If Missouri were an independent and sovereign State, all must admit that she could seek a remedy by negotiation, and, that failing, by force. Diplomatic powers and the right to make war having been surrendered to the General Government, it was to be expected that upon the latter would be devolved the duty of providing a remedy, and that remedy, we think, is found in the constitutional provisions we are considering." See, also, *Id.*, on the determination of the case, 200 U. S. 496, 50 L. Ed. 572, 26 Sup. Ct. Rep. 713.

4 See Secs. 768, 769.

5 Where the defendant claimed title by prior appropriation to a certain part of the flow of an interstate river to irrigate its lands in Nevada, and alleged that such rights were being interfered with by defendant, an appropriator of the waters of the same stream in California, of which State the defendant was a resident, complainant was entitled to sue to quiet its title to such water right in the Federal courts sitting in Nevada, and such jurisdiction will be maintained as against subsequent similar actions brought by defendant for the same purpose in the California State courts. Rickey etc. Co. v. Miller & Lux (Nev.), 152 Fed. Rep. 11, 81 C. C. A. 207; affirming *Id.*, 146 Fed. Rep. 547.

See, also, Taylor v. Hulett, 15 Idaho 265, 97 Pac. Rep. 37, 19 L. R. A., N. S., 535.

6 Taylor v. Hulett, 15 Idaho 265, 97 Pac. Rep. 37, 19 L. R. A., N. S., 535.

In a case decided in 1910 by the Supreme Court of the United States [7] it was held that the Federal Circuit Court for the District of Nevada and the California State courts have concurrent jurisdiction to determine the relative rights of parties claiming, the one in Nevada and the other in California, to be entitled to appropriate, as against each other, the waters of an interstate stream, and whichever court first acquired jurisdiction is entitled to proceed to final determination without interference from the other. And Mr. Justice Holmes, in rendering the opinion of the Court upon the subject, said: "We are of the opinion, therefore, that there was concurrent jurisdiction in the two courts, and that the substantive issues in the Nevada and California suits were so far the same that the Court first seised should proceed to the determination without interference, on the principles now well settled as between the courts of the United States and of the States."

§ 1234. **Jurisdiction of courts—Federal and State.**—In suits between individuals concerning the waters of interstate streams, no different rule prevails governing the jurisdiction of the Federal Courts than that which prevails in the matter of the jurisdiction of the same courts in other suits. There must be the diversity of citizenship, the requisite amount involved, and the other requisites necessary to confer jurisdiction upon the Federal courts.[1]

[7] Rickey Land & Cattle Co. v. Miller & Lux, 218 U. S. 258, 54 L. Ed. 1032, 31 Sup. Ct. Rep. 11; affirming the same case below, 152 Fed. Rep. 11, 81 C. C. A. 207.

[1] The incorporation in the State of Nevada by direction of a California corporation for the sole purpose of having the matters in dispute between such California corporation and another corporation of that State determined by a Federal rather than in the State Court, where they were pending and undetermined, must be regarded as an attempt collusively to make a party plaintiff simply for the purpose of creating a case cognizable by the Federal Court, which, under the Act of March 3, 1875 (18 Stat. L. 470, 472, Chap. 137; U. S. Comp. Stat., 1901, pp. 508, 511), Sec. 5, requires the dismissal of the suit, where the new corporation assumes to be the owner of the property rights which the old company had asserted only that it may have a standing in the Federal Court as a litigant in respect of those rights, and the old corporation can not control the conduct of the suit brought by the new corporation at any time up to the date of the decree, and can require the new corporation, in the event of a decree in its favor, to transfer the benefit of such decree to the old corporation without any new or valuable consideration. Miller & Lux v. East Side

In all other cases the State courts where the diversion is made have full and complete jurisdiction to determine all questions, with the exception of that of the right to quiet title to the use of water where a stream rises in one State and flows into an adjoining State and is there diverted and used for irrigation. In such a case the courts of the former State have no jurisdiction to try and determine the right to the use of the water in the latter State.[2]

Canal & Irr. Co., 211 U. S. 293, 53 L. Ed. 189, 29 Sup. Ct. Rep. 111.

2 Conant v. Deep Creek etc. Irr. Co., 23 Utah 627, 66 Pac. Rep. 188, 90 Am. St. Rep. 721, where it is held that, where a stream rises in the State of Idaho, and flows into the State of Utah, a Court of the former State has no jurisdiction to try and determine the right to the use of water flowing in that portion of the stream which is situated in Utah, and there diverted and used for irrigation of lands therein.

Lamson v. Valies, 27 Colo. 201, 61 Pac. Rep. 231, where the same rule was adhered to where the point of diversion was within the first State, but the lands to be irrigated were without its territorial limits.

The District Court of Wyoming has jurisdiction to adjudicate the rights of the owners of land in Montana to the water of the stream so far as may be necessary to protect their rights, though the Court may not have jurisdiction to enter a decree for quieting the title of such owners to the water claimed. Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939, and where it is said: "If, therefore, a decree adjudicating the various priorities of the parties would operate as a decree quieting title to the lands of plaintiffs Willey and Ellison in another State, it is quite obvious that it would be beyond the jurisdiction of the Court."

§ 1286. Water users' associations—And our conclusions.

**§ 1235. Scope of chapter.**—As is the case with the Carey Law, discussed in another chapter, so it is with the National Reclamation Act, the subjects of the acquisition of both the land and water rights are so interwoven that they must be discussed together. In this chapter, therefore, we will discuss the "National Reclamation Act," or "the National Irrigation Act," as it is sometimes called, in all its phases.[1]

1 For the Carey Act, see Chap. 67, Secs. 1312-1336.

**§ 1236. General scope of the law.**—The National Reclamation Act of June 17, 1902, is the first Act of Congress which provides for the disposal of both lands and a water right therefor by the Federal Government to individuals.[1] In fact, this was the first attempt upon the part of the Government to provide National projects for the construction of irrigation works for the reclamation of its arid public lands, and to dispose of both its lands and a water right to settlers.

The Act authorizes the Secretary of the Interior at or immediately prior to the time of the beginning of the surveys for any contemplated reclamation project to withdraw from entry, except under the homestead laws, any public lands believed to be susceptible of irrigation from said works: *Provided*, that all lands entered and entries made under the homestead laws within the areas so withdrawn during such withdrawal shall be subject to all the provisions, limitations, charges, terms, and conditions of the Act. If after a complete survey and estimates the project should be deemed impracticable or unadvisable, the lands withdrawn must be restored to entry; if, however, it is decided that the irrigation project is practicable, the public lands which it is proposed to irrigate by means of any contemplated works shall be subject to entry only under the provisions of the homestead laws in tracts of not less than 40 nor more than 160 acres, and shall be subject to the limitations, charges, terms, and conditions as in the Act provided; *Provided*, that the commutation provisions of the homestead laws shall not apply to entries made under the Act.[2] Upon the completion of the works the Secretary of the Interior shall give public notice of the lands irrigable under any project, and the limit of the area per entry; also of the charges which shall be made per acre upon said entries, and upon lands already in private ownership which may be irrigated by the water of said project, and the number of annual installments, not exceeding ten, in which such charges shall be paid, and the time when such payments shall commence. The said charges shall be determined with a view of returning to the reclamation fund the

[1] For the full text of the Act, see Sec. 1244.

For the full text of the amendatory Acts to the National Reclamation Act, see Secs. 1245-1260.

For the regulations of the Secretary of the Interior, under the Act and its amendments, see Secs. 1271-1280.

[2] See, for homestead laws, Sec. 435.

estimated cost of the construction of the project, and shall be apportioned equitably. The entryman upon the lands to be irrigated by such works shall, in addition to the compliance with the homestead laws, reclaim at least one-half of the total irrigable area of his entry, and shall pay to the Government the charges apportioned against such tract, and then he will be entitled to a patent. An actual and *bona fide* residence upon the land is required,[3] and no right to the use of water for land already held in private ownership shall be sold for a tract exceeding 160 acres to any one land owner, and no such sale shall be made to any land owner unless he be an actual *bona fide* resident on such lands, or occupant thereof residing in the neighborhood of said land, and no right shall permanently attach until all payments therefor are made. The annual installments shall be paid to the receiver of the local land office, and a failure to make any two payments when due shall render the entry subject to cancellation, with the forfeiture of all rights under the Act, as well as any moneys already paid thereon.

Such in effect are the general provisions of the National Reclamation Act providing for the disposal of both lands and waters therefor by the Government to settlers. The other provisions of the Act will be discussed in the future sections of this chapter.

**§ 1237. Conditions leading to its enactment.**—In Section 34 of the first edition of this work, published in 1893, in discussing how the natural water supply of the country which was then not utilized might be made available for irrigation and reclamation of the vast tracts of the then arid and barren lands, we said: "The last method for adding to our supply of water, in order to increase the acreage that may be cultivated by its artificial application, is the construction of large and expensive works to divert the water from large rivers upon the lands. Although in the arid region there are a great number of small canals which take the waters from the inferior streams, there are no large canals that take the waters from the large rivers. These works can only be constructed at immense cost, and eventually the Government will either have to undertake them or offer some special advantage to induce private enterprise to do so. Although we have no such rivers in the arid region as the Ganges, in India, still a few, such as the Columbia, Missouri, Rio

[3] For actual and *bona fide* residence, see Secs. 1271, 1274.

Grande, and Sacramento, discharge large volumes of water, much of which may at some future time be utilized. There is no doubt but in the matter of irrigation we are behind Europe, Asia, and even Africa, not only in the extent of our works, but in their cost and engineering features. We are not only behind the marvelous nations of antiquity, but also behind the people of modern India, Algeria, Italy, and Spain. The explanation of this is, as before stated, that the time has not yet arrived when the subject of irrigation has become a great national question or national necessity, as it has in the more densely populated countries of the old world."

Our prediction as set forth in the above paragraph has become true, and sooner than expected. As this Western country has become more thickly settled, the demand for available water has become greater and greater for the irrigation of the lands settled upon. In fact, in order to have the arid lands settled and made inhabitable for man, it was oftentimes necessary that the water for their reclamation should be first made available. In order to do this the waters from the larger sources of supply must be utilized. Therefore, greater diverting works and longer and larger canals must be constructed than was the former need in order that the waters may be made to reach the lands lying further back from the rivers or other sources of supply. This, of course, requires a great amount of capital in order that these great reclamation works may be properly and safely constructed. The General Government, since the writing of the above paragraph, has taken both of the steps suggested therein. By the provisions of the Carey Act it has given special advantages so that private enterprise, backed by private capital, has been induced to undertake the construction of these irrigation works for the reclamation of these lands; and by the National Reclamation Act, the Government itself has undertaken to construct works even greater than those which would be undertaken by private enterprise, or, at least, those of such great magnitude, that private capital for many years to come would be loth to undertake. These Acts were passed not so much due to the present necessities as they were looking to the future prosperity of the country. As was said by the United States Circuit Court of Appeals in a recent case,[1] in speaking of the unlimited power of Congress to dispose of the public lands of the United States: "In pursuance

1 United States v. Hanson, 167 Fed. Rep. 881.

of that power Congress passed the Reclamation Act to make marketable and habitable large areas of desert land within the public domain, which lands are valueless and uninhabitable unless reclaimed by irrigation, and the irrigation whereof is impracticable except upon expenditure of large sums of money in the construction of a system of reservoirs and distributing canals. All previous efforts to make these arid lands available for settlement had resulted in failure. By the Desert Land Act of March 3, 1875,[2] Congress made provision for their use by individual settlers, and on March 3, 1877,[3] had enacted further legislation to facilitate the reclamation of such lands by private entrymen, and in 1894,[4] to provide for the irrigation of the arid public lands, had passed the Carey Act, by which it proposed to donate to the States in which such lands were located so much thereof not exceeding 1,000,000 acres in each State, as the State would cause to be reclaimed. These efforts having failed to accomplish the desired end, the Reclamation Act was passed."

We are not prepared to go to the extent that the Circuit Court of Appeals went in the above quotation, and designate the Desert Lands Acts and the Carey Law as failures, because in their workings they have accomplished great results, but even in their operation the more accessible lands were taken up. The National Reclamation Act was designed to reclaim those lands lying further back from the streams, or which were more inaccessible to the source of supply of water for their reclamation.[5] It is possible for all of these laws to work in perfect harmony with each other, and all of them are needed. This great country, rapidly nearing its hundred millions of population, is approaching a period when the subject of the reclamation and cultivation of the now arid lands of the West is becoming more and more each year "a great National question, or a National necessity, as it has in the more densely populated countries of the Old World."

**§ 1238. Conditions leading to its enactment—President Roosevelt's message to Congress.**—The causes and conditions leading up

[2] 18 Stat. L., Vol. 3, 497.

[4] Act Aug. 18, 1894, Chap. 301, 304; 28 Stat. L. 422; U. S. Comp. Stat., 1901, p. 1554.

[5] For the comparison as to the results as between the Carey Act and the National Reclamation Act, see Secs. 1239, 1240.

to the passage of the National Reclamation Act can not be better stated than as given in a portion of President Roosevelt's first message to Congress, delivered December 3, 1901. This portion of the message has become a classic upon the subject, and undoubtedly was the first definite step taken by one in authority, which led in the following year to the National Reclamation Act, which became a law on June 17, 1902.[1] Upon this subject he said:

"In the arid region it is water, not land, which measures production. The Western half of the United States would sustain a population greater than that of our whole country today if the waters that now run to waste were saved and used for irrigation. The forest and water problems are perhaps the most vital internal questions of the United States.

"The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought they make possible the use of waters otherwise wasted. They prevent the soil from wasting, and so protect the storage reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation.

"The forests alone can not, however, fully regulate and conserve the waters of the arid region. Great storage works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a National function, at least, in some of its features. It is as right for the National Government to make the streams and rivers of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering works of another kind. The storage of the floods at the headwaters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same stream.

"The Government should construct and maintain there reservoirs as it does other public works. Where their purpose is to regulate the flow of streams, the water should be turned freely into the chan-

[1] For the full text of the Act and its amendments, see Sec. 1244.

nels in the dry season to take the same course under the same laws as the natural flow.

"The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of the streams. The object of the Government is to dispose of the land to settlers who will build homes upon it. To accomplish this object water must be brought within their reach.

"The pioneer settlers on the arid public domain chose their homes along streams from which they could themselves divert the water to reclaim their holdings. Such opportunities are practically gone. There remain, however, vast areas of public land which can be made available for homestead settlement, but only by reservoirs and main-line canals, impracticable for private enterprise. These irrigation works should be built by the Government for actual settlers, and the cost of construction should, so far as possible, be repaid by the land reclaimed. The distribution of the water, the divisions of the streams among irrigators, should be left to the settlers themselves, in conformity with the state laws, and without interference with those laws or with vested rights. The policy of the National Government should be to aid irrigation in the several States and Territories in such a manner as will enable the people in the local communities to help themselves, and as will stimulate needed reforms in the State laws and regulations governing irrigation.

"The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of Ohio and Mississippi Valleys brought prosperity to the Atlantic States. The increased demand for manufactured articles will stimulate industrial production, while wider home markets and the trade with Asia will consume the larger home supplies and effectually prevent competition with Eastern agriculture. Indeed, the products of irrigation will be consumed chiefly in upbuilding local centers of mining and other industries, which would otherwise not come into existence at all. Our people as a whole will profit, for successful home-making is but another name for the upbuilding of the nation.

"The necessary foundation has already been laid for the inauguration of the policy just described. It would be unwise to begin by doing too much, for a great deal will doubtless be learned, both as to what can and what can not be safely attempted, by the early efforts, which must of necessity be partly experimental in character.

At the very beginning the Government should make clear, beyond shadow of doubt, its intention to pursue this policy on lines of the broadest public interest. No reservoir or canal should ever be built to satisfy selfish personal or local interests, but only in accordance with the advice of trained experts, after long investigation has shown the locality where all the conditions combine to make the work most needed and fraught with the greatest usefulness to the community as a whole. There should be no extravagance, and the believers in the need of irrigation will most benefit their cause by seeing to it that it is free from the least taint of excessive or reckless expenditure of the public moneys."

**§ 1239. Its operation as compared to that of the Carey Law from the standpoint of the State and private enterprise.**—As to the true merits of the workings of the National Reclamation Act, as compared with those of the Carey Act,[1] it is yet too early to attempt to decide. However, in this and the following section[2] we shall attempt to draw some comparisons between the operations of these two laws, as at present they appear to us, and as they affect those most interested.

The National Reclamation Act is, in a way, a rival of the Carey Act, discussed in another chapter.[3] By the withdrawal of vast tracts of lands irrigable from certain sources of water supply in nearly every State and Territory throughout the West by the Secretary of the Interior, for the purposes of the Reclamation Act, it has greatly hampered the future operations under the Carey Act, and thereby has also hampered the projection of private projects in the reclamation of large tracts of arid lands. Some law should be enacted by Congress whereby, when the Secretary of the Interior was satisfied that a certain project would be taken up and prosecuted to its conclusion by a private company, that the Government would relinquish its right to the lands segregated and set apart for the purposes of the National Reclamation Act, and thus permit the works to be taken up by the State and private enterprise under the provisions of the Carey Law in the States where that law applies and which have accepted its provisions. From experience during

1 For the Carey Act, see Chap. 67, Secs. 1312-1336.

2 See Sec. 1240.

3 For the Carey Act, see Chap. 67, Secs. 1312-1336.

the ten years' operation under the National Reclamation Act, it has been ascertained that the Government moves with great deliberation in these matters. Many projects begun a number of years ago are still unfinished. Many other contemplated projects, where vast tracts of land have been reserved from entry or from the operation of private enterprise under the Carey Law, have not yet been commenced. The reclamation fund has been exhausted, and money from other sources has been appropriated by the General Government in order to finish the projects already commenced. As the Federal Government has left the subject as to what laws should govern the waters to the respective States within which they flow, so also should the Government leave to the States and to private enterprise, under State control, as far as possible, the subject of the reclamation of the arid lands within their respective boundaries, especially where the State is willing to undertake the burden thereof.

Upon the other hand, the operations under the Carey Law under wise State control has been such as to give the utmost satisfaction. The lands have been set aside to the State for the purposes of the law, the works have been prosecuted in many cases with the utmost diligence to completion, the water conducted to the land as required by the law, and the land thus been reclaimed and made ready for settlers, who are now enjoying the benefits of the law. The progress of the country has been very rapid, and towns and cities have sprung up under its influence. As soon as the settler secures title to his land, which may be done as soon as he complies with the law, and under this system not have to wait through a long series of years as is the case with the National Reclamation Act, it becomes private property, and is taxable, and thus another benefit accrues to the State.

According to the report of the preliminary results of the thirteenth census of the United States, 1910, in 1909 there were under actual irrigation from water furnished by National Reclamation projects 395,646 acres. The acreage irrigation projects were capable of irrigating, in 1910, is given as 786,190 acres. The acreage included in enterprises completed or under construction in 1910 were 1,973,016 acres.

**§ 1240. Its operation as compared to that of the Carey Law from the standpoint of the settler.**—But those most interested in the operations of these two laws are the settlers who go upon the

lands segregated under the respective Acts to make homes for themselves and their families. The National Reclamation Act provides that the amount of land to be taken by any one settler must not exceed 160 acres; but this amount may be cut down, at the option of the Secretary of the Interior, to a small acreage, as in his judgment might reasonably be required for the support of a family. In order to acquire title to the land filed upon by him, he must reside upon it for the full period of five years, and fully comply with the other provisions of the homestead law, in order to make his final proof, and also prior to his obtaining patent to the land covered by his entry he must pay to the Government the charges for water apportioned against his tract. The law also provides for not to exceed ten annual installments, and in practice the Reclamation Service has provided a ten-year period. So that in addition to five years of residence, there must be an additional five years of residence during which the installments on the water right must be paid before the patent is issued by the Government. In order to make final proof it is necessary for the settler to reclaim at least one-half of the total irrigable entry for agricultural purposes.

One feature of the National Reclamation Act which is liable to cause considerable trouble lies in the applying of the homestead law to the conditions existing necessary for the reclamation of these lands. In the enactment of the National Reclamation Act the homestead law was attached to and made a part of the same. The original place of operation of the homestead law was in that portion of our country where there was annually an ample rainfall, and it was easy the first year to bring a considerable portion of the land entered under cultivation. It needed only fencing, plowing, and cultivation. In fact, under the homestead law the Government practically donated a farm to any settler who would cultivate and improve the same and reside upon the land for a period of five years. If the settler got ahead, he might commute his entry by paying the Government the sum of $1.25 per acre, and receive his patent before the expiration of the five-year period. But under the National Reclamation Act the donation feature of the original homestead law is practically removed. To be sure, he gets title to the land without charge, but this is absolutely worthless to him without the water right, and for this he pays the Government full value, or his proportion of the full cost of the works. "The said charges shall

be determined with a view of returning to the reclamation fund the estimated cost of construction of the project, and shall be apportioned equitably." The only ostensible advantage in the Act to the settler is the freedom of an interest charge on the cost of his water right, but this is more than counterbalanced by the additional burdens imposed upon him by way of additional residence, annual payments for the water right, and necessary cultivation of one-half of the land covered by his entry. Even the old commutation clause, originally an attractive feature of the homestead law, is made not to apply to entries made under the Reclamation Act.

In short, as the law stands today, the settler under a reclamation project is confronted with all the so-called safeguards which a banker might take in order to obtain security for a loan of money. Or, by way of a better illustration, the precautions which are taken by those who sell merchandise upon the partial-payment plan and reserve the title in the vendor until the property is fully paid for, and providing, in case the payments are not made when due that the vendor is entitled to the recovery of the property so sold, and that all moneys paid under the contract shall be forfeited as liquidated damages. The Reclamation Act also provides that "a failure to make any two payments when due shall render the entry subject to cancellation, with a forfeiture of all rights under the Act, as well as of any moneys already paid thereon." From many years of experience it has been ascertained that where a settler attempts to make a home upon the arid lands of the West, even under the most favorable conditions, without considerable ready money, which the average settler does not possess, for the first few years it is a hard proposition to make a bare living for himself and family, even with the greatest industry and economy. And as the National Reclamation Act now stands, with its drastic forfeiture clause, an additional burden is imposed upon the settler, which, we predict, he will not always be able to meet.

In contradistinction to the National Reclamation Act the requirements of the Carey Act affecting the settlers are as follows: The settler may take any portion of 160 acres, by legal subdivisions, which he may choose to enter. He may reside on the entry for a period of three years before making his final proof, but if he so desires he may prove up in a much shorter period. No payment on his water contract with the construction company is necessary in

order to obtain title to the land. As soon as he makes his final proof as required by the law, the State issues the final certificate or the patent, as the case may be, and the land is then subject to the lien of the construction company for the deferred payments. Another advantage of the Carey Law is the knowledge by the settler as to the exact amount of charges against the land for the water furnished. These are fixed and settled in advance by the specific terms of the contract. The construction company even guarantees the maximum cost of the maintenance, this maintenance being oftentimes fixed as low as thirty-five cents per acre, while on National Reclamation projects the price of the water right is not fixed until after settlement, nor is it fixed until construction is well under way. In order to make final proof the settler under the Carey Law is required to cultivate and reclaim an eighth of the land covered by his entry. This is the same requirement as under the Desert Land Act.[1]

There is another thing which should be mentioned in comparing the workings of these two laws as they now exist, and that is the credit of the settlers under the respective laws. The average settler has but little ready money to live upon during the first few years. Therefore, he must depend largely upon the credit which he can obtain from those with whom he deals. Credit, as much as the fact is to be deplored, is the absolute necessity of the pioneer. The settler under a National Reclamation project, with all his rights subject to the drastic forfeiture clause above quoted, goes to his country store for credit and finds that it is practically limited to the value of his team, wagon, and harness. At the bank it is also curtailed to the same extent. Upon the other hand, the settler under the Carey Law project can assign or transfer his entry as soon as it is made; he can obtain credit thereon, and oftentimes it is so arranged that the construction company, or a company organized for that purpose, will advance the necessary credit for the first few years until the settler gets a start. Under the former Act the holdings of the settler is but a prospect, which, if his health continues good, by the utmost economy he may develop to maturity in the dim future, while the holdings of a settler under the Carey Law project become at once property, a titled asset available for use as credit. The patent is promptly issued and again the settler's credit is strength-

[1] For the provisions of the Desert Land Acts, see Chap. 66, Secs. 1287-1311.

ened to the full capacity of his acreage. He may thus tide over the first few years of hardship until he has got a start, while under the National Reclamation Act, as it now exists, in case of a failure of crops, sickness, or financial distress or from other sources, only forfeiture of all of his rights faces the failure to make "any two payments when due." It will be ascertained shortly, when the payments of the settlers under National Reclamation Act projects become due, that extensions will have to be granted by Congress, otherwise more failures will be recorded than successes.

**§ 1241. Criticism of the Act—The opinion of Elwood Mead.**—Mr. Elwood Mead, now chairman of the Water Supply Commission of Victoria, Australia, formerly State Engineer of Wyoming, and Chief of Irrigation Investigations under the Department of Agriculture of the United States, visited this country in 1911 and examined a number of reclamation projects constructed and controlled by the National Reclamation Service under the provisions of the Act in question.

Although the preceding sections [1] were written long before the letter quoted herein from Mr. Mead was written, it will be seen that his criticism is somewhat in accord with our own views upon the subject. Mr. Mead said: "I do not think either the settlers or the Government are doing as well as they should under a number of the National projects. The reasons for this seem to be the poverty of the settlers and the severe conditions of payment exacted by the Government. When these projects were inaugurated settlers with little or no capital were allowed to file on the land, and in some instances encouraged to do so before there was water for irrigation or any means for productive employment. Before the settler was in a position to grow crops all his money had been dissipated in living expenses and erecting a habitation, and now, when there is water to use and an obligation to pay for it, the settler lacks seed, teams, tools, and money to live on, all of which are essential to growing a crop or utilizing the land and water.

"This distressing situation is made worse by the Government requiring these settlers to repay the cost of the works in ten years. In some cases this payment reaches $5 an acre, or $400 for an eighty-acre farm. There are few cases where the first crop is a success.

1 See Secs. 1239, 1240.

It is rare that it repays the cost of cultivation; hence the settler, if he pays the Government charge, must pay it from money he brought with him. Those who did not have considerable money to start with are not paying. Worse than this, they are living under hard conditions, and are not developing the land in a way to pay in the future.

"The remedy or remedies would seem to be: Extend the terms of payment. Make the period thirty years, charging nothing but interest for the first five years. Failure to charge interest on deferred payments is a fundamental mistake of the Act. It is an incentive to men to defer payments. It was one of the causes for making the time of repayment so short. Better results will come to both settlers and the Government by giving ample time and charging a low rate of interest on deferred payments.

"More than this is needed to enable many settlers to cultivate their farms and make any payments to the Government in the near future. They must have money to enable them to prepare the land, plant, cultivate, and harvest crops."

**§ 1242. The Act is constitutional—Doubts expressed in Kansas-Colorado case.**—In rendering the opinion in the case of Kansas v. Colorado,[1] Mr. Justice Brewer made use of some expressions which have led some to the belief that the National Reclamation Act was unconstitutional. He said: "At the time of the adoption of the Constitution, within the known and conceded limits of the United States there were no large tracts of arid land, and nothing which called for any further action than that which might be taken by the legislature of the State in which any particular tract of such land was to be found; and the Constitution, therefore, makes no provision for a National control of the arid regions or their reclamation. But as our National territory has been enlarged we have within our borders extensive tracts of arid lands which ought to be reclaimed, and it may be well that no power is adequate for their reclamation other than that of the National Government. But if no such power has been granted, none can be exercised." It will be noticed that in the language used it was not held that no such power was granted. In fact, there was nothing in the case which called for a decision upon this point. The language quoted had reference

[1] 206 U. S. 46, 51 L. Ed. 956, 27 Sup. Ct. Rep. 655.

solely to the question of the power of Congress to interfere with the State control over the flow of waters within its limits, which control, subject to the power of Congress to regulate commerce, is vested wholly in the State. Further along in the opinion the Justice said: "As to those lands within the limits of the States, the National Government is the most considerable owner, and has the power to dispose of and make all needful rules and regulations respecting its property." This is expressly granted to Congress by Section 3 of Article IV of the Federal Constitution, which provides as follows: "The Congress shall have the power to dispose of and made all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State."

Therefore, the United States being the owner of these arid lands, Congress is vested with the unlimited authority over the same. It may dispose of these lands without improving them, or, upon the other hand, it has the unquestioned right to expend money thereon for their improvement by reclaiming them, and afterward dispose of the lands so reclaimed as it sees fit;[2] provided, that it does not interfere with the right of the State legislation controlling the waters flowing within the respective jurisdictions. And in this respect the National Reclamation Act itself in Section 8 recognizes the right of the States to regulate the control, appropriation, use, and distribution of water, wherein it is said: "That nothing in this Act shall be construed as affecting or intending to affect or to any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State, or of the Federal Government, or

2 "This power has been vested in Congress without limitation." United States v. Gratiot, 39 U. S. 14 Pet. 526, 10 L. Ed. 573.

"That power is subject to no limitations. Congress has the absolute right to prescribe the times, the conditions, and the modes of transferring this property or any part of it, and to designate the persons to whom the transfer shall be made." Gibson v. Chouteau, 80 U. S. 13 Wall. 92, 20 L. Ed. 534.

of any land owner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof."

**§ 1243. The Act is constitutional—Decisions and conclusion.**—The United States Supreme Court has not yet decided the question of the constitutionality of the National Reclamation Act; and other than the expressions used by Mr. Justice Brewer in the case of Kansas v. Colorado, we find no statement by that Court tending to hold that the law is either valid or invalid. But the United States Circuit Court of Appeals, the Court next in authority to that of the Supreme Court of the United States, has held that the Act was constitutional in a case decided in 1909 [1] wherein it is held that the Act providing for the irrigation by the United States of arid public lands is within the power of Congress as to lands within the States, as well as in the Territories, under the Federal Constitution, Article IV, Section 3, giving it power to dispose of and to make all needful rules and regulations respecting the territory or other property belonging to the United States, and is not in violation of the Constitution on the ground that it authorizes the expenditure of public money without an appropriation, since it is in itself an appropriation of the proceeds of the land sold, nor as delegating legislative authority to the Secretary of the Interior. In performing the duty imposed by the Act the Secretary of the Interior only executes the clearly expressed will of Congress, and will not, in any true sense, exert legislative or judicial power.[2]

In a still later case decided by the same Court [3] the same conclusions were reached, that the Act was constitutional, and the Court said: "We come now to the consideration of the real question in this case, which is presented as a constitutional question, and may be stated in the following terms: Can the United States, owning arid lands within a State, organize and maintain a scheme or project whereby it will associate with itself other owners of arid lands for the purpose of reclaiming and improving such lands, and in that behalf exercise the right of eminent domain against another land

1 United States v. Hanson, 167 U. S. 881.

2 See Union Bridge Co. v. United States, 204 U. S. 364, 51 L. Ed. 523, 27 Sup. Ct. Rep. 367.

3 Burley v. United States, 179 Fed. Rep. 1, 102 C. C. A. 429; affirming *Id.*, 172 Fed. Rep. 615.

owner for the purpose of obtaining the title and possession of land absolutely necessary in carrying the proposed scheme or project into effect? . . . It would be strange if the National Government could enter the territory of a State where there were no public lands of the United States requiring irrigation, and no public lands through which water flows necessary for the irrigation of arid lands, and by legislation provide a system of irrigation for the private lands within the State and control its administration. It would indeed be a strange proceeding, and obviously wholly outside of the authority of Congress. But in this case the United States is the owner of large tracts of land within the States named in the Act of June 17, 1902. The public welfare requires that these lands, as well as those held in private ownership, should be reclaimed and made productive. To do this effectively and economically with the available water supply, large tracts must be brought into relation with a single system or project. . . . The Act of June 17, 1902, not only recognizes the Constitution and laws of the State providing for the appropriation of its waters and the reclamation of its arid lands, but it requires that the Secretary of the Interior, in carrying out the provisions of the Act, shall proceed in conformity with such laws. In what respect does such a proceeding contravene the Constitution of the United States? Has not the United States as a land owner the same rights within the State that any other land owner has? And when the land is of such a character that, to be useful, it must be irrigated and reclaimed in large tracts, may not the United States, co-operating with such other land owners, organize and establish an effective and economical system or project for such irrigation and reclamation? And, finally, if the necessary use of lands for such a purpose is made a public use by the State, is there any reason why the United States should not exercise its right of eminent domain to acquire title to lands absolutely necessary to such public use? We can think of no constitutional objection to such a proceeding when it is clearly established that with respect to surrounding circumstances and conditions the use is a public use; and while it has been held that the law of the State is not conclusive upon this subject, the Supreme Court of the United States in numerous cases has determined that such a use as here described in the project under consideration is a public use."

As we view the law upon the subject, there can be no doubt but that the National Reclamation Act is constitutional as to all objections which may be raised against it, and clearly within the power granted by the Federal Constitution to dispose of and make all needful rules and regulations respecting the arid lands of which the United States is the proprietor. And it is to be remembered that the questions raised in the Kansas-Colorado case do not involve Government irrigation projects, and neither do they in any way involve the construction of the National Reclamation Act, but the Court, in rendering its decision, merely indulged in a wide field of speculation, and by indirection intimated a doubt, to put it in the strongest manner possible, as to the validity of the law. But to date there has been no decision by the Supreme Court of the United States upon the direct question as to the constitutionality of the Act.

As held by the Federal Court in two recent cases, one decided in Idaho in 1911,[4] and the other in Oregon,[5] the Reclamation Act is not a "revenue law of the United States" within the meaning of Section 643 of the Revised Statutes[6] authorizing the removal of any suit brought in any State court against any officer appointed under or acting by authority of any revenue officer of the United States, and such section does not apply to a suit against the officer in charge of a reclamation project because of acts done under the color of his office.

**§ 1244. The full text of the National Reclamation Act of June 17, 1902.**—The full text of the National Reclamation Act, approved June 17, 1902,[1] and the amendments since enacted thereto, is as follows:

TITLE—"*An Act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands.*

"Section 1. That all moneys received from the sale and disposal of the public lands in Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma,

4 Twin Falls Canal Co. v. Foote, 192 Fed. Rep. 583.

5 City of Stanfield v. Umatilla River Water Users' Assn., 192 Fed. Rep. 596.

6 United States Compiled Statutes, 1901, p. 521.

1 7 Fed. Stat. Ann., 1905, p. 1098; Supp. U. S. Comp. Stat., 1905, p. 349; 32 Stat. L. 388.

Oregon, South Dakota, Utah, Washington, and Wyoming,[2] beginning with the fiscal year ending June 30, 1901, including the surplus of fees and commissions in excess of allowance to registers and receivers, and excepting the five per centum of the proceeds of the sales of public lands in the above States set aside for educational and other purposes, shall be, and the same are hereby, reserved, set aside, and appropriated as a special fund in the Treasury, to be known as the 'reclamation fund,' to be used in the examination and survey for and the construction and maintenance of irrigation works for the storage, diversion, and development of waters for the reclamation of arid and semi-arid lands in the said States and Territories, and for the payment of all other expenditures provided for in this Act: *Provided,* that in case the receipts from the sale and disposal of lands other than those realized from the sale and disposal of lands referred to in this section are insufficient to meet the requirements for the support of agricultural colleges in the several States and Territories, under the Act of August 30, 1890, entitled, 'An Act to apply a portion of the proceeds of the public lands to the more competent endowment and support of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an Act of Congress approved July 2, 1862,' the deficiency, if any, in the sum necessary for the support of said colleges shall be provided for from any moneys in the treasury not otherwise appropriated.

"Sec. 2. That the Secretary of the Interior is hereby authorized and directed to make examinations and surveys for, and to locate and construct, as herein provided, irrigation works for the storage, diversion, and development of waters, including artesian wells, and to report to Congress at the beginning of each regular session as to the results of such examinations and surveys, giving estimates of cost of all contemplated works, the quantity and location of the lands which can be irrigated therefrom, and all facts relative to the practicability of each irrigation project; also the cost of works in process of construction, as well as of those which have been completed.

"Sec. 3. That the Secretary of the Interior shall, before giving

[2] By the Act of June 12, 1906, the provisions of the Reclamation Act were thereby extended so as to include and apply to the State of Texas. Supp. Fed. Stat. Ann., 1909, p. 705, 34 Stat. L. 259.

the public notice provided for in Section 4 of this Act, withdraw from public entry the lands required for any irrigation works contemplated under the provisions of this Act, and shall restore to public entry any of the lands so withdrawn when, in his judgment, such lands are not required for the purposes of this Act; and the Secretary of the Interior is hereby authorized, at or immediately prior to the time of beginning the surveys for any contemplated irrigation works, to withdraw from entry, except under the homestead laws, any public lands believed to be susceptible of irrigation from said works: *Provided*, that all lands entered and entries made under the homestead laws within areas so withdrawn during such withdrawal shall be subject to all the provisions, limitations, charges, terms, and conditions of this Act; that said surveys shall be prosecuted diligently to completion, and upon the completion thereof, and of the necessary maps, plans, and estimates of cost, the Secretary of the Interior shall determine whether or not said project is practicable and advisable, and if determined to be impracticable or unadvisable he shall thereupon restore said lands to entry; that public lands which it is proposed to irrigate by means of any contemplated works shall be subject to entry only under the provisions of the homestead laws in tracts of not less than forty nor more than one hundred and sixty acres, and shall be subject to the limitations, charges, terms, and conditions herein provided: *Provided*, that the commutation provisions of the homestead laws shall not apply to entries made under this Act.

"Sec. 4. That upon the determination by the Secretary of the Interior that any irrigation project is practicable, he may cause to be let contracts for the construction of the same, in such portions or sections as it may be practicable to construct and complete as parts of the whole projects, providing the necessary funds for such portions or sections are available in the reclamation fund, and thereupon he shall give public notice of the lands irrigable under such project, and limit of area per entry, which limit shall represent the acreage which, in the opinion of the Secretary, may be reasonably required for the support of a family upon the lands in question; also of the charges which shall be made per acre upon the said entries, and upon lands in private ownership which may be irrigated by the waters of the said irrigation project, and the number of annual installments, not exceeding ten, in which such charges

shall be paid and the time when such payments shall commence. The said charges shall be determined with a view of returning to the reclamation fund the estimated cost of construction of the project, and shall be apportioned equitably: *Provided,* that in all construction work eight hours shall constitute a day's work, and no Mongolian labor shall be employed thereon.

"Sec. 5. That the entryman upon lands to be irrigated by such works shall, in addition to compliance with the homestead laws, reclaim at least one-half of the total irrigable area of his entry for agricultural purposes, and before receiving patent for the lands covered by his entry shall pay to the Government the charges apportioned against such tract as provided in Section 4. No right to the use of water for land in private ownership shall be sold for a tract exceeding one hundred and sixty acres to any one land owner, and no such sale shall be made to any land owner unless he be an actual *bona fide* resident on such land, or occupant thereof residing in the neighborhood of said land, and no such right shall permanently attach until all payments therefor are made. The annual installments shall be paid to the receiver of the local land office of the district in which the land is situated, and a failure to make any two payments when due shall render the entry subject to cancellation, with the forfeiture of all rights under this Act, as well as any moneys already paid thereon. All moneys received from the above sources shall be paid into the reclamation fund. Registers and receivers shall be allowed the usual commissions on all moneys paid for lands under this Act.

"Sec. 6. That the Secretary of the Interior is hereby authorized and directed to use the reclamation fund for the operation and maintenance of all reservoirs and irrigation works constructed under the provisions of this Act: *Provided,* that when the payments required by this Act are made for the major portion of the lands irrigated from the waters of any of the works herein provided for, then the management and operation of such irrigation works shall pass to the owners of the land irrigated thereby, to be maintained at their expense under such form of organization and under such rules and regulations as may be acceptable to the Secretary of the Interior: *Provided,* that the title to and the management and operation of the reservoirs and the works necessary for their protection and operation shall remain in the Government until otherwise provided by Congress.

"Sec. 7. That where in carrying out the provisions of this Act it becomes necessary to acquire any rights or property, the Secretary of the Interior is hereby authorized to acquire the same for the United States by purchase or condemnation under judicial process, and to pay from the reclamation fund the sums which may be needed for that purpose, and it shall be the duty of the Attorney-General of the United States upon every application of the Secretary of the Interior, under this Act, to cause proceedings to be commenced for condemnation within thirty days from the receipt of the application at the Department of Justice.

"Sec. 8. That nothing in this Act shall be construed as affecting or intending to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested rights acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any land owner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided,* that the right to the use of water acquired under the provisions of this Act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limitation of the right.

"Sec. 9. That it is hereby declared to be the duty of the Secretary of the Interior in carrying out the provisions of this Act, so far as the same may be practicable and subject to the existence of feasible irrigation projects, to expend the major portion of the funds arising from the sale of public lands within each State and Territory hereinbefore named for the benefit of arid and semi-arid lands within the limits of such State or Territory: *Provided,* that the Secretary may temporarily use such portion of said funds for the benefit of arid or semi-arid lands in any particular State or Territory hereinbefore named as he may deem advisable, but when so used the excess shall be restored to the fund as soon as practicable, to the end that ultimately, and in any event, within each ten-year period after the passage of this Act, the expenditures for the benefit of the said States and Territories shall be equalized according to the proportions and subject to the conditions as to practicability and feasibility aforesaid.

"Sec. 10. That the Secretary of the Interior is hereby authorized to perform any and all acts and to make such rules and regulations as may be necessary and proper for the purposes of carrying the provisions of this Act into full force and effect."

**§ 1245. Acts amendatory—Indian reservations and lands—Acts of April 21, 1904, April 27, 1904, March 6, 1906, June 21, 1906, March 1, 1907.**—As a rule, ceded Indian lands are subject to disposition under certain specific Acts mentioned in the treaty or the Act of Congress providing for the cession, and hence would not be subject to withdrawal under the provisions of the Reclamation Act. Specific decisions will be made by the Secretary of the Interior in each case.[1]

The original National Reclamation Act has been added to by several amendatory Acts of Congress enacted from time to time. Several of these amendatory Acts relate to Indian reservations and to Indian lands, and are as follows:

By Sections 25 and 26 of the Indian Department appropriation Act of April 21, 1904,[2] it was provided that "in carrying out any irrigation enterprise which may be undertaken under the provisions of the Reclamation Act of June 17, 1902, and which may make possible and provide for, in connection with the reclamation of other lands, the reclamation of all or any portion of the irrigable lands on the Yuma and Colorado River Indian Reservations, in California and Arizona, the Secretary of the Interior is hereby authorized to divert the waters of the Colorado River and to reclaim, utilize, and dispose of any lands in said reservations which may be irrigable by such works in like manner as though the same were a part of the public domain: *Provided,* that there shall be reserved for and allotted to each of the Indians belonging to the said reservations five acres of the irrigable lands. The remainder of the lands irrigable in said reservations shall be disposed of to settlers under the provision of the Reclamation Act: *Provided further,* that there shall be added to the charges required to be paid under said Act by settlers upon unallotted Indian lands such sum per acre as in the opinion of the Secretary of the Interior shall fairly represent the value of the unallotted lands in said reservation before reclama-

1 4th Report Reclamation Service, p. 29.

2 10 Fed. Stat. Ann., 1906, p. 435; 33 Stat. L. 224, 226, Secs. 25, 26.

tion; said sum to be paid in annual installments in the same manner as the charges under the Reclamation Act. Such additional sum per acre, when paid, shall be used to pay into the reclamation fund the charges for the reclamation of the said allotted lands, and the remainder thereof to be placed to the credit of said Indians, and shall be expended from time to time, under the direction of the Secretary of the Interior, for their benefit."

Section 26 of the same Act provides in similar terms to the above for the reclamation of the irrigable lands of the Pyramid Lake Indian Reservation, in the State of Nevada.

In Article II of the Act approved April 27, 1904, entitled, "An Act to ratify and amend an agreement with the Indians of the Crow Reservation, in Montana, and making appropriations to carry the same into effect," it is provided that, in consideration of the land ceded, the United States agrees to dispose of the same under the provisions of the Reclamation Act, the homestead, townsite, and mineral land laws, except Sections 16 and 36, or an equivalent of two sections in each township, at not less than $4 per acre. And Section 5 of said article provides:

"Sec. 5. That before any of the lands by this agreement ceded are open to settlement or entry, the Commissioner of Indian Affairs shall cause the allotments to be made and the schedule to be prepared, as provided for in Section 4 of this Act, and a duplicate of said schedule shall be filed with the Commissioner of the General Land Office. Upon the completion of such allotments and the filing of such schedule and after the sale or removal of such improvements the residue of such ceded lands, except Sections 16 and 36, or lands in lieu thereof, which shall be reserved for common school purposes, and are hereby granted to the State of Montana for such purposes, shall be subject to withdrawal and disposition under the Reclamation Act of June 17, 1902, so far as feasible irrigation projects may be found therein. The charges provided for by said Reclamation Act shall be in addition to the charge of $4 per acre for the land, and shall be paid in annual installments as required under the Reclamation Act; and the amounts to be paid for the land shall be credited to the funds herein established for the benefit of the Crow Indians. If any lands in Sections 16 and 36 are included in an irrigation project under the Reclamation Act, the State of Montana may select in lieu thereof, as herein provided, other lands not in-

cluded in any such project, in accordance with the provisions of existing law concerning school land selections. In any construction work upon ceded lands performed directly by the United States under the Reclamation Act preference shall be given to the employment of Crow Indians, or whites intermarried with them, so far as may be practicable: *Provided, however,* that if the lands withdrawn under the Reclamation Act are not disposed of within five years after the passage of this Act, then all of said lands so withdrawn shall be disposed of as other lands provided for in this Act."[3]

One of the most extensive Acts of Congress relative to Indian reservations and lands is the Act of March 6, 1906, relative to the Yakima Indian Reservation, in the State of Washington, and entitled, "An Act authorizing the disposition of surplus and allotted lands in the Yakima Indian Reservation, in the State of Washington, which can be irrigated under the Act of Congress approved June 17, 1902, known as the Reclamation Act, and for other purposes."[4] Said Act provides as follows:

"Sec. 1. That if within the Yakima Indian Reservation, in the State of Washington, as described in the Act approved December 21, 1904, entitled, 'An Act to authorize the sale and disposition of surplus and unallotted lands of the Yakima Indian Reservation, in the State of Washington,' there shall be found surplus or unallotted lands under irrigation projects deemed practicable and undertaken under the provisions of the Act of Congress approved June 17, 1902, known as the Reclamation Act, the Secretary of the Interior is hereby authorized to exclude from the provisions of said Act of December 21, 1904, such surplus or unallotted lands which can be irrigated under such project and to dispose of the same in the manner hereinafter provided, and he is further authorized to make withdrawals of such lands for the purpose provided in said Reclamation Act.

"Sec 2. That the irrigable surplus and unallotted lands in any such project shall be subject to homestead entry under all the provisions of the Reclamation Act at such time as may be fixed by the Secretary of the Interior and at the price determined by appraisal

[3] 33 Stat. L. 352.

For proclamation of President opening Crow Reservation, see 34 Land Dec. 632, 35 Land Dec. 684.

[4] 34 Stat. L. 53; see, also, 5th Annual Report Reclamation Service, p. 22.

as provided in said Act of December 21, 1904. Payments for the land shall be made in annual installments, the number and time of beginning being fixed by the Secretary of the Interior, and shall be deposited in the Treasury of the United States and credited to the Yakima Indian fund, and disposed of as provided by Section 4 of the said Act of December 21, 1904. Such payments shall be in addition to the charges for construction and maintenance of the irrigation system made payable to the reclamation fund by the provisions of the Reclamation Act. In case of failure to make any payment for such lands when due, the Secretary of the Interior shall have the power to cancel the entry and the corresponding water right and declare forfeited to the said Yakima Indian fund and the reclamation fund, respectively, the amounts paid on such entry and water rights. The lands embraced within such canceled entry shall be subject to further entry under the Reclamation Act at the appraised value until otherwise directed by the President, who may, by proclamation, as provided by said Act of December 21, 1904, from time to time fix such price as he may deem most advantageous upon all the lands within such projects not disposed of.

"Sec. 3. That if any lands heretofore allotted or patented to Indians on said Yakima Indian Reservation shall be found irrigable under any project, the Secretary of the Interior is hereby authorized, upon the request or with the consent of such allottee or patentee, to dispose of all land in excess of twenty acres in each case, in tracts of an area approved by him and subject to all the provisions of the Reclamation Act to any person qualified to acquire water rights under the provisions of the Reclamation Act at a price satisfactory to the allottee or patentee and approved by the Secretary of the Interior, or at public sale to the highest bidder. The payments shall be made in annual installments, the number and terms being approved by the Secretary of the Interior. Such payments shall be in addition to the charges for construction and maintenance of the irrigation system made payable to the reclamation fund by the provisions of the Reclamation Act. In case of failure to make any payment for such lands when due or the charges under the Reclamation Act, the Secretary of the Interior shall have the power to cancel the entry and the corresponding water right and again dispose of the land in the manner hereinbefore provided.

"Sec. 4. That from the payments received from the sale of such individual Indian lands there shall be covered into the reclamation fund the amounts fixed by the Secretary of the Interior as the annual charges on account of the land retained by such Indian for the construction and maintenance of the irrigation system as required under the Reclamation Act. The balance, if any, shall be deposited in the Treasury of the United States to the credit of the individual Indians, and may be paid to any of them if, in the opinion of the Secretary of the Interior, such payment will tend to improve the condition and advance the progress of said Indians, but not otherwise.

"Sec. 5. That the Secretary of the Interior is hereby authorized to cover into the reclamation fund from the money of any such Indian, either from his individual credit or from the general Yakima Indian fund, for the payment of such charges for construction and maintenance for the water rights appurtenant to the land retained by him or for the annual maintenance charges payable on account of such water rights after the construction charge thereon has been paid in full. After unconditional title in fee has passed from the United States for any lands retained by such Indians, the water for irrigating such lands shall be furnished under the same conditions in all respects as for other lands under the project: *Provided*, that any Indian taking advantage of this Act shall have a perpetual water right so long as the maintenance charges are paid, whether he uses the water or not, and the Secretary of the Interior is hereby authorized to use the funds of the tribe to pay such maintenance charges, when, in his discretion, it is necessary to preserve said water right: *Provided further*, that he may, in his discretion, use said funds to pay for water rights and maintenance charges on twenty acres of any Indian allotment if the sum obtained from the sale of the allottee's land is in excess of twenty acres and his interest in the tribal funds be insufficient for those purposes.

"Sec. 6. That the Secretary of the Interior shall be authorized, upon compliance with the provisions of this Act and of the Reclamation Act, by any party having purchased such allotted or patented lands as herein provided, to issue patent passing unconditional title in fee by the United States as trustee for the allottee or patentee, and shall cancel any allotment as to the lands disposed of under this Act.

"Sec. 7. That the irrigation works heretofore constructed for the Yakima Indian Reservation may be at a cost to be determined by the Secretary of the Interior included in any project developed under the provisions of the Reclamation Act and of this Act, and become a part of said project for all purposes of the Reclamation Act, and the cost of the same shall be included in the cost of such project and be paid into the Yakima Indian fund out of the proceeds arising from the sale of water rights from time to time as payments on account thereof are received. The provisions of this Act may be construed as superseding or amending any provisions of the said Act of December 21, 1904, so far as any conflict may appear.

"Sec. 8. That the Secretary of the Interior is hereby authorized to perform any and all acts and to make such rules and regulations as may be necessary and proper for the purpose of carrying the provisions of this Act into full force and effect."

Under the authority of the above Act, and the Act of June 27, 1906, authorizing the Secretary of the Interior to fix a lesser area than forty acres as the minimum entry,[5] twenty acres is fixed as the unit for Indian ownership to be irrigated by the waters of any such project.[6]

The Act of June 21, 1906, providing for the contingent expenses of the Indian Department for the fiscal year ending June 30, 1907, provides:[7] "That any Indian allotted lands under any law or treaty without the power of alienation, and within a reclamation project approved by the Secretary of the Interior, may sell and convey any part thereof, under the rules and regulations prescribed by the Secretary of the Interior, but such conveyance shall be subject to his approval, and when so approved shall convey full title to the purchaser the same as if final patent without restrictions had been issued to the allottee: *Provided,* that the consideration shall be placed in the Treasury of the United States and used by the Commissioner of Indian Affairs to pay the construction charges that may be assessed against the unsold parts of the allotment, and to pay the maintenance charges thereon during the trust period, and any sur-

[7] See Supp. Fed. Stat. Ann., 1909, p. 208; 34 Stat. L. 327.

plus shall be a benefit running with the water right to be paid to the holder thereof." [8]

The Indian Appropriation Act approved March 1, 1907,[9] contains the following provision relative to the employment of Indian labor on reclamation projects:

"That as far as practicable Indian labor shall be employed and purchase in the open market made from Indians, under the directions of the Secretary of the Interior. And the employment of such Indians and the hiring of their property, in connection with the construction of any irrigation project under the Reclamation Service, shall be exempt from the provisions of Sections 3709 and 3744, Revised Statutes."

The same Act also contains the following provision in regard to the disposition of lands opened to settlement in the Blackfeet Indian Reservation:

"That if, after the approval of the classification and appraisement, as provided herein, there shall be found lands within the limits of the reservation under irrigation projects deemed practicable under the provisions of the Act of Congress approved June 17, 1902, known as the Reclamation Act, said lands shall be subject to withdrawal and be disposed of under the provisions of said Act, and settlers shall pay in addition to the cost of construction and maintenance provided therein the appraised value, as provided in this Act, to the proper officers, to be covered into the Treasury of the United States to the credit of the Indians: *Provided, however,* that all lands hereby opened to settlement remaining undisposed of at the end of five years from the taking effect of this Act shall be sold to the highest bidder for cash, at not less than $1.25 per acre, under rules and regulations prescribed by the Secretary of the Interior, and any lands remaining unsold ten years after said lands shall have been opened to entry shall be sold to the highest bidder, for cash, without regard to the minimum limit above stated: *Provided,* that not more than 640 acres of land shall be sold to any one person or company." [10]

The same Act also contains the following provision authorizing the

[8] A right of way for a canal may be conveyed over allotted Indian lands. Lucy Hawk Shively, 36 Land Dec. 135.

[9] 34 Stat. L. 1015-1052; Supp. Fed. Stat. Ann., 1909, p. 226.

[10] 34 Stat. L. 1037.

Secretary of the Interior to use part of the sum appropriated for an irrigation system for the Pima Indians in payment of their proportion of the cost of constructing the Salt River project, in Arizona: "That the Secretary of the Interior may, in his discretion, use such part of the $300,000 heretofore appropriated for an irrigation system for the Pima Indians in the payment of such Indians' proportionate part of the construction of the Salt River project, and such funds may be transferred to the reclamation fund, to be expended by that service in accordance with its rules and regulations, the Indians to receive a credit upon the reclamation charge assessed against their lands under the Salt River project for the amount so transferred." [11]

§ 1246. **Acts amendatory—Military reservations—Act of June 9, 1906.**—Lands included within military reservations are not subject to withdrawal and disposition under the Reclamation Act, without a specific Act of Congress authorizing the same. By the Act of June 9, 1906,[1] entitled, "An Act to provide for the disposition under the public land laws of the lands in the abandoned Fort Shaw Military Reservation, Montana," such reservation was opened for such disposal, said Act being as follows:

"That the Secretary of the Interior is hereby authorized to dispose of the lands in the abandoned Fort Shaw Military Reservation, in Montana, under the provisions of the public land laws, and the public surveys shall be extended over the lands therein: *Provided*, that he may reserve for Indian school purposes the following-described lands" (describing lands): "*Provided further*, that before opening the reservation to entry the Secretary of the Interior may withdraw any other lands needed in connection with an irrigation project under the provisions of the Act of June 17, 1902, known as the Reclamation Act, for use or disposition thereunder." [2]

§ 1247. **Acts amendatory—Construction of Rio Grande dam.**—The Act making appropriations for the sundry civil expenses of the Government for the fiscal year ending June 30, 1908, contains the

[2] The Secretary of the Interior is without authority to segregate lands in abandoned military reservations for use as reservoir sites in connection with reclamation projects. Instructions, 33 Land Dec. 130.

following provision in pursuance of a convention between the United States and Mexico, proclaimed January 16, 1907:

*Convention With Mexico:* Toward the construction of a dam for storing and delivering 60,000 acre-feet of water annually in the bed of the Rio Grande at the point where the headworks of the Acequia Madre now exists, above the City of Juarez, Mexico, as provided by a convention between the United States and Mexico, proclaimed January 16, 1907, one million dollars, to be available as needed and to be expended under the direction of the Secretary of the Interior in connection with the irrigation project on the Rio Grande: *Provided,* that the balance of the cost of said irrigation project over and above the amount herein appropriated shall be allotted by the Secretary of the Interior as may be needed and as may be available from time to time from the reclamation fund and collected from the settlers and owners of the land benefited under the provisions of the Reclamation Act approved June 17, 1902, and Acts supplemental thereto or amendatory thereof." [1]

**§ 1248. Acts amendatory to the National Reclamation Act—The use of materials from the public lands—Act of February 8, 1905.**—The Act of February 8, 1905,[1] provides: "That in carrying out the provisions of the National irrigation law, approved June 17, 1902, and in constructing works thereunder, the Secretary of the Interior is hereby authorized to use and to permit the use by those engaged in the construction of works under said law, under the rules and regulations to be prescribed by him, such earth, stone, and timber from the public lands of the United States as may be required in the construction of such works, and the Secretary of Agriculture is hereby authorized to permit the use of earth, stone, and timber from the forest reserves of the United States for the same purpose under rules and regulations to be prescribed by him." [2]

**§ 1249. Acts amendatory to the National Reclamation Act—As relating to certain lakes—Act of February 9, 1905.**—By the Act of

[1] 34 Stat. L. 1357.

For the treaty with Mexico relative to the above, see Secs. 1218-1220.

[1] 10 Fed. Stat. Ann., 1906, p. 433; 33 Stat. L. 706.

[2] By the Act of Feb. 1, 1905, 10 Fed. Stat. Ann., 1906, p. 404, 33 Stat. L. 628, the control of the forest reserves was transferred to the Agricultural Department.

February 9, 1905,[1] the Secretary of the Interior was authorized in carrying out any irrigation project that may be undertaken by him under the terms and conditions of the National Reclamation Act and which may involve the character of the levels of Lower or Little Klamath Lake, Tule or Rhett Lake, and Goose Lake, or any river or other body of water connected therewith, in the States of Oregon and California, to raise or lower the level of said lakes as may be necessary and to dispose of any lands which may come into the possession of the United States as a result thereof by cession of any State or otherwise under the terms and conditions of the National Reclamation Act.

§ 1250. **Acts amendatory to the National Reclamation Act—As relating to the sale of material used—Act of March 3, 1905.**—The Act of March 3, 1905,[1] provides: "That there shall be covered into the reclamation fund established under the Act of June 17, 1902, known as the Reclamation Act, the proceeds of the sales or material utilized for temporary work and structures in connection with the operations under the Act, as well as of the sales of all other condemned property which had been purchased under the provisions thereof, and also any moneys refunded in connection with the operations under said Reclamation Act."

§ 1251. **Acts amendatory to the National Reclamation Act—As relating to townsites—Acts of April 16, 1906, June 11, 1910, February 24, 1911.**—The Act of April 16, 1906,[1] providing for the withdrawal from public entry of lands needed for townsite purposes in connection with projects under the Reclamation Act of June 17, 1902, and for other purposes provides:

"Sec. 1. That the Secretary of the Interior may withdraw from public entry any lands needed for townsite purposes in connection with irrigation projects under the Reclamation Act of June 17, 1902, not exceeding 160 acres in each case, and survey and subdivide the same into town lots, with appropriate reservations for public purposes."

Section 2 provides for the appraisement and sale of such town

lots to the highest bidder for cash, and that the "reclamation funds may be used to defray the necessary expense of appraisement and sale, and the proceeds of such sale shall be covered into the reclamation fund."

Section 3 provides for the improvement of public reservations and that the use of the same shall forever be for public purposes.

"Sec. 4. That the Secretary of the Interior shall, in accordance with the provisions of the Reclamation Act, provide for water rights in amount he may deem necessary for the towns established as herein provided, and may enter into contract with the proper authorities of such towns, and other towns or cities in the immediate vicinity of irrigation projects, which shall have a water right from the same source as that of said project for the delivery of such water supply to some convenient point, and for the payment into the reclamation fund of charges for the same to be paid by such towns or cities, which charges shall not be less nor upon terms more favorable than those fixed by the Secretary of the Interior for irrigation projects from which water is taken.

"Sec. 5. That whenever a development of power is necessary for the irrigation of lands, under any project undertaken under the said Reclamation Act, or an opportunity is afforded for the development of power under any such project, the Secretary of the Interior is authorized to lease for a period not exceeding ten years, giving preference to municipal purposes, any surplus power or power privilege, and the money derived from such leases shall be covered into the reclamation fund and be placed to the credit of the project from which such power is derived: *Provided,* that no lease shall be made of such surplus power or power privileges as will impair the efficiency of the irrigation project: *Provided further,* that the Secretary of the Interior is authorized, in his discretion, to make such a lease in connection with Rio Grande project in Texas and New Mexico for a longer period not exceeding fifty years, with the approval of the water users' association or associations under any such project, organized in conformity with the rules and regulations prescribed by the Secretary of the Interior in pursuance of Section 6 of the Reclamation Act approved June 17, 1902."

As amended by the Act approved February 24, 1911,[2] it was provided as follows:

[2] Public, No. 417.

Applications for water rights under the Reclamation Act by individual lot owners, for lands which have been

"Sec. 3. That any townsite heretofore set apart or established by the proclamation of the President, under the provisions of Sections 2380 and 2381 of the Revised Statutes of the United States, within or in the vicinity of any reclamation project may be appraised and disposed of in accordance with the provisions of the Act of Congress approved April 16, 1906, entitled,[3] 'An Act providing for the withdrawal from public entry of lands needed for townsite purposes in connection with irrigation projects under the Reclamation Act of June 17, 1902, and for other purposes,' and all necessary expenses incurred in the appraisal and sale of lands embraced within any such townsite shall be paid from the reclamation fund, and the proceeds of the sales of such lands shall be covered into the reclamation fund.

"Sec. 4. That in the townsites of Heyburn and Rupert, in Idaho, created and surveyed by the Government, on which townsite settlers have been allowed to establish themselves, and had actually established themselves prior to March 5, 1906, in permanent buildings not easily moved, the said settlers shall be given the right to purchase the lots so built upon at an appraised valuation for cash, such appraisement to be made under the rules prescribed by the Secretary of the Interior. Providing that the limitation on the size of townsites contained in the Act of April 16, 1906,[4] . . . shall not apply to the townsites named in this section; and whenever, in the opinion of the Secretary of the Interior, it shall be advisable for the public interest, he may withdraw and dispose of townsites in excess of 160 acres under the provisions of the aforesaid Act, approved April 16, 1906, and reclamation funds shall be available for the payment of all expenses incurred in executing the provisions of this Act, and the aforesaid Act of April 16, 1906, and the proceeds of all sales of townsites shall be covered into the reclamation fund."

subdivided into town lots, will not be allowed; but water may be supplied to towns from reclamation projects by delivery to some convenient point to be handled and distributed to the inhabitants of the town by the municipal authorities in accordance with the provisions of the Act of April 16, 1906. Instructions of March 21, 1911, 39 Land Dec. 591.

Also, by Secs. 3 and 4 of the Act of June 27, 1906, Supp. Fed. Stat. Ann., 1909, p. 543; 34 Stat. L. 519.

For the balance of the Act of June 27, 1906, relating to subdivisions which may be entered, and to desert land entries, see Sec. 1253.

[3] See *supra*.

[4] See *supra*.

Again, by the Act of June 11, 1910, it was further provided, relative to the sale of town lots, as follows: "That the Secretary of the Interior is hereby authorized, whenever he may deem it necessary, to reappraise all unsold lots within townsites on projects under the Reclamation Act heretofore or hereafter appraised under the provisions of the Act approved April 16, 1906, entitled 'An Act providing for the withdrawal from public entry of lands needed for townsite purposes in connection with irrigation projects under the Reclamation Act of June 17, 1902, and for other purposes,' and the Act approved June 27, 1906, entitled 'An Act providing for the subdivision of lands entered under the Reclamation Act, and for other purposes'; and thereafter to proceed with the sale of such town lots in accordance with said Acts.

"Sec. 2. That in the sale of town lots under the provision of the said Acts of April 16 and June 27, 1906, the Secretary of the Interior may, in his discretion, require payment for such town lots in full at time of sale or in annual installments, not exceeding five, with interest at the rate of 6 per centum per annum on deferred payments.[5]

"In all cases where the Secretary of the Interior shall direct the reappraisement of unsold lots under the first section of the above quoted Act, the reappraisement will be conducted under the regulations provided for under the original appraisement of lots in townsites created under the laws in said Act mentioned. The lots to be reappraised will not, from the date of the order therefor, be subject to disposal until offered at public sale at the reappraised value, which offering will be conducted under the regulations providing for the public sale of lots in such townsites. The lots so offered at public sale will then become subject to private sale at the reappraised price. Whenever the Secretary of the Interior, in the exercise of the discretion conferred upon him by Section 2 of said Act, shall order the payment of the purchase price of lots, sold in townsites created under the laws in said Act mentioned, to be made in annual installments, the same will be done under such regulations as may be issued in each particular instance."[6]

[6] Instructions, Sept. 13, 1910, 39 Land Dec. 205.

**§ 1252. Acts amendatory to the National Reclamation Act—Relating to subdivisions—The farm unit—Act of June 27, 1906.**—The Act of June 27, 1906,[1] an Act providing for the subdivision of land under the Reclamation Act, and for other purposes, provides as follows:

"Sec. 1. That whenever, in the opinion of the Secretary of the Interior, by reason of the market conditions and the special fitness of the soil and climate for the growth of fruit and garden produce, a lesser area than forty acres may be sufficient for the support of a family on lands to be irrigated under the provisions of the Act of June 17, 1902, known as the Reclamation Act, he may fix a lesser area than forty acres as the minimum entry and may establish farm units of not less than ten nor more than 160 acres. That whenever it may be necessary for the purpose of accurate description to further subdivide lands to be irrigated under the provisions of the Reclamation Act, the Secretary of the Interior may cause subdivision surveys to be made by the officers of the reclamation service, which subdivisions shall be rectangular in form, except in cases where irregular subdivisions may be necessary in order to provide for practicable and economical irrigation. Such subdivision surveys shall be noted upon the tract books in the General Land Office, and they shall be paid for from the reclamation fund: *Provided,* That an entryman may elect to enter under said Reclamation Act a lesser area than the minimum limit in any State or Territory.

"Sec. 2. That whenever the Secretary of the Interior, in carrying out the provisions of the Reclamation Act, shall require by relinquishment lands covered by a *bona fide* unperfected entry under the land laws of the United States, the entryman upon such tract may make another and additional entry, as though the entry thus relinquished had not been made."[2]

Sections 3 and 4 of the Act apply to townsites, and are quoted in another section.[3]

Section 5 of the Act applies to desert land entries, and is quoted in another section.[4]

[1] Supp. Fed. Stat. Ann., 1909, p. 543; 34 Stat. L. 519.

[2] The protection of the possession of a settler who prior to the date of the Reclamation Act of June 17, 1902, took possession of unsurveyed lands of the United States with intent to file a homestead thereon whenever the lands should be surveyed or offered for settlement, is not given by this section. U. S. v. Hanson, 167 Fed. Rep. 881.

[3] See Sec. 1251.

[4] See Sec. 1253.

Under this Act, the entries may be reduced in area to the limit representing the acreage which, in the opinion of the Secretary of the Interior, may be reasonably required for the support of a family upon the lands in question, and the lands within a reclamation project are platted to farm units representing such areas. The farm units may be as small as ten acres where the lands are suitable for the raising of fruit and garden produce, etc., but under most projects so far, they have been fixed at from forty to eighty acres each. These areas are announced on the farm unit plats, and public notice is given stating the amount of charges, and other details concerning the payment are issued by the Secretary of the Interior, shortly before the Government is ready to furnish water. Until this public notice is given no definite information is given as to any particular tracts or as to the details to be covered by such notice.[5] Inasmuch as every entry within the limits of a withdrawal under the Reclamation Act is subject to a conformation to an established farm unit, improvements placed upon different subdivisions by the entryman prior to such conformation are at his risk.[6] They should be confined to one legal subdivision until the entry is conformed. In adjusting such an entry the Secretary is not required to confine the farm unit to the limits of the entry, but may combine any legal subdivision thereof with a contiguous tract lying outside of the entry so as to equalize in value the several farm units.[7]

Under Section 5 of the Act of June 25, 1910,[8] it is provided "That no entry shall be hereafter made and no entryman shall be permit-

[5] See Regulations, 38 Land Dec. 628, Sec. 3; Opinion Atty. Gen., 35 Land Dec. 110.

[6] Jerome M. Higman, 37 Land Dec. 718; Regulations, 38 Land Dec. 630, Sec. 16.

[7] Where a homestead entry within a reclamation project is divided into farm units, the entryman is entitled to retain only one of such units to be designated by him, and as to the remaining units, the entry must be canceled, or where satisfactory proof has been submitted an assignment may be made under the provisions of the Act of June 23, 1910. Sarah S. Long, 39 Land Dec. 297.

So, also, where a portion of the homestead entry, made subject to the provisions of the Reclamation Act, is subsequently eliminated, and the portion remaining within the project is designated as a farm unit, the entryman may retain either the farm unit or the portion lying without the limits of the project, at his election, and the entry will be canceled as to the remainder. Laurel S. Shell, 39 Land Dec. 502.

[8] 26 Stat. L. 837.

For full text of Act, see Sec. 1257.

ted to go upon lands reserved for irrigation purposes until the Secretary of the Interior shall have established the unit of acreage and fixed the water charges and the date when the water can be applied and made public announcement of the same." And it was held that under this provision, a homestead entry of land within a reclamation project allowed subsequently to the Act of June 25, 1910, upon an application in all respects regular, filed prior to that Act, and upon which action was delayed only because of pressure of business in the local office, is not in violation of the provisions of Section 5 of said Act.[9]

§ 1253. **Acts amendatory to the National Reclamation Act—Relating to desert land entries—Act of June 27, 1906.**—Section 5 of the Act of June 27, 1906,[1] relating to *bona fide* desert land entries which have or may be embraced within the limits of a reclamation project, provides as follows:

"Sec. 5. That where any *bona fide* desert land entry has been or may be embraced within the exterior limits of any land withdrawal or irrigation project under the Act entitled" (the Reclamation Act)[2] "approved June 17, 1902, and the desert land entryman has been or may be directly or indirectly hindered, delayed, or prevented from making improvements or from reclaiming the land embraced in any such entry by reason of such land withdrawal or irrigation project, the time during which the desert land entryman has been or may be so hindered, delayed, or prevented from complying with the desert land law shall not be computed in determining the time within which such entryman has been or may be required to make improvements or reclaim the land embraced within any such desert land entry: *Provided*, That if after investigation the irrigation project has been or may be abandoned by the Government, time for compliance with the desert land law by any such entryman shall begin to run from the date of notice of such abandonment of the project and the restoration to the public domain of the lands withdrawn in connection therewith, and credit shall be allowed for all expenditures and improvements

[9] Charles C. Conrad, 39 Land Dec. 432.

See, also, Anna G. Parker, 40 Land Dec. 406.

[1] Supp. Fed. Stat. Ann., 1909, p. 543; 34 Stat. L. 520.

[2] For the full text of the Act, see Sec. 1252.

heretofore made on any such desert land entry of which proof has been filed; but if the reclamation project is carried to completion so as to make available a water supply for the land embraced in any such desert land entry, the entryman shall thereupon comply with all the provisions of the aforesaid Act of June 17, 1902, and shall relinquish all land embraced within his desert land entry in excess of 160 acres, and as to such 160 acres retained, he shall be entitled to make final proof and obtain patent upon compliance with the terms of payment prescribed in said Act of June 17, 1902, and not otherwise. But nothing herein contained shall be held to require a desert land entryman who owns a water right and reclaims the land embraced in his entry to accept the conditions of said Reclamation Act."

This Act applies only to persons who have been, directly or indirectly, delayed or prevented, by the creation of any reclamation project or by the withdrawal of public lands under the Reclamation Act, from improving or reclaiming the lands covered by their desert land entries. An entryman will not need to invoke the privileges of the Act in this connection until his final proof is due. If the reclamation project is carried to completion by the Government and a water supply has been made available for the land embraced in such desert land entry, the entryman must comply with all the provisions of the Reclamation Act and must relinquish all the land embraced in his entry in excess of 160 acres; and upon making final proof and complying with the terms of payment prescribed in the Reclamation Act, he will be entitled to patent for the amount of land retained.[3]

[3] Regulations, 38 Land Dec. 644, Secs. 70-79.

See, also, desert land Acts, Secs. 1287-1311.

While desert land entrymen and their assignees are not invested with the legal title, they have such an equitable title and interest in the land as to constitute them proprietors within the spirit and purpose of the Reclamation Act, and the right to use water may be granted them, if they bring themselves within the provisions of the Act that "no right to the use of water for land in private ownership shall be sold for a tract exceeding 160 acres to any one land owner, and no such sale shall be made to any land owner unless he be an actual and *bona fide* resident on such land or occupant thereof residing in the neighborhood of said lands." Instructions, 34 Land Dec. 29.

A desert entryman, whose land is included in a reclamation project, may elect to proceed with the reclamation thereof, on his own account, and thus acquire title to all, or so much of the

Where lands are in private ownership in blocks of more than 160 acres the excess may be conveyed to members of the owner's family, provided the transfer is *bona fide* and the requirements of the Reclamation Act as to residence are complied with.[4] A final certificate and patent will not issue upon a desert land entry within a reclamation project until all payments for a water right under such project have been made and the water permanently attaches to the land.[5]

**§ 1254. Acts amendatory—Entryman may assign his entry when—Act of June 23, 1910**—The Act approved June 23, 1910, further amended the original Reclamation Act by providing that entrymen for homesteads within reclamation projects may assign their entries upon satisfactory proof of residence, improvement, and cultivation for five years as though said entry had been made under the original Homestead Act. The full text of this Act is as follows: "That from and after the filing with the Commissioner of the General Land Office of satisfactory proof of residence, improvement, and cultivation for the five years required by law, persons who have, or shall make, homestead entries within reclamation projects under the provisions of the Act of June 17, 1902, may assign such entries, or any part thereof, to other persons, and such assignees, upon submitting proof of the reclamation of the lands and upon payment of the charges apportioned against the same as provided in the said Act of June 17, 1902, may receive from the United States a patent

land included within his entry as he can secure water to irrigate, or accept the conditions of the Reclamation Act and acquire title thereunder to 160 acres; but he can not avail himself of both the reclamation project, and other means of reclamation, and thus acquire title to more than 160 acres of land. Robert J. Slater, 39 Land Dec. 380.

See, also, Instructions, Jan. 20, 1912, 40 Land Dec. 386.

[4] Instructions, 32 Land Dec. 647.

For the disposal of such excess lands by vesting the title to the same in the water users' associations, with authority to sell the same in case of the failure of the owner to dispose of them, see Instructions, 33 Land Dec. 202.

[5] Leroy W. Furnas, 38 Land Dec. 194.

Under the Desert Land Act, as modified by Act of June 27, 1906, final proof, upon the desert entry within a reclamation project, can not be held to have been made and completed until the payments required by said Acts and the Act of June 17, 1902, have been made; and the Department is without authority to accept or regard final proof in such cases as complete or to issue patent thereon, until after full compliance with the terms of payment imposed by the Reclamation Act. W. H. Skinner, 39 Land Dec. 519.

for the lands: *Provided,* That all assignments made under the provisions of this Act shall be subject to the limitations, charges, terms, and conditions of the Reclamation Act.[1]

"Under the provisions of this Act persons who have made or may make homestead entries subject to the Reclamation Act may assign their entries in their entirety at any time after filing in this office satisfactory proof of residence, improvements, and cultivation for the five years required by the ordinary provisions of the homestead law. The Act also provides for the assignment of homestead entries in part, but such assignments, if made prior to the establishment of farm units, must be made in strict accordance with the legal subdivisions of the public survey, and if made after such units are established must conform thereto. Such assignments which shall be made expressly subject to the limitations, charges, terms, and conditions of the Reclamation Act will be accepted by you, duly noted on your records and forwarded to this office in the usual manner, and the assignees in each case will be allowed to submit proof of reclamation and make payment of the water right charges as would the original entryman, and after full compliance with the law will be given final certificate and patent.[2]

"Assignments under this Act must be made expressly subject to the limitations, charges, terms, and conditions of the Reclamation Act, and inasmuch as that Act limits the rights of entry to one farm unit, the assignee must present a showing in the form of an affidavit, duly corroborated, that he has not acquired title to, and is not claiming, any other farm unit or entry under the Reclamation Act."[3]

**§ 1255. New Mexico and Arizona—Price fixed for lands—Reservations.**—In the Enabling Act of New Mexico and Arizona, ap-

1 Session Laws, 1910, Chap. 357, p. 592, 61st Cong., 2d Session; 36 Stat. L. 592.

A homestead entryman who has not acquired title to his land can not convey or agree to convey to a water users' association one or more legal subdivisions of his entry to be held in trust, and to be sold for his benefit. Opinion Atty. Gen., 34 Land Dec. 532.

2 Instructions of Sept. 13, 1910, 39 Land Dec. 202.

3 Circular of December 17, 1910, 39 Land Dec. 421.

proved June 20, 1910,[1] it was provided, relative to New Mexico,[2] that lands in such State "east of the line between ranges eighteen and nineteen east of the New Mexico principal meridian shall not be sold for less than five dollars per acre, and lands west of said line shall not be sold for less than three dollars per acre, and no lands which are or shall be susceptible of irrigation under any projects now or hereafter completed or adopted by the United States under legislation for the reclamation of lands, or under any other project for the reclamation of lands, shall be sold at less than twenty-five dollars per acre: *Provided*, That said State, at the request of the Secretary of the Interior, shall from time to time relinquish such of its lands to the United States as at any time are needed for irrigation works in connection with any Government project. And other lands in lieu thereof are hereby granted to said State, to be selected from lands of the character named and in the manner prescribed in Section 11 of this Act."

Relative to Arizona, it was provided:[3] "No land shall be sold for less than three dollars per acre, and no lands which are or shall be susceptible of irrigation under any projects now or hereafter completed or adopted by the United States under legislation for the reclamation of lands, or under any other project for the reclamation of lands, shall be sold at less than twenty-five dollars per acre: *Provided*, That said State, at the request of the Secretary of the Interior, shall from time to time relinquish such of its lands to the United States as at any time are needed for irrigation works in connection with any such Government project. And other lands in lieu thereof are hereby granted to said State, to be selected from lands of the character named and in the manner prescribed in Section 24 of this Act."

**§ 1256. Acts amendatory to the National Reclamation Act—The Reclamation Fund Act of June 25, 1910, as amended February 18, 1911.**—The Reclamation Service, acting under the directions of the Secretary of the Interior, after the passage and approval of the Reclamation Act, took immediate steps for the segregation of great tracts of land and for the commencement of the construction of the works of many reclamation projects in the States and Territories

[1] 36 Stat. L. 557.
[2] See Sec. 10 of the Enabling Act.
[3] See Sec. 28 of the Enabling Act.

named, and to which the Act applies. In fact, so strenuous had been the operations under the provisions of the Act in commencing these projects, that early in 1910 it was ascertained that the money received and which would be received in the immediate future from the sale of the public lands in those States and Territories would not be nearly sufficient to complete the projects then under various stages of construction without their being long delayed. Therefore, Congress by the Act approved June 25, 1910,[1] entitled, "An Act to authorize advances to the 'reclamation fund,' and for the issue and disposal of certificates of indebtedness in reimbursement therefor, and for other purposes," provided for the appropriation of $20,000,000 from other funds of the United States, to be applied to the completion of such works as had already been commenced as the Secretary of the Interior might require.

The full text of this Act is as follows:

"Sec. 1. That to enable the Secretary of the Interior to complete Government reclamation projects heretofore begun, the Secretary of the Treasury is authorized, upon request of the Secretary of the Interior, to transfer from time to time to the credit of the reclamation fund created by the Act entitled 'An Act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands,' approved June 17, 1902, such sum or sums, not exceeding in the aggregate twenty million dollars, as the Secretary of the Interior may deem necessary to complete the said reclamation projects, and such extensions thereof as he may deem proper and necessary to the successful and profitable operation and maintenance thereof or to protect water rights pertaining thereto claimed by the United States, provided the same shall be approved by the President of the United States; and any such sum or sums as may be required to comply with the foregoing authority are hereby appropriated out of any money in the treasury not otherwise appropriated:

"*Provided,* That the sums hereby authorized to be transferred to the reclamation fund shall be so transferred only as such sums shall be actually needed to meet payments for work performed under existing law: *And provided further,* That all sums so transferred shall be reimbursed to the Treasury from the reclamation fund, as herein-

[1] Public, No. 289; 36 Stat. L. 835.

after provided: *And provided further,* That no part of this appropriation shall be expended upon any existing project until it shall have been examined and reported upon by a board of engineer officers of the army, designated by the President of the United States, and until it shall be approved by the President as feasible and practicable and worthy of such expenditure; nor shall any portion of this appropriation be expended upon any new project.

"Sec. 2. That for the purpose of providing the Treasury with funds for such advances to the reclamation fund, the Secretary of the Treasury is authorized to issue certificates of indebtedness of the United States in such form as he may prescribe and in denominations of $50, or multiples of that sum, said certificates to be redeemable at the option of the United States at any time after three years from the date of their issue and to be payable five years after such date, and to bear interest payable semi-annually, at not exceeding 3 per centum per annum; the principal and interest to be payable in gold coin of the United States. The certificates of indebtedness herein authorized may be disposed of by the Secretary of the Treasury at not less than par, under such rules and regulations as he may prescribe, giving all citizens of the United States an equal opportunity to subscribe therefor, but no commission shall be allowed and the aggregate issue of such certificates shall not exceed the amount of all advances made to said reclamation fund, and in no event shall the same exceed the sum of twenty million dollars. The certificates of indebtedness herein authorized shall be exempt from taxes or duties of the United States as well as from taxation in any form by or under State, municipal, or local authority; and a sum not exceeding one-tenth of one per centum of the amount of the certificates of indebtedness issued under this Act is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to pay the expense of preparing, advertising, and issuing the same.

"Sec. 3. That, beginning five years after the date of the first advance to the reclamation fund under this Act, 50 per centum of the annual receipts of the reclamation fund shall be paid into the general fund of the Treasury of the United States until payment so made shall equal the aggregate amount of advances made by the Treasury to said reclamation fund, together with interest paid on

the certificates of indebtedness issued under this Act and any expense incident to preparing, advertising, and issuing the same.

"Sec. 4. That all money placed to the credit of the reclamation fund in pursuance of this Act shall be devoted exclusively to the completion of work on reclamation projects heretofore begun as hereinbefore provided, and the same shall be included with all other expenses in future estimates of construction, operation, or maintenance, and hereafter no irrigation project contemplated by said Act of June 17, 1902, shall be begun unless and until the same shall have been recommended by the Secretary of the Interior and approved by the direct order of the President of the United States.

"Sec. 5. That no entry shall be hereafter made and no entryman shall be permitted to go upon lands reserved for irrigation purposes until the Secretary of the Interior shall have established the unit of acreage and fixed the water charges and the date when the water can be applied and make public announcement of the same: *Provided,* That where entries made prior to June 25, 1910, have been or may be relinquished in whole or in part the lands so relinquished shall be subject to settlement and entry under the homestead law as amended by an Act entitled 'An Act appropriating the receipts from the sale and disposal of the public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands,' approved June 17, 1902.[2]

"Sec. 6. That Section 9 of said Act of Congress, approved June 17, 1902, entitled, 'An Act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands,' is hereby repealed.

"Approved, June 25, 1910."

**§ 1257. Acts amendatory—Leaves of absence granted when—Act of June 25, 1910.**—The Act of June 25, 1910, also amended the original homestead law where entries are made under reclamation projects, by providing that where water is not available for the irrigation of their lands, leaves of absence to homesteaders may be granted, until the water is turned into the main canals from which

2 As amended by the Act approved Feb. 18, 1911; Public, No. 386; 36 Stat. L. 835.

See instructions of Sept. 13, 1910, 39 Land Dec. 202; Annie G. Parker, 40 Land Dec. 406.

the land is to be irrigated. The full text of the Act is as follows: "That all qualified entrymen who have heretofore made *bona fide* entry upon lands proposed to be irrigated under the provisions of the Act of June 17, 1902, known as the National Irrigation Act, may, upon application and a showing that they have made substantial improvements, and that water is not available for the irrigation of their said lands, within the discretion of the Secretary of the Interior, obtain leave of absence from their entries, until water for irrigation is turned into the main irrigation canals from which the land is to be irrigated: *Provided,* That the period of actual absence under this Act shall not be deducted from the full time of residence required by law." [1]

As construed by the Secretary of the Interior, the Act of June 25, 1910, was intended to relieve entrymen who had made entry for lands within a reclamation project prior to the passage of said Act, and prior to the applying of water by the project, upon the necessity of maintaining residence upon the land "until water for irrigation is turned into the main irrigation canal from which the land is to be irrigated." It condones the prior failure of an entryman to maintain residence where water has not been available for irrigation of the land and suspends the running of the seven-year limitation of the life of the entry by allowing the period of residence to commence from the time when the water is made available.[2]

**§ 1258. Acts amendatory—The sale of lands acquired under the provisions of the Act when not needed for its purposes—Act of February 2, 1911.**—By the Act approved February 2, 1911, entitled "An Act to provide for the sale of lands acquired under the provisions of the Reclamation Act and which are not needed for the purposes of that Act," [1] it was provided that whenever in the opinion of the Secretary of the Interior any lands which have been acquired under the provisions of the Reclamation Act, "or under the provisions of any Act amendatory thereof or supplementary thereto, for any irrigation works contemplated by said Reclamation Act are

[2] Roberts v. Spencer, 40 Land Dec. 306.

[1] Public, No. 338.

not needed for the purposes for which they were acquired, said Secretary of the Interior may cause said lands, together with the improvements thereon, to be appraised by three disinterested persons, to be appointed by him, and thereafter to sell the same for not less than the appraised value at public auction to the highest bidder, after giving public notice of the time and place of sale by posting upon the land and by publication for not less than thirty days in a newspaper of general circulation in the vicinity of the land.

"Sec. 2. That upon payment of the purchase price, the Secretary of the Interior is authorized by appropriate deed to convey all the right, title, and interest of the United States of, in, and to said lands to the purchaser at said sale, subject, however, to such reservations, limitations, or conditions as said Secretary may deem proper: *Provided,* That not over 160 acres shall be sold to any one person.

"Sec. 3. That the moneys derived from the sale of such lands shall be covered into the reclamation fund and be placed to the credit of the project for which such lands had been acquired."

§ 1259. **Acts amendatory—The Government may contract for impounding, storing, and carriage of water, and to co-operate with other projects—Act of February 21, 1911.**—Under the Act approved February 21, 1911, entitled "An Act to authorize the Government to contract for impounding, storing, and carriage of water, and to co-operate in the construction and use of reservoirs and canals under reclamation projects and for other purposes,"[1] it was provided "that whenever in carrying out the provisions of the reclamation law, storage, or carrying capacity has been or may be provided in excess of the requirements of the lands to be irrigated under any project, the Secretary of the Interior, preserving a first right to lands and entrymen under the project, is hereby authorized, upon such terms as he may determine to be just and equitable, to contract for the impounding, storage, and carriage of water to an extent not exceeding such excess capacity with irrigation systems operating under the Act of August 18, 1894, known as the Carey Act, and individuals, corporations, associations, and irrigation districts organized for or engaged in furnishing or in distributing water for irrigation. Water so impounded, stored, or carried under any such contract shall be for the purpose of distribution to individual

[1] Public, No. 406; 36 Stat. L. 925; Supp. U. S. Comp. Stat., 1911, p. 681.

water users by the party with whom the contract is made: *Provided, however,* that water so impounded, stored, or carried shall not be used otherwise than as prescribed by law as to lands held in private ownership within Government reclamation projects. In fixing the charges under any such contract for impounding, storing, or carrying water for any irrigation system, corporation, association, district, or individual, as herein provided, the Secretary shall take into consideration the cost of construction and maintenance of the reservoir by which such water is to be impounded or stored and the canal by which it is to be carried, and such charges shall be just and equitable as to water users under the Government project. No irrigation system, district, association, corporation, or individual so contracting shall make any charge for the storage, carriage, or delivery of such water in excess of the charge paid to the United States except to such extent as may be reasonably necessary to cover cost of carriage and delivery of such water through their works.

"Sec. 2. That in carrying out the provisions of said reclamation Act and Acts amendatory thereof or supplementary thereto the Secretary of the Interior is authorized, upon such terms as may be agreed upon, to co-operate with irrigation districts, water users' associations, corporations, entrymen or water users for the construction or use of such reservoirs, canals, or ditches as may be advantageously used by the Government and irrigation districts, water users' associations, corporations, entrymen, or water users for impounding, delivering, and carrying water for irrigation purposes: *Provided,* that the title to and management of the works so constructed shall be subject to the provisions of Section 6 of said Act: *Provided further,* that water shall not be furnished from any such reservoir or delivered through any such canal or ditch to any one land owner in excess of an amount sufficient to irrigate one hundred and sixty acres: *Provided,* that nothing contained in this Act shall be held or construed as enlarging or attempting to enlarge the right of the United States, under existing law, to control the waters of any stream in any State.

"Sec. 3. That the moneys received in pursuance to such contracts shall be covered into the reclamation fund and be available for use under the terms of the Reclamation Act and the Acts amendatory thereof or supplementary thereto."

**§ 1260. Acts amendatory—Act authorizing the Secretary of the Interior to withdraw public notices—Act of February 13, 1911.**—Under the Act approved February 13, 1911, entitled, "An Act to authorize the Secretary of the Interior to withdraw public notices issued under Section 4 of the Reclamation Act, and for other purposes,"[1] it was provided: "That the Secretary of the Interior may in his discretion, withdraw any public notice heretofore issued under Section 4 of the Reclamation Act of June 17, 1902, and he may agree to such modification of water-right applications heretofore duly filed or contracts with water users' associations and others entered into prior to the passage of this Act, as he may deem advisable, or he may consent to the abrogation of such water-right applications and contracts, and proceed in all respects as if no such notice had been given."

**§ 1261. Action of the States affected.**—The majority of the States and Territories affected by the Reclamation Act have assisted the Government in the work of the reclamation of the arid lands within their borders by enacting laws granting rights of way over the State lands, and by further providing that no lands belonging to the State, within the areas to be irrigated from works constructed or controlled by the United States, shall thereafter be sold except in conformity with the classification of farm units by the United States, and that the title to such lands shall not pass from the State until the applicant therefor shall have complied with the provisions of the laws of the United States and the regulations thereunder concerning the acquisition of the right to the use of water from such works, and shall produce evidence thereof duly issued. In order for this provision to take effect, however, the area or areas to be so irrigated by the Government shall be determined by due notice given by the United States and filed with the State Land Board. After the withdrawal of lands by the United States for any irrigation project, no application for the purchase of State lands within the limits of such withdrawal shall be accepted, except under the conditions prescribed above. These statutes also provide to the effect that any State lands needed by the United States for irrigation works shall be sold to the Government at private sale at the appraised value of such lands.

[1] Public, No. 353.

In some of the States provision is made for the confirmation of the right to use the water upon the filing of evidence that construction has been authorized by the Secretary of the Interior.

Provisions are also made for the formation of water users' associations, which are usually exempted from the payment of any corporation tax and the annual franchise tax.

For the purposes of the Act the United States is also authorized to make appropriations of water.[1]

§ 1262. **The withdrawal and restoration of lands for the purposes of the Act.**—There are two classes of withdrawals of land authorized by the Reclamation Act: First, under Section 3 of the Act, the Secretary of the Interior is authorized to withdraw from public entry the lands required for any irrigation works contemplated under the provisions of the Act, and shall restore to public entry any of the lands so withdrawn when, in his judgment, such lands are not so acquired. Withdrawals of this class are designated by the Secretary as "Withdrawals under the first form," and only embrace lands that may possibly be needed in the construction and maintenance of the irrigation works. After the lands have been withdrawn under the first form they can not be entered, selected, or located in any manner so long as they remain so withdrawn, and all applications for such entries, selections, or locations will be rejected and denied, regardless of whether they were presented before or after the date of such withdrawal.[1]

[1] For the statutes of the various States in aid of the National Reclamation Act, see Part XIV, under each State.

[1] For the powers granted the Secretary of the Interior under the National Reclamation Act, see United States v. Burley, 172 Fed. Rep. 615; *Id.*, 179 Fed. Rep. 1, 102 C. C. A. 429; United States v. Cantrall, 176 Fed. Rep. 946; Twin Falls Canal Co. v. Foote, 192 Fed. Rep. 583; Regulations, 38 Land Dec. 628, Secs. 5 and 6; Ernest Woodcock, 38 Land Dec. 349.

By the mere filing of an application to enter under the homestead law, upon which action is suspended, and tender of necessary fees, the applicant acquires no vested right to or interest in the land applied for, nor does such application have the effect to segregate the land from the public domain so as to prevent a withdrawal thereof for reclamation purposes under the provisions of the Reclamation Act. John A. Maney, 35 Land Dec. 250.

See, also, Board of Control, Canal No. 3, State of Colorado v. Terrence, 32 Land Dec. 472; Annie G. Parker, 40 Land Dec. 406; Todd v. Hayes, 34

It is held by the Land Department that even a valid homestead entry for land within the limits of a withdrawal for irrigation works, under the authority of the Act, existing at the date of such withdrawal, upon which final certificate had not issued, or legal or equitable title to the land embraced therein become vested, may be canceled by the Department if it appear that such land is required for use in the construction and maintenance of such works, for such withdrawals have the force of legislative withdrawals, and are therefore effective to withdraw all lands within the designated limits to which a right has not vested.[2] Neither does the Reclamation Act contain any provision for the recognition or protection of any right of a settler on unsurveyed public lands which may be withdrawn and reserved thereunder for use in construction of irrigation works, and such settler has no right which he can oppose to the taking of the land for such purpose.[3] Although the right of the Government to appropriate lands for its use in the construction and operation of irrigation works under the Act is not affected by the fact that the land is mineral in character, these lands are not by a withdrawal taken out of the operation of the mining laws, but continue open to exploration and purchase under such laws.[4]

The first form of withdrawal, under which no entries of any kind can be allowed, may be used in all preliminary withdrawals.[5]

3 United States v. Hanson, 167 Fed. Rep. 881.

But a homestead entry upon which final proof has been made showing compliance with the law up to the date thereof, but where final certificate has not issued, has the same status as an entry upon which final certificate has issued, so far as it may be affected by any withdrawal under the Reclamation Act. 5th Annual Rept. of the Reclamation Service, p. 25.

No such rights are acquired by settlement upon lands embraced in the entry of another as will attach upon cancellation of such entry, where at that time the lands are withdrawn for use in connection with an irrigation project under the Reclamation Act. George Anderson, 34 Land Dec. 478.

The practice of designating certain withdrawals made under the Act as "temporary" was discontinued. Charles G. Carlisle, 35 Land Dec. 649.

4 Instructions, 35 Land Dec. 216.

5 Instructions, 33 Land Dec. 104.

No authority is granted by the Reclamation Act for the withdrawal of

There is no authority to make such executive withdrawal of public lands in a State as will reserve the waters of a stream flowing over the same from appropriation under the laws of the State, nor will it in any manner interfere with the laws relating to the control, appropriation, use, or distribution of the same.[6] Withdrawals under the first form of withdrawal are absolute, and the Land Department may remove persons from such lands as trespassers.[7] The Secretary of the Interior is without authority to segregate lands in abandoned military reservations for use as reservoir sites in connection with reclamation projects.[8] However, lands in forest reservations and in National parks may be appropriated and used for irrigation works to be constructed under the Act.[9]

The second class of withdrawals is also authorized by Section 3 of the Act, wherein it is provided that at or immediately prior to the time of beginning of the surveys for any contemplated irrigation works, the Secretary of the Interior is authorized "to withdraw from entry, except under the homestead law, any public lands believed to be susceptible of irrigation from said works." This class of withdrawals is designated by the Secretary of the Interior as "withdrawals under the second form," and which embrace lands not supposed to be needed in the actual construction and maintenance of irrigation works, but which may possibly be irrigated from such works.[10] Withdrawal under the second form precludes any kind of entry, or appropriation of the land, other than under the homestead laws.[11] More lands are withdrawn by the Secretary

lands for reservoir sites for storing water to be used for domestic purposes. Opinion Atty. Gen., 33 Land Dec. 415.

[10] Regulations, 38 Land Dec. 628, Sec. 5.

[11] Land so withdrawn can not be taken up in lieu of land relinquished to the United States in a forest reserve. Santa Fe Pac. R. Co., 33 Land Dec. 360.

Neither are they subject to soldiers' additional entry under Section 2306 of the Rev. Stat. of the U. S. Cornelius J. MacNamara, 33 Land Dec. 502; Nancy C. Yaple, 34 Land Dec. 311.

An application to enter under the provisions of Sec. 2306 of the Revised Statutes, even though approved by the Commissioner of the General Land Office, will not, prior to the allowance of entry thereon, prevent a withdrawal of the land covered thereby under the provisions of the Reclama-

than are finally included within any contemplated project. Only a portion of the lands withdrawn will be irrigated even if the project is feasible and the works finally constructed; this is so for the reason that it is impossible to decide in advance of careful examination what lands may be irrigated. It can not be determined in advance how much water there may be available, or what lands can be covered, or whether the cost will be too great to justify the undertaking until the surveys and the irrigation investigations have been completed. Withdrawals made under either of these forms do not defeat or adversely affect any valid entry, location, or selection which segregated and withheld the lands embraced therein from other forms of appropriation at the date of such withdrawal; and all entries, selections, or locations of that character will be permitted to proceed to patent or certification upon due proof of compliance with the law in the same manner and to the same extent to which they would have proceeded had such withdrawal not been made, except as to lands needed for construction purposes.[12] And for the purpose of construction all entries made upon the lands are subject to the Right of Way Act of August 30, 1890,[13] and, therefore, all or any portion of such entries may be taken where the land is required for irrigation works constructed by the authority of the United States for the purposes of the Reclamation Act. All withdrawals under the Act become effective on the date upon which they are ordered by the Secretary of the Interior, and all orders for restoration on the date they are received in the local land office, unless otherwise specified in the order.[14] Upon the cancellation of an

tion Act. Charles A. Guernsey, 34 Land Dec. 560; Mary C. Sands, 34 Land Dec. 653.

A settler on unsurveyed land subsequently embraced in a withdrawal under the Reclamation Act, may, upon survey of the land, make and complete entry for the full area allowed by law, notwithstanding such withdrawal previous to entry, free of added conditions and limitations imposed by the Reclamation Act. William Boyle, 38 Land Dec. 603.

Nor to desert entry. James Page, 32 Land Dec. 536.

Neither are they subject to disposal under the coal land laws. John Hopkins, 32 Land Dec. 560.

12 Regulations, 38 Land Dec. 629, Sec. 8.

For text of this Act, and construction, see Sec. 952.

14 Regulations, 38 Land Dec. 629, Sec. 10.

The filing of such plats in the office of the Commissioner of the General Land Office and in the local offices shall be regarded as equivalent

entry covering lands within a withdrawal under the Act, such withdrawal becomes effective as to such lands without further order.[15] A withdrawal under the Reclamation Act becomes operative upon the lands covered by timber and stone applications when no payment has been made, and terminates the contingent right of the applicant.[16] Again, by a successful contest against a desert-land entry, the contestant does not acquire such a preference right of entry as will, prior to its exercise, except the land from the operation of a withdrawal under the provisions of the Reclamation Act.[17]

Lands so withdrawn from entry may be restored by the Secretary of the Interior. In an opinion of the Attorney-General, approved by the Secretary of the Interior, it is held that when an order of withdrawal is revoked, the time for making entries may be fixed at some date in the future, leaving the lands subject to settlement from the date of the order of the revocation. This permits a right to attach to such lands, as the result of settlement, in advance of the possible filing of an entry for the same land by one who has not settled thereon.[18]

§ 1263. **Reservation of rights of way for Government use.**—By Section 1 of the Sundry Civil Appropriation Act of August 30, 1890,[1] still further provisions were made for rights of way for ditches and canals, the said Act being as follows:

to an order withdrawing such lands under the second form under the Act. George B. Pratt, 38 Land Dec. 146; Circular, 37 Land Dec. 27; Regulations, 38 Land Dec. 630, Sec. 12.

Where lands which have been withdrawn from all disposition are restored to entry, no application will be received or any rights recognized and initiated by the tender of an application for any such lands until the order of restoration is received at the local land office. George B. Pratt, 38 Land Dec. 146.

18 Crichton v. Shelton, 33 Land Dec. 205.

The revocation of a withdrawal of its own force subjects the lands to entry and disposal under the general land laws free from all conditions, except such as are imposed by those laws, and removes the conditions prescribed by the Reclamation Act that had attached to entries made during the existence of the withdrawal. Opinion Atty. Gen., 34 Land Dec. 445.

1 6 Fed. Stat. Ann., 1905, p. 508; 2 U. S. Comp. Stat., 1901, p. 1570; 26 Stat. L. 391.

See, also, Sec. 936.

". . . That in all patents for lands hereafter taken up under any of the land laws of the United States or on entries or claims validated by this Act west of the one hundredth meridian, it shall be expressed that there is reserved from the lands in said patent described a right of way thereon for ditches or canals constructed by the authority of the United States."

By the terms of this Act it is evident that the Government was providing for some future reclamation Act by taking steps to reserve rights of way for its use for its works over all lands conveyed by the Government after the approval of the Act of August 30, 1890. And these reservations are now being utilized for the works being constructed under the National Reclamation Act.

By this Act Congress provided for reservations in all patents granted of rights of way for ditches and canals by enacting that in all patents for lands hereafter taken up under any of the land laws of the United States or on entries or claims validated by the Act west of the one hundredth meridian, it shall be expressed that there is reserved from the lands in said patent described a right of way thereon for ditches or canals constructed by the authority of the United States. The purpose of this provision was to reserve and retain in the United States a right of way over all lands within the territory mentioned which may be disposed of under any land laws of the United States after the passage of the Act, and although it declares that such reservation shall be expressed in the patent, it does not follow that the reservation is less effective as to lands which are disposed of under land laws not requiring or authorizing the issuance of patents as evidence of the right of the grantee. The Act can not be confined to entries under land laws by which individuals alone acquire rights, but to all land laws in general in their operation under which inchoate and vested rights may be acquired under executive supervision by following the mode of procedure provided for by the Act. It was intended to apply to general land laws as distinguished from grants or other special Acts of Congress.[2] Hence it is held that the right of way acquired under the general law of

[2] Instructions, 32 Land Dec. 147; Regulations, 38 Land Dec. 629, Sec. 8.

All public lands west of the one hundredth meridian taken up under allotment, sale, homestead, or other form of disposition, subsequent to the Act of August 30, 1890, as to which there is no claim by reason of settlement, occupancy, or otherwise, prior to that date, are subject to the reservations provided by that Act, to be expressed in the patent for right of

March 3, 1875,[3] after the passage of the Act of August 30, 1890, is burdened with the reservation for the right of way for canals and ditches provided for by the latter Act, which right of way may be utilized by the Government without compensation, except for actual loss or damage, provided such use will not impair or defeat the use of the railroad right of way for the legitimate corporate purposes of the company.[4] The railroad company may, therefore, occupy the lands *in presenti*, legally conveyed to it within a reclamation reservation by a homestead entryman. It may also be occupied by the entryman.[5]

The word "constructed," as used in the Act of 1890, quoted above, is construed not to limit the reservation to a right of way already constructed, but extends to those ditches or canals to be constructed by the Government in furtherance of its irrigation schemes for the reclamation of arid lands.[6]

**§ 1264. The acquisition of rights of way for Government use.**—In addition to the rights of way reserved in all patents to land granted since 1890, discussed in the previous section,[1] the Reclamation Act in Section 7 provides that where in carrying out the provisions of the Act it becomes necessary to acquire any rights or property, the Secretary of the Interior is authorized to acquire the same for the United States by purchase or by condemnation under judicial process, and to pay from the reclamation fund the sums needed for that purpose. It is also made the duty of the Attorney-General of the United States upon every application of the Secretary of the Interior, under the Act, to cause proceedings to be

way for ditches and canals by authority of the United States. Clement Ironshields, 40 Land Dec. 28.

See, also, Minidoka etc. R. Co. v. Weymouth, —— Idaho ——, 113 Pac. Rep. 455, where it was held that the Acts of Congress, relative to the public lands, providing for entries thereof, and authorizing easements and rights of way thereover, must be construed together and in the light of the constitutions of the country as they existed when several Acts were passed.

[3] 6 Fed. Stat. Ann., 1905, p. 501; 2 U. S. Comp. Stat., 1901, p. 1568, Chap. 152; 18 Stat. L. 482.

commenced for condemnation within thirty days from the receipt of the application of the Secretary of the Interior at the Department of Justice.[2] Under this section water rights as well as land for rights of way may be condemned by the Government.

In the event any lands embraced in any entry on which final proof has not been offered, or in any unapproved or uncertified selection, are needed in the construction and maintenance of any irrigation works (other than for right of way for ditches or canals reserved under the Act of August 30, 1890) under the Reclamation Act, the Government may cancel such entry or selection and appropriate the lands embraced therein to such use, after paying the value of the improvements thereon and the enhanced value of such lands, the rights of the claimants being adjusted upon the basis of the status of the land at the time such determination was made.[3] The rights of the entryman as to the measure of compensation and the character of the action that may be taken by the Government in acquiring or appropriating the land embraced in his entry must be determined by the status of the entry at the time of the withdrawal of the lands for such purposes.[4] Where the owners of the improvements shall fail to agree with the representative of the Government as to the amount to be paid therefor, the same shall be acquired by condemnation proceedings, as provided by Section 7 of the Reclamation Act.[5]

Again, for the purposes of carrying out the provisions of the Reclamation Act, the Government may avail itself of the privileges conferred by the Right of Way Act of March 3, 1891,[6] granting rights of way through the public lands for the construction of ditches and reservoirs for irrigation purposes, to the same extent that individuals, corporations, or associations of individuals may exercise such privileges, and subject to the same conditions and limitations.[7]

7 Opinion Atty. Gen., 33 Land Dec. 563.

A permanent easement attaching to public lands by the construction of a reservoir and canals upon a right of

**§ 1265. Water rights—Acquisition of, by the Government for its projects.**—The Federal Government has the power under the Reclamation Act to acquire water rights for the use of its projects in the irrigation and reclamation of the lands thereunder by appropriation, purchase, or condemnation.[1] The Director of the Geological Survey is authorized by the Secretary of the Interior to designate suitable persons to file notices of water appropriation or to otherwise comply with the law of the respective States relative to the making valid appropriations of water for the projects of the Reclamation Service, in the name and on the behalf of the Secretary of the Interior, in pursuance of the provisions of Section 8 of the Reclamation Act.[2] The laws governing waters being left to the respective States where they naturally flow, this leaves the Government in the anomalous position of having to go to the State laws in order to acquire a right to the water necessary for these projects and flowing over its own lands.[3]

Statutes have been enacted by the legislatures of the various States affected, in aid of the National Reclamation Act, which statutes are fully discussed in a future part of this work.[4]

**§ 1266. Water rights—Reservation of waters by the Government for its projects.**—As has been stated before, the United States, first by its forbearance and afterward by its several Acts of Congress, has permitted vested rights to be acquired by individuals and others to the waters flowing over the public domain, separate and apart from the land itself.[1] But we have seen that the United

way under the Act of March 3, 1891, does not, upon acquisition of such irrigation system by the United States for use in connection with a reclamation project, become extinguished by merger in the estate of the Government in such reservoir lands; and entries allowed for lands within and below the flowage contour line of the reservoir as marked upon the township plat, are subject to the right of flowage by storage of waters in the reservoir. McMillan Res. Site, 37 Land Dec. 6.

1 The United States may exercise the right of eminent domain against other land owners to obtain land necessary to carry a proposed project under the National Reclamation Act into effect. Burley v. United States, 179 Fed. Rep. 1, 102 C. C. A. 429; affirming *Id.*, 172 Fed. Rep. 615.

2 4th Annual Rept. of the Reclamation Service, p. 26.

3 That the government of the waters is left to the States, see Secs. 507, 593.

4 See for statutes in aid of the National Reclamation Act, Part XIV.

1 See for history of the Arid Region Doctrine of appropriation, Chap. 32, Secs. 595-626.

States still has rights in and to the water flowing over the public domain as a riparian proprietor,[2] and has the power authorized to maintain the navigability of the navigable waters of the United States.[3] That as such proprietor, where the particular circumstances required, the Government has the right to reserve from all appropriation such waters for its own use and for particular purposes, such as the preservation of the navigable capacity of the rivers,[4] or the use upon Indian reservations.[5] The National Reclamation Act, in Section 8, provides: "That nothing in this Act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this Act, shall proceed in conformity with such laws."[6] And, in practice, the Secretary of the Interior proceeds under the laws of the respective States where the project is being constructed for the acquisition of the water rights.

But where the Government is the sole owner of both the lands and the waters, as where it is the sole riparian proprietor, and no vested rights have accrued in and to the waters, as is the case on some of the larger rivers, as was said in a recent case decided by the United States:[7] "Has not the United States, as a land owner, the same rights within the State that any other land owner has?" We think it has, and as the sole riparian proprietor upon some of the streams, where it can be done without interfering with vested rights, not only this, but it has the right under its power to make reservations[8] to reserve such waters from all appropriation under State laws, and in the face of the dedication by a State of all the waters flowing within its boundaries to the State or to the public.[9] As was said by the Supreme Court of the United States: "The power of the Government to reserve the waters and exempt them from appro-

9 For dedication of water as against the United States, see Sec. 388.

priation under the State laws is not denied, and could not be."[10] Again, in a case decided in 1910, by the United States Circuit Court of Appeals,[11] where the questions under consideration were the constitutionality of the National Reclamation Act and the rights of the United States to acquire property for the purpose of the Act by the exercise of eminent domain, it was said: "That the United States may, where the circumstances and conditions require it, reserve the waters of a river flowing through its public lands for a particular, beneficial purpose. . . . The authority of the United States to reserve the waters of its streams in the arid region for a beneficial purpose has been recently extended to the settlement of a long-standing controversy between the United States and Mexico respecting the use of the waters of the Rio Grande."[12] In the latter matter referred to, the Secretary of the Interior refused to grant rights of way to utilize the water of the Rio Grande River where it might tend to embarrass the project near Engle, New Mexico, and where it would tend to interfere with the carrying out of the treaty of this country with Mexico.[13]

As we view the subject, the United States has the same authority to reserve waters flowing over the public domain to which vested rights have not attached, for the purposes of carrying out the provisions of the National Reclamation Act, as it has to make reservations for its own use, for the use upon Indian reservations, or to preserve the navigable capacity of the navigable streams of the United States.

**§ 1267. Duty of the Secretary of the Interior to construct the works—Contracts.**—It is made the duty of the Secretary of the Interior to construct all the reclamation works contemplated by the
